--------------------	--	--

(At Japan International Research Center for Agricultural Sciences and National Food Research Institute, July 13-Sept. 14, 1998)

Mr. Cheng Yong Qiang	China Agricultural University People's Republic of China	Processing technologies of soybean for improved food ingredients
----------------------	--	--

(At Japan International Research Center for Agricultural Sciences, July 15-Sept. 29, 1998)

Mr. Hoang Dinh Dinll	Cuu Long Delta Rice Research Institute Vietnam	Epidemiology of rice blast disease in the Mekong Delta
----------------------	--	--

(At Japan International Research Center for Agricultural Sciences, July 15-Sept. 29, 1998)

Mr. Lai VanE	Cuu Long Delta Rice Research Institute Vietnam	Study on pathogenic diversity of <i>Xanthomonas oryzae</i> pv. <i>oryzae</i> distributed in the Mekong Delta
--------------	--	--

(At Japan International Research Center for Agricultural Sciences, Aug. 3, 1998-Feb. 1, 1999)

Dr. Xu Ming Gang	Institute of Soils and Fertilizer, Chinese Academy of Agricultural Sciences People 's Republic of China	Study on nitrogen removal function of paddy fields
------------------	---	--

(At Japan International Research Center for Agricultural Sciences and National Institute of Agro-Environmental Sciences, Aug. 26-Oct. 22, 1998)

Mr. Surasit Attajarusit	Soil Science Division, Department of Agriculture (DOA) Thailand	Analysis of soil micro-nutrients of Thai upland soils by plasma source micro-nutrient spectrometry
-------------------------	---	--

(At Japan International Research Center for Agricultural Sciences, Sept. 2-Nov 25, 1998)

Dr. Prapai Chairroj	Soil Science Division, Department of Agriculture (DOA) Thailand	Development of mitigation techniques for gases including nitrogen emitted from agro-ecosystems in tropical areas
---------------------	---	--

(At Japan International Research Center for Agricultural Sciences, Sept. 7-16, 1998)

Dr. Segenet Kelem	International Center for Tropical Agriculture (CIAT) Colombia	Seminar on the endophyte project
-------------------	---	----------------------------------

(At Japan International Research Center for Agricultural Sciences and National Food Research Institute, Sept. 22-Oct. 30, 1998)

Ms. Erliana Ginting	Research Institute for Legume and Tuber Crops (RILET) Indonesia	Evaluation of Indonesian soybean varieties for the processing and improvement of fermented foods
---------------------	---	--

(At Japan International Research Center for Agricultural Sciences, Sept. 29-Nov 19, 1998)

Mr. Phongchate Pichitkul	Kasetsart University Thailand	Studies on nuinent cycles in aquaculture systems in Southeast Asia
--------------------------	----------------------------------	--

(At Japan International Research Center for Agricultural Sciences and Hokkaido National Agricultural Experiment Station, Sept.30, 1998-Mar 26, 1999)

Mr. Ye Changrong	Crop Germplasm Station, Yunnan Academy of Agricultural Sciences People's Republic of China	Genetic analysis of cool-weather tolerant rice genetic resources using molecular markers
------------------	--	--

(At Japan International Research Center for Agricultural Sciences and Hokkaido National Agricultural Experiment Station, Sept. 30, 1998-Mar 26, 1999)

Mr. Yang Qinzhong	Crop Protection Institute, Yunnan Academy of Agricultural Sciences People's Republic of China	Genetic analysis on blast disease resistance of rice genetic resources using molecular markers
-------------------	---	--

(At Japan International Research Center for Agricultural Sciences and National Agriculture Research Center, Oct. 1, 1998-Mar 31, 1999)

Dr. Zhao Guilan	Soybean Institute, Jilin Academy of Agricultural Sciences People's Republic of China	Establishment of soybean transformation methods
-----------------	--	---

(At Japan International Research Center for Agricultural Sciences, Oct. 6-Nov 5, 1998)

Dr. Ren Tianzhi	Institute of Natural Resources and Regional Planning, Chinese Academy of Agricultural Sciences People's Republic of China	Modeling methods for managing regional food balance
-----------------	---	---

(At Japan International Research Center for Agricultural Sciences, Nov. 23-Dec. 4, 1998)

Ms. Xue Guica	Institute of Agricultural Economy, Chinese Academy of Agricultural Sciences People's Republic of China	Extension of new technology and regional agricultural economy management
---------------	--	--

(At Japan International Research Center for Agricultural Sciences, Dec. 1, 1998-Feb. 27, 1999)

Ms. Liao Lin	Soybean Institute, Jilin Academy of Agricultural Sciences People's Republic of China	Genetic analysis of soybean mosaic virus resistance
--------------	--	---

(At Japan International Research Center for Agricultural Sciences and National Institute of Animal Industry, Jan. 13-Feb. 11, 1999)

Mr. Taweesak Chuenpreecha	Khon Kaen Animal Nutrition Research Center Thailand	Evaluation of new feed resources by the in-vitro method
---------------------------	---	---

(At Japan International Research Center for Agricultural Sciences and National Institute of Animal Industry, Jan. 13-Feb. 11, 1999)

Mr. Pimpapom Pholsen	Khon Kaen Animal Nutrition Research Center Thailand	Comparison of various protein evaluation methods
----------------------	---	--

(At Japan International Research Center for Agricultural Sciences and Akita Prefectural Food Research Institute, Jan. 27-Feb. 25, 1999)

Dr. Xue Wentong	China Agricultural University People's Republic of China	Mechanism of gel formation of plant proteins during processing
-----------------	--	--

(At Japan International Research Center for Agricultural Sciences and National Food Research Institute, Jan. 27-Feb. 25, 1999)

Dr. Han Dong Hai	China Agricultural University People's Republic of China	Suitable technologies for food packaging to maintain and extend food quality
------------------	--	--

(At Japan International Research Center for Agricultural Sciences, Feb. 6-Mar 5, 1999)

Mr. Suchart Reanthung	Soil Survey and Classification Division, Land Development Department Thailand	Analysis and evaluation of site conditions for sustainable agricultural systems through the use of GIS and remote sensing data
-----------------------	---	--

(At Japan International Research Center for Agricultural Sciences, National Food Research Institute and Ibaraki University, Feb. 12-Mar. 26, 1999)

Mr. Gontijo Mandarina Jose Marcos	National Center for Soybean Research, EMBRAPA Brazil	Chemical analysis on sugars, saponins, and related qualitative characteristics of Brazilian cultivars and breeding lines of soybean
-----------------------------------	--	---

(At Japan International Research Center for Agricultural Sciences and Kyushu National Agricultural Experiment Station, Feb. 12-Mar 26, 1999)

Mr. Moises de Aquino	National Center for Soybean Research, EMBRAPA Brazil	Comparative analysis of micronutrients in soybean plants and soil
----------------------	--	---

(At Japan International Research Center or Agricultural Sciences, Feb. 14-23, 1999)

Mr. Ja Shangang	Scientech Documentation and Information Center People's Republic of China	Agricultural information network in China
-----------------	--	---

(At Japan International Research Center for Agricultural Sciences, Feb. 14-23, 1999)

Mr. Shao Changlei	Scientech Documentation and Information Center People's Republic of China	Agricultural information network in China

JIRCAS Visiting Research Fellowship Program at Okinawa

The Okinawa Visiting Research Fellowship Program was initiated in FY 1992, prior to the reorganization of the Tropical Agricultural Research Center (TARC) into JIRCAS. The program invites post-doctoral scientists to conduct research for a period of one year at the Okinawa Subtropical Station. Researchers must focus on important topics relating to tropical agriculture in developing countries within one of several broad categories: the development of techniques for environmental control utilizing plants and microorganisms specific to the tropics and subtropics, studies on heat-tolerance mechanisms in tropical and subtropical crops, the identification and evaluation of salt-tolerant crops, or the evaluation and development of long-term conservation techniques of the genetic resources of vegetatively propagated crops in the tropics and subtropics. Ten fellows are chosen each year, beginning their terms on October 1 and ending on September 30 of the following year. Recent invitees and their research activities are summarized below.

Photo: Okinawa Fellows in 1998 pose for group Photograph.

from October 1997 to September 1998

Development of techniques for environmental control by using plants and microorganisms specific to the tropics and subtropics

El-KI Iawas Hussein Moustafa	Cairo University Egypt	Utilization of plant growth promoting rhizobacteria (PGPR) for promoting plant growth and saving fertilizer
Wang Bujun	Institute of Crop Breeding and Cultivation People's Republic of China	Associations between methane emission and methanogenic and methanotrophic bacteria in flooded soil as affected by rice cultivars

Studies on the mechanism of heat-tolerance of tropical and subtropical crops

Liu Jian	Institute of Stress Plant of Shandong People's Republic of China	Expression of heat tolerance-relative genes in tomato reproductive organs.
----------	---	--

Identification and evaluation of salt-tolerant crops

Safdar Hussain Shah	Agricultural Research Station, Dhodial Mansehra Pakistan	Physiological, biochemical and genetic characterization of salinity tolerance in rice
Li Chengyun	Plant Protection Research Institute Yunnan Academy of Agricultural Sciences People's Republic of China	Selection and detection of salt responsive mutants in rice (<i>Oryza sativa</i> L.)
Sumana-singhe Vithanaa ra-chchige Ariyawanse	University of Peradeniya Sri Lanka	Expression and evaluation of salinity stress related genes in <i>Oryza sativa</i> L.
Masood M. Shahid	National Agricultural Research Center Pakistan	Identification and evaluation of salinity tolerance in rice (<i>Oryza sativa</i> L.) using molecular markers
Bakhtiyor Yaku:bov	Institute of Genetics Uzbekistan	Molecular study of the heat-shock inducible genes in a highly heat-tolerant variety of <i>Brassica oleracea</i> var. <i>capitata</i> L.

Evaluation and development of long-term conservation techniques of genetic resources of vegetatively propagated crops in the tropics and subtropics

Narinder Pal Singh Dhillon	Punjab Agricultural University India	RAPD and AFLP analysis of genetic diversity in sweet potatoes (<i>Ipomea batatas</i> L.)
-------------------------------	--------------------------------------	---

from October 1998 to September 1999

Development of techniques for environmental control by using plants and microorganisms specific to the tropics and subtropics

Wang Bujun	Institute of Crop Breeding and Cultivation People's Republic of China	Methane emission and carbon cycling in rice fields as affected by elevated atmospheric CO ₂ concentration and environmental factors
------------	--	--

Studies on the mechanism of heat-tolerance of tropical and subtropical crops

Md. Abdul Karim	Institute of Postgraduate Studies in Agriculture Bangladesh	Interactive effect of thermal and irradiance stresses on some physiological and biochemical parameters of grain legumes and mangos
Liu Jian	Shandong Teachers' University People's Republic of China	Cloning of heat tolerance-related genes from tomato reproductive tissue
Hu Xinwen	National Key Biotechnology Laboratory for Tropical Crops, Chinese Academy of Tropical Agricultural Sciences People's Republic of China	Development of microsatellite markers in snap beans
<i>Identification and evaluation of salt-tolerant crops</i>		
M. Arumugam Pillai	Tamilnadu Agricultural University India	Screening of a cDNA library for a salt tolerant gene in rice
<i>Evaluation and development of long-term conservation techniques of genetic resources of vegetatively propagated crops in the tropics and subtropics</i>		
Rubio Calderon Armando	Instituto Nacional Autonomo de Investigaciones Agropecuarias Ecuador	Evaluation and characterization of oligofructan content in yacon germplasm
Chamwan B angwaek	Prachinburi Rice Research Center Thailand	Enzyme activity related to sugar accumulation in sugarcane
Maribel R. Quintana Sanz	Institute of Pastures and Forages Research Cuba	Evaluation of genomic diversity of sugar related enzyme genes and sugarcane genetic resources
Narinder Pal Singh Dhillon	Punjab Agricultural University India	Genetic variation and relationships in sweet potato populations detected with RAPD and AFLP markers

JIRCAS Visiting Research Fellowship Program at Tsukuba

A program similar to the Okinawa Visiting Research Fellowship Program has been implemented on the Tsukuba premises since October 1995. The Tsukuba Visiting Research Fellowship Program aims to promote collaborative research to address various problems confronting countries in developing regions. The program allows for the invitation of six to eight researchers per year. Four researchers engage in two-year projects at JIRCAS and two to four researchers conduct short five-month projects at the National Institute for Agrobiological Resources (NIAR). Recent invitees and their research activities are listed below.

More information on the Tsukuba Visiting Research Fellowship Program can be obtained by contacting the International Relations Section, Japan International Research Center for Agricultural Sciences, 1-2, Ohwashi, Tsukuba, Ibaraki, 305-8686, Japan. (Tel. : +81-298-38-6335 Fax: +81-298-38-6337; e-mail: irs@jircas.affrc.go.jp).

Photo : Host scientist and Tsukuba fellow engaged in experiment on prawn physiology at the Fisheries Division

Long-term JIRCAS from October 1996 to September 1998

Methods for optimum utilization of biological resources

Zabta Khan Shinwari	National Agricultural Research Center Pakistan	Analysis of plant responses to environmental stresses and gene expression
Gassinee Trakoontivakorn	Kasetsart University Thailand	Development of practical methods for the evaluation of the quality of indigenous crops and for the analysis of components and functionality of foods

Analysis and evaluation of the impact of climatic and anthropogenic factors on environmental resources

Qian Minze	Tsinghua University People's Republic of China	Relation between climatic changes and biomass in agro-ecosystems
Yang Hao	The Institute of Soil Science, Academia Sinica People's Republic of China	Investigations of the process of rock-weathering through the analysis of the rock surface by electron spectroscopy

Long-term at JIRCAS from October 1997 to September 1999

Methods for optimum utilization of biological resources

Mohammad Masud Parvez	Bangladesh Agricultural Institute Bangladesh	Molecular analysis of abscisic acid-mediated control of gene expression in higher plants under water stress
Vuong Dinh Tuan	Cuu Long Delta Rice Research Institute Vietnam	Tagging and cloning of salt tolerant genes in rice using AFLP markers

Analysis and evaluation of the impact of climatic and anthropogenic factors on environmental resources

Li Zhong	Institute of Soil Science, Academia Sinica People's Republic of China	Effects of doubling CO ₂ concentration on carbon and nitrogen cycles in soil-rice ecosystems
Muhammad Akhtar Abbas	University of Agriculture, Faisalabad Pakistan	Analysis of land environmental change in semi-arid areas using remote sensing and GIS

Long-term at JIRCAS from October 1998 to September 2000

Methods for optimum utilization of biological resources

Joseph Gogo Dubouzet	University of the Philippines, The Philippines	Molecular analysis of drought stress responses in rice
Vipaporn Na Thalang	Kasetsart University Thailand	Chemical and biological evaluation of Thai vegetables (Fam. Leguminosae)
Do Thi Thanh Huong	Cantho University Vietnam	Physiological studies on reproduction and osmoregulation in the giant freshwater prawn, <i>Macrobrachium rosenbergii</i>

Systems analysis of food problems and rural development

Guo Jianjun	Research Center for Rural Economy People's Republic of China	Econometric analysis on food consumption by Chinese farm households
Short-term at NIAR from October 1998 to February 1999		
Irina Olegovaa Vvedenskaya	All-Russian Institute of Plant Industry Russia	The molecular basis of protein markers in wild relatives of crops
Short-term at NIAR from 1998 to March 1999		
Dea de Lima Vidal	University of Zaragoza Brazil	Economic and breeding evaluation of animal genetic resources in developing countries
Aboagye Lawrence Misa	Plant Genetic Resources Center Ghana	Evaluation of diversity for a starch synthetic gene in wheat
Dennis Yeo	National Institute of Agrobiological Resources Singapore	Development of strategy to generate male-sterile plants using a transcription factor gene

SYMPOSIA AND WORKSHOPS

1) INTERNATIONAL SYMPOSIA

Between 1967 and 1993, the Tropical Agricultural Research Center (TARC) sponsored annual international symposia for the purposes of promoting scientific exchange and accurately gauging and responding to the agriculture, forestry, and fishery needs of the world's developing areas. Since its transition from TARC, JIRCAS has continued this practice, organizing its first International Symposium in Fiscal Year (FY) 1994. At present, each symposium is organized around a theme of central importance to international agricultural research, and roughly ten researchers and administrators from concerned research institutes and international agencies are invited as speakers. Symposia are ordinarily held in joint sponsorship with a relevant scientific society or research organization. The program from the FY 1998 International Symposium appears below.

- [The 5th JIRCAS International Symposium Postharvest Technology in Asia - A step forward to stable supply of food products -.](#)

2) SPECIAL PROGRAMS

- [International Workshop on Learning from Farming Systems Research in Indonesia.](#)
- [Workshop on a Cooperative Research Project Between Thai Institutes and JIRCAS on Sustainable Agricultural Systems in Northeast Thailand.](#)
- ["Plant Signaling": Molecular Responses to Environmental Stimuli and Stress.](#)
- [JIRCAS / IPGRI Joint International Workshop on Cryopreservation of Tropical Plant Germplasm.](#)
- [Fourth Seminar for "Brackish Water Project" Held in Malaysia.](#)

3) WORKSHOP AND SEMINARS

- [International Research Seminars](#)
- [International Research Workshops](#)

4) MISCELLANEOUS MEETINGS AND WORKING GROUPS

- [Annual Meeting for the Review and Promotion of Research](#)
- [JIRCAS Return Seminars](#)
- [Review and Promotion of International Research Collaboration - Committee Meetings](#)
- [Comprehensive Project Working Group Meetings](#)

The 5th JIRCAS International Symposium POSTHARVEST TECHNOLOGY IN ASIA - A STEP FORWARD TO STABLE SUPPLY OF FOOD PRODUCTS -

(Held September 9 -10, 1998, in Tsukuba, Japan, in conjunction with the National Food Research Institute (NFRI), National Agriculture Research Center, Food Forum Tsukuba, and the Nestle Science Promotion Committee).

Opening addresses

- Inaugural address by Dr. Nobuyoshi Maeno, Director General, Japan International Research Center for Agricultural Sciences (JIRCAS), Ministry of Agriculture, Forestry and Fisheries (MAFF), Japan
- Welcome address by Mr. Sakue Matsumoto, Chairman, Secretariat of the Agriculture, Forestry and Fisheries Research Council (AFFRC), Ministry of Agriculture, Forestry, and Fisheries(MAFF), Japan

Keynote speech

“Role of postharvest technology research for promoting a sustainable food supply” by Dr. Keiji Kainuma, Vice-President, Bio-oriented Technology Research Advancement Institution, (BRAIN), Japan

Session 1: Main priorities and constraints of postharvest technology in Asia

Chaired by Dr. Silvestre C. Andales, Bureau of Postharvest Research and Extension, the Philippines and Dr. Kunio Tsubota, JIRCAS, Japan

- Priorities and constraints of postharvest technology in Vietnam. L. V. To, Postharvest Technology Institute, Vietnam
- Priorities and constraints of postharvest technology in the Philippines. S. C. Andales, Bureau of Postharvest Research and Extension, the Philippines
- Postharvest problems in Thailand: Priorities and constraints. J. Siripanich, Kasetsart University, Thailand
- Main postharvest problems and countermeasures for agricultural products in China. S. Q. Feng, China Agricultural University, People’s Republic of China
- Priorities and constraints of postharvest technology in India. A. Ramesh, Central Food Technological Research Institute, India

Session 2: Current development and future orientation for technology of grain storage and preservation in the tropics

Chaired by Dr. Bruce R. Champ, formerly of the Australian Center for International Agricultural Research, Australia and Dr. Hiroshi akakita, NFRI, Japan

- Alternative chemicals for methyl bromide. B. R. Champ, formerly of the Australian Center for International Agricultural Research, Australia
- Hermetic storage of grains in the tropics. F. M. Caliboso, Bureau of Postharvest Research and Extension, the Philippines
- Role of biological control in grain storage in the tropics. H. Nakakita, NFRI, Japan
- Minimizing aflatoxin production in grains in the tropics. P. Siriacha, Kasetsart University, Thailand
- Strategies to maintain grain quality in the humid tropics. M. Sidik, Ministry of Food and Horticulture, Indonesia

General discussion and conclusions for Sessions 1 and 2

Chaired by Dr. Silvestre C. Andales, Bureau of Postharvest Research and Extension, the Philippines and Dr. Kunio Tsubota, JIRCAS, Japan

- General comments "Postharvest technology in Asia: ACIAR’s framework for collaborative research and development." G. I. Johnson, Australian Center for International Agricultural Research, Australia
- General discussion

Session 3: Current situation and future orientation of technology for food industries in Asia

Chaired by Dr. Akinori Noguchi, JIRCAS, Japan and Dr. Cherl-Ho Lee, Korea University, Korea Brief introduction by the Chairperson

- Development and constraints of food industries in Thailand. S. Maneepun, Kasetsart University, Thailand
- Development and constraints of food industries in the Philippines. J. S. Falla, Bureau of Postharvest Research and Extension, the Philippines
- Development and constraints of food industries in China. D. Yong, China Agricultural University, People's Republic of China
- Development and constraints of food industries in Indonesia. M. A. Wirakartakusumah, Institute Pertanian Bogor, Indonesia
- Development and constraints of food industries in Taiwan. T. Y. Liu, Food Industry Research and Development Institute, Taiwan
- Development and constraints of food industries in Korea. C. H. Lee, Korea University, Korea
- Development and constraints of food industries in Japan. H. Uehara, Nihon University, Japan

General discussion and conclusions for Session 3

Chaired by Dr. Saipin Maneepun, Kasetsart University, Thailand and Dr. Akinori Noguchi, JIRCAS, Japan

- Summary of Session 3 by the Chairperson
- General comments by Dr. Yoshihito Kadoma, Nihonyushi Co., Ltd., Japan
- General comments by Dr. Hajime Taniguchi, NFRI, Japan
- General comments by Dr. Cherl-Ho Lee, Korea University, Korea
- General discussion
- Summarization and conclusive remarks by the Chairperson

Closing remarks by Dr. Hajime Taniguchi, Director General, NFRI, Japan

INTERNATIONAL WORKSHOP ON LEARNING FROM FARMING SYSTEMS RESEARCH IN INDONESIA

An international workshop “Learning from farming systems research in Indonesia,” jointly organized by JIRCAS and the Center for Agro-Socioeconomic Research (CASER), the Agency for Agricultural Research and Development (AARD), the Ministry of Agriculture, the Republic of Indonesia, was held in Bogor, Indonesia on March 3-4, 1999. This two-day workshop outlined an on-going collaborative study between CASER and JIRCAS on the history and present conditions of farming systems research within the AARD organizations of Indonesia.

An international workshop “Learning from farming systems research in Indonesia,” jointly organized by JIRCAS and the Center for Agro-Socioeconomic Research (CASER), the Agency for Agricultural Research and Development (AARD), the Ministry of Agriculture, the Republic of Indonesia, was held in Bogor, Indonesia on March 3-4, 1999. This two-day workshop outlined an on-going collaborative study between CASER and JIRCAS on the history and present conditions of farming systems research within the AARD organizations of Indonesia.

The workshop participants approached the following key questions from various angles and with diverse personal experiences.

- How can we interpret the past 25 years of FSR in Indonesia?
- What are the roles and relationships of researchers and extension specialists in FSR?
- What are the roles of the social and natural sciences in the farming systems (FS) approach?
- How adequate or inadequate is the institutional framework for FSR in Indonesia today?
- Foreign assistance, commitment, and intervention in FSR: How can Indonesia use these most effectively?
- Technology and the FS approach: “Assessment of Agricultural Technology” vs. Technology of “Assessment”

Approximately fifty individuals from Indonesia, Japan, Australia, and the USA participated in the workshop. Supported by the experienced staff of CASER, the workshop went smoothly with a high level of focus. All participants realized that the FSR system still needs improvement and stressed the importance of mutual learning and exchanging diverse views. The proceedings of the workshop will be published by JIRCAS in 1999/2000.

Workshop schedule

Day 1

- Welcome address. Erwidodo, Center for Agro-Socioeconomic Research (CASER), Indonesia
- Welcome address. Kunio Tsubota, Japan International Center for Agricultural Sciences (JIRCAS), Japan
- Opening remarks. Joko Budianto, Agency for Agricultural Research and Development (AARD), Indonesia
- Farming Systems Research: Evolution, issues, and new directions building on 25 years of contributions. J. S. Caldwell, Virginia Polytechnic Institute and State University, USA
- Farming Systems Research in Indonesia: Lessons learned and future directions. M. O. Adnyana, Center for Agro-Socioeconomic Research (CASER), Indonesia
- Foreign assistance and commitment. A. Rachman and A. Abdurachman, Center for Soil and Agroclimate Research, Indonesia

- Collaboration between natural and social scientists. Sumarno, H. Taslim, and D. Pasaribu, Central Research Institute for Food Crops, Indonesia
- Institutional framework and restructuring. Hermanto, Assessment Institutes for Agricultural Technology (AIAT-Ungaran), Indonesia
- Technology and the Farming Systems approach. A. Dimiyati, Assessment Institutes for Agricultural Technology (AIAT-Lembang), Indonesia

Day 2

- Challenge for today's research and extension community. A. Martaamidjaja, Center for Agricultural Extension, Indonesia
- Case study presentations from previous and on-going research projects
- Rural transformation under rapid economic growth in West Java. S. Yokoyama, National Research Institute of Agricultural Economics, Japan, W. Sudana, A. S. Bagyo, and A. K. Zakaria Center for Agro-Socioeconomic Research (CASER), Indonesia
- A follow-up socio-economic study of the banana-based farming systems research project in Cibinong, Cianjur, West Java. J. Goto, Japan International Research Center for Agricultural Sciences (JIRCAS), Japan, H. Mayrowani, and Austian, Center for Agro-Socioeconomic Research (CASER), Indonesia
- Research and extension linkage in FS: A field experience. Surachman and Kuscahyo, Assessment Institutes for Agricultural Technology (AIAT-Ungaran), Indonesia
- Case study presentations from previous and on-going research projects
- Farming systems research in South Sumatera: Lessons learned and their implications. M. O. Adnyana, Center for Agro-Socioeconomic Research (CASER), Indonesia
- The perspective of a sustainable agricultural farming system in the Imperata grassland area in Indonesia. I. W. Rusastra, Center for Agro-Socioeconomic Research (CASER), Indonesia and K. Menz, Australian Center for International Agricultural Research, Australia
- Discussion on new orientation, application and follow up
- Closing remarks

WORKSHOP ON A COOPERATIVE RESEARCH PROJECT BETWEEN THAI INSTITUTES AND JIRCAS ON SUSTAINABLE AGRICULTURAL SYSTEMS IN NORTHEAST THAILAND

On December 9, 1998, JIRCAS welcomed Dr. Ananta Dalodom, Director General, Department of Agriculture (DOA), and Mr. Pawit Watanavitawas, Director, International Training Center for Agricultural Development (ITCAD), DOA, Thailand to a workshop on a cooperative research project between Thai Institutes and JIRCAS on sustainable agricultural systems in northeast Thailand. Following a welcome address given by JIRCAS Director General Dr. N. Maeno, Dr. Dalodom and Mr. Watanavitawas each addressed the audience and then took questions concerning their speeches. The project's research coordinator and directors of the relevant JIRCAS divisions then commented briefly on their current work.

In the course of the address, Dr. Dalodom requested JIRCAS cooperation on two new research projects: 1) forecasting crop production in Thailand and the utilization of advanced technologies for planning and monitoring that production; and 2) research and development of postharvest technology. This request is now under consideration at JIRCAS.

- Ⓢ Welcome address: N. Maeno, Director General, Japan International Research Center for Agricultural Sciences (JIRCAS), Japan
- Ⓢ Research activities for sustainable agriculture in northeast Thailand. A. Dalodom, Director General, Department of Agriculture (DOA), Thailand
- Ⓢ Collaboration of ITCAD in the field management study. P. Watanavitawas, Director, International Training Center for Agricultural Development (ITCAD), Department of Agriculture (DOA), Thailand
- Ⓢ Question and answer period
- Ⓢ General situation of the project from the Japanese side. S. Matsui, Research Coordinator, Japan International Research Center for Agricultural Sciences (JIRCAS), Japan
- Ⓢ Studies on environmental resources. T. Hamazaki, Director, Environmental Resources Division, Japan International Research Center for Agricultural Sciences (JIRCAS), Japan
- Ⓢ Studies on bio-resources. T. Hoshino, Director, Bio-resources Division, Japan International Research Center for Agricultural Sciences (JIRCAS), Japan
- Ⓢ Studies on livestock production. S. Shimizu, Director, Animal Production and Grassland Division, Japan International Research Center for Agricultural Sciences (JIRCAS), Japan
- Ⓢ Studies on agricultural systems. A. Noguchi, Director, Crop Production and Postharvest Technology Division, Japan International Research Center for Agricultural Sciences (JIRCAS), Japan
- Ⓢ Studies on socio-economics. K. Tsubota, Director, Research Information Division, Japan International Research Center for Agricultural Sciences (JIRCAS), Japan
- Ⓢ Studies on reforestation. K. Tanaka, Director, Forestry Division, Japan International Research Center for Agricultural Sciences (JIRCAS), Japan
- Ⓢ General discussion

"PLANT SIGNALING": MOLECULAR RESPONSES TO ENVIRONMENTAL STIMULI AND STRESS

An international symposium on "Plant Signaling: Molecular Responses to Environmental Stimuli and Stress" organized by JIRCAS, in conjunction with the Institute of Chemical and Physical Research (RIKEN) and the Bio-oriented Technology Research Advancement Institution (BRAIN) was held at JIRCAS, Tsukuba, on August 12th, 1998. This symposium gathered scientists researching plant signal transduction and responses to biotic and abiotic environmental stresses to share their results and ideas for the future.

In recent years, food supply and environmental deterioration problems on a global scale have become increasingly critical, especially in developing regions. Biotechnology could be a useful method to increase food production through the development of crops with improved tolerance to biotic and abiotic environmental stresses. To develop the biotechnology to breed stress tolerant crops, basic research on plant molecular biology is important. Recently, considerable progress has been made in understanding how plants sense and respond to the varied stimuli in their environment.

Molecular and genetic approaches have led to great progress in many aspects of plant signaling research, including the explanation of how environmental stimuli and stress elicit the production of second messengers and how plant cells perceive the messengers. In addition, these approaches have led to an increased understanding of the induction of specific responses to and the

physiological consequences of environmental stimuli and stress. The most active scientists specializing in plant signaling were invited to present lectures at the symposium. From 10 countries, 191 scientists participated in the symposium. Dr. Nobuyoshi Maeno, Director General of JIRCAS and Dr. Keiji Kainuma, Vice President of BRAIN, gave the welcome addresses. The keynote lecture was delivered by Professor Nam-Hai Chua, Rockefeller University, USA, and 10 foreign scientists from the USA, France, Germany, England, Austria and 4 Japanese scientists presented papers in three sessions: ethylene signaling and biotic stress response, ABA signaling and water stress response, and short talks. The symposium was successful and valuable information was exchanged throughout the discussions.

Keynote lecture

Chaired by Dr. K. Shinozaki, The Institute of Physical and Chemical Research (RIKEN), Japan

- Ⓢ Molecular and genetic dissection of plant signaling pathways. N.H. Chua, The Rockefeller University, USA

Session I: Ethylene signaling and biotic stress response

Chaired by Dr. K. Yamaguchi-Shinozaki, Japan International Research Center for Agricultural Sciences (JIRCAS), Japan

- Ⓢ Ethylene gas signaling from the membrane to the nucleus. J. R. Ecker, University of Pennsylvania, USA
- Ⓢ Regulation of gene expression by plant hormone ethylene. H. Shinshi, National Institute of Bioscience and Human-Technology (NIBHT), Japan

- Ⓢ Function of a tobacco ethylene-insensitive 3 homolog as a transcription factor. S. Kosugi and Y. Ohashi, National Institute of Agrobiological Resources (NIAR), Japan

Session II: ABA signaling and water stress response

Chaired by Dr. J. R. Ecker, University of Pennsylvania, USA and Dr. J. Giraudat, Centre National de la Recherche Scientifique (CNRS), France

- Ⓢ Genetic analysis of abscisic acid signaling in Arabidopsis. J. Giraudat, Centre National de la Recherche Scientifique (CNRS), France
- Ⓢ Gene expression and signal transduction in water stress responses. K. Yamaguchi-Shinozaki, Japan International Research Center for Agricultural Sciences (JIRCAS), Japan
- Ⓢ Genetic Analysis of salt stress signal transduction in Arabidopsis thaliana. J. K. Zhu, University of Arizona, USA
- Ⓢ Gene expression during dehydration studied in a resurrection plant. D. Bartels, Max Planck Institute, Germany
- Ⓢ Role of drought-inducible genes in stress response and tolerance. K. Shinozaki, The Institute of Physical and Chemical Research (RIKEN), Japan

Session III: Short Talks

Chaired by Dr. K. Shinozaki, The Institute of Physical and Chemical Research (RIKEN), Japan

- Ⓢ Protein kinase pathways involved in plant pathogen signaling. H. Hirt, Vienna Biocenter, Austria
- Ⓢ Promoter complexes and transacting factors involved in ABA regulated gene expression. T. D. D. Ho, Washington University, USA
- Ⓢ A unique way to identify an abscisic acid signaling component. B. Leyman, London University, UK
- Ⓢ Stress-regulated ion channels in guard cells. S. Luan, University of California, USA
- Ⓢ Integration of sugar and stress signal transduction pathways. T. Roitsch, University Regensburg, Germany

JIRCAS / IPGRI JOINT INTERNATIONAL WORKSHOP ON CRYOPRESERVATION OF TROPICAL PLANT GERMPLASM

Intensive exploration and collection activities in recent years have encouraged the collection of plant germplasm throughout the world. The development of safe and cost effective techniques for the long-term conservation of the specimens, especially recalcitrant seed- and vegetatively propagated species, is considered a priority research area.

For long-term conservation of problem species, cryopreservation is the only method currently available. Dramatic progress has been made in recent years in the development of new cryopreservation techniques, and cryopreservation protocols have been established for over 100 different plant species. However, cryopreservation of tropical and sub-tropical species has been less extensively investigated than that of temperate species.

Against this background, JIRCAS and the International Plant Genetic Resources Institute (IPGRI) jointly organized an international workshop on "Cryopreservation of tropical plant germplasm: Current research progress and application" held at JIRCAS, Tsukuba, Japan, October 20-23, 1998. In an increasing number of national programs in the tropics there has been a growing awareness of the importance of cryopreservation, and research activities in this field have been recently initiated. Thus, the workshop was timely in providing a unique opportunity for cryopreservation researchers to meet to exchange information and discuss numerous aspects of the cryopreservation of tropical plant species.

The workshop enjoyed active discussions concerning the current status of research, its present application, and existing problems with cryopreservation of plant germplasm. With a strong focus on tropical species, the workshop also identified priority areas for collaborative research and the development, transfer, and application of technology. It was pointed out that the workshop could be a good start for establishing a network in the field of germplasm conservation to facilitate international research collaboration.

Opening address

Inaugural address by Dr. Nobuyoshi Maeno, Director General, Japan International Research Center for Agricultural Sciences (JIRCAS)

Keynote addresses

Chaired by Dr. Tsuguhiro Hoshino, Japan International Research Center for Agricultural Sciences (JIRCAS)

- Development of cryopreservation techniques. A. Sakai, Hokkaido University, Japan
- Importance of cryopreservation for the conservation of plant genetic resources. F. Engelmann, International Plant Genetic Resources Institute (IPGRI), Italy

Session 1: Fundamental aspects of cryopreservation

Chaired by Dr. David Cyr, BC Research Inc., Canada

- Freezing behaviors in plant tissues as visualized by NMR microscopy and their regulatory mechanisms. M. Ishikawa, National Institute of Agrobiological Resources (NIAR), Japan
- Ultrastructural aspects for freezing adaptation of cells by vitrification. S. Fujikawa, Hokkaido University, Japan

Chaired by Dr. Patricia Berjak, University of Natal, South Africa

- The use of physical and biochemical studies to elucidate and reduce cryopreservation-induced damage in hydrated/desiccated plant germplasm. D. Dumet, University of Abertay-Dundee, UK
- Physiological and molecular changes in tobacco suspension cells during development of tolerance to cryopreservation by vitrification. P. J. Reinhoud, Leiden University, the Netherlands
- Molecular mechanisms of freezing and drought tolerance in plants. K. Yamaguchi-Shinozaki, Japan International Research Center for Agricultural Sciences (JIRCAS), Japan
- Cryopreservation of medicinal plant resources: Retention of bio-synthetic capabilities in transformed cultures. K. Yoshimatsu, National Institute of Health Sciences, Japan

Session 2: Cryopreservation techniques

[Cryopreservation of plant cells]

Chaired by Dr. Masaya Ishikawa, National Institute of Agrobiological Resources (NIAR), Japan

- Cryopreservation of undifferentiated plant cells. P. J. Reinhoud, Leiden University, the Netherlands
- Cryopreservation of banana embryogenic cell suspensions: A tool for genetic engineering. B. Panis, Catholic University of Leuven, Belgium
- Cryopreservation of sugarcane embryogenic callus using a simplified freezing process. F. Engelmann, International Plant Genetic Resources Institute (IPGRI), Italy

[Cryopreservation of pollen]

Chaired by Dr. William Roca, International Center for Tropical Agriculture (CIAT), Colombia

- Use of stored pollen for wide crosses in wheat haploid production. M. N. Inagaki, Japan International Research Center for Agricultural Sciences (JIRCAS), Japan
- Storage of pollen for long-term conservation of yam genetic resources. N.Q. Ng, International Institute of Tropical Agriculture (IITA), Nigeria

[Cryopreservation of embryos]

Chaired by Dr. H.F. Chin, International Plant Genetic Resources Institute (IPGRI), Italy

- Cryopreservation of embryonic axes. P. Berjak, University of Natal, South Africa
- Cryopreservation of zygotic embryos of tropical fruit trees: A study on *Lansium domesticum* and *Baccaurea* species. M.N. Normah, University Kebangsaan Malaysia, Malaysia
- Cryopreservation of coffee (*Coffea arabica* L.) seeds: Towards a simplified protocol for routine use in coffee genebanks. S. Dussert, Institute de Recherche Pour le Developpement (ORSTOM), France
- Cryopreservation of melon somatic embryos by the desiccation method. K. Shimonishi, Kagoshima Biotechnology Institute, Japan
- Cryopreservation of oil palm (*Elaeis guineensis* Jacq.) polyembryonic cultures. D. Dumet University of Abertay-Dundee, UK

[Cryopreservation of apices]

Chaired by Dr. Florent Engelmann, International Plant Genetic Resources Institute (IPGRI), Italy

- Recent development in cryopreservation of shoot apices of tropical species. H. Takagi, Japan International Research Center for Agricultural Sciences (JIRCAS), Japan

Cryopreservation of vegetatively propagated species (mainly mulberry). T. Niino, Tohoku National Agricultural Experimental Station, Japan

Genotype considerations in temperate fruit crop cryopreservation. B.M. Reed, United States Department of Agriculture-Agricultural Research Station, USA

Chaired by Dr. Tsukasa Nagamine, National Institute for Agrobiological Resources (NIAR), Japan

Cryopreservation of in vitro-grown meristems of potato (*Solanum tuberosum* L.) by encapsulation vitrification. D. Hirai, Hokkaido Prefectural Plant Genetic Resources Center, Japan

Cryopreservation of in vitro-cultured meristems of wasabi. T. Matsumoto, Shimane Agricultural Experiment Station, Japan

Cryopreservation of citrus apices using the encapsulation-dehydration technique. F. Engelmann, International Plant Genetic Resources Institute (IPGRI), Italy

Development of cassava cryopreservation. R.H. Escobar, International Center for Tropical Agriculture (CIAT), Colombia

Chaired by Dr. Mary Taylor, Secretariat for the Pacific Community, Fiji

Cryopreservation of in vitro-grown shoot tips of five vegetatively propagated tropical monocots by the vitrification technique. N.T. Thin, Nuclear Research Institute, Vietnam

Cryopreservation of yam apices: A comparative study with three different techniques. B.B. Mandal National Bureau of Plant Genetic Resources, India

Cryopreservation of proliferating meristem cultures of banana. B. Panis, Catholic University of Leuven, Belgium

Poster session

Fifty-one technical papers were presented in this session.

Discussion on cryopreservation techniques

Chaired by Dr. Barbara M. Reed, United States Department of Agriculture-Agricultural Research Station, USA

Dr. M.N. Normah, Universiti Kebangsaan Malaysia, Malaysia

Dr. Bart Panis, Catholic University of Leuven, Belgium

Session 3: On-going cryopreservation projects: Research and its application

Chaired by Dr. S. K. Ng, International Institute of Tropical Agriculture (IITA), Nigeria

Application of cryopreservation protocols at a clonal gene bank. B. M. Reed, United States Department of Agriculture-Agricultural Research Station, USA

Advances in potato cryopreservation at the International Potato Center, Peru. A. Golmirzaie, International Potato Center (CIP), Peru

The in vitro germplasm collection at the Musa INIBAP Transit Center and the importance of cryopreservation. B. Panis, Catholic University of Leuven, Belgium

Cryopreservation: Roles in clonal propagation and germplasm conservation of conifers. D. Cyr, BC Research Inc., Canada

Conservation of threatened flora by cryopreservation of shoot apices. D. Touchell, United States Department of Agriculture-Agricultural Research Station, US

Conservation and cryopreservation of tropical tree species. C. Kirdmanee, National Center for Genetic Engineering and Biotechnology, Thailand

Conservation and cryopreservation of tropical tree species. C. Kirdmanee, National Center for Genetic Engineering and Biotechnology, Thailand

Session 4: Current status of cryopreservation research and future perspectives of its application in national programs

Chaired by Dr. H.F. Chin, International Plant Genetic Resources Institute (IPGRI), Italy

- [India]: Cryopreservation research in India: Current status and future perspectives. B.B. Mandal, National Bureau of Plant Genetic Resources, India
- [Malaysia]: Current status of cryopreservation research and future perspectives of its application in Malaysia. M.N. Normah, Universiti Kebangsaan Malaysia, Malaysia
- [Indonesia]: Cryopreservation of tropical plants: Current research status in Indonesia. E. Sudarmonowati, Indonesian Institute of Sciences, Indonesia
- [Thailand]: Status and future prospects of cryopreservation in Thailand. C. Kirdmanee, National Center for Genetic Engineering and Biotechnology, Thailand
- [Philippines]: Philippines: Conservation and cryopreservation research. A. Zamora University of the Philippines Los Baños, the Philippines
- [Vietnam]: Current status and future perspectives of plant cryopreservation in Vietnam. N.T. Thinh, Nuclear Research Institute, Vietnam
- [China]: Cryopreservation of plant germplasm in China. T. G. Lu, Chinese Academy of Sciences, China
- [South Africa]: Current status of cryopreservation research and future perspectives of its application in South Africa. P. Berjak, University of Natal, South Africa
- [Nigeria]: Applying cryopreservation techniques in national programs in Nigeria. P.M. Kyesmu, University of Jos, Nigeria
- [Costa Rica]: Current status of cryopreservation research and future perspectives for its application in Costa Rica. A. A. Esquivel, Costa Rica Institute of Technology, Costa Rica
- [South Pacific]: Current status of cryopreservation research and future perspectives of its application in the South Pacific. M.Taylor, Secretariat for the Pacific Community, Fiji

General Discussion and Summarization

Chaired by Dr. H.F. Chin, International Plant Genetic Resources Institute (IPGRI), Italy

- Dr. Barbara M. Reed, United States Department of Agriculture-Agricultural Research Station, USA
- Dr. M.N. Normah, Universiti Kebangsaan Malaysia, Malaysia
- Dr. Bart Panis, Catholic University of Leuven, Belgium
- Dr. Masaya Ishikawa, National Institute of Agrobiological Resources (NIAR), Japan

Closing address

Dr. Florent Engelmann, International Plant Genetic Resources Institute (IPGRI), Italy

FOURTH SEMINAR FOR “BRACKISH WATER PROJECT” HELD IN MALAYSIA

On December 8-9, 1998, the 4th “Brackish Water Project” seminar was held in the Conference Room of the Hotel Equatorial Penang, Penang, Malaysia. This project, “Productivity and Sustainable Utilization of Tropical and Subtropical Brackish Water Mangrove Ecosystems,” aims to evaluate the productivity of the above areas and identify the criteria for sustainable resource utilization. The west coast of Peninsular Malaysia was initially selected as the study area due to the presence of various managed or exploited types of mangrove forests. Project counterpart organizations include the Fisheries Research Institute (FRI), the University of Malaya (UM), and the Forest Research Institute of Malaysia (FRIM).

Subjects addressed in the seminar were as follows: 1) forest and litter fall, 2) benthic communities, 3) aquatic organisms, 4) socio-economic aspects, and 5) environmental aspects. About 40 scientists and government officials from Japan, Malaysia, and Australia participated in the seminar, which included the presentation of fourteen papers. Mr. Hashim Ahmad, Deputy Director General, Department of Fisheries, Malaysia, gave the opening address and Dr. Shiroh Uno of JIRCAS presented closing remarks. The contents of seminar presentations are summarized below.

Forest and litter fall

- Litterfall of three different vegetations in the Matang Mangrove Forest, Peninsular Malaysia. Y. Ochiai, Japan International Research Center for Agricultural Sciences (JIRCAS), H. Tanouchi, S. Nakamura, Forestry and Forest Products Research Institute (FFPRI), Japan and A. Hassan, Forest Research Institute of Malaysia (FRIM)
- Stand structures and aboveground biomass of *Rhizophora apiculata* and *Rhizophora bruguiera* mixed forests in Matang, Perak, Malaysia. S. Nakamura, H. Tanouchi, Forestry and Forest Products Research Institute (FFPRI), Japan, Y. Ochiai, Japan International Research Center for Agricultural Sciences (JIRCAS), and A. Hassan, Forest Research Institute of Malaysia (FRIM)
- Biomass profile of a *Rhizophora-Bruguiera* forest in Matang, Perak, Peninsula Malaysia. S. Nakamura, H. Tanouchi, Forestry and Forest Products Research Institute (FFPRI), Japan, Y. Ochiai, Japan International Research Center for Agricultural Sciences (JIRCAS), and A. Hassan, Forest Research Institute of Malaysia (FRIM)
- Benthic diatoms and their possible contributions to the diet of herbivorous gastropods in mangrove areas in Okinawa, Japan. T. Kawamura, National Food Research Institute, Japan
- Relationship between meiofauna biomass and logging residues in mangrove: Three post-felling temporal and spatial variations. S. Ibrahim, Forest Research Institute of Malaysia (FRIM)
- Benthic macrofaunal distribution in the Sungai Selinsing, Matang Mangrove Forest Reserve, M. A. S. Hussein, A. Sasekumar and C. V. Ching, University of Malaysia (UM)
- Importance of mangroves toward sustainable fisheries resources on the west coast of Peninsular Malaysia (Research Scope). K. Kiso, Japan International Research Center for Agricultural Sciences (JIRCAS) and M. M. Isa, Fisheries Research Institute (FRI), Malaysia
- Comparison of ecological and taxonomic features of *Scylla* sp., in Balik Pulau, Merbok and Matang Mangroves. C. Daniels and C. P. Sze, Fisheries Research Institute (FRI), Malaysia
- Fish distribution and abundance in Matang / Merbok Mangrove brackish waters on the west coast of Peninsular Malaysia: Results in 1997 / 1998. S. Hayase, Seikai National Fisheries Research Institute, Japan
- Prawn production in the Matang and Sungai Dinding Mangroves: Species distribution and seasonal recruitment. L. C. Beng, C. V. Ching and L.H.S. Lim, University of Malaysia (UM), S. Hayase, Seikai National Fisheries Research Institute, Japan
- Sustainable commercialized utilization and local response to the wise use of Matang Mangroves. L. H. Fui, Forest

Research Institute of Malaysia (FRIM)

Physico-chemical environment of the Matang and Sungai Dinding Mangroves (Malaysia). C. V. Ching, A. Sasekumar, L. C. Beng and M. A. S. Hussein, University of Malaysia (UM)

Influence of nutrient out-welling from the mangrove swamps on the distribution of phytoplankton in the Matang Mangrove Estuary, Malaysia. K. Tanaka, National Research Institute of Fisheries Science (NRIFS), Japan and C. P. Sze, Fisheries Research Institute (FRI), Malaysia

Environmental valuation of the utilization of mangrove forests in the Kuala Selangor District, Selangor (Malaysia). L. L. Fun, University of Malaysia(UM)

WORKSHOPS and SEMINARS

International Research Seminars

International research seminars are held throughout the year, either at JIRCAS premises or overseas, with foreign guests, Japanese specialists, or JIRCAS staff presenting on topics of importance to international agricultural research. The following four seminars were held in FY 1998.

- September 8, 1998 **Research activities at the Australian Center for International Agricultural Research (ACIAR)**
Greg Johnson, Australian Center for International Agricultural Research (ACIAR)
- December 1-2, 1998 **High-value timber species for plantation establishment-teak and mahoganies**
Datuk Musa Haji Aman, INNOPRISE Corp., Malaysia, Haman Anjin, Sabah Forestry Department, Indonesia, and Kiyoshi Tanaka, Japan International Research Center for Agricultural Sciences (JIRCAS)
- December 8-9, 1998 **Fourth seminar on productivity and sustainable utilization of tropical and subtropical brackish water mangrove ecosystems**
Hashim Ahmad, Department of Fisheries, Malaysia, and Shiro Uno, Japan International Research Center for Agricultural Sciences (JIRCAS)
- March 17, 1999 **Evaluation, restoration, and preservation of soil productivity to establish sustainable agricultural systems in Sub-Saharan Africa**
Hank Breman, International Fertilizer Development Center (IFDC-Africa)

International Research Workshops

Attended jointly by JIRCAS researchers and foreign invitees, these workshops aim to facilitate discussion regarding the numerous collaborative research projects which JIRCAS is currently undertaking with counterpart institutions throughout the world.

- November 26, 1998 **Workshop on food supply-demand and extension systems for new agricultural technology in China**
Attended by representatives of JIRCAS; the Institute of Agricultural Economics, Chinese Academy of Agricultural Sciences (CAAS), People's Republic of China; Niigata University, and Tottori University, Japan
- December 9, 1998 **Workshop on new technologies for the development of sustainable agriculture in northeast Thailand**
Attended by representatives of JIRCAS, the National Agricultural Research Center (NARC) and the Forestry and Forest Products Research Institute (FFPRI), Japan
- February 22, 1999 **Workshop on development of utilization technology of freshwater fisheries resources**
Attended by representatives of JIRCAS; Shanghai Fisheries University, People's Republic of China; National Research Institute of Fisheries Science, the University of Tokyo, Hokkaido University, and Kyoto University, Japan

March 3-4, 1999

Learning from farming systems research experiences in Indonesia

Attended by representatives of JIRCAS, National Agricultural Research Center (NARC), National Research Institute of Agricultural Economics (NRIAE), Japan; Agency for Agricultural Research and Development (AARD), Center for Agro-Socio Economic Research (CASER), Center for Soil and Agroclimate Research (CSAR), Central Research Institute for Food Crops (CRIFC), Indonesia; Virginia Polytechnic Institute & State University, USA; and Australian Center for International Agricultural Research (ACIAR), Australia

March 12, 1999

Workshop on extension of new agricultural technology and evaluation of the effects of its extension in China

Attended by representatives of JIRCAS; the Institute of Agricultural Economics, Chinese Academy of Agricultural Sciences (CAAS), People's Republic of China

March 23-25, 1999

Workshop on evaluation and development of methods for sustainable agriculture and environmental conservation

Attended by representatives of JIRCAS; Chinese Academy of Agricultural Sciences (CAAS), the Institute of Soils and Fertilizers Agricultural Economics, CAAS, the Institute of Soil Science, Academia Sinica, People's Republic of China

March 24, 1999

Workshop on the management of biotic agents in direct seeded culture in Malaysia

Attended by representatives of JIRCAS; the Muda Agricultural Development Authority (MADA) and the Malaysian Agricultural Research and Development Institute (MARDI), Malaysia; and Saga University and Fukuoka Agricultural Research Center, Japan

MISCELLANEOUS MEETINGS and **WORKING GROUPS**

Annual Meeting for Review and Promotion of Research

JIRCAS conducts its Annual Meeting for the Review and Promotion of Research for International Collaboration in February, as the end of the fiscal year approaches. The purpose of the meeting is to review and evaluate the year's activities in detail in preparation for the subsequent fiscal year. All operations of JIRCAS are outlined, and research achievements deemed of particular importance are highlighted (see Research Overview: Research Division topics for more detail). Those in attendance at the meeting include JIRCAS directors and invited representatives from the Agriculture, Forestry and Fisheries Research Council (AFFRC), the Forestry Agency, the Fisheries Agency, and various research institutes affiliated with the Ministry of Agriculture, Forestry and Fisheries. In 1998, the meeting considered, as its principal theme, the agricultural field in current international cooperative efforts. Recognizing the importance of preserving and stabilizing food and environmental resources, the meeting focused on ways to advance JIRCAS's comprehensive project research in developing countries. Participants agreed that the comprehensive approach to regional agricultural problems, with its method of strategic planning and policy suggestions followed by multi-disciplinary research including socio-economic studies, best fulfilled JIRCAS commitment to international cooperation in agriculture.

JIRCAS Return Seminars

At JIRCAS, researchers returning from overseas dispatches or research projects give an oral presentation accompanied by a written summary of activities which is distributed to JIRCAS staff. These sessions are termed "JIRCAS Return Seminars" and are held during the interim or upon the completion of research projects and dispatch assignments. Such seminars are ordinarily held twice per month, and each year approximately thirty scientists give presentations.

Review and Promotion of International Research Collaboration - Committee Meetings

A series of committee meetings are convened throughout the year in order to review and promote international collaborative research. This body, which is responsible for all executive decisions pertaining to JIRCAS's activities, is headed by the Director of the Research Planning and Coordination

Division and consists of all directors of the Research Divisions and International Research Coordinators. Under this body, arrangements concerning dispatches of JIRCAS researchers on overseas assignments, project support by other domestic institutions are evaluated and authorized; the committee members are as well responsible for the evaluation of on-going projects and final decisions concerning the implementation of new research projects.

Comprehensive Project Working Group Meetings

During FY 1997, participants in eight comprehensive research projects gathered regularly in working groups to discuss the structure and progress of their studies on Mekong Delta farming systems, sustainable agricultural systems in northeastern Thailand, brackish water mangrove ecosystems in Malaysia, sustainable agropastoral systems in subtropical Brazil, the food production and distribution industries in the People's Republic of China, soybean cultivation in the Southern Cone of South America, rainfed rice cultivation in West Africa, and regional farming systems in Indonesia. Researchers studying Malaysia, Thailand, and Indonesia held formal meetings as highlighted above in this section. Beginning in 1999, researchers involved in the development of new technologies and their practice for sustainable farming systems in the Mekong Delta will also convene in similar discussion sessions to evaluate the progress of their project.

ADVISORS AND PRINCIPAL STAFF**JIRCAS Technical Advisory Committee FY 1998**

The JIRCAS Advisory Committee members generally convene one time each year for a round table discussion regarding policy formation, research direction, and project design at JIRCAS. The Committee consists of scientists and administrators representing various fields of international development. We actively seek their advice and opinions throughout the year and greatly value their participation in the affairs of JIRCAS. The Committee was initiated at the request of the Ministry of Agriculture, Forestry and Fisheries (MAFF) and the Agriculture, Forestry, and Fisheries Research Council (AFFRC).

Advisors	
Dr. Hisao Azuma	Vice-President, Japan International Cooperation Agency
Dr. Ronald P. Cantrell	Director General, International Rice Research Institute
Mr. Tadao Chino	Executive Director, Nomura Research Institute
Dr. Keiji Kainuma	Board Member, Bio-oriented Technology Research Advancement Institute
Dr. Fujio Kobayashi	Vice Chairman, Japan Forestry Association
Ms. Midori Miyazaki	Journalist
Dr. Kazuo Shima	President, Japan Fisheries Resource Conservation Association
Dr. Kunio Takase	Board Member, International Development Center of Japan
Dr. Saburo Yamada	Professor, College of Agriculture and Veterinary Medicine, Nihon University

Message from the Director General

*Dr. Nobuyoshi Maeno, Director General,
Japan International Research Center for Agricultural Sciences*

Building New Structures for Collaborative Research

During the time of the Tropical Agricultural Research Center (TARC), the predecessor of JIRCAS, collaborative research came to be conducted primarily in individual fields of research with particular research organizations in specific countries. There is no doubt that, based on unidisciplinary collaborative research efforts under such institute-to-institute relationships, we have achieved numerous valuable research results.

However, when TARC was reorganized into the present Japan International Research Center for Agricultural Sciences (JIRCAS) in 1993, the scope of our research objectives and, concomitantly, the number of partner countries and regions in our cooperative research program widened considerably. In order to respond to this newly expanded mandate within the constraints of limited resources, an emphasis on collaborative research and research structures differing from those previously utilized became necessary. As a result, a variety of new initiatives have been undertaken since the start of JIRCAS. One such initiative involves efforts to strengthen comprehensive research programs aimed at systematic multidisciplinary research in complement to the unidisciplinary approach characteristic of the past. At present, comprehensive research projects are underway in Thailand, Vietnam, Malaysia, the People's Republic of China, Brazil, Indonesia, and various other countries.

A [map](#) indicating the [comprehensive research projects being conducted by JIRCAS throughout the world](#) as of June, 1998.

As the scope of our research has broadened from unidisciplinary to multidisciplinary, the number of research organizations in partner countries with whom we maintain relationships has also quite naturally expanded. Consequently, institution-to-institution relationships of the past have become what might be called government-to-government relationships. In other words, relations which were once modest and cozy have been transformed into diplomatic ties. For this reason, a variety of formalities have become necessary in launching collaborative research projects, and I cannot deny that this invites some complications. At the same time, I can also say that relationships with partner countries have become more formalized and systematized.

These changes have allowed JIRCAS to pursue a broad range of additional international initiatives, some of which are described below.

Multinational Initiatives

In one new initiative, we have developed structures allowing us to implement research in collaboration with multiple countries regarding research problems spanning broad areas. Our collaborative soybean research project with the MERCOSUR countries Brazil, Paraguay, and Argentina provides one example. It marks our attempts since the days of TARC to move from cooperative relationships with individual countries toward cooperative multilateral relations within which we can work together with several countries simultaneously. Through these efforts, we have become better able with limited research resources to implement efficient and effective collaborative research for addressing problems common to several countries.

Furthermore, in the South American soybean project, we have created new research systems amenable to the participation of experts outside those organizations formally affiliated with the Ministry of Agriculture, Forestry and Fisheries. These arrangements

might be described as the practical application of the power of post-doctoral research, as they allow JIRCAS to complement the abilities of its own staff by adopting, for relatively long periods of time, outside experts to assist with multinational research projects. Many of these researchers have previously accumulated invaluable experience in conducting collaborative research in targeted areas of the developing world.

Additionally, in our comprehensive project on the "Sustainable production and utilization of major food resources in China," we have made possible the participation of researchers from Japanese prefectural agricultural organizations, which often conduct research highly relevant to the developing areas with which JIRCAS is most concerned. Now, in cooperation with JIRCAS, these organizations can take advantage of opportunities to dispatch personnel overseas and develop links with foreign countries.

Through these initiatives, the Institute hopes to be able to plan for further expansion in the ranks of researchers interested in international agricultural research collaboration, particularly with developing countries.

Photo: [Okinawa Visiting Research Fellows display their national colors](#) with JIRCAS staff and Director General Nobuyoshi Maeno in front of the International Collaborative Research Section at the Okinawa Subtropical Station on Ishigaki Island.

New Cooperative Relationships with CGIAR Centers

Since the beginning of Fiscal Year 1997, we have been promoting a project on "New technologies for agricultural research" in cooperation with the [International Service for National Agricultural Research \(ISNAR\)](#). The project will be funded with a special allotment to ISNAR from the Japanese Ministry of Foreign Affairs, but JIRCAS has been selected to cooperate in the implementation of technical matters. This marks for us a new cooperative relationship with one of the international research organizations under the umbrella of the [Consultative Group on International Agricultural Research \(CGIAR\)](#). Up to this point, we have had relationships in which JIRCAS researchers are dispatched to CGIAR research organizations and utilize available research infrastructure to implement particular research projects. Hereafter, however, it will be necessary to expand these types of new cooperative relationships.

With the restructuring of TARC into JIRCAS, our mandate has grown. Because it would prove difficult to respond to this new mandate using only established methods, new structures for research cooperation are becoming increasingly necessary. Therefore, in the future, by commissioning research to organizations in developing countries and by devising a variety of other new structures, we hope to realize more efficient, effective cooperative research.

Note on Annual Report 1997

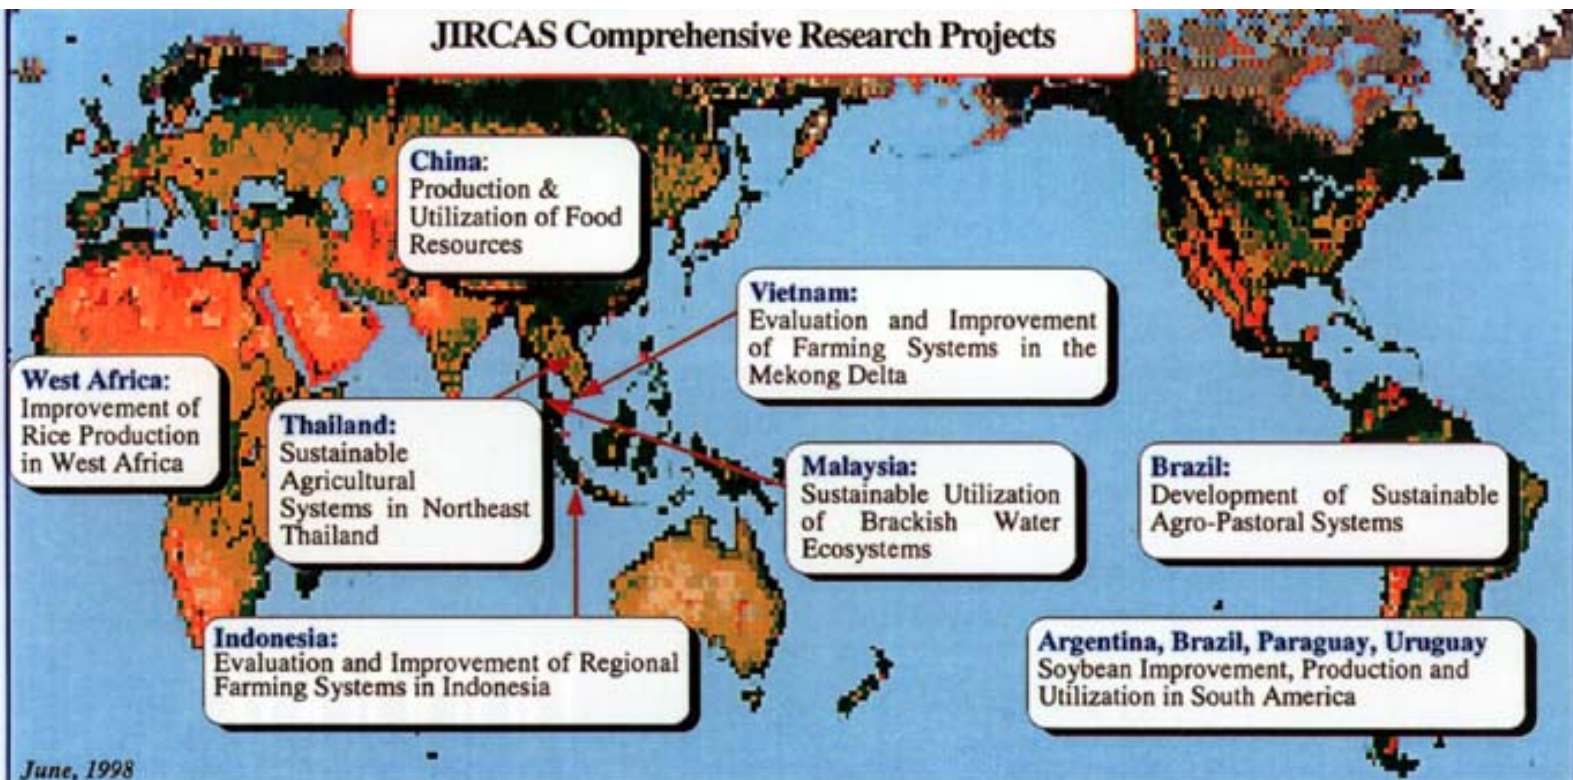

In keeping with our recent efforts to spotlight JIRCAS activities in particular regions of the world, Annual Report 1997 will focus on projects involving JIRCAS research in Southeast Asia countries. In this year's issue, detailed descriptions of research sites in Thailand and Vietnam can be found in the section entitled [International Research at JIRCAS](#). When viewed in full, however, JIRCAS activities range widely across the globe. It is our hope that the increasingly international scope of research at JIRCAS will be equally evident within Annual Report 1997.

Dr. Nobuyoshi Maeno, Director General

JIRCAS Comprehensive Research Projects

June, 1998

INTERNATIONAL RESEARCH AT JIRCAS

International collaborative projects at JIRCAS encompass all fields of agriculture, forestry, and fisheries and are often carried out in collaboration with counterpart institutions, including international research centers, national research organizations, and universities. Projects fall into one of two broad classifications. A series of comprehensive projects commenced when the Tropical Agricultural Research Center (TARC), the predecessor of JIRCAS, was restructured to create the present institute. Six such comprehensive projects are currently underway in Vietnam, Thailand, Malaysia, Brazil, the People's Republic of China, and South America. In addition, JIRCAS continues to promote the specific, focused, unidisciplinary types of projects originally carried out at TARC.

The following section presents recent developments in several ongoing comprehensive projects and, in keeping with this year's focus on Southeast Asia, spotlights important research sites in Thailand and Vietnam where collaborative projects are currently being pursued. A [complete summary of all collaborative and unidisciplinary projects](#) currently being undertaken by JIRCAS researchers can be found [here](#).

@ COMPREHENSIVE PROJECTS

In 1997, JIRCAS was involved in six comprehensive projects in Vietnam, Thailand, Malaysia, Brazil, the People's Republic of China, and the Southern Cone of South America. In addition, new projects in Indonesia and West Africa are scheduled to begin during FY 1998. These studies continue the comprehensive research system begun shortly after the founding of JIRCAS in 1994. Under this program, a research coordinator in the Research Information Division assumes the role of project leader, helping to conduct socio-economic studies to identify the most pressing research priorities in counterpart countries. The research coordinator then helps to organize and oversee collaboration among researchers in all participating Research Divisions of the Institute. Information on developments in the most recent of these projects can be accessed below.

International Collaborative Projects

JIRCAS research projects are designated as either comprehensive or unidisciplinary. Regardless of designation, all projects are undertaken and maintained principally by JIRCAS Research Divisions. Listings marked with an asterisk (*) indicate projects whose budgets have been specifically authorized by the Agriculture, Forestry and Fisheries Research Council (AFFRC) of the Ministry of Agriculture, Forestry and Fisheries. Remaining projects are funded by JIRCAS through other budget instruments.

(A) COMPREHENSIVE PROJECTS

Time Frame		Project Title	Research Site	
1994	-	1998	Evaluation and improvement of farming systems combining agriculture, animal husbandry, and fisheries in the Mekong Delta	Cuu Long Delta Rice Research Institute (CLRRI) and Cantho University (CTU), Vietnam
1995	-	2001	Development of sustainable agricultural technology in Northeast Thailand	Khon Kaen University, Thailand
1995	-	1999	Productivity and sustainable utilization of tropical and subtropical brackish water ecosystems	Department of Fisheries (DOF), Forestry Research Institute Malaysia (FRIM), and Ministry of Agriculture (MOA), Malaysia
1996	-	2002	Comprehensive studies on the development of a sustainable agro-pastoral system in the sub-tropical zone of Brazil	Brazilian Agricultural Research Corporation (EMBRAPA), Center for Tropical Agriculture (CIAT), and JATAK International Center for Agriculture Technology, Brazil
1997	-	2003	Development of sustainable production and utilization of major food resources in China	Institute of Agricultural Economics, Institute of Natural Resources and Regional Planning, Research Center for Rural Economy, China Agricultural University, Soil and Fertilizer Institute, China National Rice Research Institute, and the Shanghai Fisheries University, People's Republic of China
1997	-	2006	Comprehensive soybean research project in South America (multinational)	Agricultural Technology Center in Paraguay (CETAPAR) and the Ministry of Agriculture and Livestock (MAG), Paraguay; Brazilian Agricultural Research Corporation (EMBRAPA), Brazil; and the National Institute for Agricultural Technology (INTA), Argentina

1998	-	2002	Evaluation and improvement of regional farming systems in Indonesia	Agency for Agricultural Research and Development (AARD), Indonesia
1998	-	2002	Improving food security in West Africa through increased productivity in rainfed rice systems	West Africa Rice Development Association (WARDA), Côte d'Ivoire

(B) UNIDISCIPLINARY PROJECTS

Time Frame		Project Title	Research Site	
1993	-	1997	Development of sustainable agriculture in dry areas based on environmental improvement	Xinjiang Institute of Biology, Pedology and Desert Research and the Chinese Academy of Sciences, People's Republic of China
1993	-	1997	Analysis of environmental changes in agricultural lands after forest clearing in the tropics and development of sustainable land use systems *	International Crop Research Institute for the Semi-Arid Tropics (ICRISAT), India
1993	-	1997	Studies of technology for the evaluation of environmental changes in the transfer of tropical forest into farm land and methods for sustainable use *	International Crop Research Institute for the Semi-Arid Tropics (ICRISAT), India
1994	-	1997	Investigations on the mechanical properties of typical soils distributed in Northeast Thailand for the construction of irrigation facilities	Asian Institute of Technology (AIT), Thailand
1995	-	1997	Evaluation of changes in agricultural production structure associated with economic development and clarification of agricultural development trends using model analysis *	Research Center for Rural Economy, People's Republic of China; Universiti Pertanian Malasia (UPM), Malaysia; Thai Development Research Institute (TDRI), Thailand; Center for Agro-Socioeconomic Research (CASER), Indonesia
1995	-	1997	Long range migration of rice plant hoppers in the monsoon area of East Asia	China National Rice Research Institute, People's Republic of China
1995	-	1997	Breeding of hybrid rice varieties in Malaysia	Malaysian Agricultural Research and Development Institute (MARDI), Malaysia
1995	-	1997	Studies on the development of methods of preservation of tropical wood in Malaysia	School of Industrial Technology, Universiti Sains Malasia, Malaysia
1995	-	1998	Rehabilitation of secondary degraded forest	Forest Research Institute Malaysia (FRIM), Malaysia
1995	-	1998	Improvement of technologies for raising small livestock in the tropics	Malaysia Agricultural Research and Development Institute (MARDI), Malaysia
1995	-	1998	Ecology and control of insect pests in reforested areas at Luasong Forestry Centre, Tawau, Sabah	Forest Research Institute Malaysia (FRIM), Malaysia
1995	-	1998	Methods of cultivation of soybean in cropping systems with low pesticide input in Indonesia	Research Institute for Legumes and Tuber Crops (RILET), and the Agency for Agricultural Research and Development (AARD), Indonesia
1995	-	1999	Biorational approaches to long term and sustainable management of desert locusts in East and Northeast Africa	International Center for Insect Physiology and Ecology (ICIPE), Kenya

INTERNATIONAL COLLABORATIVE PROJECTS

1996	-	1998	An explanation of the ecology of and methods for control of weeds in direct seeded rice cultivation in Malaysia	Malaysian Agricultural Research and Development Institute (MARDI), Malaysia
1996	-	1998	Improvement of logging techniques in hill dipterocarp forests	Forest Research Institute Malaysia (FRIM)
1996	-	1999	Development for effective water management in paddy fields in the dry season	International Irrigation Management Institute (IIMI), Sri Lanka
1996	-	2000	Development of technology for sustainable management of grasslands in Central Asia	Kazakh Institute of Agriculture, Republic of Kazakhstan
1996	-	2000	Afforestation technology for useful tropical tree species and the development of related research	University of the Philippines at Los Baños, The Philippines
1997	-	1998	Early interactions between <i>Theilelia parva</i> and bovine immune cell populations	International Livestock Research Institute (ILRI), Kenya
1997	-	1999	The role of local people in the degradation and rehabilitation of tropical forests	International Center for Research in Agroforestry (ICRAF)-South East Asia, Indonesia
1997	-	1999	Improvement of high-yielding wheat varieties through biological procedures	International Wheat and Maize Improvement Center (CIMMYT), Mexico
1997	-	1999	Studies on Technology for sustainable Production in Closed Coastal Zone	Kasetsart University, Thailand
1997	-	1999	The development of methods for the use of underutilized timber resources in the tropics	School of Industrial Technology, Universiti Sains Malasia, Malaysia
1997	-	2001	Development of the diagnosis and prevention technology for shrimp viral diseases	Fisheries Research Institute (FRI), Malaysia
1998	-	2001	Development of technology for water distribution management for large scale paddy fields in tropic monsoon area	Muda Agricultural Development Authority (MADA) and Malaysian Agricultural Research and Development Institute (MARDI), Malaysia

INDONESIA

Comprehensive Project on the Evaluation and Improvement of Regional Farming Systems

Food production levels in Southeast Asia have increased rapidly during the past several decades, in keeping with high rates of economic growth. Nevertheless, problems in food production persist. Income difference between urban citizens and rural farmers have expanded with rapid industrialization. Large-scale migration from villages to cities has detrimentally impacted agricultural conditions. Consequently, efforts to strengthen agricultural activities and improve living conditions in rural areas will have an important role to play in generating stable, sustainable economic development in the region.

Approximately two hundred million people live in Indonesia, scattered across several thousand islands under humid tropical conditions. Agriculture, forestry, and fisheries production are conducted in great variety, depending upon natural environmental conditions and the types of exploitation possible in each locale. Forms of production and development in villages differ with each unique socio-economic and historical situation. For instance, rapid economic growth, industrialization, and urbanization on Java Island has exacerbated gaps between cities and villages and fundamentally altered social and economic conditions in rural areas. On the outer islands, generally poor living conditions reflect the slow pace of economic development and the lack of suitable technologies with which to overcome the difficulties of resource exploitation.

A "farming systems approach" has become popular among researchers, extension workers, and agricultural officials working to raise educational levels among local farmers, tackle persistent problems in agricultural production, and improve rural conditions overall. This farming systems approach is characterized by a bottom-up participatory process and an emphasis on multi-disciplinary approaches to problems.

Most agricultural research in Indonesia has remained focused on lowland farming systems based on the cultivation of rice. This focus, when combined with the effects of other governmental programs to aid rice farmers, allowed Indonesia to achieve its national goal of self-sufficiency in rice by 1984. However, upland crop areas have benefited little from the new techniques in spite of the many research projects, with or without the title of farming systems research, that have targeted upland or rainfed lands. Consequently, the state of upland agriculture remains much less developed than lowland agriculture throughout the country.

Photo: [Farmers in central Java prepare cowpeas](#) before taking them to market.

The comprehensive research project entitled "Evaluation and improvement of regional farming systems in Indonesia" aims to shed light on the development and implementation of farming systems in Indonesia. Specific objectives include efforts to clarify problems and evaluate on-going farming systems from the viewpoints of environmental resources, biological resources, production, processing, and socio-economic factors. At the same time, the project will attempt to improve regional farming systems in consideration of the need to achieve sustainability, maintain an ecological balance, and generate greater profit.

The project is scheduled to last five years starting from April, 1998, and involves close collaboration with Indonesian research institutes, such as the Center for Agro Socio-Economic Research (CASER), the Research Institute for Legumes and Tuber Crops (RILET), and other organizations under the Agency for Agricultural Research and Development (AARD) of the Ministry of Agriculture of the Republic of Indonesia.

WEST AFRICA

Comprehensive Project on Improving Food Security through Rainfed Rice Systems

During the past two years, JIRCAS workshops on African agricultural problems have consistently suggested that the institute enhance its efforts to review major issues in African agriculture and examine possible collaborative research projects in the region. In March, 1998, in keeping with this recommendation, JIRCAS launched a collaborative research project with the [West Africa Rice Development Association \(WARDA\)](#) to increase rice productivity in West Africa.

According to World Bank estimates, 49.7% of all sub-Saharan Africans will be living in conditions of absolute poverty as we enter the new millennium. Demand for rice in sub-Saharan Africa is growing faster than that for any other major food staple, with consumption broadening across all socioeconomic classes, including the poor. These patterns are clearest in West Africa where the substitution of rice for coarse grains and traditional roots and tubers has fueled demand growth at an annual rate of 5.6% between 1961 and 1992, double the rate of population growth.

Rice is no longer a luxury food. The poorest urban households in West Africa obtain larger shares of their cereal-based calories from rice than do higher income households, and rice purchases represent a greater share of their total cash expenditures. Rice availability and rice prices directly impact the welfare of the poorest West African consumers who are the least food secure.

The research project on interspecific hybridization between the African and Asian rice species (*Oryza glaberrima* and *O. sativa*) was initiated at WARDA in January, 1997. The main goal of the project is to improve the welfare of rice producers and consumers by developing through interspecific hybridization low-management rice varieties that are well suited to resource-poor farmers in West Africa. The new interspecific progenies included a significant percentage of intermediate types combining seedling vigor, high tillering and weed suppression traits of *O. glaberrima* with the panicle and grain type characteristics of *O. sativa*. They are considered promising new breeding materials. Further efforts for combining high-yield and stress tolerance characteristics into new generations could prove beneficial to the farmers in the region.

*Photo: Introducing a new rice genotype produced through the interspecific hybridization of *Oryza sativa* and *O. glaberrima* to villagers in the northern part of Côte d'Ivoire, Africa.*

JIRCAS has initiated collaboration by dispatching senior researchers to WARDA to pursue several specific research topics as first steps in the five-year project. These include studies of the genetic and eco-physiological characterization of indigenous varieties and interspecific progenies, especially for tolerances to drought and acid soil conditions. On a broader level, researchers will analyze major constraints to productivity increases in rainfed rice systems.

Forward to

learn about soybean production and utilization in [South America](#).

SOUTH AMERICA **Comprehensive Project on Soybean Improvement, Production and Utilization**

The soybean, *Glycine max*, is considered to be one of the principal crops for human sustenance. Soybeans provide a major source of food, oil, and protein-rich livestock feed. Production of this valuable crop has increased rapidly during the past three decades in comparison with rice, wheat, corn, and other major grains. Encouraging the continuation of this trend may aid efforts to stabilize the world food supply.

At present, Brazil, Argentina, and Paraguay account for approximately one-third of global soybean production, placing them among the leading soybean exporting countries. However, soybean production in South America has often been carried out under environmentally vulnerable conditions in arid, acidic soils characterized by low fertility. Of additional concern, the history of soybean cultivation in these areas has been relatively short, giving rise to concerns that continuous cropping, outbreaks of pests and diseases, and soil erosion may adversely affect future soybean production. Comprehensive, multinational research efforts focused on the development of sustainable and more efficient systems of soybean production in South America can be considered an important means of addressing these constraints.

Japan possess rich experience in the cultivation of soybeans and the their use in traditional foods and has contributed significantly to the understanding of this important industrial crop through soybean research programs initiated under JIRCAS and the [Japan International Cooperation Agency \(JICA\)](#). In Brazil, JIRCAS recently implemented a major project on subtropical agro-pastoral systems in which soybeans will constitute the main crop in the development of mixed multi-cropping systems. Moreover, a cooperative JICA project in Paraguay has been working since 1996 to propagate a no-tillage cultivation system useful for sustainable soybean production in the fertile Terras Roxas areas of Paraguay and neighboring countries.

The JIRCAS research project entitled “Soybean improvement, production, and utilization in South America” marks a new initiative by the Institute to promote multidisciplinary studies on soybean production and utilization in Southern Cone countries through collaborative research linking Japanese and South American specialists. The project will involve collaboration with JICA personnel and incorporate that agency’s ongoing research with the Agricultural Technology Center in Paraguay (CETAPAR) as one of several anticipated research sites.

This comprehensive project will complement earlier efforts in the field by focusing research in five areas, including genetics and breeding, soil management and pest control, crop management and production, post harvest technology, and socioeconomic factors. Cooperative arrangements with the [National Institute for Agriculture Technology \(INTA\)](#) of Argentina and the Ministry of Agriculture and Livestock (MAG) of Paraguay have already been secured, as reported in the Highlights section of this Annual Report. In addition, the participation of research organizations affiliated with the [Brazilian Agricultural Research Corporation \(EMBRAPA\)](#) of Brazil is anticipated.

 learn about rainfed rice systems in [West Africa](#).

Forward to

the Research Site introduction for [northeastern Thailand](#).

THAILAND RESEARCH SITE: Collaborative research on sustainable agricultural systems in northeastern Thailand

Environmental changes in northeastern Thailand have severely impacted local agriculture during the past thirty years. In an effort to better understand and overcome agricultural problems in the region, JIRCAS initiated a project on the “Development of sustainable agricultural technology in northeastern Thailand” two years ago. The objective of the program is to propagate sustainable agricultural practices in northeastern Thailand by generating simple yet effective new techniques for crop and livestock production. These techniques will then be transferred to local farmers during the seven year term of the project in an effort to enhance agricultural productivity.

The JIRCAS Thailand Office, which coordinates this and other collaborative efforts, is located on the campus of Kasetsart University on the outskirts of Bangkok. The present office was constructed in 1989 and shares the first floor with the Soil Science Division, an office of the Department of Agriculture within Thailand’s Ministry of Agriculture and Cooperatives. The office boasts eight rooms and faces onto a small Japanese garden constructed by Dr. M Hayashi, a former staff member now residing in Thailand. Four Japanese staff members, consisting of three researchers and one administrator, maintain daily operations with the assistance of six local employees.

Photo: JIRCAS researchers and local staff pose with Dr. Masaaki Suzuki, the JIRCAS Representative to Thailand, outside the [JIRCAS office in Bangkok](#).

The International Training Center for Agricultural Development (ITCAD), a division of the Department of Agriculture located in the city of Khon Kaen, provides additional office space for the comprehensive research project. Originally constructed with aid from the Japan International Cooperation Agency (JICA) and now staffed by three Japanese researchers and two Thai employees, the small office serves as an important gateway to research sites in northeastern Thailand.

Researchers on the comprehensive project team have recently reported significant progress in their studies of northeastern Thailand. Scientists exploring mechanisms by which groundwater salinization takes place conducted dynamic analyses to confirm their hypothesis of salinization through fault cracks. At the same time, studies of the mechanical properties of local soils have allowed project researchers to propose improved ways for estimating properties of unsaturated soils and methods for constructing dams and small ponds. In order to improve cattle production with locally available feed resources, livestock specialists have been examining the use of sugarcane stalks as feed appropriate to the metabolism of local species of Brahman cattle and water buffalo. Additionally, agronomists working in the region have established that cropping systems using tree alleys hold promise for sustainable cultivation in upland areas, just as cropping systems characterized by direct dry seeding of rice plants should prove sustainable in regional lowlands. Finally, aware that biological nitrogen fixation may help to raise soil fertility levels, other experts have undertaken evaluations of nitrogen fixation in leguminous crops and initiated a study on indigenous rhizobias.

The broad scale of the northeastern Thailand project has been made possible by the extensive knowledge of local conditions that JIRCAS staff members have accumulated over many years of research in Thailand. This year marks the thirtieth anniversary of cooperative efforts between the two countries. Collaborative research activities originated in 1967, linking researchers at the Tropical Agricultural Research Center (TARC) with counterparts in the Thai Department of Agriculture, Kasetsart University, and the Department of Livestock Development. Since the creation of JIRCAS in 1993, these collaborative activities have expanded to include other organizations, such as the Asian Institute of Technology, Khon Kaen University, the Land Development Department, and the Agricultural Development Research Center in Northeast Thailand.

Extensive cooperative relationships with public and private agricultural research organizations in Thailand have allowed JIRCAS to undertake a number of projects in addition to the comprehensive research in northeastern Thailand. A long-term experiment examining the effects of organic material utilization on the chemical and physical properties of upland soil has continued for twenty years in collaboration with the Thai Department of Agriculture. More recently, researchers from the JIRCAS Fisheries Division have initiated a collaborative project entitled “Studies on technology for the development of sustainable aquaculture in Southeast Asia,” intended to address problems of coastal environmental degradation and increased disease outbreak that characterize the intensive cultivation of giant tiger prawn, *Penaeus monodon*.

In the course of thirty years of collaboration, TARC and JIRCAS have dispatched to Thailand more than 100 researchers on long-term projects lasting one year or more. With the addition of short-term visiting scientists and administrators, the number of researchers involved in collaborative bilateral projects now surpasses 1500.

Back to	the Research Overview menu .
Forward to	the Research Site introduction for the Mekong Delta region of Vietnam.

VIETNAM RESEARCH SITE: Collaborative research on methods to improve farming systems in the Mekong Delta region

In collaboration with Cantho University and the Cuu Long Delta Rice Research Institute (CLRRI) in Vietnam, JIRCAS has been carrying out a comprehensive research project entitled "Evaluation and improvement of farming systems combining agriculture, animal husbandry, and fisheries in the Mekong Delta." This project, initiated in 1994, aims to clarify the structure of farming systems, to identify and develop necessary technology currently lacking in these systems, and to specify conditions for the application of these systems to other regions.

Cantho University was founded in 1966 in the Mekong Delta city of Cantho, where agriculture has long been the dominant economic activity. Affiliated with the university are numerous colleges and institutes concerned with problems in agricultural sciences and agricultural production. In one such organization, the Mekong Delta Farming Systems Research and Development Institute, JIRCAS staff members have been pursuing research on the socio-economic aspects of farming systems called VACs, which combine agricultural activities such as rice cultivation, swine farming, and aquaculture. These systems operate by cycling agricultural products through several stages of production in order to minimize waste, maximize benefits, and contribute to sustainable management. In one model, swine are fed with broken rice and rice bran produced locally. Waste products from the swine are then washed into fish ponds, raising fertility levels in the water and enhancing growth in cultured fish. To complete the cycle, water from the fish ponds is then diverted into paddy fields, where the abundance of nitrogen and other elements contributes to more fruitful rice production. In effect, waste material in each stage of production can thus be recycled to produce commodities without seriously polluting the environment.

Photo: [The campus of Cantho University](#) in the Mekong Delta region of Vietnam.

Over the past two years, an animal parasitologist from JIRCAS has worked with animal scientists in the Cantho University College of Agriculture on problems, including environmental conservation issues, encountered in swine farming in VAC systems. During the same period, fisheries scientists have visited annually to work with university researchers studying the physiology of freshwater fish and crustacean species and disease outbreaks occurring in freshwater prawn culture. These efforts will help to strengthen current means of livestock management and to improve existing technologies for commercial aquaculture in Vietnam.

Located nearby in the city of Omon, Cantho Province, the Cuu Long Delta Rice Research Institute is a national organization affiliated with the Ministry of Agriculture and Cooperatives in Vietnam. The institute is charged with developing new varieties and production technologies useful for the cultivation of rice. Dr. Nobuyoshi Maeno, the Director General of JIRCAS, attended a ceremony held in Omon to mark CLRRI's twentieth anniversary last year. Under the auspices of the collaborative project, both an agronomist and a plant pathologist from JIRCAS have conducted research at the institute, pursuing research topics related to improved rice culture and disease control. Current efforts focus on developing new methods for growing high yielding rice and controlling disease in rice plants through integrated pest management (IPM) methods.

Vietnam became the world's second largest rice exporter in 1997, shipping approximately 3.5 million tons, mainly to Asian and African nations. Rice production in the Mekong Delta region now contributes nearly half of total national production. Among the widest alluvial plains in Southeast Asia, the Mekong Delta accounts for four million hectares of Vietnamese territory. The area is characterized by favorable agricultural conditions, including vast fertile land, ample quantities of river water, adequate temperature and sunshine, and a well-educated, diligent labor force. Improved irrigation and drainage, the introduction of modern varieties of rice, the development of integrated management methods for rice production, and the introduction of the market-oriented *doi moi* economic policy have played large roles in raising agricultural productivity to current levels.

However, problems requiring attention remain. The relatively low quality of Vietnamese rice in comparison with that produced in Thailand, for example, has kept export prices problematically low. Additionally, the Mekong Delta area still harbors expanses of wasteland covered with acid sulfate or saline soils and is prone to periodical flooding and the threat of salt water intrusion. Socioeconomic problems including low farm incomes, the lack of agricultural organizations for marketing or crediting, and underdeveloped transportation infrastructure need to be studied during the remaining project term. Such cooperative research would further contribute to the development of technologies for sustainable growth in the area and lead to better lives for its people.

HIGHLIGHTS FROM 1997

@IMPORTANT NEW DEVELOPMENTS

During Fiscal Year 1997, the Japan International Research Center for Agricultural Sciences (JIRCAS) witnessed a number of noteworthy happenings. Peruvian President Alberto Fujimori visited the Ministry of Agriculture, Forestry and Fisheries (MAFF) Tsukuba Institutional Complex, which houses JIRCAS and several related research institutes. Researchers in JIRCAS laboratories made significant progress in the use of genetic engineering to improve stress tolerance in plants, while the Okinawa Subtropical Station intensified its research program on heat tolerance in commercially cultivated cash crops. Finally, the Institute helped to disseminate findings from these and other ongoing research projects through a large number of international seminars and workshops ranging in focus from food production problems in China to soybean utilization in South America. We are pleased to highlight these activities and achievements in greater detail below.

- [Highlight #1](#): Genetic Engineering to Improve Environmental Stress Tolerance in Crops

@NEW RESEARCH COLLABORATION

Since its establishment in 1993, JIRCAS has consistently sought to expand the depth of its collaborative efforts with research organizations and universities in a geographically diverse range of developing countries. In keeping with the JIRCAS mandate, collaborative efforts have become increasingly multidisciplinary in their focus and complex in their approach, often involving formal cooperative agreements between JIRCAS and foreign governmental entities. During Fiscal Year 1997, JIRCAS proudly initiated new Memoranda of Understanding (MOU's) solidifying project ties with countries in East and Southeast Asia, the Southern Cone of South America, and Western Africa. The following segments detail several of these agreements.

Highlight #1: Genetic Engineering to Improve Environmental Stress Tolerance in Crops

Plant productivity is greatly affected by environmental stresses, including drought, salinization, and freezing. These factors, in turn, may be exacerbated by rising levels of ambient pollution, environmental degradation, and climatic change around the world. In order to cope with such conditions, the breeding of crops tolerant to a wide variety of environmental stresses has become increasingly important. Genetic engineering can be used as a fast and precise means of improving these stress tolerance factors.

Scientists have made considerable progress in genetically altering commercial crop plants for resistance to disease, damage, and pests, and in actually cultivating such crops in the field. However, the development of crop plants tolerant to environmental stresses has lagged behind, due to the relative complexity of biological mechanisms necessary for the acquisition of tolerance factors. While announcements concerning laboratory breakthroughs have been frequent, generally the prospects for practical utilization have not appeared promising.

Several different approaches to improve the stress tolerance of plants by gene transfer have been attempted. Until now, a single protective protein or enzyme has been produced in each approach, even though a number of genes have been shown to function in environmental stress tolerance and response. In order to develop commercially viable crops tolerant to environmental stresses, however, it will be necessary to allow for the simultaneous transformation of multiple genes connected with stress tolerance ([Figure 1](#)).

To improve multi-stress tolerance to drought, salinization, and freezing by gene transfer, scientists at JIRCAS manipulated a single gene for stress-inducible transcription factors that regulates many stress-inducible genes involved in environmental stress tolerance. The team used not only the *35S CaMV* constitutive promoter but also a stress-inducible *rd29A* promoter for the expression of the gene for the transcription factor.

Previously, these researchers reported that a *cis*-acting element named DRE (Dehydration Responsive Element) plays an important role in gene expression induced by dehydration, salt, and low temperature in *Arabidopsis thaliana* and isolated cDNA encoding transcription factors DREB1A and DREB2A that specifically interact to DRE and activate many stress-inducible genes. Overproduction of the DREB1A protein in transgenics activated the expression of many target genes involved in stress tolerance and significantly improved stress tolerance to drought, salinization, and freezing. Moreover, the stress-inducible *rd29A* promoter minimized negative effects on growth of plants while the constitutive *35S CaMV* constitutive promoter caused severe growth retardation under normal growth conditions.

As the DRE regulatory element is not limited to *Arabidopsis*, the DREB1A cDNA and the stress-inducible *rd29A* promoter may be useful to improve the dehydration, salt and freezing tolerance of crop plants. By introducing the newly identified promoter and transcription factor into plants, the simultaneous alteration of a group a genes functioning in multiple tolerance mechanisms may at last prove possible.

If so, the knowledge gained from these experiments at JIRCAS would enable scientists to induce guided genetic expression in response to environmental stresses within a relatively short period of time. Such a breakthrough would allow for great strides toward commercially viable crop plants genetically engineered for tolerance to a wide variety of potentially damaging environmental stresses.

[Highlight #1: Genetic Engineering to Improve Environmental Stress Tolerance in Crops.](#)

Highlight #2: Heat Tolerance as a Research Strategy at the Okinawa Subtropical Station

The Okinawa Subtropical Station is the only division of JIRCAS located in a subtropical environment. For this reason, the Station seeks to promote research on subtropical agriculture and to develop agricultural technology pertinent to subtropical environments in ways that are possible neither at the Tsukuba headquarters of JIRCAS nor at other national research institutions affiliated with the Ministry of Agriculture, Forestry and Fisheries.

Among the major research initiatives of the Station have been projects relating to the heat tolerance of crops. Fundamental knowledge of heat tolerance mechanisms remains important, considering the fact that vegetables make strategic cash crops for addressing problems of malnutrition, meeting increasing demands for food, and sustaining rural development in the lowland tropics where heat acts as a major constraint on agricultural activities.

In order to promote greater awareness of this field of study, the Okinawa Subtropical Station hosted a Workshop on Heat Tolerance of Crops from October 7-8, 1997. The workshop focused on two priorities, including a review of results from the station's previous research activities and an effort to develop new techniques for mitigating heat stress and otherwise improving the heat tolerance of crops.

Photo: Participants in the [Workshop on Heat-Tolerance of Crops](#) at the Okinawa Subtropical Station.

During the first day of discussion, Dr. Chungchi George Kuo of the [Asian Vegetable Research and Development Center](#) spoke on the "Improvement of heat tolerance in vegetables under tropical conditions," and Dr. Anthony Hall of the Department of Botany and Plant Science, University of California, presented findings on the "Positive and potential negative effects of heat tolerance genes on crops." After these keynote addresses, six researchers from the Okinawa Subtropical Station and three visiting scientists from the Visiting Research Fellowship Program at Okinawa presented results from several heat tolerance research projects.

On the following day, Dr. Mitsuo Ishige, former Director of the Biological Resources Division at JIRCAS headquarters in Tsukuba, served as commentator and chairman for the final plenary sessions. Participants exchanged views on progress in heat tolerance research and outlined strategies for future collaborative studies of the subject at the Station. They raised numerous questions and held a lively discussion which continued after the presentations.

The workshop provided valuable intellectual stimulation for members of the Okinawa Subtropical Station research staff, who have since organized themselves into a heat tolerance working group for the promotion of improved heat tolerance in crop plants. Toward this end, the group is currently planning a series of collaborative projects for FY 1998 involving Nagoya University, the University of the Ryukyus, and the Tokyo University of Agriculture.

Forward to	Highlight #3 : Visit of Peruvian President Alberto Fujimori to the Tsukuba Institutional Complex, or to Highlight #4 : Research Meetings and Conferences during Fiscal Year 1997.

Highlight #3: Visit of Peruvian President Fujimori to the Tsukuba Institutional Complex

During the afternoon of July 4, 1997, Peruvian President Alberto Fujimori took time out from a state visit to Japan to make a short stop at the Ministry of Agriculture, Forestry, and Fisheries (MAFF) Tsukuba Institutional Complex. The opportunity was arranged at the request of President Fujimori, a specialist in agricultural engineering and a former professor and administrator at the National Agrarian University of Peru. Designed to highlight the advanced state of Japanese agricultural research, the visit served equally well as a recognition of the international importance of JIRCAS and ten related research organizations located in the vicinity of Tsukuba Science City.

Takao Fujimoto, the Minister of Agriculture, Forestry and Fisheries at the time, welcomed President Fujimori amid tight security at the entrance to the Tsukuba Office of the [Agriculture, Forestry, and Fisheries Research Council \(AFFRC\)](#). Other dignitaries awaiting the President's arrival included AFFRC Secretary General Eitaro Miwa, Tsukuba Mayor Junichi Fujisawa, and related government officials. Three Peruvian trainees dispatched to the Tsukuba International Center under an exchange agreement with the Japan International Cooperation Agency (JICA) were also present to offer bouquets of flowers during a short welcoming ceremony.

After receiving their greetings, President Fujimori listened to a brief overview of research programs currently in progress throughout the complex. He then proceeded to the Tsukuba Research Gallery at the [National Agricultural Research Center](#), where a series of displays offered more specific details on the recent successes and accomplishments of each of the national research institutes. At the JIRCAS booth, the President spoke with Director General Nobuyoshi Maeno about collaborative international agricultural research projects which the institute is currently conducting in the People's Republic of China, South and Southeast Asia, Africa, and Latin America. Relating his discussions to the needs of his own country, President Fujimori requested that recent findings on the role of forests in environmental protection be forwarded to researchers in Peru. Then, stopping at a nearby display for the Fruit Tree Research Station where improved varieties of commercial fruit crops were introduced, he sampled large-seeded *kyoho* grapes indigenous to Japan. "Delicious, aren't they?" he declared, to the delight of his hosts.

Photo: [President Alberto Fujimori of Peru speaking with Dr. Nobuyoshi Maeno](#), Director General of JIRCAS, about the current state of international collaborative agricultural research during his official visit to the Tsukuba Research Gallery on July 4, 1997..

Expressing a strong interest in the future of biotechnology and the potential for human improvement of plant varieties, President Fujimori also requested a visit to the [MAFF DNA Bank](#) housed within the [National Institute of Agrobiological Resources \(NIAR\)](#). The bank preserves DNA and molecular information on agricultural organisms for the support of national research activities in the agricultural sciences. The sophistication of ongoing research at the institute seemed to pique the President's curiosity. Secretary General Miwa, who led the tour, noted that, "In addition to knowing agricultural sciences very well, President Fujimori understood expert descriptions down to the finest point."

At the conclusion of the Tsukuba tour, President Fujimori remarked on the similar agricultural challenges faced by Japan and Peru. Both countries lack sufficient flatland areas suitable for farming, thus necessitating the utilization of steeply graded land for agricultural purposes. These characteristics may generate common interests in support of future agricultural cooperation, he suggested. Thus, the President's visit may mark the beginning of greater cooperation between institutions such as JIRCAS and partner countries in developing regions, such as Peru.

<p>Back to</p>	<p>the Highlights menu, or to Highlight #1: Genetic Engineering to Improve Environmental Stress Tolerance in Crops, or to Highlight #2: Heat Tolerance as a Research Strategy at the Okinawa Subtropical Station.</p>
<p>Forward to</p>	<p>Highlight #4: Research Meetings and Conferences during Fiscal Year 1997.</p>

Highlight #4: Research Meetings and Conferences during Fiscal Year 1997

During FY 1997, JIRCAS played proud host to a greater number of research meetings, academic seminars, workshops, and conferences than in previous years. Discussion topics ranged from the sustainable harvesting of brackish water mangrove ecosystems to the reclamation of salt-accumulated soils through recent technological developments, and from the diversification of methods for the utilization of acacia woods to the manufacture and distribution of secure supplies of food. Invited guests included fellow researchers from affiliates of the [Consultative Group on International Agricultural Research \(CGIAR\)](#) and other prominent international research organizations, numerous national universities, and local experts from China, Vietnam, Thailand, Malaysia, Indonesia, the Philippines, Brazil, Argentina, Paraguay, and Kazakhstan.

These gatherings provided an important opportunity for JIRCAS researchers to share the fruits of their ongoing projects with one another and with their counterparts in other institutions. By the same token, contact with the researchers most intimately familiar with local conditions enhanced opportunities for learning and influenced the direction of future research. More information on the meetings, seminars, workshops, and conferences sponsored by JIRCAS during the previous year can be found under the [Symposia and Workshops](#) section of this Annual Report.

SYMPOSIA AND WORKSHOPS

1) INTERNATIONAL SYMPOSIA

Between 1967 and 1993, the Tropical Agricultural Research Center (TARC) sponsored annual international symposia for the purposes of promoting scientific exchange and accurately gauging and responding to the agriculture, forestry, and fishery needs of the world's developing areas. Since its transition from TARC, JIRCAS has continued this practice, organizing its first International Symposium in FY 1994. At present, each symposium is organized around a theme of central importance to international agricultural research, and roughly ten researchers and administrators from concerned research institutes and international agencies are invited as speakers. Symposia are ordinarily held in joint sponsorship with a relevant scientific society. The program from the FY 1997 International Symposium appears below.

- [**FY 1997 International Symposium: Sustainable Agricultural Development Compatible with Environmental Conservation in Asia.**](#)

2) SPECIAL PROGRAMS

- [**JIRCAS/ILRI Joint Workshop on the International Contributions of Japan and ILRI to World Animal Production Research.**](#)
- [**International Workshop on the Development of Farming Systems in the Mekong Delta.**](#)
- [**International Seminar on New Technologies for the Development of Sustainable Farming in Northeast Thailand.**](#)
- [**First Seminar on Comprehensive Soybean Research in South America.**](#)
- [**Workshop on the Recent Situation and Future Orientation of the Food Industry in China.**](#)

3) WORKSHOPS AND SEMINARS

SUSTAINABLE AGRICULTURAL DEVELOPMENT COMPATIBLE WITH ENVIRONMENTAL CONSERVATION IN ASIA

(Held August 26 - 28, 1997, in Tsukuba Science City in conjunction with the Tsukuba Center for Institutes, a division of the Science and Technology Agency of Japan).

Opening addresses

① Inaugural address by Dr. Nobuyoshi Maeno, Director General, Japan International Research Center for Agricultural Sciences (JIRCAS), Japan

② Welcome address by Mr. Sakue Matsumoto, Chairman, Secretariat of the Agriculture, Forestry and Fisheries Research Council (AFFRC), Ministry of Agriculture, Forestry, and Fisheries, Japan

Keynote speech

“Main issues for sustainable agricultural development in Asia” by George H. L. Rothschild, Director General, International Rice Research Institute (IRRI), The Philippines

Session 1: Food problems in Asia

Chaired by Dr. Wen S. Chern, Institute of Economics, Taiwan

① Food security in Asia: A demand side analysis. W. S. Chern, Institute of Economics, Taiwan

② Asian food supply and demand situation from a global perspective. O. Koyama, Japan International Research Center for Agricultural Sciences (JIRCAS), Japan

③ Food problems and future outlook in China. K. Bingsheng, China Agriculture University, People's Republic of China

④ Problems and future outlook in agriculture in Thailand. N. Poapongsakorn, M. Ruhs, and S. Tangjitwisuth, Thailand Development Research Institute, Thailand

⑤ Food problems and future outlook in India. K. P. Rao, National Institute of Agricultural Extension Management, India

Session 2: Agriculture and environment in Asia

Chaired by Dr. Dennis Keeney, Iowa State University, USA

① Sustainable agriculture and the environment. D. Keeney, Iowa State University, USA

② Global warming and sustainable agriculture. K. Minami, Japan International Research Center for Agricultural Sciences (JIRCAS), Japan

③ Technology for conservation of soil and water resources in China. Z. Qi-Guo, Institute of Soil Science, People's Republic of China

④ Technology for conservation of soil and water resources in Korea. P. K. Jung and N. J. Lee, National Institute of Agricultural Science and Technology, Korea

⑤ Material balance and ecological functions of paddy farming in Japan. H. Iwama, National Institute of Agro-Environmental Sciences, Japan

⑥ External economies of agriculture. E. Nishizawa and K. Yoshida, National Research Institute of Agricultural Economics, Japan

Session 3: Technological issues after the Green Revolution

Chaired by Dr. Osamu Ito, International Rice Research Institute (IRRI), The Philippines

① JIRCAS projects for the development of technologies for sustainable agriculture in Asia. M. Kokubun, Japan International Research Center for Agricultural Sciences (JIRCAS), Japan

- ④ Development of rice production technology in Southeast Asia. N. Kabaki, Japan International Research Center for Agricultural Sciences (JIRCAS), Japan
- ④ Sustaining rice-wheat cropping system productivity in the Indo-Gangetic Plains. I. P. Abrol, International Crops Research Institute for the Semi-Arid Tropics, India
- ④ Rural development through commodity-based and agribusiness-oriented farming systems. A. Suryana and S. Bahri, Center for Agro-Socioeconomic Research, Indonesia
- ④ Production systems and farming systems in the Mekong Delta. D. K. Son, Cuulong Delta Rice Research Institute, Vietnam
- ④ Strategy for rice production technologies at the International Rice Research Institute. O. Ito, International Rice Research Institute (IRRI), Philippines

General discussion

Chaired by Dr. Kunio Tsubota, Japan International Research Center for Agricultural Sciences (JIRCAS), Japan

- ④ Summary of Session 1, by Dr. Wen S. Chern, Institute of Economics, Taiwan
- ④ Summary of Session 2, by Dr. Dennis Keeney, Iowa State University, USA
- ④ Summary of Session 3, by Dr. Osamu Ito, IRRI, the Philippines

Conclusion

- ④ Comments by Dr. William Coyle, Department of Agriculture, USA
- ④ Comments by Dr. Keiji Ohga, Japan International Research Center for Agricultural Sciences (JIRCAS), Japan

Closing remarks by Dr. Toru Nagata, Director General, National Institute of Agro-Environmental Sciences (NIAES), Japan

JIRCAS/ILRI JOINT WORKSHOP ON THE INTERNATIONAL CONTRIBUTIONS OF JAPAN AND ILRI TO WORLD ANIMAL PRODUCTION RESEARCH

On February 13, 1998, the Japan International Research Center for Agricultural Sciences (JIRCAS) and the International Livestock Research Institute (ILRI) conducted a joint workshop in the JIRCAS International Conference Room to address the role of each in international animal production research. Workshop discussions were designed to assist ILRI, a CGIAR organization formed in 1995 through the consolidation of the International Laboratory for Research on Animal Diseases (ILRAD) in Kenya and the International Livestock Centre for Africa (ILCA) in Ethiopia, in its efforts to broaden the scope of its research activities to developing Asian countries. The workshop was organized by the Secretariat of the Agriculture, Forestry and Fisheries Research Council (AFFRC), JIRCAS, and ILRI in collaboration with the National Institute of Animal Industry (NIAI), the National Grassland Research Institute (NGRI), and the National Institute of Animal Health (NIAH) under the sponsorship of the Japan Livestock Technology Association.

Dr. Eitaro Miwa, Director General of the Agriculture, Forestry and Fisheries Research Council (AFFRC), and Dr. Neville P. Clarke, Chairman of the ILRI Board of Trustees, opened the workshop with welcoming remarks. Following these addresses, five researchers presented reports and discussed their significance. In concluding the workshop at day's end, Dr. Mamoru Kashiwazaki, Director General of NIAH, noted the continuing importance of such discussions in preparing future strategies for livestock production research, not only in developing Asian countries, but also in developing countries throughout the world. As such, information exchanged through workshop discussions will serve to deepen mutual understanding and collaborative relationships between Japanese and ILRI scientists, ensuring greater cooperation in the near future. Contents of the workshop presentations are summarized below.

Session 1

- Ⓢ Global livestock research workshop: International livestock research. H. Fitzhugh, Director General, International Livestock Research Institute (ILRI)
- Ⓢ New priorities and future directions in research and development for livestock production in Southeast Asia. C. Chantalakhana, International Livestock Research Institute (ILRI)
- Ⓢ International collaboration in agricultural research. N. Maeno, Director General, Japan International Research Center for Agricultural Sciences (JIRCAS)
- Ⓢ Recent developments in livestock research in Japan. H. Kobayashi, Director General, National Grassland Research Institute
- Ⓢ International contribution of Japanese scientists to livestock research at ILRAD/ILCA/ILRI and other organizations. E. Imaizumi, Japan International Research Center for Agricultural Sciences (JIRCAS)

Session 2

- Ⓢ General discussion

INTERNATIONAL WORKSHOP ON THE DEVELOPMENT OF FARMING SYSTEMS IN THE MEKONG DELTA

Although rice production has markedly increased in the Mekong Delta of Vietnam, incomes and living standards among farmers in the region have remained low. Researchers involved in the comprehensive collaborative project entitled “Evaluation and improvement of farming systems combining agriculture, animal husbandry, and fisheries in the Mekong Delta” have been examining these and other problems affecting efforts to modernize agricultural production in Vietnam. On December 8-9, 1997, these researchers conducted a workshop to review progress and develop closer cooperation between Japanese and Vietnamese organizations. The workshop invited six researchers from Vietnam, led by Dr. Vo-Tong Xuan, Director of the Farming Systems Research and Development Institute at Cantho University. Among Japanese participants, several have studied agriculture in the Mekong Delta for extended periods. They include Dr. Matsuno of the Tokyo University of Agriculture, Dr. Cho of Kyushu University, Dr. Furukawa of Kyoto University, and Dr. Oe of the Tokyo University of Agriculture and Technology.

The workshop started with opening remarks by Dr. Nobuyoshi Maeno, Director General of JIRCAS, and a key note address by Dr. Vo-Tong. After a day of presentations, the workshop concluded that the development of sustainable farming systems combining rice cultivation, animal husbandry, and aquaculture constitutes an important priority for the region. Creation of viable credit and marketing channels, as well as the promotion of technology transfer, may also provide keys to further agricultural development in the Mekong Delta.

Keynote address

“History, present conditions and perspectives on the development of farming systems in the Mekong Delta of Vietnam,” by Dr. Vo-Tong Xuan, Director, Mekong Delta Farming Systems Research and Development Institute and Vice Rector, Cantho University

Session 1: Characterization of Mekong Delta farming systems

Moderated by Dr. Le Thanh Duong, Cantho University, and Dr. Ryoichi Yamazaki, Rakuno Gakuen University

- ⊙ Characteristics of farming systems: A case study of the O Mon District. N. X. Lai, Cuulong Delta Rice Research Institute
- ⊙ Diversification and specialization of farming systems: A case study of the Thot Not District. D. N. Thanh, Cantho University
- ⊙ Melaleuca forestation and farmers’ organizations in Hoa An Village. D. V. Ni, Cantho University

Session 2: Development of technologies for farming systems in the Mekong Delta

Moderated by Dr. Nico Vromant, Flemish Development Association, and Dr. Koji Kawashima, Japan International Research Center for Agricultural Sciences (JIRCAS)

- ⊙ Rice production and research in the Mekong Delta. T. Kon, Tohoku National Agricultural Experiment Station
- ⊙ Swine production and research in the Mekong Delta. S. Yoshihara, National Institute of Animal Health
- ⊙ Aquaculture and research in the Mekong Delta. M.N. Wilder, Japan International Research Center for Agricultural Sciences (JIRCAS)

Session 3: Farmers’ organizations

Moderated by Dr. Vo-Tong Xuan, Director, Mekong Delta Farming Systems Research and Development Institute

- ⊙ Farmers’ organizations in Vietnam. K. Sho, Japan International Research Center for Agricultural Sciences (JIRCAS)
- ⊙ Organizing farmers toward Vietnamese agricultural modernization. R. Yamazaki, Rakuno Gakuen University
- ⊙ Comments by Vietnamese participants

Session 4: Orientation of collaborative research projects

Moderated by Dr. Shigeo Matsui, Japan International Research Center for Agricultural Sciences (JIRCAS)

- ② Farming system research in the Mekong Delta. L. T. Duong, Cantho University
- ② Collaborative research on aquaculture in the Mekong Delta. N. Vromant, Flemish Development Association
- ② Research on farm management in the Mekong Delta. R. Yamada, Japan International Research Center for Agricultural Sciences (JIRCAS)

General discussion

Chaired by Dr. Kunio Tsubota, Japan International Research Center for Agricultural Sciences (JIRCAS)

the [Symposia and Workshops](#) menu.

INTERNATIONAL SEMINAR ON NEW TECHNOLOGIES FOR THE DEVELOPMENT OF SUSTAINABLE FARMING IN NORTHEAST THAILAND

Large areas of forest in northeastern Thailand have been cleared to provide fields for cash crops such as cassava, corn, and sugar cane. Removing trees and exposing fragile tropical soils to sun, wind, and rain has contributed to significant land deterioration. However, as farmers in the region remain desperately poor, they can ill afford to introduce agricultural techniques capable of increasing productivity and incomes without further exacerbating land degradation.

This seminar examined new agricultural technologies, such as the utilization of small machinery or rotations between certain fruit and vegetable crops, that might aid in efforts to achieve sustainable agricultural systems in northeastern Thailand. Jointly sponsored by JIRCAS and the International Training Center for Agricultural Development (ITCAD) of Thailand, seminar sessions were held in the auditorium of ITCAD in Khon Kaen, Thailand, on March 24, 1998. Approximately seventy scientists attended, primarily from Khon Kaen University, the Thai Departments of Agriculture, Land Development, and Livestock Development, and Japanese research institutes, including JIRCAS. The governor of Khon Kaen and the head of the Provincial Office of Agriculture and Cooperatives welcomed participants. Summaries of the remainder of the day's activities follow.

Photo: Shigeo Matsui, chairman of Session III, directs discussion at the International Seminar.

Session I

Chaired by Dr. Anek Topark-ngarm, Dean, Khon Kaen University

- ⊙ Development of direct seeding technology for rice in Japan. N. Kabaki, Japan International Research Center for Agricultural Sciences (JIRCAS)
- ⊙ Land classification and improved efficiency in production of Hom Mali rice in northeastern Thailand. R. Katawatin, Khon Kaen University, Thailand

Session II

Chaired by Dr. Montien Somabhi, Khon Kaen Department of Agriculture

- ⊙ New methods for crop protection. C. Noda, Japan International Research Center for Agricultural Sciences (JIRCAS)
- ⊙ Development of papaya lines tolerant to papaya ring spot virus. V. Prasartsri, Khon Kaen Department of Agriculture, Thailand
- ⊙ Sustainable vegetable growing through cropping systems. M. Yamada and I. Nakagawa, National Agricultural Research Center, Japan

Session III

Chaired by Dr. Shigeo Matsui, Japan International Research Center for Agricultural Sciences (JIRCAS)

- ⊙ Development of culturing practices for vegetables and crop introduction at the Okinawa Subtropical Station. K. Suzuki, Japan International Research Center for Agricultural Sciences (JIRCAS)
- ⊙ Peanut breeding and production for specific purposes in northeastern Thailand. P. Sorawat, Khon Kaen Department of Agriculture, Thailand
- ⊙ Tree species for reforestation in cultivated areas. R. Tabuchi, Forestry and Forest Products Research Institute, Japan

Session IV

Chaired by Dr. Sho Kosugi, Japan International Research Center for Agricultural Sciences (JIRCAS)

- ⊙ Effect of stocking density and water turbidity on production of *Macrobrachium lanchesteri de Man* in concrete tanks. N. Sriputinipondh, Department of Fisheries, Thailand
- ⊙ Use of small machinery in upland field cropping. K. Otsuka, National Agricultural Research Center, Japan

Session V

Chaired and moderated by Dr. Waewchark Kongpolprom, Head, Khon Kaen Provincial Office of Agriculture and Cooperatives

© Comments from Dr. Montien Somabhi, Khon Kaen Department of Agriculture, Thailand

© Comments from Dr. Aran Patanothai, Khon Kaen University, Thailand

© Comments from Dr. Tadao Hamazaki, Japan International Research Center for Agricultural Sciences (JIRCAS)

General Discussion on further strengthening collaborative research topics suited for the development of sustainable farming systems in northeastern Thailand

FIRST SEMINAR ON COMPREHENSIVE SOYBEAN RESEARCH IN SOUTH AMERICA

In 1997, JIRCAS initiated a research project entitled “Comprehensive studies on soybean improvement, production and utilization in South America” in collaboration with national research organizations in MERCOSUR countries and the Japan International Cooperation Agency (JICA). The main objective of this seminar was to provide opportunities for the exchange of scientific information among soybean scientists from South American countries and thereby to stimulate the generation of innovative and collaborative ways to resolve the constraints and problems facing soybean production and utilization in this region. This seminar was co-organized by JIRCAS and a joint program between JICA and the Agricultural Technology Center in Paraguay (CETAPAR). Following opening addresses by Dr. Nobuyoshi Maeno, Director General of JIRCAS, and Dr. Mitsuhiro Ota, Director of the JICA-CETAPAR project, researchers from a number of countries gave presentations and engaged in a lively discussion of relevant concerns. The central issues involved in the seminar were as follows.

Session 1: The present and future of no-tillage cultivation of soybeans

Chaired by Dr. Norman Neumaier, National Center for Research on Soybeans (EMBRAPA-CNPSo), Brazil

- Ⓢ Historical review of no-tillage cultivation of crops. R. Derpsch, German Society for Technical Cooperation (MAG/GTZ), Germany
- Ⓢ Effects of no-tillage methods on chemical and physical characteristics of soil in Paraguay. C. Paredes Benegas, Regional Center for Agricultural Research (MAG-CRIA), Paraguay
- Ⓢ Effect of no-tillage system on chemical and physical characteristics of soil in Argentina. R.C. Gil, Research Center for Natural Resources (CIRN), Argentina
- Ⓢ Disease management in no-tillage soybean system. S. Vallone, National Institute for Agricultural Technology (INTA-EEA Marcos Juarez), Argentina
- Ⓢ Control of weeds in no-tillage cultivation. D. L. P. Gazziero, National Center for Research on Soybeans (EMBRAPA-CNPSo), Brazil
- Ⓢ Establishment of no-tillage method for soybean cultivation in Paraguay. Y. Seki, W. Asada, and K. Hoshiba, JICA-CETAPAR, Japan
- Ⓢ Cropping systems under no-tillage cultivation. J. E. Denardin and R. A. Kochhann, National Center for Research on Wheat (EMBRAPA-CNPT), Brazil
- Ⓢ An innovative cropping system for soybeans: Agro-pastoral systems in Brazil. M. Macedo, J. Bono, A. Kichel, and A. Zimmer, National Center for Research on Beef Cattle (EMBRAPA-CNPGC), Brazil, and T. Kanno, JIRCAS, Japan

Session 2: Perspective of Demand for Soybean and Future Research Needs

Chaired by Dr. Laura M. Giorda, National Institute for Agricultural Technology (INTA-EEA Manfredi), Argentina

- Ⓢ Role of soybeans with reference to global food supply and demand. H. Ozeki, National Agricultural Research Center (NARC), Japan, and Y. Sugai, Brazilian Agriculture Research Corporation (EMBRAPA), Brazil
- Ⓢ Perspectives on demand for the utilization of soybeans. O. S. de Oliveira, EXIMCOOP, Brazil
- Ⓢ Potential uses of soybean as food in South America. M. C. Carrao-Panizzi, National Center for Research on Soybeans (EMBRAPA-CNPSo), Brazil
- Ⓢ Potential for industrial utilization of soybeans. J. P. Cherry, United States Department of Agriculture, Agriculture Research Service (USDA-ARS), USA

WORKSHOP ON THE RECENT SITUATION AND FUTURE ORIENTATION OF THE FOOD INDUSTRY IN CHINA

The first comprehensive project linking JIRCAS and the government of the People's Republic of China began on May 28, 1997, with the signing of a Memorandum of Understanding between JIRCAS, the Agriculture, Forestry and Fisheries Research Council (AFFRC), and the Ministry of Agriculture of the People's Republic of China. This project aims to address increasing expectations for high-quality dietary resources generated by high rates of economic growth and rising purchasing power in China. Specifically, the project targets the development of sustainable production capacities for major food resources in China, including rice, soybeans, corn, and freshwater fishes. If successful, this project can be expected to improve average eating habits. Such bold objectives, however, will require not only a better understanding of the development of agricultural production but also of trends within the rapidly growing Chinese food industry.

With these goals in mind, JIRCAS convened a workshop in Tokyo from March 23-24, 1998, under the kind support of Ajinomoto Co., Inc., and with participation of leaders in the Chinese food industry. The contents of workshop presentations are summarized below.

Session 1: The Japanese food industry and demand and supply for food in China

- ④ Status of the Japan-China project. A. Noguchi, Japan International Research Center for Agricultural Sciences (JIRCAS), Japan
- ④ Demand, supply, and distribution of food in China. S. Yan, St. Andrew's University, Japan
- ④ Present situation and topics in the food industry of Japan. Y. Nagara, Center for Food Industry, People's Republic of China

Session 2 Chinese food industry, its present and future

- ④ Structural readjustments in food and food industry development in China. J. Jianping, Academy of Agricultural Sciences, People's Republic of China
- ④ Present situation of the food industry in China. W. Wenzhe, China National Food Industry Association, People's Republic of China
- ④ Present situation of the food distribution industry in China. C. Shiguan, Department of Consumer Goods Circulation, Ministry of Internal Trade, People's Republic of China
- ④ Present and future markets for stock farm products in China. L. C. Xiang, Northeast Agricultural University, People's Republic of China
- ④ Future orientation of the food industry in China. B. Qingyan, Department of Planning, China National Food Industry Association, People's Republic of China

WORKSHOPS and SEMINARS

JIRCAS Workshop Series: Facets of International Agricultural Research

In addition to the annual international symposia, JIRCAS sponsors research workshops focusing on specific themes several times per year. Workshops are hosted by the relevant JIRCAS research divisions and are attended by JIRCAS staff, speakers invited from within Japan, and interested persons from various government research institutes, private companies and universities. The following workshops were held at JIRCAS during FY 1997.

- | | |
|-----------------|--|
| April 4, 1997 | Fourth research meeting on problems in African agriculture
(JIRCAS Research Information Division) |
| March 4-5, 1998 | Aquaculture and related environmental problems in Southeast Asian countries
(JIRCAS Fisheries Division) |
| March 17, 1998 | Research meeting on the establishment of technologies for recovering salt-accumulated soils in Central Asia
(JIRCAS Research Information Division) |

International Research Seminars

International research seminars are held informally throughout the year, with one to three foreign guests, Japanese specialists, or JIRCAS staff presenting on topics of importance to international agricultural research. The following two seminars were held in FY 1997.

- | | |
|--------------------|--|
| September 30, 1997 | South American agriculture and international collaborative research
<i>Fumio Iwata, Japan International Cooperation Agency (JICA), and Kiyoko Hitsuda, Japan International Research Center for Agricultural Sciences (JIRCAS), Japan</i> |
| December 8-9, 1997 | Productive capacity of tropical mangrove habitats and their sustainable utilization
<i>Chong Ving-Ching, University of Malaya</i> |

International Research Workshops

Nine International Research Workshops were convened on JIRCAS premises during FY 1997. Attended jointly by JIRCAS researchers and foreign invitees, these workshops aimed to facilitate discussion regarding the numerous collaborative research projects which JIRCAS is currently undertaking with counterpart institutions throughout the world.

- | | |
|--------------------------|---|
| December 2-5, 9-10, 1997 | Cooperative soybean research in South America
<i>Attended by representatives of JIRCAS, the Brazilian Agriculture Research Corporation (EMBRAPA), Brazil; the Ministry of Agriculture and Cattle (MAG), Paraguay; and the National Institute for Agricultural Technology (INTA), Argentina</i> |
| December 8-9, 1997 | International workshop on the development of farming systems in the Mekong Delta
<i>Attended by representatives of JIRCAS; Cantho University and the Cuu Long Delta Rice Research Institute, Vietnam; the Flemish Development Association, Belgium; and Rakuno Gakuen University, the Tohoku National Agricultural Experiment Station, and the National Institute of Animal Health, Japan</i> |

February 4, 1998

Development and evaluation of environmentally sensitive agricultural production technologies in China

Attended by representatives of JIRCAS and the Soil and Fertilizer Institute of the Chinese Academy of Agricultural Sciences and the Institute of Soil Science of the Chinese Academy of Sciences, People's Republic of China.

February 13, 1998

MISCELLANEOUS MEETINGS and WORKING GROUPS

Annual Meeting for Review and Promotion of Research

JIRCAS conducts its Annual Meeting for the Review and Promotion of Research for International Collaboration in February, as the end of the fiscal year approaches. The purpose of the meeting is to review and evaluate the year's activities in detail in preparation for the subsequent fiscal year. All operations of JIRCAS are outlined, and research achievements deemed of particular importance are highlighted (see Research Overview: Research Division topics for more detail). Those in attendance at the meeting include JIRCAS directors and invited representatives from the Agriculture, Forestry and Fisheries Research Council (AFFRC), the Forestry Agency, the Fisheries Agency, and various research institutes affiliated with the Ministry of Agriculture, Forestry and Fisheries. In 1997, the meeting considered, as its principal theme, prospects for cooperation between international agricultural projects and domestic research. After reporting on the present state of JIRCAS's international agricultural projects and their relation to important domestic research subjects, project leaders proposed concrete topics on which to focus their cooperation with related domestic research centers. Based on these proposals, a variety of opinions on establishing cooperative arrangements between these institutes and each international project were exchanged, and participants confirmed their intention to consider further cooperation in the future.

JIRCAS Return Seminars

At JIRCAS, researchers returning from overseas dispatches or research projects give an oral presentation accompanied by a written summary of activities which is distributed to JIRCAS staff. These sessions are termed "JIRCAS Return Seminars" and are held during the interim or upon the completion of research projects and dispatch assignments. Such seminars are ordinarily held twice per month, and each year approximately fifty scientists give presentations.

Comprehensive Project Working Group Meetings

During FY 1997, participants in six comprehensive research projects gathered regularly in working groups to discuss the structure and progress of their studies on Mekong Delta farming systems, sustainable agricultural systems in northeastern Thailand, brackish water mangrove ecosystems in Malaysia, sustainable agropastoral systems in subtropical Brazil, the food production and distribution industries in the People's Republic of China, and soybean cultivation in the Southern Cone of South America. Researchers studying Vietnam, Malaysia, and the Southern Cone held formal meetings as highlighted above in this section. Beginning in 1998, researchers involved in the evaluation of regional farming systems in Indonesia and the rainfed rice project in West Africa will also convene in similar discussion sessions to evaluate the progress of their projects.

PEOPLE'S REPUBLIC OF CHINA

Project on the Sustainable Production and Utilization of Food Resources

JIRCAS officially inaugurated its first comprehensive research project with the national government of the People's Republic of China on May 28, 1997. During a ceremony timed to coincide with the sixteenth meeting of the Japan-China Agricultural Science and Technology Exchange Group in Tokyo, representatives from JIRCAS, the Japanese Agriculture, Forestry and Fisheries Research Council (AFFRC), and the Ministry of Agriculture (MOA) of the People's Republic of China signed a memorandum of understanding committing the institutions to a collaborative research program spanning eight years.

Photo: Akinori Noguchi, Director of the Crop Production and Postharvest Technology Division, and Dr. Nobuyoshi Maeno, Director General of JIRCAS, sign a Memorandum of Understanding with President Mao Daru and Vice President Li Lite of the China Agricultural University in Beijing.

The comprehensive project aims to develop technologies for sustainably producing and utilizing major food resources in China. Such resources, including rice, soybeans, corn, and freshwater fish, will become increasingly important as economic development strengthens the purchasing power of ordinary Chinese citizens and enhances their expectations concerning dietary nutrition.

A report entitled "Who Will Feed China? Wake-Up Call for a Small Planet" (L. Brown, The World Watch Institute, 1995) provided the initial impetus behind concerns about the future of China's food supply. In response, many Chinese and foreign researchers have made analyses and projections regarding food supply problems in China, focusing their studies primarily on the grain sector. These reports reveal little agreement on future scenarios for food production and demand, most likely due to differences in underlying assumptions, data, and estimation processes. Nevertheless, there exists sufficient consensus to conclude that food demand will increase continuously during the next three decades and that available supplies will not meet this demand. Consequently, rising demands for imported foodstuffs will likely occur.

The major factors inhibiting agricultural production increases in China include the area of arable land, the poor quality of farmland, the weak response of soils to fertilizer, and the small-holder structure of private Chinese farms. In the process of rapid economic growth, it is inevitable that more farmland will be put toward non-agricultural uses. New efforts to reclaim land and recent increases in crop indices do not seem to have halted the trend toward declining levels of land under cultivation. Moreover, crop yields in China remain significantly lower than in advanced industrial countries.

At the same time, major factors influencing food demand will include the expansion of the population, changes in the structure of Chinese society due to rural-urban migration, the growth of income, alterations in the prices of agricultural products, and the persistence of poor infrastructure. Due to the inevitable shrinkage of agricultural resources and the natural, structural, financial, and economic constraints on yield potentials, demand for food in China will continue to rise even as agricultural production fails to keep pace.

In light of these trends, this project marks an attempt to develop an effective production and distribution system for food resources in order to cope with changing structures for the supply and demand of agricultural products. Efforts to achieve this objective will require not only an evaluation of the dissemination of new technologies in selected areas and their economic impacts on rural areas and individual farmers, but also modeling for the supply and demand of food resources in selected areas, analysis of the structure of corresponding farming areas and agricultural products, and design of more effective control systems to improve food supply and demand in selected areas.

In addition, the project seeks to generate technologies for the sustainable and stable production of major food resources. Toward this end, project participants intend to evaluate existing genetic resources, create new species, and develop and evaluate environmentally sensitive agricultural technologies. Finally, the project aims to develop food technologies that will enhance the utilization and distribution of major food resources. These efforts will include evaluating the quality of major food resources, developing new food ingredients, and improving preservation and distribution technologies for major food resources.

WEST AFRICA **Project on Rice Hybridization and Food Supply Stabilization**

On the basis of recommendations from the ongoing Workshop on African Agriculture, JIRCAS has long promoted collaborative efforts to improve agricultural conditions in African countries, many of which suffer from high population growth, poor economic performance, desertification, and urbanization problems that rank among the most severe in the world. In an effort to address some of these problems as they impact the development of major food crops, JIRCAS signed a Memorandum of Understanding with the [West Africa Rice Development Association \(WARDA\)](#), a research organization based in Côte d'Ivoire, in early March, 1998.

Under terms of the agreement, the two institutes will pursue cooperative research on the inter-specific hybridization of two rice species, *Oryza sativa* and *Oryza glaberrima*, a field in which Japanese scientists can contribute effectively. On a larger scale, the project aims to improve the income level of individual cultivators and help to stabilize the overall food balance in Sub-Saharan Africa.

*Photo: Introducing a [new rice genotype produced through the interspecific hybridization](#) of *Oryza sativa* and *Oryza glaberrima* in the northern part of Côte d'Ivoire, Africa.*

As such, the project remains consistent with the intention of JIRCAS to develop and distribute agricultural products which are relevant to local socioeconomic conditions, technological levels, and farming practices and to do so within the framework of small-scale, water-efficient cropping rather than the large-scale irrigated farming characteristic of more advanced farming systems. The project is slated to continue for five years.

SOUTH AMERICA

Project on the Production and Utilization of Soybean Resources

During the second week of March, 1998, JIRCAS signed Memoranda of Understanding with two South American organizations, the [National Institute for Agricultural Technology \(INTA\)](#) of Argentina and the Ministry of Agriculture and Livestock (MAG) of Paraguay. This agreement commits the organizations to a new collaborative research project entitled “Soybean improvement, production, and utilization in South America” initiated by JIRCAS in April, 1997.

Photo: Ceremony in Buenos Aires, Argentina, at which Dr. Nobuyoshi Maeno, Director General of JIRCAS, and Luis M. Firpo Brenta, Vice President of INTA, signed a Memorandum of Understanding pledging cooperation under the South American soybean project. March 12, 1998.

The project will promote multidisciplinary studies on soybean production and utilization in Southern Cone countries through the encouragement of collaborative research linking Japanese and South American specialists. Cooperation in this area is particularly important given the large role which South American countries play in the international production of soybeans, a major source of food, oil, and livestock feed. The recent agreements with INTA and MAG complement earlier soybean research projects by focusing efforts in five areas, including genetics and breeding, soil management and pest control, crop management and production, post harvest technology, and socioeconomic factors. Research efforts will proceed on a continuing basis with no ending date set. The cooperation of the [Brazilian Agriculture Research Corporation \(EMBRAPA\)](#) is also expected.

MONGOLIA

Project on the Monitoring of Grassland Evapo-Transpiration

In September, 1998, JIRCAS Director General Nobuyoshi Maeno signed a Memorandum of Understanding with the Institute of Meteorology and Hydrology, a division of the Mongolian Ministry of Nature and Environment. The agreement is entitled “Studies on heat and water exchange in the atmosphere-vegetation-soil system for the determination of evapo-transpiration distribution.”

Under terms of the agreement, scheduled to run for three years, the two institutes will focus cooperative efforts on developing techniques for monitoring turbulence flux over grassland areas and applying remote sensing techniques for hydrological monitoring. More specifically, plans call for observations of eddy transfer characteristics in the Arvayheer area toward the development of suitable corrections for the Band Pass Covariance Method. The same region will be utilized for time-sequential and sub-pixel analysis of surface and satellite data that may help to improve algorithms for soil moisture and snow-water equivalency factors.

Photo: JIRCAS researchers sampling soil and measuring moisture levels on the [steppes of Mongolia](#).

Other important Memoranda of Understanding

A number of other important MOU’s have been concluded during the previous year. Seven such documents signed in August, 1997, commit JIRCAS to pursue cooperative studies with research institutes and organizations in the People’s Republic of China, including the China Agricultural University, the Research Center for Rural Economy, and the Jilin Academy of Agricultural Sciences. Also signing on to collaborative research projects are four affiliates of the Chinese Academy of Agricultural Sciences: the Institute of Natural Resources and Regional Planning, the Soil and Fertilizer Institute, the Institute of Agricultural Economics, and the China National Rice Research Institute.

In addition, JIRCAS has concluded MOU’s with the [International Maize and Wheat Improvement Center \(CIMMYT\)](#) located in Mexico City, Mexico, and the [International Center for Research in Agroforestry \(ICRAF\)](#) located in Nairobi, Kenya.

Photo: Mitsuo Ishige, former director of the Biological Resources Division at JIRCAS, sign a Memorandum of Understanding with Director General Cun Shan Ying of the China National Rice Research Institute in Hangzhou, Zhejian Province..

Academic Prizes and Awards

JIRCAS is pleased to note that many of its staff members have been the recipients of academic prizes and awards from scientific societies and other organizations. The following is a brief summary of special achievements received during the previous Fiscal Year. The Institute is proud to include these awards in the Highlights of Annual Report 1997.

Glaciology

Dr. Hiroyuki Ohno, Senior Researcher in the Environmental Resources Division, received the 1997 Hirata Award from the Japanese Society of Snow and Ice for “Study on heat transfer on thick snow and ice mass.” The award is given to a researcher as the Society’s recognition of individual’s achievement on glaciology and encouragement for successful career evolution.

Soil Science and Plant Nutrition

Dr. Yoshinari Ohwaki, Senior Researcher at the Okinawa Subtropical Station, received the 1998 Young Scientist Award for Soil Science and Plant Nutrition from the Japanese Society of Soil Science and Plant Nutrition for “Comparative studies on phosphorous and iron nutrition of legumes.” The award is given to a rising, young researcher as the Society’s recognition of individual achievement and promise.

JIRCAS AND THE MINISTRY OF AGRICULTURE,

FORESTRY, AND FISHERIES

Administration of the MAFF Research Institutes

The Japan International Research Center for Agricultural Sciences (JIRCAS) is one of twenty-nine research institutes belonging to the [Ministry of Agriculture, Forestry and Fisheries \(MAFF\)](#), a department of the Japanese government. As Japan faces the twenty-first century, these agricultural research institutes are playing a key role in the development of new technologies, such as biotechnology, which will powerfully influence further developments in the food industry and help to promote agriculture, forestry and fisheries activities both in Japan and abroad. MAFF's institutes work in close collaboration with local governments, universities, and private research organizations with the dual objectives of contributing to the overall prosperity of Japan while making significant contributions to the international community.

Including JIRCAS, nineteen of the twenty-nine institutes affiliated with MAFF are directly overseen by the [Agriculture, Forestry and Fisheries Research Council \(AFFRC\)](#), a special administrative body attached to the Ministry. Principal duties of the AFFRC include overall research planning and coordination, liaison and coordination between researchers and administrative entities, administration of the institutes, and provision of research assistance to local organizations and the private sector. The AFFRC is headed by a chairman, and its advisory members consist of independent university professors, former directors of research institute, and high officials who previously served within MAFF ([Table 1](#)). The ten remaining national agricultural research institutes, include one in the field of forestry and nine devoted to fisheries research, are attached to the AFFRC but are overseen, respectively, by the Forestry Agency and the Fisheries Agency, administrative agencies under the direct supervision of MAFF. [Figure 1](#) provides further details of these organizational arrangements.

JIRCAS is unique among the national agricultural research institutes in that it serves as an international research center while, at the same time, remaining an integral part of the MAFF infrastructure. Therefore, JIRCAS both dispatches researchers overseas and remains involved in active exchange and collaboration with the other twenty-eight institutes. The Institute is located in Tsukuba Science City, nearly 50 km northeast of Tokyo ([Figure 2](#)), along with a number of other research institutes affiliated with MAFF. The AFFRC Secretariat maintains a Tsukuba Office, which constitutes the administrative center of the Tsukuba Institutional Complex. Tsukuba itself is home to many other research institutes and experimental facilities belonging to other ministries and agencies of the Japanese government, as well as to the private sector.

Administration and Research at JIRCAS

The JIRCAS staff currently includes a total of 163 research scientists and administrators, including forty-three staff members posted to the JIRCAS Okinawa Subtropical Station on Ishigaki Island. A Director General heads the Institute from the Main Building in Tsukuba. The Research Planning and Coordination Division oversees the seven Research Divisions that comprise JIRCAS: the Research Information Division, Biological Resources Division, Environmental Resources Division, Crop Production and Postharvest Technology Division, Animal Production and Grassland Division, Forestry Division, and the Fisheries Division, as well as the Okinawa Subtropical Station. The Administration Division is responsible for general administrative affairs. The administrative structure of JIRCAS is further delineated in [Figure 3](#).

● Research Planning and Coordination Division

The Research Planning and Coordination Division functions as a central organ for overseeing and supporting the activities of the seven Research Divisions and the Okinawa Subtropical Station. The Division consists of a Research Planning Section, a Research Coordination Section, an International Relations Section, and a Publication and Documentation Section. Their activities are supported by the work of an International Research Coordinator and a Research Information Officer assigned to the Division.

The Research Planning Section, Research Coordination Section, and International Relations Section are jointly responsible for the implementation of research programs involving JIRCAS researchers both overseas and in Japan. Staff members within the three divisions undertake comprehensive planning of JIRCAS research projects, arrange the dispatch of researchers on long and short-term bases, assist in the implementation of invitation programs for visiting researchers and administrators, and maintain communication with relevant international and domestic organizations. The Publication and Documentation Section handles the collection, classification, and supply of bibliographic materials both from overseas and from domestic sources and prepares public relations materials for the Institute. The International Research Coordinator oversees collaborative efforts in Southeast Asia while serving in the Bangkok Office as the JIRCAS Representative to Thailand. The Research Information Officer is responsible for developing the JIRCAS computer information network and coordinating the exchange of data between JIRCAS and related research institutions. Additionally, the Division as a whole coordinates the organization of various meetings and workshops, including the annual International Symposium.

Administration Division

The Administration Division consists of a General Affairs Section, an Accounting Section, and an Overseas Support Section. The General Affairs Section manages official documents, personnel-related matters, and social affairs pertaining to JIRCAS staff. The Accounting section handles accounting activities, budgeting, settlements and wage distribution. Finally, the Overseas Support Section assumes responsibility for all matters pertaining to the overseas operations of JIRCAS, including general international affairs, overseas expenditures, and overseas shipments of equipment and materials.

Other

The Okinawa Subtropical Station maintains a separate General Affairs Section independent of the Administration Division. Additionally, JIRCAS has two field management sections which oversee experimental fields belonging to the Institute. The Okinawa Field Management Section falls under the direct supervision of the Okinawa Subtropical Station management, while the Tsukuba Field Management Section is attached to the Crop Production and Post Harvest Technology Division.

JIRCAS Organization

RESEARCH INFORMATION DIVISION

The Research Information Division fulfills three main responsibilities relating to research operations at JIRCAS. First, the Division collects and analyzes information pertaining to socioeconomic conditions and the state of agricultural sciences in developing countries. Second, it attempts to formulate and coordinate collaborative research projects with public and private organizations in developing countries. In recent years, this role has grown in relative importance as JIRCAS has become increasingly involved in large-scale, comprehensive research projects with countries throughout the world. Finally, in an effort to coordinate rising flows of data to and from partner countries, the Division has assumed the responsibility of developing and operating information systems through mainframe computers located at JIRCAS.

The Division's research coordinators and senior scientists undertake these tasks from two distinct perspectives. The first is a strategic perspective focusing on critically important world regions, including China, other monsoonal areas of Asia, arid and semi-arid Asian areas, Africa, and Latin America. The second perspective focuses on particular issues, with an emphasis on global problems generated by environmental degradation, food insecurity, and unbalanced patterns of rural development. Combining these two perspectives, research coordinators in the Research Information Division conduct studies on agriculture in specific regions and consider the prospects for collaborative studies. They design and coordinate comprehensive projects in which scientists representing different disciplinary backgrounds can work together toward common goals. Thus far, eight major comprehensive projects have been designed and implemented since the establishment of JIRCAS.

In 1994, JIRCAS launched its first comprehensive research project in Vietnam in an effort to promote improved efficiency in the combined farming systems currently used in the Mekong Delta region. Subsequently, the Division launched comprehensive projects on tropical brackish water ecosystems in Malaysia and sustainable agricultural technologies in Northeast Thailand during 1995, and another comprehensive project on sustainable agro-pastoral rotation systems in subtropical Brazil during 1996. In FY 1997, two new comprehensive projects began, one targeting sustainable production and processing of major food resources in China and the other investigating new technological developments for soybean production and utilization in South American countries. Additionally, the Division has been planning comprehensive projects on rice development in West Africa and farming systems in Indonesia scheduled to begin during the next fiscal year.

Photo: [Chongwenmen Food Market in Beijing](#) teems with shoppers on a recent weekend afternoon.

The Research Information Division is also involved in analyzing global issues. In collaboration with the FAO and other international agencies, the Division recently helped to develop a sophisticated world food model that can be used to project world food supply and demand and to simulate the effects of proposed policy changes. At the same time, findings derived from ongoing collaborative research projects at JIRCAS are often incorporated into simulations conducted using the model. Currently, researchers are attempting to elaborate the model so that the impact of environmental changes can also be analyzed. In addition, researchers within the Division are studying rural development strategies, with particular emphasis on farming systems research, by reviewing recent development strategies and assisting researchers in the natural sciences who are involved in integrated rural development projects.

Another important task of the Division is to develop and operate the computer-based JIRCAS information system. In addition, the Division has constructed a database of bibliographic articles on tropical agriculture published in Japan which is available to JIRCAS researchers. The Division has developed an integrated information system including statistical data, documents and imagery data based on PC windows and UNIX. JIRCAS researchers have access to this information as well as access to external sources through the Internet system.

Finally, the Division works as the secretariat for the numerous international seminars and workshops which JIRCAS researchers conduct throughout the year. The largest is the JIRCAS International Symposium, which addresses a topic of central importance in agricultural research. The [International Symposium for FY1997](#) concerned "Sustainable agricultural with environmental conservation in Asia" and was attended by 230 participants from over twenty countries.

● [Division Topic](#): Modeling Food Demand and Supply in Shandong, China.

Back to

the Annual Report [Main Contents](#) page.

Forward to

the [Biological Resources Division introduction](#) page.

RESEARCH INFORMATION DIVISION TOPIC
Modeling Food Demand and Supply in Shandong, China

Questions regarding the future of China's food supply are matters of great concern among both national leaders and specialists throughout the world. Such concerns derive from the wide regional gaps which exist in patterns of food supply and demand in China, as evidenced in per capita agricultural land statistics, the unequal distribution of income, patterns of food intake, and the persistence of policy priorities favoring certain commodities. In order to better estimate future trends affecting food supply in the midst of such factors, analyses based on detailed regional information is essential. Our study examined the case of Shandong province, an eastern coastal province which has played a significant role in Chinese agriculture since the beginning of market-oriented reforms.

In order to suggest tentative prospects for the food balance in Shandong Province in the year 2010, we constructed an econometric model covering thirteen commodities, namely wheat, rice, maize, tubers, soybeans, groundnuts, pork, beef, mutton, poultry, eggs, fish and milk. We examined demand functions separately for urban and rural areas of the province. Most parameters used in the model were estimated econometrically, based on historical data, including artificial compound prices combining government procurement prices with the market retail prices that have emerged since the introduction of market-oriented reforms. We allowed substantial time lags between agricultural investment from local authorities and changes in fertilizer prices and their impacts on crop yields.

Our model utilized two possible scenarios for estimating future changes in procurement prices and fertilizer prices. Scenario A assumed that price evolution would continue along the same trajectory as average price changes between 1980 and 1995. Scenario B assumed convergence at the level of world market prices by the year 2010, a probable outcome in the case that China gradually opens its agricultural markets through international negotiation. Assumptions were also made for other exogenous variables based on historical data ([Table 1](#)). Combining A and B with three different possibilities for economic and population growth generated a total of six scenarios simulated within the model.

Our simulations produced several useful suggestions about the food balance in Shandong Province in the near future. Regardless of scenarios, the model predicts that the region will experience increasing surplus levels of wheat and rice ([Figure 1](#)), along with meat and eggs. At the same time, the regional deficit for maize, which is mostly used for animal feed, appears poised to deepen over time ([Figure 2](#)). These results suggest that more agricultural land in the region may be designated for maize production, and that utilization of imported feed may become more common in Shandong, as in neighboring Asian countries.

Future grain production will also be affected by market and procurement prices, as well as the relative share of commodity sales falling under each category. Thus, the response of supplies to price changes will remain the key element for improvement in the model, requiring intense studies of the progress of relevant local policies. Our model also suggests that different livestock raising systems will heavily affect the predicted outcomes for feed requirements, as the efficiency of feed-livestock conversion has a large impact on feed usage within the model.

With limited sources of information and constant change affecting contemporary Chinese economic institutions, outputs from this model should be treated as tentative and conditional. However, further efforts to construct such models will continue at JIRCAS, and the advantages of this type of study will become increasingly evident as models expand to cover each province in China.

BIOLOGICAL RESOURCES DIVISION

In many developing regions of the world, rapidly increasing populations combined with problems of progressively deteriorating natural resources have led to widespread malnutrition and serious instability in crop production. As a result, such areas are now faced with the need to increase and stabilize agricultural production through methods compatible with the preservation of the environment. Agricultural technologies that optimize the use of biological resources will play an important role in determining whether or not this objective can be met.

Photo: An Andean market in Ulluco, Peru, is a treasure house of plant genetic resources.

In response to these concerns, the Biological Resources Division has placed considerable emphasis on collaborative on-site breeding projects in foreign countries. The objective of such projects is to utilize available genetic resources and biotechnological procedures to develop new crop varieties. In cooperation with the International Rice Research Institute (IRRI) in the Philippines, for example, the Division has been involved in a recent project examining blast resistance in several rice varieties, results of which allowed for the selection of near-isogenic lines of rice and the development of several pre-isogenic lines with different single genes with blast resistance. Working with the International Maize and Wheat Improvement Center (CIMMYT) in Mexico, the Division has conducted research on the doubled haploid system and marker-assisted selection, which may assist wheat breeders in developing countries in increasing the efficiency of their operations. Additionally, in collaboration with the Soybean Institute of the Jilin Academy of Agricultural Sciences in the People's Republic of China, our researchers helped to develop soybean varieties resistant to viral diseases and nematode pests. At the same time, experts dispatched by the Division to the International Crop Research Institute for the Semi-Arid Tropics (ICRISAT) evaluated sorghum and pigeonpea germoplasm to obtain genetic resources highly adaptable to soils with low nitrogen and phosphorus levels. And at Khon Kaen University in Thailand, Division scientists analyzed cowpea cultivars during the dry season to test the possibility of utilizing them as feed or green manure.

Using technology available in Tsukuba to support these overseas efforts, researchers from the Biological Resources Division have been studying genetic resources and crop production in selected crops and experimental plants. Several have been working with the Yunnan Academy for Agricultural Sciences in the People's Republic of China to analyze genes that provide disease and cool-weather tolerance in rice strains, to screen relatives of wheat to help understand disease resistance in particular wheat strains, and to utilize molecular markers for analyzing genetic resistance to *Fusarium* head blight. The molecular biology group of the Division, including several visiting scientists, has recently utilized biotechnological methods to study environmental stress patterns in higher-order plants, in particular examining how to use genes and regulatory factors for the production of drought-tolerant transgenic crops. The researchers isolated a number of genes that function in drought tolerance and, using *Arabidopsis* and cowpea plants, analyzed the regulatory factors of these genes in stress response. Their research will contribute to the development of commercial crops capable of withstanding potentially damaging environmental stresses, perhaps thereby helping to mitigate problems relating to the food crisis and environmental degradation in developing countries.

● [Division Topic #1](#): Improving Plant Tolerance to Environmental Stress by Gene Transfer.

● [Division Topic #2](#): Hybrid Rice Yields under Low Direct Seeding Rate Conditions in Malaysia.

Back to	the Annual Report Main Contents page.
Forward to	the Environmental Resources Division introduction page.

BIOLOGICAL RESOURCES DIVISION TOPIC 1

Improving Plant Tolerance to Environmental Stress by Gene Transfer

Drought, salinization and freezing are environmental conditions that dramatically affect the growth of plants and the productivity of crops. Genetic engineering, through the use of gene transfer technology, has the potential to improve stress tolerance in crops. Recently, several different approaches to improve the stress tolerance of plants by gene transfer have been attempted. Approaches yielding partial improvement involved the introduction of gene encoding enzymes required for the biosynthesis of various osmoprotectants, such as mannitol, proline, glycine, and betaine. The introduction of genes which encode enzymes for modifying membrane lipids, late embryogenesis abundant (LEA) proteins, and detoxification enzymes has also been attempted.

In each approach, a single protective protein or enzyme has been produced in the test plants. However, comprehensive studies suggest that a number of genes function in environmental stress tolerance and response. In order to contribute to improvements in biotechnology for stress tolerance, we analyzed plant responses to environmental stress. During the course of our research, we cloned more than 40 cDNAs for dehydration-inducible genes from *Arabidopsis* and subsequently analyzed the gene expression, the gene products functions, and the signal transduction cascades under water stress for each. Our findings matched earlier suggestions that genes induced during stress conditions protect cells from environmental stress not only by producing important metabolic proteins but also by regulating genes for signal transduction in stress response.

One of the isolated genes, *rd29A*, is induced by the stress of drought, high salt and low temperature. We analyzed the *rd29A* promoter and identified a novel cis-acting element containing 9 bp, TACCGACAT (DRE, Dehydration Responsive Element), that is involved in dehydration-, salt- and cold-responsive gene expression. We isolated two cDNA clones that encode DRE binding proteins, DREB1A and DREB2A, by yeast one-hybrid screening. The DREB1A and DREB2A proteins contain a conserved DNA binding motif found in the ethylene-responsive element binding protein and AP2 proteins (EREBP/AP2 motif) that function in ethylene-responsive expression and floral morphogenesis, respectively. Both proteins specifically bound to the DRE sequence *in vitro* and activated the transcription of the b-glucuronidase reporter gene driven by the DRE sequence in *Arabidopsis* leaf protoplasts. Expression of the DREB1A gene was induced by low-temperature stress while expression of the DREB2A gene was induced by dehydration. Thus, two independent DREB proteins, DREB1A and DREB2A, function as trans-acting factors in two separate signal transduction pathways under low temperature and dehydration conditions, respectively ([Figure 1](#)).

Overexpression of the DREB1A cDNA in transgenic *Arabidopsis* plants using constitutive cauliflower mosaic virus 35S promoter induced strong expression of the target genes under unstressed conditions. These target genes include *kin1*, *cor6.6*, *rd17*, *cor15a* and *erd10*, which are induced by both dehydration and cold stresses. Proteins encoded by these target genes have been shown to function in protecting plant cells from dehydration and low temperature stress. These transgenic plants revealed multi-stress tolerance to drought, salt and freezing. Higher levels of the transcripts of the DREB1A gene in the transgenic plants increased their stress tolerance to dehydration and freezing. However, the higher level of the transcripts also caused the growth retardation of plants grown in unstressed conditions and remarkably reduced plant productivity.

We avoided this problem by using the stress inducible *rd29A* promoter. The DREB1A gene driven by the *rd29A* promoter was expressed at low levels under controlled conditions but was immediately induced to very high levels by dehydration, salt and low temperature stress. In transgenic plants, the stress tolerance was high, but growth retardation was not severe and the productivity of the plants was almost the same as in the natural state ([Figure 2](#)). Previously, we showed that the cis-element DRE also functions in tobacco plants and DRE-related motifs have been reported in the promoter region of the cold-inducible *Brassica napus* gene. These observations suggest that both the DREB1A cDNA and *rd29A* promoter may be useful for improving dehydration, salt and freezing tolerance in crop plants.

BIOLOGICAL RESOURCES DIVISION TOPIC 2

Hybrid Rice Yields under Low Direct Seeding Rate Conditions in Malaysia

Direct seeding of rice is common throughout Malaysia. In order to control detrimental weed growth in paddy fields, seeding rates that reach 100 kg/ha are often employed. These practices present problems in efforts to raise the productivity of rice cultivation in Malaysia, as high-yielding hybrid rice seeds are more expensive than normal rice seeds. Hybrid rice cannot be used economically without reducing excessively high seeding rates. Initial testing elsewhere has demonstrated that hybrid rice lines experience high rates of initial growth, suggesting that their use in direct-seeded paddy fields may offset weed competition sufficiently to produce comparative advantages over common rice lines. Our research tested this hypothesis.

We conducted low seeding rate yield trials of high-yielding hybrids from the International Rice Research Institute (IRRI) in the Philippines and from India and checked their competitive abilities against *Echinochloa* spp., namely, *E.oryzicola*, *E.crus-galli* var. *formosensis* and *E.crus-galli* var. *crus-galli*.

Photo: Hybrid rice growing in Bumbung Lima, Malaysia.

The highest varietal heterosis across seeding rates was 115.5 by IR69690H. This heterosis level is considered to be low. All four IRRI hybrids were confirmed at about 20 percent of heterosis over MR84 in transplanted yield trials for four consecutive seasons in Malaysia. One reason for the relatively low heterosis in hybrids may be the fact that hybrids have never been selected in a direct seeding condition, even at the IRRI and in India. Adaptability for direct seeding might prove different from that for transplanting.

The highest varietal yield of 3.23 t/ha was achieved by MR185 with *Echinochloa* spp. The hybrids used here did not show any superiority over the control variety MR185 in direct seeding conditions where the fields were very much infested with *Echinochloa* spp. plants. The average dry whole weight of *Echinochloa* spp. was 2.13 t/ha. In this experiment the infestation of *Echinochloa* spp. is considered to be very serious. With the increase in culm length that ranged from 65 cm to 80 cm, the yield of hybrids clearly increased. Even within this range of variation of culm length, their yield increased according to the height of rice. For the purpose of controlling weeds in paddy fields, seeding rates have to be as high as about 100 kg/ha, whereas in the case of transplanting, the seeding rates can be reduced to about 20 kg/ha.

Hybrid rice seeds are 5 to 10 times more costly than normal rice seeds. According to the results of this experiment, hybrid rice was not more competitive against weeds than the usual rice lines in direct seeding paddy fields. These findings imply that utilizing high-yield hybrids in direct-seeded paddy fields under drastically reduced seed rates will, ultimately, prove impractical.

By introducing transplanters, seed rates can be reduced by up to 20 kg/ha. The increase in seed cost is estimated at no more than RM (Malaysian ringgit) 200/ha. With the addition of labor and other cost incurred in using transplanters, the total increase in cost is RM 475.4/ha. To cover this cost increase, 0.63 t/ha increase in yield is necessary, and a yield increase of roughly 1.0 t/ha would allow farmers to profit even with hybrid rice. Therefore, the use of transplanters appears to be the most practical means of utilizing hybrid rice in Malaysia.

ENVIRONMENTAL RESOURCES DIVISION

Recent estimates suggest that the world population could reach the 6.3 billion mark by the year 2000 and the 6.8 billion mark by 2025. To feed this ever-increasing population, existing agricultural land is likely to be subjected to a higher intensity of cultivation in populous areas, and farmland development is likely to be extended to areas only marginally suited for agriculture. Trade liberalization in recent years has led to a sharp increase in the importation of commercial crops and is encouraging increased production in exporting countries. This may result in excessive load to farmland soils as well as continuous single cropping and deforestation in many countries. Past experience has shown that these practices accelerate farmland degradation and desertification on a global-scale. Such drastic changes in land use cause climatic transformation over extended regions and bring about unpredictable constraints to existing agricultural and forest ecosystems.

Photo: JIRCAS researchers sampling soil and measuring moisture levels on the [steppes of Mongolia](#).

From the middle of this century, patterns of land utilization have been changing due to population expansion. These changes, along with a rapid increase in fossil fuel consumption, have had tremendous impact on the atmosphere through intensified emission of carbon, nitrogen, and sulfur gases. The annual consumption of fossil fuel now exceeds 5 billion tons of carbon. If the present level of consumption continues, CO₂ concentration will increase by 0.5 per year and double by the middle of the next century. The 1995 report from the International Panel on Climate Change (IPCC) suggests that a two-fold increase in CO₂ concentrations could cause an increase in mean global surface temperature by about 2C by the year 2100.

Furthermore, research has shown that the atmospheric concentrations of other greenhouse gases such as methane, nitrous oxide and chlorofluorocarbons have also increased greatly within the past two decades. If the effects of these trace gases are taken into account, global warming is estimated to take place more rapidly than in the case where the effects of CO₂ are considered alone. These trace gases move from the troposphere to the stratosphere and participate in the destruction of stratospheric ozone. The depletion of the ozone layer allows more ultraviolet rays to reach the Earth's surface where millions of species of organisms live without any means of protection from ultraviolet radiation.

To address these problems, this Division is organizing research to identify and develop technologies for the improvement of agricultural activities and the rehabilitation of degraded lands. The target technology must be compatible with the conservation of the environment and ecosystems such as arid lands, wetlands and sloped lands which have long been considered of little use for agriculture. Other projects aim at the development of technology for sustainable agriculture through analyzing mechanisms of nutrient cycling within arable land ecosystems. To conserve the global environment in harmony with agricultural activities, research on sustainable agriculture should be given foremost emphasis.

ENVIRONMENTAL RESOURCES DIVISION TOPIC 1 **Using Neural Networks to Assess Vegetation Stability**

In arid regions, declining levels of vegetation cover have contributed to the intensification of desertification. Manifold complex factors are involved in this type of land degradation, including land factors such as topography and soil characteristics, climatic factors such as average temperatures and rainfall variations, and human-induced factors such as grazing intensity and land use. Proper assessment of these factors requires analytical methods capable of considering numerous variables simultaneously. This project applied remote sensing and neural network algorithms in order to analyze relationships between environmental factors and land degradation and to make assessments of vegetation stability. We selected the Kunoth Paddock (153 km²), located in an arid region of central Australia, as the test site for the study.

Neural networks are characterized by high parameters and data availability, which permit automatic definition through the self-learning of supervised data sets. They often operate in pattern analysis problems to provide a means of resolving relationships between factors and phenomena. Consequently, neural networks are commonly utilized for classification purposes and are regarded as effective modeling methods for use with the Geographic Information System (GIS).

Proper evaluations of vegetation stability should consider two principal site characteristics, the richness of vegetation and vegetation change. Prior to construction of our assessment model, we analyzed these characteristics of the test site using LANDSAT/TM data. Richness and change of vegetation were measured with categorized PD54, the specific vegetation index from satellite data provided by the Division of Wildlife and Ecology of the Commonwealth Scientific and Industrial Research Organisation (CSIRO). Results of this analysis indicated that the relative richness of vegetation was higher on the eastern side than the western and southern parts of Kunoth Paddock, while vegetation change in the eastern part was high and areas of low vegetation remained small.

Neural networks contain both an input layer and an output layer, which correspond respectively to factors and phenomena. In this study, vegetation richness and vegetation change as indicated by PD54 analysis represented the output layer. Inputs consisted of seven environmental factors, which we assigned as geomorphic systems, hydrological units, soil units, vegetation units, slope, distance from water points, and distance from ridges. Two neural network models were constructed through the self-learning of supervised data sets, which included 271 points of data combining the seven input factors and the output properties of vegetation. Each model scored 74.5% accuracy in relation to the supervised data sets, and this figure was regarded as the reliability of the models.

Based on these models, we utilized GIS data to perform map calculations in an effort to estimate vegetation richness and change across the full test site. Two maps produced by map calculation were integrated into the assessment. We then compared data from the models to field observations executed in February and November, 1997, to verify properties of the test ([Figure 1](#)). Observations suggested that shrub land consisting largely of mulga shrubs dominated the northern to western part of the Kunoth Paddock, while annual short-grass characterized the east. In the south, large-scale soil erosion had occurred. These conditions generally matched results of our neural network assessments, suggesting that neural networks may provide significant advantages as modeling methods. Because they prepare reliable supervised data sets, neural network work well with GIS modeling.

ENVIRONMENTAL RESOURCES DIVISION TOPIC 2

Using Remote Sensing to Monitor Land Use in Semi-Arid Tropical India

In the semi-arid tropics of India, agricultural land use varies in relation to physical factors such as soil and climatic conditions. The lack of reliable geographical information for most of the semi-arid region renders the task of measuring changes in land use extremely problematic. This study aims to develop better methods for monitoring both the spatial and temporal aspects of agricultural land use through the use of remote sensing, one of the few technologies available for the observation of ground conditions worldwide.

In our test site in the central Deccan Plateau region, cropping seasons known as the *kharif* and the *rabi* are generally recognized. During the *rabi* season, which begins in November and ends in March, cloud coverage remains comparatively low, allowing us to collect high-quality remote sensing data during each of the past several years. Throughout the project, we utilized data from the Indian Remote Sensing Satellite (IRS), which had four spectral bands ranging in wavelength between visible and near infrared.

The procedure we developed for monitoring cultivated land use during each *rabi* season consisted of two steps. First, we calculated the normalized vegetation index (NDVI), the value of which reflects the strength of vegetation growth. During the *rabi* season, the green leaves of crops grew to cover a considerable percentage of the ground surface, generating NDVI values for cultivated land that measured much higher than those for grasslands, forests, or other types of land use. Consequently, NDVI values could be employed as adaptable indicators for discriminating between cultivated land and other types of land use. As a second step, we estimated temporal changes in the threshold values of NDVI for extracting cultivated land. This step was necessary because the date of satellite observation and, accordingly, the growth condition of crops proved somewhat inconsistent from year to year.

[Figure 1](#) shows the intensity of land use for cultivation in the *rabi* season during the period between 1988-1989 and 1995-1996, excluding the year 1991-1992 when IRS data was unavailable. Our observations show that the most heavily utilized areas were located near river courses and that intensity of use decreased toward the characteristically black soils of upper hills, which dominate the western half of the study area. This study also revealed a positive correlation between the area of cultivation in the *rabi* season and the amount of rainfall during the sowing period. The method developed in this study can be utilized for monitoring agricultural land use in areas where a regular cropping season is repeated annually.

ENVIRONMENTAL RESOURCES DIVISION TOPIC 3

Nitrous Oxide Emission from Fertilized Upland Fields in Thailand

Nitrous oxide (N₂O) has garnered considerable attention, due to its potential for environmental disruption as an agricultural byproduct. N₂O contributes to global warming and has also been linked to ozone destruction in the stratosphere. Considerable data concerning nitrous oxide emissions from natural and cultivated soils already exists, but most measurements have been made in the temperate zone. There has been insufficient research conducted in the tropics, especially in tropical Asia, despite the critical importance of N₂O emissions from these regions. This project aims to further our understanding of N₂O emissions from fertilized upland fields in Thailand.

We measured nitrous oxide emissions from upland soils over the course of one year, using closed chamber methods at four experimental sites in Thailand. Two sites were located in central Thailand, one in the north, and the other in the northeast. At each experimental site, we applied two treatments in triplicate, one with nitrogen fertilizer and the other without. Maize was cultivated in the experimental plots in accordance with methods common to each district. Gas was sampled eleven to fourteen times during the crop season and every month during the dry season. At each sampling, the soil cores were also taken on the ridge of the experimental plots at depths of 0-15 and 15-30 cm, then stored in a freezer until analyzed. Field-moist soil samples were extracted by with potassium chloride (KCl) to determine levels of ammonia (NH₄⁺) and nitrate (NO₃⁻).

[Figure 1](#) displays the results of this research project. Nitrous oxide flux increased just after fertilizer application at three experimental fields, excepting the fields at Khon Kaen. The NO₃⁻ concentration in the soils also increased after fertilization. It seems that the increased N₂O flux and NO₃⁻ concentration derived from the application of nitrogen fertilizer by nitrification. At Khon Kaen the concentration of NH₄⁺ decreased gradually after fertilization. However, the concentration of NO₃⁻ did not increase. It seemed that nitrification activity in surface soil was low.

The average measured N₂O flux from unfertilized plots through the crop season was 4.16±1.52¼gN₂O-N/m² hr, 5.05±1.65¼gN₂O-N/m² hr, 5.25±1.68¼gN₂O-N/m² hr, 6.74±2.95¼gN₂O-N/m² hr, at Nakhon Sawan, Phra Phutthabat, Khon Kaen and Chiang Mai, respectively. We estimated that N₂O emission from nitrogen fertilized field was 0.22-0.44 %, 0.19-0.38 %, 0.12-0.24 % and 0.08-0.15% of the total nitrogen applied at the respective experimental sites. These values were calculated from the difference of emitted N₂O between fertilized and unfertilized plots after fertilizer application. These estimated values for nitrogen loss as N₂O do not differ significantly from temperate zone values estimated by other researchers.

Our results demonstrate that rates of N₂O emission to applied nitrogen were not significantly different between tropical and temperate zones. The average N₂O flux in dry season was between 0.7 and 3.5 N₂O-N¼g m⁻² hr⁻¹. Average flux from nitrogen-fertilized fields and from unfertilized fields was significantly different only at Khon Kaen.

CROP PRODUCTION AND POSTHARVEST TECHNOLOGY DIVISION

Although world population growth rates have declined steadily since 1970, the global population will continue to increase by ninety to one hundred million people annually for the next several years. Some 95 percent of this population growth will occur in developing regions, where food deficits are already severe. Clearly, population growth will provide the primary impetus behind growing demands for food. Yet food markets will also be influenced by shifts in the purchasing power of local consumers. As development proceeds, changing patterns of consumption may dramatically increase demand for greater varieties of vegetables, fruits, and meats.

For these reasons, self-reliance in food, rather than complete economic self-sufficiency, will become an increasingly important objective in developing regions. There are no definitive models for achieving this goal. However, various methods exist for ensuring self-reliance within the particular natural and environmental constraints of each country.

Photo: Villagers in the Cuu Long Delta region of Vietnam spread recently harvested rice to dry under the sun.

The Crop Production and Postharvest Technology Division promotes research projects on topics ranging from production and storage to the processing and marketing of agricultural products. Our research activities encompass a variety of disciplines including agronomy, plant protection (pest, disease, and weed control), agricultural mechanization, irrigation, drainage, cropping systems, food storage, postharvest technology, farm management and agricultural economics.

Because the total area of arable land in the world is limited, we believe that sustainable production of agricultural products can be achieved only by raising overall productivity. While various technological problems must be resolved, productivity growth must be pursued in ways compatible with the preservation of the natural environment. Therefore, it is necessary to reduce as much as possible the amount of chemical inputs in agricultural endeavors. Instead, research should address the need for integrated pest management through biological control systems and better utilization of information. Topics requiring additional attention include ecological studies of insect pests and their natural enemies and the development of predictive methodologies for outbreaks of insects and diseases. .

Far too often the problem of feeding the world's hungry is conceived in terms of producing sufficient food. Equally pressing problems related to preservation and distribution, issues which affect food products between harvest and consumption, are frequently neglected. Postproduction operations in agricultural and horticulture include a wide range of functions necessary for supplying good quality food, reducing transaction costs, and raising domestic welfare. It is necessary to stress postharvest studies of agricultural products, such as quality improvement, safety, the extension of shelf life, and the control of the presence of insects and microorganisms in foodstuffs. These constitute important objectives of this Division.

Finally, sustainable production of agricultural commodities can only be supported by the development of sustainable markets. Technology for enhancing the value of agricultural products is being developed with the goal of increasing incentives for farmers to promote sustainable production. Economic studies are requisite in furthering the development of target countries.

CROP PRODUCTION AND POSTHARVEST TECHNOLOGY DIVISION TOPIC 1 **Case Study of Edible Insects in Enzaro Village, Kenya**

For generations, indigenous peoples have utilized insects as food resources. Although insects such as locusts, grasshoppers, weevils, and termites may compete with humans as crop pests, they are frequently harvested for use in traditional foods, especially in Africa. As potential sources of proteins, lipids, and other essential nutrients, edible insects may also play an important role in human nutrition.

Field surveys and interviews with nine ethnic groups in Kenya have revealed that human consumption spans at least eight insect families representing six orders. Insects utilized for food in this region include *Isoptera* (termites), *Orthoptera* (locusts, grasshoppers, crickets), *Coleoptera* (beetles), *Hymenoptera* (honey bees), *Lepidoptera* (moths), and *Diptera* (lake flies). Most commonly eaten are termites, particularly in their winged reproductive phase, which are highly valued as food resources throughout Kenya.

In Enzaro Village, a community in the Vihiga District of western Kenya, human consumption of insects concentrates on three termite species. Villagers can easily distinguish species and are familiar with the emergence patterns of termites. *Microtermes* sp., the most common edible insect in the district, exhibits circadian rhythms which induce emergence at roughly two o'clock in the afternoon following rain. Villagers know this behavior well and prepare for catching termites with various types of traps.

Photo: A heavy blanket trap covering a termite emergence hole in Enzaro Village, Kenya.

One method involves the construction of a cone-shaped or tent-like structure of sticks, branches, and leaves over active emergence holes. This structure is covered tightly with banana leaves or blankets, except for a small side opening facing the sun, to which flying termites will be attracted. A dugout hole is then plastered with moistened soil and lined with banana leaves. Termites drop through the opening and collect into the hole. In case of cold weather, villagers light a small fire nearby to warm the air, so that the emergence of termites will not be inhibited. In another method for trapping termites, villagers place a simple light source inside a bucket, line the bucket with slippery wet banana leaves, then place the bucket near an active mound. In urban areas, termites can be caught easily in water receptacles left under or near electric lights, which attract the insects at night.

During the dry season, villagers must induce termites to emerge from their earthen nests in the early morning or afternoon. To do so, they blow smoke from burning roots, stems, and leaves of black jack or other wild plants into emergence holes while striking stones or beating a large piece of wood with sticks to create a slow rhythmic vibration. The sound produced may simulate heavy rainfall and appears quite effective in stimulating termites to emerge.

When other food resources may be lacking, active termite mounds are identified and sprinkled with cold water, an action that stimulates worker termites to start forming emergence holes. Villagers then construct a complicated structure of circular clay pipes leading from emergence holes, with wet perforated leaves placed nearby to direct flying termites towards collection receptacles. Several informants reported that beating wood with sticks near the termite mounds triggered certain species to emerge. Similar techniques have been reported in Uganda.

Enzaro Village boasts several methods for preparing termites to be eaten. It is most common to fry them lightly in their own fat over a low heat, sometimes with the wings removed and with a dash of salt. Fried winged termites are tastiest after being dried in the sun and can be preserved for a rather long period of time. In some areas, termites are used as marriage gifts. Raw termites are also frequently eaten. In some areas of western Kenya, sun-dried termites are packed in containers for sale in the local markets during the rainy season and may even find their way to urban markets in large East African cities, such as Kisumu, Kampala, and Nairobi.

Photo: Termites sold at an open market in Kampala, Uganda.

Our survey of Enzaro Primary School children from November, 1995, through February, 1996, showed that all twenty-one children in the first grade ate termites at least once per week. Nutritional chemical analysis showed that dried termites collected in Enzano Village contained 40 percent fat, about 20 percent carbohydrate, and more than 10 percent protein. These results suggest that termites play an important role in the Vihiga District, especially during the rainy season, when there are shortages in maize or sorghum supplies. We concluded that termites provide an especially valuable food source for children and pregnant women who require a high calorie diet and nutritious food.

[Photo: A child enjoys a snack of termites in Enzaro Village, Kenya.](#)

Research conducted in collaboration with the International Center for Insect Physiology and Ecology (ICIPE) and Kenyatta University should be further promoted to raise awareness of the importance of insects as a good, inexpensive source of lipids and animal protein. We may castigate insects as unpleasant creatures when we lack a full realization of the many benefits they bring to human beings, not all of which are properly exploited. Developing farming methods for production of edible insects and establishing an edible insect agro-industry to process and package different insect species would improve their marketability and create future socio-economic benefits for the people of East Africa.

CROP PRODUCTION AND POSTHARVEST TECHNOLOGY DIVISION TOPIC 2 **Monsoon-Dependent Long-Range Migrations of Rice Planthoppers in East Asia**

Two species of rice planthoppers are found throughout rice-growing areas of Asia. *Nilaparvata lugens*, commonly known as the brown planthopper (BPH), and *Sogatella furcifera*, or white-backed planthopper (WBPH) feed only on the *Oryza sativa* species of rice.

In Japan, these planthoppers have long been known as destructive rice pests, and famines caused by planthopper plagues have been recorded throughout history. For many years, however, it remained unclear whether planthoppers are indigenous to and winter in Japan or migrate annually to Japan from across the sea. The controversy was solved only in 1967, when a Japanese weather ship encountered a swarm of planthoppers in the western Pacific Ocean. Since that time, many aspects of planthopper migration and associated meteorological phenomena have been investigated. Scientists now widely accept that rice planthoppers cannot winter in temperate areas of East Asia, but instead repeat migrations from tropical to temperate rice areas every year.

Between 1983 and 1987, a national research project on the long-distance migration of insect pests was conducted in Japan. This project examined relationships between the known migratory patterns of rice planthoppers and the early summer monsoon rains, known as the *baiu* phenomena. The results did not allow for clear forecasting of overseas planthopper migrations.

As a result, JIRCAS and the Chinese Ministry of Agriculture agreed to conduct a collaborative research project entitled “Long range migration of rice insect pests in monsoonal East Asia” at the China National Rice Research Institute between 1992 and 1997. The project has attempted to trace the basic patterns of planthopper migration from source areas to Japan, and then to relate these patterns to rice cropping systems and weather changes in East Asia.

We used comparative studies of brown planthopper (BPH) biotypes to determine source areas from which planthoppers migrate to temperate East Asia. For example, planthopper populations in Japan and China consist of BPH biotypes 1 and 2 at a ratio of about one to two. Similar populations are distributed only in the Red River Delta and adjacent coastal areas of North Vietnam. In contrast, BPH biotypes in southern Vietnam, Cambodia, Thailand, and other Southeast Asian countries proved to be distinct from those in northern Vietnam, China and Japan.

These findings led us to conclude that migratory planthoppers originate in the northern part of Vietnam. Following the 19° C January isotherm, the Red River Delta marks the northern limit of year-round breeding habitats for planthoppers. Moreover, the region constitutes the largest area in northern Indochina under rice cultivation. Well-synchronized rice double-cropping is practiced, allowing planthoppers to repeat a perennial life cycle on two rice crops.

The overseas migration zone for planthoppers ranges between 15° N and 40° N latitude and 105° E to 140° E longitude, covering almost all irrigated rice areas in East Asia. Northward expansion of rice planting areas in the spring and summer provides vast resources to planthoppers far to the north of their perennial breeding habitats. Shifting rice cropping seasons and highly seasonal monsoon climates play critical roles in the migration and distribution of planthoppers in this typical insect migration zone. Migration surges of planthoppers usually occur in southwest monsoons accelerated by frontal depressions.

We determined that planthopper migrations from northern Vietnam to Japan can be divided into a two-staged habitat displacement ([Figure 1](#)). In the first stage, planthoppers migrate from winter-spring rice fields in northern Vietnam to early rice maturing in southern China between April and May. As winter-spring rice in Vietnam is transplanted from January through February, increasing planthopper populations thrive on it from March into April. Newly emerged macropterous adults then emigrate from April to May.

During this period, the front between the retreating Continental High and the warm, humid tropical air mass tends to remain stationary over southern China. This situation mediates the first stage of planthopper migration. Southwest monsoons strengthened by frontal depressions displace planthoppers from the winter-spring rice in northern Vietnam, pushing them toward the early rice in southern China. Air masses at 850 kPa of pressure follow trajectories leading

from northern Vietnam to southern China within 48 hours, while backward trajectories from southeastern regions in southern China also reach the Red River Delta region.

Early rice in southern China is usually transplanted in April, between two and three months later than winter-spring rice in northern Vietnam. Thus, early rice in southern China offers a fresh habitat to planthoppers recently transported from northern Vietnam. These planthoppers reproduce one to two generations on the early rice, and their population densities grow quickly from mid-June to mid-July.

In the second stage of habitat displacement, planthoppers migrate from the early rice in southern China to the summer rice in Japan between June and July. This migration follows a change in the weather front from southern to central China. This shift occurs when the mid-latitude westerly moves from the southern to northern side of the Tibetan Plateau and forms a stationary *baiu* front over central China and Japan. During the *baiu* season, the southwest monsoon bursts into central China and Japan. Migrations of rice planthoppers to Japan occur in association with a low-level jet stream (LLJ), a strong wind core that appears in the lower troposphere in the warm sector of depressions on the *baiu* front, producing defined surges over the East China Sea. The most active planthopper migrations take place on LLJs between late June and early July

The jet streams which transport planthoppers to Japan extend to Fujian, Jiangxi and Guangdong Provinces in southern China within 36-48 hours of back-tracking. Emigrants from the early rice in southern China are carried downwind toward the frontal zone in central China, and a group of them is transported beyond the East China Sea as far as Japan ([Figure 2](#)).

We found a specific synoptic pattern facilitating the overseas migration of planthoppers from southern China to Japan. The pattern consists of a subtropical high pressure system developing in the western Pacific Ocean, the stationary *baiu* front running from 32° N to 35° N latitude across the East China Sea, and the depressions which generate LLJs and move eastward along the front. This pattern may be described as an overseas transporting synoptic weather pattern (OTSWP), under which simultaneous migrations of planthoppers both to central China and to Japan are brought about by eastward-moving frontal depressions. In central China and Japan, summer rice is usually transplanted in June, about two to two and one-half months later than early rice in southern China. This newly transplanted summer rice provides suitable habitat for planthoppers migrating from early rice cropping regions.

The exploitation of fresh resources confers a temporary adaptation to habitat-shifting northeastward migrations of rice planthoppers. However, without return migrations before winter, the offspring of migrants which invaded the temperate regions are destined to perish during the harsh winters. In eastern China, the prevalent wind direction veers from southwest to northeast in autumn, making a return migration plausible. However, return migrations from Japan are impossible because the northwest winds prevailing in autumn force planthoppers into the Pacific Ocean. Thus, migrations to Japan suggest a follow-the-leader pattern with no adaptive significance.

The habitat-shifting concept described above allows for enhanced forecasting of planthopper migrations and subsequent outbreaks in the East Asian insect migration zone (IMZ). The distribution of planthoppers expands swiftly from localized source habitats in northern Vietnam throughout the IMZ by way massive habitat-shifting migrations along the southwest monsoons. Consequently, our ability to predict planthopper migrations hinge largely on wintering conditions in the source area and the dynamics of monsoon climates in the IMZ. Under such conditions, international cooperation to cope with planthopper migrations appears essential.

CROP PRODUCTION AND POSTHARVEST TECHNOLOGY DIVISION TOPIC 3 **Serological Diagnosis of Citrus Greening Disease**

Citrus greening disease occurs in the African and Asian tropics and constitutes one of the most destructive diseases affecting citrus trees. One pathogen of the disease is a bacterium restricted to the phloem of infected plants. These organisms are called bacterium-like organisms (BLOs) or greening organisms (GOs) and are transmitted by two psyllid vectors, *Diaphorina citri* in Asia and *Trioza erytreae* in Africa. The scientific names of *Liberobacter africanum* and *Liberobacter asiaticum* were proposed for the African and Asian isolates of GOs in 1994.

Although PCR diagnosis of citrus greening disease has been developed, serological methods may offer simple diagnoses that are more cost effective. Several attempts in this direction have been reported in recent years. Whitlock and Chippindall (1993) produced an antiserum against an extract of greening infected citrus material in South Africa. However, the antiserum reacted with a disease shock protein common to all the diseases. C. Ke et al (1993) produced a polyclonal ascite antiserum against a partially purified periwinkle material infected with the huanglungbin strain of GO in Taiwan. However, the titer of the antiserum was low and interference from non-specific reactions were obvious.

Our research produced an antiserum against a partially purified periwinkle material infected with the Nakhon-Pathum isolate of GO found in Thailand. We tried to remove the pathogen related protein (a disease shock protein described by Whitlock and Chippindall) and to prepare the citrus antigen for serological tests in as high a concentration as possible. Serological diagnosis with a microprecipitin test was developed for greening disease.

To produce an antiserum, phloem tissues of infected periwinkle leaves with yellowing symptoms were separated in extraction solution after digestion of the diseased midribs in enzyme solution for one night. The phloem tissues were washed five times in extraction solution, and homogenized in 5 ml of the extraction solution. Partially purified GOs were obtained by suspending final pellets after one cycle of centrifugation of the homogenate of the phloem tissues. The suspension was dialyzed in 4% glutaraldehyde in extraction solution for one night, and then dialyzed in the extraction solution for one day and night. Supernatant was carefully collected after low-speed centrifugation using a 20% sucrose cushion at high speed. The pellet was re-suspended in 500-1000 μ l of the 0.85% NaCl solution. Preparations for the antiserum were obtained three weeks after six injections into rabbits of the emulsion of the partially purified GOs suspension and Freund's incomplete adjuvant.

To prepare the citrus antigen for microprecipitin testing, phloem tissues were separated after digestion of the diseased midribs in enzyme solution. Partially purified GOs concentrated up to 40 times the midrib weight were obtained from final pellets after one cycle of centrifugation of homogenate of the phloem tissues.

A microprecipitin test was conducted by adding one drop (5 μ l) of the partially purified GO to one drop of the GO antiserum without mixing drops. Clear plus reactions were observed as strong aggregations with translucent parts around central aggregates in the reactant drop of the infected citrus and the antiserum ([Figure 1](#)). The plus reaction could be found in the mixture with diseased citrus at least at a dilution level of 16 times that of the antiserum, but could not be found in the mixture with the healthy citrus or with the citrus extract infected with attenuated citrus *tristeza* virus that contained pathogen related proteins.

Serological diagnosis with microprecipitin testing was established for greening disease by preparing the extract of phloem tissues concentrated up to 40 times the midrib weight. Midribs of about 50 leaves of candidate citrus are convenient to use and can be stored at -80° C until testing.

Evaluation Methods to Quantify Mechanical Properties of Collapsible Soils

Soils subjected to compressive deformation due to wetting, or saturation collapse, under natural conditions are referred to as collapsible soils. As compressive deformation in collapsible soils is comparatively large, damage to structures from saturation collapse may prove quite serious. One type of collapsible soil, known as loess, covers about eleven percent of total land area in the world. Loess consists primarily of silt or fine sand particles transported and loosely deposited by wind. In northeastern Thailand, for example, most surface soils are loosely deposited sediments of sandstones and siltstones which exhibit the features of collapsible soils.

This research project examined the mechanical properties of collapsible soils, also called yellow soils, sampled from Khon Kaen city in northeastern Thailand and targeted the development of improved methods for estimating these properties based on field observations. Such methods are of fundamental importance to the future design and construction of irrigation facilities.

The red squares in [Figure 1](#) reveal results from a series of oedometer tests, in which soil samples measuring 6 cm in diameter and 2 cm in height were compressed within a ridged ring by increasing vertical loads. Under these conditions, soil samples could deform only vertically, permitting measurements of vertical displacement and vertical load. Values of x and y for each sample express the vertical stress and the void ratio, or the ratio between pore volume and the volume of soil particles. Small void ratio values indicate relatively large reductions in volume, otherwise known as compressive deformation.

Our experimental data reveal that increasing volume reduction in soil samples occurs with increasing vertical stress. Adding water to our sample at vertical stress = 320 kPa produced a markedly increased reduction in volume, indicating the presence of saturation collapse at this point. Simulation was conducted using a consolidation analysis method with a generalized elastoplastic model for unsaturated soils, which had been suggested to us for estimating the properties of collapsible soils. The results, shown as a solid blue line, remain consistent with our experimental data. Collapse behavior can also be easily simulated.

Saturation collapse behavior is one of the typical properties of unsaturated soils and has remained a difficult problem in the field of soil mechanics. With further development, our research on saturation collapse should allow us to estimate real problems, including the failure of natural slopes following heavy rainfall and the complex behavior of dams during reservoir filling.

CROP PRODUCTION AND POSTHARVEST TECHNOLOGY DIVISION TOPIC 5 **Improving Rice Cropping Techniques in the Mekong Delta, Vietnam**

The Mekong Delta covers an area of 5.9 million hectares, of which two-thirds are located in Vietnam. This region possesses climatic conditions highly favorable to agricultural development. According to the Cantho Meteorological Station, annual temperatures average 26.6° C, precipitation reaches 1,632 mm, and roughly 2,592 hours of sunshine fall on fields during an average year. Despite these conditions, agricultural productivity had remained stagnant for many years, primarily due to an uninterrupted series of wars affecting the country from its independence in 1954 through the early 1980s.

Since 1986, the *doi moi* policy has encouraged “farming system” approaches to agricultural development in the region. The policy promotes activities such as rural infrastructure improvement through the excavation of canals, the construction of dikes for water control, the introduction and breeding of high-yielding crop varieties resistant to diseases and insects, and the improvement and extension of direct seeding techniques for rice. In response to the market stimuli permitted in recent years, land reclamation has increased total cropping area, and the growth of double or triple rice cropping methods, together with higher yields in newly hybridized varieties, has resulted in rapid growth both in productivity and in total rice production.

In this collaborative project with Cuu Long Rice Research Institute (CLRRI) of Vietnam, we tested two rice varieties, OMCS94 and IR64, and several rice cropping techniques in an effort to promote higher yields per hectare. The effects of nitrogen application on yield components are shown in [Figure 1](#). The highest yields were obtained in Plot Three, which received 40 kg of nitrogen in the first week after sowing and at the booting stage, which occurred during the eighth week for OMCS94 and one week later for IR64. Our observations revealed that the number of grains increased and ripening ability remained relatively high with the application of nitrogen at the booting stage. Obviously, nitrogen recovery was improved by this application method.

In contrast, the nutrients were spent for excess growth of stems and leaves and did not affect the increase of grains in Plots One and Two, which received 40 kg nitrogen only before the booting stage. In tests with heavy manuring, such as Plot Five hosting both varieties and Plot Six hosting OMCS94, rice plants experienced early lodging and gave low yields. These results suggest the need to reconsider the use of top dressing in early stages, given the fertile clay soils of the Mekong Delta.

The validity of techniques for controlling growth through the application of nitrogen is accepted throughout the Mekong Delta. Therefore, adjusting fertilizer application to achieve growth regulation and higher efficiencies in nitrogen utilization would result in high, stable yields to input and would minimize adverse effects on local ecosystems. Additional contributions to the development of low-input sustainable rice production in the Mekong Delta may come from other studies currently underway, such as initiatives to prevent lodging in directly seeded rice through improved water management or efforts to better control the growth and yield components of rice based on knowledge from leaf color measurements.

CROP PRODUCTION AND POSTHARVEST TECHNOLOGY DIVISION TOPIC 6
Structural Changes in Vietnamese Agricultural under the Doi Moi Policy

In 1986, the Vietnamese Communist Party forged a new national policy, called *Doi Moi*, to promote comprehensive socioeconomic revitalization. As a part of this effort, Politburo Resolution Number Ten implemented reforms in the agricultural sector beginning in 1988. Reforms proved immediately successful in boosting agricultural growth rates. Since 1989, Vietnam has not only produced enough paddy rice to meet domestic consumption, but has also produced surplus for export.

The success of the *doi moi* policy may be attributed to several factors. First, Resolution Number Ten undermined the dominance of inefficient agricultural cooperatives by confirming farm households as completely autonomous economic units. Moreover, the resolution mandated that land held by the cooperatives be assigned to individual farm households for long-term periods of use. The resolution further recognized the farmers' private ownership rights to essential means of production other than land. And finally, the policy conferred upon farmers the right to enjoy profits from their activities on assigned fields after the deduction of taxes and contributions to cooperatives.

Photo: In recent years, rural development projects in Vietnam's Mekong Delta have focused on poverty alleviation. In [Hoa An village](#), 180 landless households received 1500 m² of home and garden lands and 2.2 million dong to provide for stock in 1997.

Despite remarkable achievements in agricultural production, potential problems in rural land relations have also emerged since the introduction of the *doi moi* reforms. The contractual mode initially used to divide land under Resolution Number Ten assigned small plots to each household in ways that have proven unsustainable. Poor farm households with little farm management experience and no capital received "equivalent land plots per labor power" as wealthy farm households with extensive experience and capital resources. Many poor farmers could not retain their assigned lands and, as a result, were forced by the circumstances to deliver the lands to their wealthier neighbors.

This process has strengthened emerging patterns of differentiation among farmers and encouraged the development of commercial agricultural production. However, it has also generated a rapid increase in the number of households earning their living by working for hire. Work for hire, which now characterizes a large proportion of households in rural areas, is associated with problems of landlessness that are leading to renewed income disparity in rural areas.

Of further concern, rural incomes have generally lagged behind urban incomes. This problem may derive from several factors, including the shortage of rural infrastructure and the insufficiency of facilities for agricultural product processing, the shortage of working capital for farmers, and continuing disorder in agricultural extension systems under the *doi moi* policy. Nevertheless, income disparities are important social issues which will require great attention if social stability is to be ensured.

One solution to these problems may rest on efforts to reestablish influential farmer organizations. Such organizations have been lacking since the demise of agricultural cooperatives.

ANIMAL PRODUCTION AND GRASSLAND DIVISION

In developing countries, domesticated animals contribute to the betterment of people's lives. Animals not only produce meat, milk, and hide, which are essential in daily life and are an important source of income, but also generate draft power for tillage and transportation and produce wastes for use as fertilizer and fuel. Despite these benefits, livestock production remains at low levels throughout the developing world due to constraints such as low genetic potentials, poor quality feeds, disease prevalence, harsh climatic conditions, and management inexperience.

The Animal Production and Grassland Division carries out research aimed at achieving sustainable increases in animal production without generating adverse environmental consequences. In order to reach this goal, the Division seeks to enhance the productive capacity of natural resources, manage grasslands to secure feed resources, enhance the utilization of agro-industrial by-products, control invasive animal diseases, and improve management practices in developing regions of the world.

During FY 1997, two collaborative research projects moved toward successful conclusion. One involved cooperation between Division researchers and scientists from the International Livestock Research Institute (ILRI) on immuno-histological studies aimed at developing a vaccine against the East Coast Fever commonly found among livestock in Kenya. The second project involved the long-term dispatch of Division personnel to Cantho University in Vietnam, where a research team has been examining improved methods for animal production under combined farming systems that integrate agriculture, animal husbandry, and fisheries in the Mekong Delta area. Although the long-term research position has ended, the Division will continue to dispatch researchers to Vietnam on a short-term basis.

Photo: Hornless Boran cattle grazing in East African pastures owned by the International Livestock Research Institute (ILRI).

In addition to these projects, four long-term international research projects lasting from two to five years are currently underway. Division researchers are working with the Thai Department of Livestock Development (DLD) to improve cattle production with feed resources available in northeastern Thailand. In Malaysia, a cooperative agreement with the Malaysian Agricultural Research and Development Institute (MARDI) seeks to improve local methods for raising small livestock. Sustainable management and utilization of grasslands marks the theme of cooperative research on agro-pastoral systems being carried out with the National Center for Research on Beef Cattle (CNPGC-EMBRAPA) in Brazil. Finally, a new collaborative effort with the ILRI has begun to investigate the role of the TNF- \pm gene in trypanosomiasis. This project replaces the immuno-histological study of East Coast Fever, which ended during this Fiscal Year.

In addition to long-term projects, the following studies were carried out by researchers on short-term assignments of one to three months: 1) studies on the nutritive requirement of tropical ruminant in Thailand with the Khon Kaen Animal Nutrition Research Center and the DLD; 2) studies with Cantho University in Vietnam on environmental pollution caused by hog production under the farming systems in Mekong Delta; 3) collection and classification of parasitic protozoa in swine in Mekong Delta, also in collaboration with Cantho University; 4) research with MARDI on the influence of large-scale duck operations on water pollution levels in ponds and their surroundings in Malaysia; 4) an evaluation of the feed value of corn stalk and agricultural by-products with the Chinese Agricultural University in northern China; 5) genetic analysis of the cattle tolerance to Trypanosomiasis conducted with the ILRI in Kenya; 6) studies on the relationship between the fertility and grassland vegetation in the steppe soils of Central Asia with the Kazakh Institute of Agriculture (KIA); 7) an examination of seed-pellet seeding methods for the improvement of settlement in grassland vegetation in Central Asia, also conducted with the KIA; 8) identification of endophytic fungi in pasture plants in South America with Colombia's CIAT; 9) and studies of methods for sustaining mixed pasture plants in South American savanna, also in collaboration with CIAT.

The Division receives numerous requests from developing countries to pursue collaborative research, primarily concerning the incorporation of biotechnological applications and enhancement of overall levels of research. In order to address such needs, the Division has begun promoting basic research on JIRCAS's Tsukuba premises in support of overseas activities. At present, a project on the identification of endophytic fungi in pasture plants in tropical regions and their utilization in plants via biotechnological methods constitutes the focus of domestic research.

ANIMAL PRODUCTION AND GRASSLAND DIVISION TOPIC 1

Immunohistological Analysis of the Attachment Sites of *Rhipicephalus appendiculatus* Ticks Infected with *Theileria parva*

Theileria parva, the protozoan that causes East Coast Fever (ECF) in African cattle, is transmitted by the brown ear tick *Rhipicephalus appendiculatus*. Inoculation of *T. parva* sporozoites occurs over a period of time commencing several days after infected ticks attach themselves to cattle, by which time a pronounced inflammatory reaction becomes evident in cattle previously exposed to ticks. The precise location at which sporozoites invade lymphocytes is not known, and the immune cell populations contributing to the reactions at tick attachment sites have not been characterized. Nevertheless, as early interactions between parasites and the immune system have considerable bearing on the success of sporozoite neutralization, a better understanding of the environment into which sporozoites are delivered would contribute greatly to the development of optimal vaccination strategies.

To enhance our understanding of early events associated with *T. parva* infection *in vivo*, we investigated the distribution of immune cell subsets at tick attachment sites through immunohistochemical analyses of cattle. We took skin-punch biopsies from Boran calves at various times after their infection with *T. parva*. Frozen sections were then cut and stained using monoclonal antibodies against bovine leukocyte surface antigens, the results of which are indicated in [Table 1](#).

[Table 2](#) details immune cell populations at the attachment sites of ticks carrying *T. parva* sporozoites on Boran calves previously immunized against ticks. Before infestation (day zero), Langerhans cells in the epidermis and dermal dendritic cells stained positively for class two major histocompatibility complex (MHC). No CD1⁺ and CD11b⁺ cells were present in the epidermis, although small numbers of other T lymphocytes, including CD4⁺, CD8⁺, and WC1⁺ T cells, were detected. Cell clusters containing CD4⁺, CD8⁺, and WC1⁺ T cells with CD1⁺ dendritic cells and both CD11b⁺ and WC6⁺ cells were observed in the papillary dermis.

After infestation, we observed inflammatory reactions near the tick attachment sites. Increasing numbers of CD4⁺, CD8⁺, and WC1⁺ T cells and increasing skin thickness were also observed. WC1⁺ T cells were present in larger numbers than were CD4⁺ and CD8⁺ T cells. These cells were localized at the superficial dermal layer after the second day. Infiltration of lymphocytes and granulocytes was observed deeper in the dermis after the fourth day. CD4⁺ T cells were present in the dermis in larger numbers than CD8⁺ T cells, while CD8⁺ T cells infiltrated the epidermis in larger numbers than did CD4⁺ T cells. Class II MHC⁺ cells infiltrated the dermis in large numbers, with almost all bearing CD11b⁺. Both CD1⁺ dendritic cells and cells expressing CD11b⁺ were observed in the epidermis after day four.

After the sixth day, we observed intense staining of WC1, class II MHC and CD11b both in the dermis and epidermis. Severe inflammatory edema and infiltration of all subsets of lymphocytes, as well as dendritic cells, were observed after one week.

The precise function of such large numbers of lymphocytes in cattle is not known. These cells seem to play a role in inflammatory reactions and tissue degeneration at the attachment site of *R. appendiculatus*. CD8⁺ T cells appear to infiltrate the epidermis more readily than do CD4⁺ T cells, despite being present in lesser numbers in the dermis. Sub-populations of dendritic cells in the skin of cattle are not well characterized. CD1⁺ dendritic cells do not contribute a significant proportion of the dermal infiltrate, although, in contrast to the CD11b⁺ population, these cells enter the epidermis easily. CD1⁺ dendritic cells may be a sub-population of WC6⁺ dendritic cells. Clarification of this issue will require further investigation through the double-staining of specific markers. These findings may also be useful for understanding immune reactions of the skin in other tick-borne disease.

ANIMAL PRODUCTION AND GRASSLAND DIVISION TOPIC 2

In situ Hybridization to Detect Bovine Cytokine mRNAs Involved in Protozoan Disease

Cytokines are a family of regulatory protein molecules responsible for communication between cells in the immune system. In the case of infectious diseases, cytokines mediate protective immunity as well as pathophysiology. As their reaction cascades form complex networks, it is believed that variable cytokine expression may strongly influence pathophysiological conditions. The examination of both local and systemic cytokine expression profiles, therefore, may prove to be of primary importance in developing diagnostic and protective procedures against protozoan diseases that affect livestock.

Recent research has demonstrated the critical role that cytokines can play in the pathogenesis and control of infections. Their ability to function as adjuvants in facilitating the activation of immune responses may allow cytokines to counteract the suppression of immune systems that is symptomatic of the worst protozoan diseases. For example, it is believed that TNF- \pm , a cytokine which shows anti-parasitic effects in cattle infected with trypanosomiasis, is also responsible for the physical wasting and malnutrition, or cachexia, associated with the disease. Similarly, in cell lines infected with *Theileria parva*, the protozoan parasite responsible for deadly East Coast Fever in African cattle, RT-PCR analysis has revealed the consistent expression of mRNA for the interleukin IL-10, an immunosuppressant affecting cellular immunity. Utilizing cytokines may allow scientists to maintain the proper functioning of livestock immune systems while battling these protozoan infections.

Accordingly, the International Livestock Research Institute (ILRI) has heightened its efforts to develop recombinant sub-unit vaccines in combination with several cytokines in order to combat theileriosis. One goal of this initiative has been to establish *in situ* hybridization techniques for the detection of bovine cytokine mRNAs at the cytological level, which will contribute to a better understanding of local immune responses.

Our research employed an *in situ* hybridization protocol using non-radioactively labeled RNA probes to detect bovine cytokine mRNAs, including TNF- \pm , IFN- γ , and the interleukins IL-2, IL-4, IL-6, IL-10, and IL-12p35, in cytospin preparations. We first prepared bovine peripheral blood mononuclear cells (PBMC) under the Ficoll-paque method and cultured them with concanavalin A (Con A) for three days, then cyto-centrifuged Con A-stimulated PBMC onto silane-coated slides for inspection. The results of these pre-hybridization treatments, which are intended to increase the efficiency of hybridization and decrease non-specific backgrounds, are summarized in [Table 1](#).

We found that optimal types of pretreatment differed among the several cytokines selected for analysis. Only treatment with Triton X-100 proved consistently effective in detecting the presence of IL-4 and IL-12p35. We also observed that treatment with hydrochloric acid (HCl) helped to decrease background staining and that, an acetylation step following pretreatment helped to reduce non-specific backgrounds.

Investigations of cattle infected with trypanosoma demonstrated that one typical symptom is a dramatic increase in the level of CD5⁺ B cells present in peripheral blood and the spleen. These CD5⁺ B cells express CD11b. Our RT-PCR analysis further revealed increases in the levels of IL-10 mRNA in the blood, lymph node and spleen of infected cattle. *In situ* hybridization showed that CD11b⁺ B cells expressed IL-10 mRNA in normal cattle ([Figure 1a](#)), but that CD11b⁻ B cells did not ([Figure 1b](#)). Thus, it appears that CD11b⁺ B cells contribute to increasing levels of IL-10 characteristic of trypanosomiasis.

We also investigated the patterns of cytokines expressed by seven *T. parva*-infected lymphoblast cell lines using *in situ* hybridization. Our observations suggested considerable variation in cytokine profiles among the lines. IL-2 and IL-10 were universally expressed, and an IL-2 receptor (IL-2R) \pm chain was immunohistochemically detected in all cell lines. These findings suggest that an IL-2/IL-2R autocrine loop may contribute to the proliferation lines

TOPIC 2

infected with *T. parva*. Additionally, it is tempting to speculate that the expression of IL-10 by lymphocytes infected with *T. parva* may be associated with the pathogenesis of East Coast fever in naive animals, because IL-10 can dampen the T-cell response in bovines which is responsible for killing parasitized cells.

On a larger scale, *in situ* hybridization to detect bovine cytokine mRNAs may be useful for analyzing immune responses not only in protozoan diseases but also in other infectious diseases. The aforementioned cytokines and the RNA probes (TNF- α , IFN- γ , IL-1 α , IL-1 β , IL-3, IL-5, IL-7, IL-12p40 and IL-15) utilized in this study were provided by ILRI.

FORESTRY DIVISION

As increasing demands for food compel farmers to exploit ever greater levels of arable land, natural forest cover has declined sharply, particularly in developing areas of the world. In turn, forest degradation has generated serious economic and environmental problems, not only at local levels but also on a global scale. Providing for rehabilitation and sustainable management of forest areas therefore remains an urgent issue, and improving forest production systems and post harvest technologies in local communities can be viewed as an essential means of stanching forest decline.

The Forestry Division conducts a wide range of research in developing countries, addressing issues from production to end-use. Projects undertaken by the Division generally fall under one of two categories, consisting of silvicultural and forest management technologies and processing technologies for forest products. These projects involve our researchers in disciplines such as silviculture, plant ecology and eco-physiology, soil science, entomology, mycology, forest mechanization, socio-economics, and wood technology.

Enrichment and rehabilitation of degraded forests are the first steps in the development of sustainable management in forest reserves. In an effort to make these initial goals attainable, the Forestry Division has concentrated its research on developing relevant technologies in silviculture, site evaluation and pest control, while paying due consideration to natural environmental conditions.

Photo: Teak trees after one year of growth at a reforested [plantation in Gurun, Kedah State, Malaysia](#).

At the same time, the Division has recently initiated studies on species behavior, systems for natural forest regeneration, enrichment planting methods, and harvesting systems. These are designed to support sustainable production of forest products, which constitute a principal trading commodity in thirty three developing countries around the world. If achieved, sustainable production will help to stabilize levels of exploitation, both in natural forests and plantations.

Finally, the Forestry Division has focused research on problems of shifting cultivation, which remains a leading cause of forest degradation in some areas. Such problems require the development of forest production and planning systems for stimulating local economies. As rapid deforestation continues, the disappearance of various lesser-known tree species and the loss of potential forestry products associated with them also grows. For these reasons, the Division believes that evaluative studies are urgently needed, while efforts to upgrade wood processing technologies currently available in developing regions should be given greater priority.

 [Division Topic](#): Location and Properties of Caoutchouc in Teak Wood.

FORESTRY DIVISION TOPIC 1

Location and Properties of Caoutchouc in Teak Wood

Teak (*Tectona grandis* L. f.) constitutes one of the most commercially important timber species in the world as it consistently produces high-quality general-purpose lumber. For this reason, the cultivation of teak trees has become common in many parts of the tropics. The wood has outstanding properties in terms of durability, dimensional stability, and resistance to abrasion and iron stains. These properties have been ascribed to the relatively high incidence of caoutchouc, a hydrophobic natural rubber compound. The presence of caoutchouc in teak wood xylem was first reported in 1959, at which time it was assumed to occur in parenchyma cells located in the heartwood.

The desirable characteristics of teak wood, however, cannot be wholly explained by the presence of the compound in the parenchyma cell lumen. Therefore, in order to determine the location and distribution of caoutchouc and its influence on commercially significant properties of teak wood, we organized a collaborative study with the Unit of Wood Paper and Coating of the School of Industrial Technology, Universiti Sains Malaysia.

To observe caoutchouc formation, we cut sections 2¼m thick from fresh teak samples fixed with two percent glutaraldehyde and one percent osmium tetroxide, then examined the region between the cambium and the heartwood under a light microscope. Granules stained with osmium tetroxide were not observed in the cambial zone and the outer sapwood, but osmium black granules, consisting mainly of caoutchouc, appeared with increasing prevalence from the middle sapwood inward. We observed that the granules became larger toward the sapwood boundary and that dark substances occurred mainly in the lumen of parenchyma cells in the sapwood. In the heartwood, these substances usually fused into one large granule or several smaller granules in a parenchyma cell and were distributed in most of the fiber lumens ([Figure 1](#)).

Radial dried heartwood sections of 60¼m in thickness were extracted with acetone to remove extractives other than caoutchouc, or were extracted with acetone and chloroform successively to remove both extractives and caoutchouc. These sections were examined using scanning electron microscopy (SEM). Unextracted sections revealed that the heartwood lumen of all cell types, as well as the cut-surfaces of parenchyma cell walls, were more or less covered with extraneous materials ([Figure 2a](#)). These extractives might have diffused to the cut-surface from the underlying cell walls after sectioning. An enrichment of wood extractives, forming a thin layer on the surfaces of cut cell walls, might also have taken place. However, extraction with acetone, which removes extractives other than caoutchouc, did not produce marked changes in surface morphology, suggesting that the extraneous layer remaining on the wood surfaces consisted of caoutchouc. After successive extraction with acetone and chloroform, most extraneous materials were absent, and the lumen surfaces of parenchyma cells became smooth and clear ([Figure 2b](#)). SEM examination revealed the presence of caoutchouc, not only in the lumens of the parenchyma cells, but also in those of fibers and vessel elements.

Subsequently, we analyzed the surface of untreated and extracted heartwood sections using X-ray photoelectron spectroscopy (XPS). Unextracted sections produced a C1s spectrum rich in C1 (C-C or C-H) components, possibly indicating the migration of extractives after sectioning ([Figure 3a](#)). The CPS oxygen-to-carbon ratio was 0.24. Extraction with acetone caused a slight decrease in levels of C2 (C-OH) and a slight increase in C1, with a lower XPS O/C ratio of 0.16. Both the decrease of the O/C ratio and the increase of C1 demonstrated the removal of hydrophilic wood extractives. Because of its hydrophobic nature, caoutchouc remained on the surface. Successive extraction with acetone and chloroform caused clear reductions in the level of C1, combined with increases in C2 levels ([Fig. 3b](#)), probably due to the removal of caoutchouc from the section surfaces. The rise in the O/C ratio to 0.40 also supports this finding.

Next, we utilized electron spin resonance spectroscopy (ESR) on the sections in order to examine the formation of free radicals under sunlight irradiation. The ratio of the relative signal intensity of organic free radicals at $g_{\text{eff}}=2.005$ (10G line width) before sunlight irradiation to the intensity following irradiation indicated the effectiveness of the wood surface in absorbing sunlight. After irradiation for six hours, ESR measurements produced high ratios (4.4) for specimens extracted with acetone and low ratios (1.8) for those treated with acetone-chloroform, while ratios for unextracted specimens measured 2.1. These results suggest that extraction with acetone may expose caoutchouc by depriving the wood of other protective compounds, leaving residual caoutchouc, with its unsaturated bonds, to absorb sunlight. The effects of these properties on teak wood durability are not clear.

We also measured water contact angles on the wood surfaces in an effort to evaluate hydrophobicity. Our results indicated a high degree of water repellency in unextracted teak sections relative to other wood species reported in the literature ([Figure 4](#)), thereby confirming the hydrophobic properties of teakwood. Extraction with acetone increased contact angles slightly, suggesting that the acetone removed hydrophilic extractives. Apparently, residual caoutchouc was also redistributed and enriched on the surface of the sections, resulting in a slight increase in water repellency. Successive chloroform treatments removed caoutchouc, resulting in a significant decrease of contact angles.

Finally, we evaluated the ability of teak wood to resist decay by exposing particleboard samples reconstructed from unextracted, ethanol extracted, and ethanol-chloroform extracted wood meal to white rot fungus, *Coriolus versicolor* (L. ex. Fr.) for twelve weeks. Particleboard specimens from untreated wood meal showed only 3.2 percent weight loss. Specimens made from ethanol and ethanol-chloroform extracted wood meal lost 14.2 percent and 16.3 percent of total weight respectively. These results demonstrate that the substances responsible for decay resistance properties in the samples were removed with the ethanol extract and that residual caoutchouc contributed little to resistance properties.

FISHERIES DIVISION

As an initial phase (1994-1998) in international collaborative activity in the field of fisheries, the Fisheries Division has initiated five major research projects in Asian countries, including efforts to improve the management of fisheries resources in Malaysia and Indonesia, aquaculture in Thailand and Vietnam, and fisheries product processing in China. In addition to these studies, the Division has also endeavored to secure the participation of Southeast Asian countries in a research project targeting prawn viral diseases.

During FY 1997, the Division initiated its first international collaborative research project on fisheries resource management in Malaysia with the Fisheries Research Institute (FRI) and the University of Malaya (UM). This multidisciplinary project, which examines the productivity and sustainable utilization of brackish water mangrove ecosystems, involves the integration of studies in fisheries, forestry, agriculture, and socio-economics. JIRCAS has successively dispatched two senior researchers to Penang, Malaysia, to provide long-term oversight for the project, and several short-term scientists specializing in fish larval ecology, crustacean ecology, and marine chemistry have also participated. In December, 1997, members of the project team conducted a workshop on brackish water mangrove ecosystems that brought together researchers from FRI, UM, and the Forest Research Institute Malaysia (FRIM).

At the same time, the Division remains involved in several other ongoing projects. These include collaborative studies on the life history of major coastal fishes in Indonesia based on otolith analyses now being conducted in Maros, South Sulawesi, Indonesia, in conjunction with the Research Institute for Coastal Fisheries (RICF) under the jurisdiction of the Central Research Institute for Fisheries (CRIFI). The project aims to deepen understanding of the ecology and life history of important coastal fish species in ways that may improve resource management methods. One researcher has been dispatched to Maros as long-term residing scientist.

Photo: Sampling from a fish market in Ujung Pandang, Indonesia.

The Division's collaborative work on the development of sustainable aquaculture technology in Southeast Asia also continues at Kasetsart University in Bangkok, Thailand. In addition, the Division has been participating in a comprehensive project entitled "Evaluation and improvement of farming systems combining agriculture, animal husbandry, and fisheries in the Mekong Delta" with the College of Agriculture at Cantho University in Vietnam. This project involves multidisciplinary studies of integrated farming systems to address problems in rice production, animal husbandry, freshwater aquaculture, and socio-economics. Research in fisheries and freshwater aquaculture comprises an important part of the project, in particular as it relates to technologies for the production of fish and prawn fry, the prevention of disease among fish and prawn, and the utilization of new feed resources for freshwater aquaculture. To oversee components of the project which relate to fisheries management, JIRCAS has dispatched on short-term bases one researcher specializing in crustacean endocrinology and three Fisheries Agency scientists specializing in fish disease and fisheries nutrition.

Concerning the processing of fisheries products, the Division has continued collaborative research on postharvest and processing of freshwater fish in China with the Faculty of Food Science and Technology at the Shanghai Fisheries University. Two senior researchers have been dispatched successively to Shanghai, and short-term scientists specializing in postharvest technology have visited to lend support to the project.

Intensive aquaculture has been well-developed in recent years and has become one of the most important industries in many countries, but self-contamination and fish disease in culture ponds have given rise to serious environmental and social problems. In order to promote effective management and prevent problems from occurring, the Fisheries Division in March, 1998, organized a research workshop to consider aquaculture and related environmental problems in Southeast Asia. Five foreign scientists from four countries joined two Japanese university professors to share perspectives on the conditions prevailing in the regional and discuss the direction of future research efforts.

Finally, under the auspices of the JIRCAS Visiting Research Fellowship Program, one scientist from the Central Research Institute for Fisheries (CRIFI) in Indonesia has been invited to Tsukuba to undertake cooperative studies of aquatic animal physiology and pathology over a two-year period. Other invitees will soon follow. Participating Tsukuba Fellows are expected to become core scientists in JIRCAS's counterpart institutions and to contribute to the continued development of collaborative studies.

FISHERIES DIVISION TOPIC 1

Food-Chain Mechanisms And Productivity in Brackish Water Mangrove Ecosystems

Brackish waters form where sea water and freshwater mix, usually within regions characterized by flat topography stretching between rivers and seas. In tropical and subtropical areas, brackish water coastlines often play host to mangrove forests, which serve as nursery grounds for fish and prawns while playing critical roles in protecting coasts from the threat of hurricanes and erosion. Humans also utilize mangrove trees for fuel, charcoal, chips, timber and medicinal products.

In recent years, processes of urbanization, resort development, farmland clearing, and the expansion of commercial shrimp pond enterprises in the tropics have generated excessive levels of water pollution, soil erosion, and sediment accumulation that threatens the survival of many brackish water mangrove ecosystems. Already the world has witnessed widespread reduction of nursery grounds and the occurrence of red tides as a consequence of the destruction of brackish water mangrove ecosystems.

In order to better understand the functions of these valuable ecosystems, JIRCAS has initiated a collaborative research project on the productivity and sustainable utilization of brackish water mangrove ecosystems in cooperation with leading Malaysian scientists. The project covers a five-year period from 1995-2000 and prioritizes four principal research topics, including production and decomposition processes in differential brackish water mangrove ecosystems, nutrient flux from rivers to coastal ecosystems, energy flow and carrying capacity in differential brackish water mangrove ecosystems, and socio-economic evaluations of brackish water mangrove ecosystems. Research touching upon issues in fisheries is now being conducted in collaboration with the Fisheries Research Institute (FRI) and the University of Malaya (UM).

At present, three research sites in Peninsular Malaysia have been selected for the project. The Matang Mangrove Forest in Perak State is located within a forest reserve measuring 40,711 hectares. The area consists of numerous islands and adjacent waterways and is populated primarily by *Rhizophora apiculata* trees. Under sustainable management since the early part of the century, Matang Mangrove Forest is reputed to be the world's best managed mangrove forest. As such, it will provide a valuable location for analyzing the role of fish populations in mangrove ecosystems. In contrast, disturbance through partial deforestation characterizes Merbok Mangrove Forest Reserve in Kedah State. During the past ten years, the mangrove cover at the site has declined from 9,037 ha in 1980 to 8,034 ha in 1990, amounting to roughly 11% of the original forested area. The loss of mangroves continues due to the persistence of destructive land uses, especially the conversion of mangrove areas into shrimp culture ponds. The third site, the Lumut Mangrove Forest, has experienced much more extensive deforestation.

Measurement of natural $^{13}\text{C}/^{12}\text{C}$ and $^{15}\text{N}/^{14}\text{N}$ isotopic ratios provide a powerful tool in determining sources of nutrition for consumers and trophic relationships among organisms. Such measurements are often used in the study of marine food webs. It is known that ^{13}C measurements primarily indicate the main sources of carbon to consumers, while ^{15}N values provide information on the trophic distance of consumers from their food bases. Therefore, the simultaneous use of ^{13}C and ^{15}N values allows elucidation of trophic relationships in food webs.

Surveys conducted between 1996 and 1997 in the Selinsing River of the Matang Mangrove indicate the presence of a certain C-N isotopic ratio gradient (Figure 1). This finding suggests the presence of a food pathway that begins with leaf-based detritus in the mangrove, continues upwards to herbivorous shrimp and crab species, and culminates in carnivorous fish and squid. In other words, a series of trophic relationships is fulfilled in the Matang brackish water mangrove ecosystem.

Additional research comparing populations of larval and juvenile anchovies, *Stolephorus* spp., at the research sites indicates population densities (number/100 m³) at least 1.5 times greater in the intact brackish water mangrove ecosystem at Matang than those in the disturbed ecosystem at Merbok. Biomass (mg/100 m³) at Matang also measured 4.3 times higher than that in the Merbok Mangrove (Figure 2). These results confirm our assumptions that the undisturbed nature of Matang Mangrove would generate much higher levels of productivity for larval and juvenile anchovy, when measured as the product of biomass and daily growth rates calculated through otolith ring analysis.

We have presented the results of these and other studies conducted during the past two years in an annual seminar held under the auspices of the comprehensive project. Two seminar proceedings have already been published. As a result of the studies, integrated criteria on tree and aquatic production under suitable forest management can now be standardized. Information obtained in this project will be useful to scientists in many fields in their efforts to improve techniques for the sustainable utilization of brackish water mangrove ecosystems, benefiting local residents as well as policy makers.

Our results may also help countries facing problems in the development and sustainable utilization of their brackish water mangrove

ecosystems. However, the task of linking comprehensive studies on trees and aquatic animals and of identifying criteria for sustainable utilization of brackish water mangrove ecosystems remains. These tasks will form the focus of our remaining research before the end of the project in the year 2000.

FISHERIES DIVISION TOPIC 2 **Age Determination of Tropical Fishes in Indonesia**

Scientists know little about the life histories of many commercial fish species utilized in tropical areas. In order to achieve sustainable management of fisheries resources greater knowledge of age, growth, reproductive cycles, and migratory habits are necessary. Therefore, in 1996, JIRCAS initiated a collaborative project to study the life cycles of major coastal fish species in Indonesia with the Central Research Institute for Fisheries (CRIFI). Among the main purposes of this project is an analysis of age based on daily otolith growth increments in tropical fish.

Studies of age and growth in fish species have generally examined annual growth rings found in scales, otoliths, bones, or spines. However, due to the lack of seasonal variation in tropical regions, tropical fish exhibit no such annual markings. In 1971, Pannella discovered very thin otolith growth rings which form daily. Since that time, considerable research has been conducted on the basis of these increments, primarily examining fish from temperate zones. Nevertheless, this method is considered effective for studying tropical fishes and was applied in our study.

We analyzed eight species collected from South Sulawesi, Indonesia, including *Spratelloides gracilis*, *Stolephorus indicus*, *Rastrelliger kanagurta*, *R. negruetus*, *Liognathus* sp., *Atherinomorus lacunosus*, *Vallamugil* sp. and *Sphaeramia ordicularis*. Otoliths were extracted, washed with water, air-dried and mounted with epoxy resin on a glass slide. After the epoxy resin hardened, otoliths were ground by lapping film (grind paper for hard tissues, 9¼m and 3¼m) under a light microscope until the focus was at the ground surface of the otolith. Ground otoliths were observed and growth increments counted by light and scanning electron microscopy.

Two of the eight species, *Atherinomorus lacunosus* and *Sphaeramia ordicularis*, had clear increments which enabled the estimation of age in days. Specimens of *Atherinomorus lacunosus*, which ranged from 5.7 to 7.3 cm in total length, had from 88 to 141 increments, suggesting ages that ranged from three to five months ([Figure 1](#)). *Sphaeramia ordicularis*, and *Vallamugil* sp. clearly exhibited increments, but they were so complicated that we could not count the total number accurately. Other species exhibited only dim increments, which also proved too difficult to count

Additionally, we verified the daily periodicity of increment formation of *Sphaeramia ordicularis* using rearing experiments. Fish were reared in a floating cage and immersed in alizarin complexion (ALC) solutions on two occasions, January 15 and 20, 1998. Otoliths were then extracted from the fish and examined under a light microscope. Two distinct increments colored by ALC could be observed ([Figure 2](#)), while four additional increments were counted between these distinct increments. This result indicated that the observed increments were daily growth increments, each having formed on a daily basis.

Our results demonstrate that analysis of daily growth increments is possible in tropical fishes. However, our results also suggest that this technique may prove very difficult or impossible for particular fish species. Further investigation is required to determine which species can be analyzed using this method.

OKINAWA SUBTROPICAL STATION

The Okinawa Subtropical Station was established in 1970 as a field experiment station for the Tropical Agriculture Research Center (TARC), which was reorganized into JIRCAS in 1993. It is located on Ishigaki Island, nearly 2100 km southwest of Tokyo. As annual temperatures on the island average 24° C, the Station provides the most suitable location in Japan for research concerning subtropical and tropical agriculture and the development of techniques and technologies appropriate for the constraints of warm climates.

Photo: New [experimental facility for tropical fruit tree research](#) constructed in 1997.

During FY 1997, Station personnel consisted of twenty-five researchers divided among seven research sections involved in projects relating to genetic resources, biotechnology, plant physiology, plant breeding, plant protection, and soil science. In addition to the permanent research staff, ten specialists were invited from Burkina Faso, China, Egypt, India, Nigeria, Pakistan, the Philippines and Vietnam under the auspices of the Visiting Research Fellowship Program at Okinawa overseen by the International Research Section. Visiting fellows conducted basic research on plant physiology and soil microorganisms in collaboration with Station researchers and participated in the International Workshop on Heat-Tolerance of Crops held in October, 1997.

OKINAWA SUBTROPICAL STATION TOPIC 1 Assessing Watershed Levels Using Routine Irrigation Data

It is widely believed that proper analysis of watershed levels and water balances requires large-scale monitoring systems supported by extensive man power and financial resources. This may explain the relative lack in developing countries of water balance studies and effective means for increasing efficient utilization of irrigation resources. Our collaborative research with Malaysia's Muda Agriculture Development Authority (MADA) has produced a simple method for analyzing watershed levels and water balances using twelve sets of data calculated routinely in the daily operation of irrigation systems.

In this method, two kinds of assessment indicators are used to assess management and identify constraints to proper performance in the irrigation system. A *performance indicator* expresses the ratio of performance to target and indicates the extent of target achievement. For instance, the ratio of actual irrigation supply to targeted irrigation supply is a performance indicator that demonstrates the sufficiency of irrigation supply. On the other hand, an *impact indicator* expresses the ratio of performance to total quantity and indicates constraints to proper performance when performance is not adequate. The ratio of irrigation intake to river flow constitutes one impact indicator that could be used, for instance, to show deficiencies in irrigation canal capacity despite sufficient river flow. This problem might further suggest reduced volumes in canal sections due to sedimentation. Ratios comparing the delivery of water to terminal systems against the levels of total water intake constitute a second impact indicator which can be utilized to assess excessive conveyance losses caused by damaged canal linings or the inadequate operation of control gates.

In its daily operations, MADA conducts routine measurements that clarify twelve sets of primary data. These include changes in dam storage, spillage from dams, controlled release from dams (DMRL), total runoff into rivers below dams (uncontrolled river flow, or RVIN), rainfall in the command area (RF), total levels of intake at headwork (IRIN), irrigation supplies delivered to subsystems (IRDL), recycled drainage water (IRRC), target water supplies (WRF), field water use (WUF), evapo-transpiration rates (estimated from pan-evaporation rates), and seepage and percolation (estimated through field experiments). In turn, these primary data sets can be used to derive nine sets of secondary data, including dam inflow (DMIN), river flow at canal headwork, effectively used uncontrolled river flow (RVE), unused uncontrolled river flow, effective rainfall (RFE), ineffective rainfall, canal loss, recyclable drainage water (DR), and rates of disposal to sea.

Our study utilized these twelve data points to calculate one performance indicator and five impact indicators useful for assessing watershed levels and water balances in the watershed managed by MADA, as shown in [Table 1](#). Our figures suggest strengths and weaknesses in the management of water resources in the area. They also demonstrate that analyses of watershed levels and water balances can be fruitfully conducted using data routinely monitored in most large-scale irrigation projects in developing countries.

For instance, our real performance indicator (WUF'/WRF) implies that MADA faced a water shortage in the first season of study. At the same time, authorities appeared to release dam storage at rates excessively high compared to dam inflow (DMRL/DMIN), resulting in annual reductions in dam storage and the surrender of first season rice crops every five to ten years. Utilization of uncontrolled river flow was low due to discrepancies between the timing of river flow and irrigation demand. In other words, when irrigation demand rose steeply during the dry season, river flow remained small and increased only when demand sank to low levels during the wet season.

Our statistics suggest that it is not realistic to raise effective rainfall or canal conveyance efficiency in order to improve irrigation management in the Muda watershed, as these ratios are already appropriate. However, we found ratios for recycling drainage water into the irrigation system that reached only ten percent during the first season, a figure which suggests that the development of drainage water recycling systems may provide one solution to water shortage problems in the Muda area.

(S. Yashima)

[Division Topic #1](#): Assessing Watershed Levels Using Routine Irrigation Data.

OKINAWA SUBTROPICAL STATION TOPIC 1
Assessing Watershed Levels Using Routine Irrigation Data

The role of enzymes in storing sugars in sugarcane stalk remains unclear. This study sought to address the question by measuring acid invertase (AI) activity, a negative factor, and sucrose phosphate synthase (SPS) activity, a positive factor, in sugar accumulation processes within sugarcane storage tissues.

NiF4 is an early maturing Japan variety of sugarcane characterized by high sugar content. When compared to conventional sugarcane varieties, this variety exhibits relatively high brix, even during the growing season. Invert sugars of this variety decrease remarkably in November, whereas conventional types decrease in January ([Figure 1](#)). To clarify the physiological functions of high sugar content varieties, this study examined samples of NiF4 and the more conventional F172.

First, we measured seasonal changes in the level of AI activity. We found AI activity in NiF4 to be higher than that of F172 through most of the season ([Figure 2](#)). The negative factor for sugar accumulation was high in the high sugar content variety NiF4, suggesting that AI activity does not play an important role in sugar accumulation.

SPS activity in NiF4 was higher than in F172, both during the maturing season and during the harvest season. Particularly in the NiF4 variety, SPS activity increased throughout the maturing season into the harvest season ([Figure 3](#)).

Cold temperatures are the primary determinant of maturation in sugarcane. Sugarcane samples grown at 24° C, the temperature characterizing the maturing season, indicated high brix and low invert sugar content compared to samples grown at 32° C, the temperature characteristic of the vegetative growing season. Sugarcane grown at 24° C also demonstrated higher SPS activity than that grown at 32° C ([Figure 4](#)).

The fact that SPS activity increased under maturing conditions with increments of brix and decrements of invert sugars suggests that the SPS enzyme plays an important role in sugar accumulation in sugarcane storage tissues.

(T. Terauchi)

OKINAWA SUBTROPICAL STATION TOPIC 3
Evaluating Mungbean Cultivars for Resistance to Iron Deficiency

Iron deficiency is a major factor limiting the growth and production of crop plants grown on calcareous soils. Foliar and soil application of iron may be employed, but currently the only economical alternative for alleviating iron-deficiency is the selection of cultivars efficient in iron uptake. The purpose of the present study is to evaluate mungbean cultivars for their resistance to iron-deficient soils under field conditions and to identify the physiological factors involved in differential responses of mungbean cultivars to iron deficiency using solution culture.

A field experiment was conducted at the Nakhon Sawan Field Crops Research Center, Thailand. Ten mungbean cultivars/lines were evaluated for their resistance to iron deficiency in view of chlorosis symptoms, plant growth and seed yield under field characterized by calcareous soil. Ten cultivar lines grown in the field exhibited various susceptibilities to iron deficiency. Of the ten cultivar lines examined, the KPS2 proved highly susceptible; the KPS1, PSU1 and Pag-asa 1 somewhat susceptible; the VC1163B moderately tolerant; the CN36, CN60, UT1 and CNM-I tolerant; and the CNM8509B very tolerant to iron deficiency. Foliar application of a solution of 5g L⁻¹ ferrous sulphate was effective in correcting chlorosis induced by iron deficiency, and it enhanced both the growth and the yield of susceptible cultivars.

Photo: [Mungbean cultivated on alkaline calcareous soils](#) at Nakhon Sawan Field Crops Research Center, Thailand.

Two cultivars which differ in chlorosis resistance in the field, KPS2 and UT1, were examined for their ability to lower the pH of the nutrient solution under iron-deficient conditions. Compared with the susceptible cultivar KPS2, the tolerant cultivar UT1 had a greater ability to lower the pH of the nutrient solution in response to iron deficiency. Recovery from chlorosis was observed only in UT1 after acidification of the nutrient solution. Acidification of the medium in response to iron deficiency might contribute to the efficient solubilization of iron from calcareous soils and relates closely to the resistance to iron deficiency in mungbean cultivars. These results suggest that, when mungbean is grown on calcareous soils, loss of yield due to iron deficiency can be eliminated by the selection of cultivars with high-level resistance to iron deficiency.

MISCELLANEOUS PROJECTS OUTLINE

In addition to international collaborative projects, JIRCAS conducts a variety of miscellaneous projects: domestic projects in cooperation with other MAFF institutes; commissioned research, principally in cooperation with universities; cross-ministry and cross-agency projects currently involving the Science and Technology Agency and the Environment Agency; and special allotment projects.

DOMESTIC PROJECTS

Analysis of genes that are induced by dehydration stress in higher plants

(Biological Resources Division, 1993-1999)

Primary characterization of rice genetic resources

(Okinawa Subtropical Station, 1993-2000)

Rapid generation advance breeding of high quality wheat for blend usage

(Okinawa Subtropical Station, 1993-1999)

Simulation analysis of world food policies

(Research Information Division, 1994-1998)

A comprehensive evaluation of the effects of international trade fluctuation on resources and the environment

(Research Information Division, 1996-2000)

Elucidation of characteristics of water resource changes by agricultural production and change of industrial structure and settlement of a suitable macro indicator

(Research Information Division, 1996-2000)

Search for endophytes from tropical grasses

(Animal Production and Grassland Division, 1996-1998)

Elucidation of antagonistic mechanisms of lytic microorganisms against plant pathogenic fungi and development of a means of disease control

(Animal Production and Grassland Division, 1996-1998)

Characterization and primary evaluation of blackgram germplasma

(Okinawa Subtropical Station, 1996-2000)

Development of a predictive MI method for salt accumulation in semi-arid areas

(Crop Production and Post Harvest Technology Division, 1996-1999)

Analysis of high-yielding "Haibushi," a heat tolerant snap bean variety, in summer cultivation on Ishigaki Island, Okinawa

(Okinawa Subtropical Station, 1997-2002)

Search for possible natural enemies of the Golden apple snail and evaluation of their efficacy

(Crop Production and Post Harvest Technology Division, 1997-2000)

Development of detection and control methods for citrus greening organisms

(Biological Resources Division, 1997-2002)

Development of tools for agricultural information analysis with GIS

(Research Information Division, 1997-2006)

COMMISSIONED RESEARCH

Desertification in cool, dry areas and accompanying changes in systems of agricultural dynamics

(Environmental Resources Division in cooperation with Nihon University, 1995-1997)

Evaluation of salinity tolerance in wild species of rice and elucidation of tolerance mechanisms

(Okinawa Subtropical Station in cooperation with the University of the Ryukyus, 1996-1999)

RESEARCH PROJECTS WITH OTHER GOVERNMENT AGENCIES AND MINISTRIES

In cooperation with the Science and Technology Agency

Oceanographic investigations: Fluctuations in tropical mangrove forests and evaluation of possible influences

(Forestry Division, 1990-1997)

Molecular analysis of two-component histidine kinases in higher plants

(Biological Resources Division, 1997)

Evaluation of the effects of controlled availability fertilizer on nitrous oxide production and emission

(Environmental Resources Division, 1997)

Durability of *Acacia mangium* wood as a fast growing plantation species

(Forestry Division, 1997)

In cooperation with the Environment Agency

Research for the development of technology to inhibit the production and emission of methane and nitrous oxide from agricultural fields

(Environmental Resources Division, 1995-1997)

MAFF SPECIAL RESEARCH ALLOTMENTS

Stabilization of rice culture under water stress in the tropics utilizing a broader spectrum of genetic resources

(JIRCAS in cooperation with the International Rice Research Institute [IRRI], 1994 - 1999)

Sustainable cultivation of upland crops in the semi-arid tropics

(JIRCAS in cooperation with the International Crops Research Institute for the Semi-Arid Tropics [ICRISAT], 1994-1999)

New technologies for agricultural research: A proposal for management training in information and biotechnology research

(JIRCAS in cooperation with the International Service for National Agricultural Research [ISNAR], 1997-2000)

the Annual Report [Main Contents](#) menu.

INVITATION PROGRAMS AT JIRCAS

In keeping with its role as an international research center, JIRCAS has implemented several programs for the invitation of foreign researchers and administrators at counterpart organizations. These programs serve to facilitate the exchange of information and opinion concerning agriculture, forestry and fisheries administration and to strengthen international research ties with scientists and administrators in other countries. Current programs are described in greater detail below.

1) Administrative Invitation

Under the Administrative Invitation program, JIRCAS invites administrators from counterpart organizations to the Tsukuba premises to engage in discussions and to review ongoing research in order to ensure the smooth running of collaborative projects. Additionally, the program introduces administrators to current activities at JIRCAS and related MAFF research organizations. Finally, the program provides opportunities for the exchange of information and opinion at the administrative level concerning policy-making and project design, thereby contributing to deeper mutual understanding and international cooperation. Sixty-nine individual visits to JIRCAS were made during FY 1997 under the Administrative Invitation program, including thirteen invitations to the International Symposium. Invited administrators and their home institutions are [listed here](#).

2) Counterpart Researcher Invitation

The Counterpart Researcher Invitation program provides invitations for periods of up to six months to researchers engaged in collaborative work with members of the JIRCAS research staff. Counterparts conduct in-depth research at JIRCAS, at other MAFF research institutes, or at national universities. This invitation program aims both to enhance the quality of research conducted in foreign countries and to facilitate exchanges between individual research staff. Twenty-three researchers were invited under the Counterpart Researcher Invitation Program during FY 1997. Invited researchers, their affiliated research organizations, and their research activities are [summarized here](#).

3) JIRCAS Visiting Research Fellowship Program at Okinawa

The Okinawa Visiting Research Fellowship Program was initiated in FY 1992, prior to the reorganization of the Tropical Agricultural Research Center (TARC) into JIRCAS. The program invites post-doctoral scientists to conduct research for a period of one year at the Okinawa Subtropical Station. Researchers must focus on important topics relating to tropical agriculture in developing countries within one of several broad categories: the development of techniques for environmental control utilizing plants and microorganisms specific to the tropics and subtropics, studies on heat-tolerance mechanisms in tropical and subtropical crops, the identification and evaluation of salt-tolerant crops, or the evaluation and development of long-term techniques for conserving the genetic resources of vegetatively propagated crops in the tropics and subtropics. Ten fellows are chosen each year, beginning their terms on October 1 and ending on September 30 of the following year. Recent invitees and their research activities are [summarized here](#).

More information on the Okinawa Visiting Research Fellowship Program can be obtained by contacting the International Relations Section, Japan International Research Center for Agricultural Sciences, 1-2, Ohwashi, Tsukuba, Ibaraki, 305, Japan. (Tel.: 81-298-38-6335 Fax: 81-298-38-6337 Telex: 3652456 JIRCAS J).

4) JIRCAS Visiting Research Fellowship Program at Tsukuba

A program similar to the Okinawa Visiting Research Fellowship Program has been implemented on the Tsukuba premises since October, 1995. The Tsukuba Visiting Research Fellowship Program aims to promote collaborative research to address various problems confronting countries in developing regions. The program allows for the invitation of six to eight researchers per year. Four researchers engage in two-year projects at JIRCAS and two to four researchers conduct short five-month projects at the National Institute for Agrobiological Resources (NIAR). Recent invitees and their research activities are [listed here](#).

More information on the Tsukuba Visiting Research Fellowship Program can be obtained by contacting the International Relation Section, Japan International Research Center for Agricultural Sciences, 1-2, Ohwashi, Tsukuba, Ibaraki, 305, Japan. (Tel.: 81-298-38-6335 Fax: 81-298-38-6337 Telex: 3652456 JIRCAS J).

5) Other fellowships for visiting scientists

The Government of Japan sponsors a post-doctoral fellowship program for both Japanese and foreign scientists through the Science and Technology Agency (STA). The program places post-doctoral fellows in national research institutes throughout Japan according to research theme and prior arrangement with a host scientist for a term of generally 1-3 years. Fellowships can be undertaken in any of the ministries and many fellows are currently working at the various institutes of MAFF. During FY 1997, Dr. Chien Hsiaoping from the People's Republic of China pursued research in the Research Information Division and Dr. Park Kwang-Lai (Korea) conducted experiments in the Environmental Resources Division. In addition, two Japanese fellows, Dr. Naohiro Aoki and Dr. Makiko Sakagawa, conducted research at JIRCAS. Dr. Tsuyoshi Urao, previously a fellow, became a member of the Biological Resources Division staff in April, 1998.

Administrative Invitation Program Invitees

Under the Administrative Invitation program, JIRCAS invites administrators from counterpart organizations to the Tsukuba premises to engage in discussions and to review ongoing research in order to ensure the smooth running of collaborative projects. Additionally, the program introduces administrators to current activities at JIRCAS and related MAFF research organizations. Finally, the program provides opportunities for the exchange of information and opinion at the administrative level concerning policy-making and project design, thereby contributing to deeper mutual understanding and international cooperation. Sixty-nine individual visit to JIRCAS were made during FY 1997 under the Administrative Invitation program, including thirteen invitations to the International Symposium. Invited administrators and their home institutions are listed below.

FY 1997		
Dr. Bui Chi Buu	Vice Director Cuu Long Delta Rice Research Institute Vietnam	July 22-Aug. 5, 1997
Dr. Li Lite	Vice President China Agricultural University People's Republic of China	July 31-Aug. 11, 1997
Mr. Paiwit Watanavitawas	Director General Agricultural Development Research Center Thailand	Aug. 24-Sept. 5, 1997
Dr. Chau Ba Loc	Dean Faculty of Animal Husbandry and Veterinary Medicine Cantho University Vietnam	Aug. 24-Sept. 3, 1997
Dr. Wan Razali Wan Mohammad	Deputy Director General Forest Research Institute Malaysia Malaysia	Aug. 24-Sept. 6, 1997
Dr. Zhang Zhitao	Deputy Director General China National Rice Research Institute People's Republic of China	Aug. 25-Sept. 5, 1997
Dr. Taufic Ahmad	Director Research Institute for Coastal Fisheries Indonesia	Sept.28-Oct.8, 1997
Dr. Anthony E. Hall	Professor Department of Botany and Plant Sciences University of California U.S.A.	Oct. 5-11, 1997
Dr. Chungchi George Kuo	Director of Crop Improvement Program Asian Vegetable Research and Development Center Taiwan	Oct. 6-10, 1997
Dr. Suwithaya Pollarp	Director General Department of Livestock Development Thailand	Oct. 12-19, 1997
Mr. Watcharin Boonpakdee	Director Khon Kaen Animal Nutrition Research Center Thailand	Oct. 12-19, 1997

1) Administrative Invitation

Dr. Yoshihiko Sugai	Researcher Secretary of Strategic Administration Brazilian Agriculture Research Corporation (EMBRAPA) Brazil	Oct.13-Nov.10, 1997
Dr. Celso Boin	Director General National Center for Research on Beef Cattle (EMBRAPA-CNPGC) Brazil	Nov. 4-12, 1997
Dr. Jose Francisco Ferraz de Toledo	Head National Center for Research on Soybeans (EMBRAPA-CNPSo) Brazil	Dec. 1-6, 1997
Dr. Paulo Roberto Galerani	Associate Head of Technical Cooperation National Center for Research on Soybeans (EMBRAPA-CNPSo) Brazil	Dec. 1-6, 1997
Dr. Norman Neumaier	International Liaison Officer National Center for Research on Soybeans (EMBRAPA-CNPSo) Brazil	Dec. 1-6, 1997
Dr. Vo-Tong Xuan	Director General Mekong Delta Farming Systems Institute Cantho University Vietnam	Dec. 8-12, 1997
Mr. Duong Le Thanh	Deputy Director Mekong Delta Farming Systems Institute Cantho University Vietnam	Dec. 8-12, 1997
Mr. Duong Ngoc Thanh	Deputy Head of Sustainable Resource Management Department Mekong Delta Farming Systems Institute Cantho University Vietnam	Dec. 8-12, 1997
Mr. Duong Van Ni	Lecture and Senior Researcher Mekong Delta Farming Systems Institute Cantho University Vietnam	Dec. 8-12, 1997
Mr. Nico Vromant	Researcher Mekong Delta Farming Systems Institute Cantho University Vietnam	Dec. 8-12, 1997
Mr. Nguen Xuan Lai	Researcher Agricultural Technology Transfer Center Cuu Long Delta Rice Research Institute Vietnam	Dec. 8-12, 1997
Dr. Laura M. Giorda	National Coordinator of Soybean Research National Institute for Agricultural Technology (INTA) Argentina	Dec. 8-13, 1997
Mr. Mario Nuñez	General Coordinator Ministry of Agriculture and Livestock Direction of Agricultural Research Paraguay	Dec. 8-13, 1997

1) Administrative Invitation

Mr. Martin F. Naumann	International Liaison Officer National Institute for Agricultural Technology (INTA) Argentina	Dec. 8-13, 1997
Dr. Huang Hongxiang	Vice Director Soil and Fertilizer Institute Chinese Academy of Agricultural Sciences People's Republic of China	Feb. 3-7, 1998
Dr. Liu Jifang	Assistant Professor Soil and Fertilizer Institute Chinese Academy of Agricultural Sciences People's Republic of China	Feb. 3-7, 1998
Dr. Zhang Weili	Associate Professor Soil and Fertilizer Institute Chinese Academy of Agricultural Sciences People's Republic of China	Feb. 3-7, 1998
Dr. Xu Minggang	Associate Professor Soil and Fertilizer Institute Chinese Academy of Agricultural Sciences People's Republic of China	Feb. 3-7, 1998
Dr. Liu Fulai	Director General Soil and Fertilizer Institute Chinese Academy of Agricultural Sciences People's Republic of China	Feb. 3-7, 1998
Dr. Cao Zhihong	Director General Institute of Soil Science Chinese Academy of Sciences People's Republic of China	Feb. 3-7, 1998
Dr. Cai Zucong	Professor Institute of Soil Science Chinese Academy of Sciences People's Republic of China	Feb. 3-7, 1998
Dr. Zhu Jianguo	Associate Professor Institute of Soil Science Chinese Academy of Sciences People's Republic of China	Feb. 3-7, 1998
Dr. Zhou Ying Qi	President Shanghai Fisheries University People's Republic of China	Feb. 23-Mar. 4, 1998
Ms. Celia R. Lavilla Pitogo	Associate Scientist Aquaculture Department, Southeast Asian Fisheries Development Center (SEAFDEC) The Philippines	Mar. 1-8, 1998
Mr. Tadokoro Yasuo	Deputy Chief Aquaculture Department Southeast Asian Fisheries Development Center (SEAFDEC) The Philippines	Mar. 1-8, 1998
Dr. Yont Musig	Dean Faculty of Fisheries Kasetsart University Thailand	Mar. 1-8, 1998

1) Administrative Invitation

Dr. Taufik Ahmad	Director General Research Institute for Coastal Fisheries Indonesia	Mar. 1-8, 1998
Dr. Chong Ving-Ching	Lecturer Institute of Postgraduate Studies and Research University of Malaya Malaysia	Mar. 1-8, 1998
Dr. Yang Guoting	Northeastern Forestry College People's Republic of China	Mar. 3-9, 1998
Mr. Anim Boanyo Danson	Visiting Researcher Hokkaido University Japan (Ghana)	Mar. 3-9, 1998
Mr. Sattar Nyaz	Visiting Researcher Hokkaido University Japan (People's Republic of China)	Mar. 3-9, 1998
Ms. Ishikawa Noemia Kazue	Visiting Researcher Hokkaido University Japan (Brazil)	Mar. 3-9, 1998
Dr. Dongshen Cheng	Beijing Forestry University People's Republic of China	Mar. 3-31, 1998
Dr. Ge Mao quan	Dean Faculty of Food Science and Technology Shanghai Fisheries University People's Republic of China	Mar. 17-26, 1998
Dr. Pan Borong	Vice Director Xinjiang Institute of Biology, Pedology and Desert Research People's Republic of China	Mar. 18-25, 1998
Dr. Yin Linke	Director Turpan Desert Research Station Xinjiang Institute of Biology, Pedology and Desert Research People's Republic of China	Mar. 18-25, 1998
Mr. Wang Wenzhe	President China National Food Industry Association People's Republic of China	Mar. 22-26, 1998
Mr. Bi Qingyan	Director and Senior Engineer Department of Planning China National Food Industry Association People's Republic of China	Mar. 22-26, 1998
Mr. Chu Shiguan	Vice Director Department of Consumer Goods Circulation Ministry of Internal Trade People's Republic of China	Mar. 22-26, 1998
Dr. Jiang Jianping	Professor Macro Agriculture Research Department Chinese Academy of Agricultural Sciences People's Republic of China	Mar. 22-26, 1998
Dr. Luo Cheng Xiang	Director Food Science Department Northeast Agricultural University People's Republic of China	Mar. 22-26, 1998

1) Administrative Invitation

Dr. John S. Caldwell	Associate Professor Virginia Polytechnic Institute & State University United States of America	Mar. 22-28, 1998
Mr. Teoh Weng Chaw	Senior Engineer Water Management Muda Agricultural Development Authority (MADA) Malaysia	Mar. 24-28, 1998
Dr. Hosni B. Bardan	Director Division of Research and Training Department of Irrigation and Drainage Ministry of Agriculture Malaysia	Mar. 24-28, 1998
Dr. Abdul Aziz Ibrahim	Director General National Hydraulic Research Institute of Malaysia (NAHRIM) Ministry of Agriculture Malaysia	Mar. 24-28, 1998

Counterpart Researcher Invitation Program Invitees

The Counterpart Researcher Invitation program provides invitations for periods of up to six months to researchers engaged in collaborative work with members of the JIRCAS research staff. Counterparts conduct in-depth research at JIRCAS, at other MAFF research institutes, or at national universities. This invitation program aims both to enhance the quality of research conducted in foreign countries and to facilitate exchanges between individual research staff. Twenty-three researchers were invited under the Counterpart Researcher Invitation Program during FY 1997. Invited researchers, their affiliated research organizations, and their research activities are summarized below.

FY 1997

(At Japan International Research Center for Agricultural Sciences, Aug. 18-30, 1997)

Ms. Nussipbayeva Assem	Kazakh Institute of Agriculture Kazakhstan	Seeding methods of grasses and legumes on natural grassland
------------------------	---	---

(At Japan International Research Center for Agricultural Sciences, National Research Institute of Fisheries Science, National Research Institute of Fisheries Engineering, and National Research Institute of Far Sea Fisheries, Sept. 2-Nov. 15, 1997)

Mr. Syarifuddin Tonnek	Research Institute for Coastal Fisheries Indonesia	Age determination of fish and squid based on daily growth increments of otoliths and statoliths
------------------------	---	---

(At Japan International Research Center for Agricultural Sciences, National Institute of Agro-Environmental Science, National Agriculture Research Center and Tohoku National Agricultural Experiment Station, Sept. 9-Oct. 14, 1997)

Dr. Pham Sy Tan	Cuu Long Delta Rice Research Institute Vietnam	Fertilizer management for rice in the Mekong Delta region of Vietnam
-----------------	---	--

(At Japan International Research Center for Agricultural Sciences and National Institute of Agro-Environmental Science, Oct. 1-Dec. 27, 1997)

Mr. Ping Xiaofei	China National Rice Research Institute People's Republic of China	Development of insecticide resistance in long range migratory rice planthoppers
------------------	--	---

(At Japan International Research Center for Agricultural Sciences, National Institute of Agro-Environmental Science, and National Agriculture Center, Oct. 1-Dec. 27, 1997)

Mr. Precha Wadisirisuk	Ministry of Agriculture and Cooperatives Department of Agriculture (DOA) Thailand	Nitrogen uptake in legume-rhizobium symbiosis in Thailand
------------------------	---	---

2) Counterpart Researcher Invitation

(At Japan International Research Center for Agricultural Sciences, National Institute of Agro-Environmental Science, National Agriculture Center, and Tohoku National Agricultural Experiment Station, Oct. 6-Nov. 14, 1997)

Dr. Meow-Chan Feng	Universiti Sains Malasia (USM) Malaysia	Allelopathy of some Malaysian plants
--------------------	--	--------------------------------------

(At Japan International Research Center for Agricultural Sciences, Seikai National Fisheries Research Institute, and National Research Institute of Aquaculture, Oct. 22, 1997-Feb. 11, 1998)

Ms. Tran Thi Thanh Hien	Cantho University Vietnam	The effects of stock origin and feed on growth and reproductive development in the giant freshwater prawn, <i>Macrobrachium rosenbergii</i>
-------------------------	------------------------------	---

(At Japan International Research Center for Agricultural Sciences, Seikai National Fisheries Research Institute, and National Research Institute of Aquaculture, Nov. 17, 1997-Feb. 11, 1998)

Mr. Truong Quoc Phu	Cantho University Vietnam	The effects of feed quality and level on growth and reproductive development in the giant freshwater prawn, <i>Macrobrachium rosenbergii</i>
---------------------	------------------------------	--

(At Japan International Research Center for Agricultural Sciences and Forestry and Forest Products Research Institute, Nov. 17, 1997-Jan. 15, 1998)

Dr. Othman Sulaiman	Universiti Sains Malasia (USM) Malaysia	Effect of lignin on preservative fixation
---------------------	--	---

(At Japan International Research Center for Agricultural Sciences, National Food Research Institute, and National Research Institute of Fisheries Science, Dec. 3, 1997-Mar. 31, 1998)

Ms. Zhou Li-Pin	Shanghai Fisheries University People's Republic of China	Gel formation and its properties in freshwater fish meat by Ohmic heating
-----------------	---	---

(At Japan International Research Center for Agricultural Sciences, Jan. 9-Mar. 27, 1998)

Dr. Divaagiin Erdenetsetseg	Institute of Meteorology and Hydrology Mongolia	Heat and water exchange in atmosphere-vegetation-soil systems for the determination of evapotranspiration distribution
-----------------------------	--	--

(At Japan International Research Center for Agricultural Sciences, Jan. 12-Mar. 10, 1998)

Mr. Suksun Horpibulsuk	Asian Institute of Technology Thailand	Investigation on the mechanical properties of typical soils distributed in Northeast Thailand for the construction of irrigation facilities
------------------------	---	---

(At Japan International Research Center for Agricultural Sciences, Jan. 13-Mar. 12, 1998)

Dr. H. Muhammad Dimiyati	Ministry of Public Works Indonesia	Analysis of land use change using remote sensing and GIS
--------------------------	---------------------------------------	--

(At Japan International Research Center for Agricultural Sciences and National Institute of Animal Industry, Jan. 28-Mar. 31, 1998)

2) Counterpart Researcher Invitation

Ms. Wanna Anghong	Ministry of Agriculture and Cooperatives Department of Livestock Development Thailand	Methods for estimating energy values in feed for dairy cattle
-------------------	---	---

(At Japan International Research Center for Agricultural Sciences and National Food Research Institute, Feb. 16-Mar. 31, 1998)

Ms. Vipaporn Na Thalang	Institute of Food Research and Product Development, Department of Research Thailand	Antioxidant activity of various Thai vegetables
-------------------------	--	---

(At Japan International Research Center for Agricultural Sciences, Feb. 17-Mar. 25, 1998)

Mr. Tang Lisong	Xinjiang Institute of Biology, Pedology and Desert Research People's Republic of China	Sustainable agricultural techniques for improving environmental conditions in marginal agricultural areas and arid lands
-----------------	---	--

(At Japan International Research Center for Agricultural Sciences and Forestry and Forest Products Research Institute, Mar. 16-30, 1998)

Dr. Zulkifli Yusop	Forest Research Institute Malaysia (FRIM) Malaysia	Study on watershed management and its impact on harvesting
--------------------	---	--

(At Japan International Research Center for Agricultural Sciences and National Institute of Sericultural and Entomological Science, Feb.25-Mar. 31, 1998)

Ms. Anchalee Chuaboonmee	Sisaket Sericultural Research Center Thailand	The physical properties of Thai poly voltine raw silk used in warp yarn
--------------------------	--	---

(At Japan International Research Center for Agricultural Sciences, Feb.16-19, 1998)

Dr. Wongkrajang Karuna	Kasetsart University Thailand	Research on food problems in Asian countries
------------------------	----------------------------------	--

JIRCAS Visiting Research Fellowship Program at Okinawa

The Okinawa Visiting Research Fellowship Program was initiated in FY 1992, prior to the reorganization of the Tropical Agricultural Research Center (TARC) into JIRCAS. The program invites post-doctoral scientists to conduct research for a period of one year at the Okinawa Subtropical Station. Researchers must focus on important topics relating to tropical agriculture in developing countries within one of several broad categories: the development of techniques for environmental control utilizing plants and microorganisms specific to the tropics and subtropics, studies on heat-tolerance mechanisms in tropical and subtropical crops, the identification and evaluation of salt-tolerant crops, or the evaluation and development of long-term techniques for conserving the genetic resources of vegetatively propagated crops in the tropics and subtropics. Ten fellows are chosen each year, beginning their terms on October 1 and ending on September 30 of the following year. Recent invitees and their research activities are listed below.

Photo: [Okinawa Fellows conduct research](#) in the laboratories of the Okinawa Subtropical Station.

Okinawa Fellows from October 1996 to September 1997

Subject: Development of techniques for environmental control by using plants and microorganisms specific to the tropics and subtropics

Dianou Dayeri	Institute of Agricultural Study and Research Burkina Faso	Biological regulation mechanisms for methane emission in rice paddy fields with reference to development of techniques for environmental control
El-Khawas Hussein Moustafa	Cairo University Egypt	Response of lowland rice to inoculation with plant growth promoting rhizobacteria (PGPR) and their culture supernatants

Subject: Studies on the mechanism of heat-tolerance of tropical and subtropical crops

Harvinder Singh Talwar	International Crops Research Institute for the Semi-Arid Tropics (ICRISAT) India	Physiological basis for heat tolerance during flowering and pod setting stages in groundnuts (<i>Arachis hypogaea</i> L.)
Padmanaban Annamalai	University of Madras India	Molecular study on the function of heat shock responsive genes in <i>Brassica Oleracea</i> var. <i>Capitata</i> L.

Subject: Identification and evaluation of salt-tolerant crops

Li Chengyun	Yunnan Academy of Agricultural Sciences People's Republic of China	Studies on the relationship between salinity tolerance and cold tolerance at the booting stage of rice (<i>Oryza sativa</i> L.)
Safdar Hussain Shah	Agriculture Research Station Dhodial Pakistan	Salinity tolerance in rice at the whole-plant and cellular levels
Maribel Dionisio-Sese	University of the Philippines Philippines	Photosynthetic and antioxidant responses of rice seedlings to salinity stress: Effects of proline and betaine on heat inactivation of <i>Rubisco</i>
Qian Qian	China National Rice Research Institute People's Republic of China	Coordinated gene responses to salt stress in rice (<i>Oryza sativa</i> L.)

Subject: Evaluation and development of long-term conservation techniques of genetic resources of vegetatively propagated crops in the tropics and subtropics

Nguyen Tien Thinh	Nuclear Research Institute Vietnam	Cryopreservation of taro (<i>Colocasia esculenta</i>) shoot tips by encapsulation / dehydration
-------------------	---------------------------------------	---

Pius Michael Kyesmu	University of Jos Nigeria	Cryopreservation of shoot apices of <i>Dioscorea</i> species by vitrification
---------------------	------------------------------	--

from October 1997 to September 1998

Subject: Development of techniques for environmental control by using plants and microorganisms specific to the tropics and subtropics

El-Khawas Hussein Moustafa	Cairo University Egypt	Utilization of plant growth promoting rhizobacteria (PGPR) for promoting plant growth and saving fertilizer
Wang Bujun	Institute of Crop Breeding and Cultivation People's Republic of China	Associations between methane emission and methanogenic and methanotrophic bacteria in flooded soil as affected by rice cultivars
Nora S. Meneses	La Granja Agricultural Research and Extension Center Philippines	Biological control of pest insects of <i>Gramineae</i>

Subject: Studies on the mechanism of heat tolerance of tropical and subtropical crops

Liu Jian	Shandong Teachers' University Institute of Plant Stress People's Republic of China	The expression of the heat tolerance-relative genes in tomato reproductive organs
----------	--	---

Identification and evaluation of salt-tolerant crops

Safdar Hussain Shah	Agricultural Research Station at Dhodial, Mansehra Pakistan	Physiological, biochemical and genetic characterization of salinity tolerance in rice
Li Chengyun	Plant Protection Research Institute People's Republic of China	Selection and detection of salt-responsive mutants in rice (<i>Oryza sativa</i> L.)
Sumanasinghe Vithanaarachchige Ariyawanse	University Peradeniya Sri Lanka	Expression and evaluation of salinity stress related genes in <i>Oryza sativa</i> L.
Masood M. Shahid	National Agricultural Research Center Pakistan	Identification and evaluation of salinity tolerance in rice (<i>Oryza sativa</i> L.) using molecular markers
Bakhtiyor Yakubov	Institute of Genetics Uzbekistan	Molecular study of the heat-shock inducible genes in a highly heat-tolerant variety of <i>Brassica oleracea</i> var. capitata L.

Subject: Evaluation and development of long-term conservation techniques of genetic resources of vegetatively propagated crops in the tropics and subtropics

Narinder Pal Singh Dhillon	Punjab Agricultural University India	RAPD and AFLP analysis of genetic diversity in sweet potatoes (<i>Ipomea batatas</i> L.)
----------------------------	---	---

JIRCAS Visiting Research Fellowship Program at Tsukuba

A program similar to the Okinawa Visiting Research Fellowship Program has been implemented on the Tsukuba premises since October, 1995. The Tsukuba Visiting Research Fellowship Program aims to promote collaborative research to address various problems confronting countries in developing regions. The program allows for the invitation of six to eight researchers per year. Four researchers engage in two-year projects at JIRCAS and two to four researchers conduct short five-month projects at the National Institute for Agrobiological Resources (NIAR). Recent invitees and their research activities are noted below.

Photo: [Tsukuba Fellows conduct experiments](#) with the help of JIRCAS staff members in the state-of-the-art Biotechnology Unit at JIRCAS headquarters in Tsukuba, Japan.

Long-Term Tsukuba Fellows at JIRCAS from October 1996 to September 1998

Subject: Methods for optimum utilization of biological resources

Zabta Khan Shinwari	National Agricultural Research Center Pakistan	Analysis of plant responses to environmental stresses and gene expression
Gassinee Trakoontivakorn	Kasetsart University Thailand	Development of practical methods for the evaluation of the quality of indigenous crops and for the analysis of components and functionality of foods

Subject: Analysis and evaluation of the impact of climatic and anthropogenic factors on environmental resources

Qian Minze	Tsinghua University People's Republic of China	Relation between climatic changes and biomass in agro-ecosystems
Yang Hao	The Institute of Soil Science Academia Sinica People's Republic of China	Investigations of the process of rock-weathering through the analysis of rock surfaces by electron spectroscopy

Long-Term Tsukuba Fellows at JIRCAS from October 1997 to September 1999

Subject: Methods for optimum utilization of biological resources

Mohammad Masud Parvez	Bangladesh Agricultural Institute Bangladesh	Analysis of plant responses to environmental stresses and gene expression
Vuong Dinh Tuan	Cuulong Delta Rice Research Institute Vietnam	Analysis of plant responses to environmental stresses and gene expression

Subject: Analysis and evaluation of the impact of climatic and anthropogenic factors on environmental resources

Li Zhong	Institute of Soil Science Academia Sinica People's Republic of China	Relation between climatic changes and biomass in agro-ecosystems
Muhammad Akhtar Abbas	University of Agriculture at Faisalabad Pakistan	Development of techniques for environmental and resource assessment, including remote sensing and GIS

Short-Term Tsukuba Fellows at NIAR from September 1997 to March 1998

Konarev Alexander	All Russian Institute for Plant Protection Russia	Methods for the analysis and preservation of plant biodiversity
-------------------	--	---

Short-Term Tsukuba Fellows at NIAR from August 1997 to March 1998

Iftikhar Farida	National Agricultural Research Center Pakistan	Production of new biological resources through the application of biotechnological procedures
-----------------	---	---

Short-Term Tsukuba Fellows at NIAR from November 1997 to March 1998

Xie Guanlin	Zhejiang Agricultural University People's Republic of China	Production of new biological resources through the application of biotechnological procedures
-------------	--	---

Short-Term Tsukuba Fellows at NIAR from September 1997 to March 1998

Tewary Prakash Kumar	Central Sericultural Research and Training Institute India	Methods for the analysis and control of biological functions
----------------------	--	--

Ⓢ **Part-Time Employees** Ⓢ

Nearly 90 persons are working at JIRCAS as non-permanent staff. They serve as editorial advisors for many of JIRCAS's publications, perform much of the institute's secretarial work, function as laboratory technicians, and maintain the buildings and laboratories. Their services to JIRCAS are highly valued.

Message from the Director General

Toward Global Partnership in Agricultural Research

Director General
Nobuyoshi Maeno

On August 1, 1996, I became the second Director General of the Japan International Research Center for Agricultural Sciences (JIRCAS) after succeeding Dr. Keiji Kainuma who retired from the Ministry after a service of 37 years. Under the dynamic leadership of Dr. Kainuma, the former Tropical Agriculture Research Center was reorganized into JIRCAS and the difficult task of setting up a new structure was eventually accomplished.

During the three-year tenure of Dr. Kainuma, JIRCAS activities were re-oriented and re-defined along the lines of its new role as an international research center. New research facilities, including a biotechnology unit and fisheries science and Earth science laboratories (highlighted in Annual Report 1994), were constructed to enhance domestic research activities and to strengthen support for overseas activity. In early 1994, a new type of project, the “Integrative-type” Comprehensive Research Project was initiated; these projects, currently being implemented in Vietnam, Thailand, Malaysia, and Brazil (for more detail, see Research Overview section), aim to unite the activities of research scientists and experts in wide-ranging agricultural fields to achieve common objectives. In addition, the scope of specific research activity was expanded to include activities in regions which had not been previously targeted for research collaboration, such as Kazakhstan in Central Asia and the subtropical areas of Brazil. Finally, under Dr. Kainuma, the JIRCAS Visiting Research Fellowship Program at Tsukuba was inaugurated in the Fall of 1995, and close relations between JIRCAS and the Japan International Cooperation Agency (JICA) were further advanced.

At present, JIRCAS activities are being expanded and promoted according to a basic strategy developed during the past three years as described below.

[Fig.1 Research Collaboration with CGIAR centers](#) (83KB)

Expansion of areas targeted for research collaboration

With the reorganization of TARC into JIRCAS, areas targeted for research collaboration were expanded beyond the tropical and subtropical areas focused on at TARC to include all developing regions. However, the tropics and sub-tropics remain important regions in which to work, and budgetary

constraints necessitated the establishment of priorities. Presently, research collaboration with Asian nations comprises 80% of total activity; this is partly based on geographical considerations and cultural similarities. Although current research activity in Africa and Latin America occurs mainly in collaboration with the Consultative Group on International Agricultural Research (CGIAR) centers, in the future, JIRCAS may expand relations with these countries to include other organizations.

Importance of research related to information systems and socio-economic aspects

In selecting research themes relevant to the needs of the targeted countries and regions, it is necessary to comprehensively collect, process and analyze; only by considering agriculture, forestry and fisheries as a whole, is it possible to effectively implement projects. Moreover, it is essential to develop technology compatible with the socio-economic conditions of each region. To reach these objectives, it is important to promote information activities aimed at integrating social and natural sciences as they relate to agriculture, forestry and fisheries activity.

Multidisciplinary versus unidisciplinary approach

Due to the complexity of the many agricultural ecosystems and societies in regions targeted by JIRCAS, it is urgent to adopt a systematic and integrated strategy for sustainable agricultural development rather than an isolated and fragmentary approach. Therefore, efforts should be made toward promoting comprehensive projects on a multidisciplinary basis in addition to pursuing specific, focused topics. Research on information science and socio-economic aspects of agricultural activity should be carried out in the context of the drafting and implementing of integrated projects.

Overseas research activity and domestic research

TARC adopted a strategy of dispatching researchers abroad to carry out collaborative research in targeted areas. This system has been essentially maintained, but certain activities abroad require the support of advanced research and the use of sophisticated instruments. Often such research activity is most effectively performed domestically. In order to strengthen JIRCAS's capacity to carry out advanced studies, JIRCAS has established the new research facilities delineated above. JIRCAS researchers are also able to utilize equipment and facilities of other MAFF institutes located in the Tsukuba Institutional Complex. As overseas and domestic research become more closely linked, the development of such a cooperative system will help alleviate many of the difficulties associated with carrying out research in developing areas.

Development of human resources (training programs and fellowships)

The development of sustainable agriculture in any region depends on the establishment of a pool of highly trained personnel. JIRCAS recognizes that there is a need to train researchers who can fulfill such requirements. JIRCAS currently sponsors two types of fellowships: the JIRCAS Visiting Research Fellowship Program at Tsukuba and the JIRCAS Visiting Research Fellowship Program at Okinawa. Under these programs, invited researchers are able to take advantage of advanced facilities in an environment conducive to research. These programs aim at enhancing the capabilities of the research fellows while promoting cooperative research with JIRCAS researchers. It is expected that upon returning to their respective countries, the fellows will become core counterparts for further research collaboration with JIRCAS.

Priorities for the future

During the past three years, JIRCAS activities have become widely recognized within the international agricultural research community and numerous countries have requested JIRCAS to engage in joint research projects. Such collaboration based on partnerships with other MAFF institutes, CGIAR centers, and related research organs will help pave the way toward establishing a global partnership dedicated to the establishment of sustainable agriculture, productive forestry and fisheries activities and the preservation of the environment.

Yet in the future, staff size and budgetary constraints will limit, and in some ways determine, our activities. Therefore, it will be essential for JIRCAS to fully utilize its comparative advantages, establishing research priorities that make the best use of its human and technical resources while considering the capabilities and the needs of the target countries and regions.

Note about Annual Report 1996

While including summaries of JIRCAS research activity around the globe, in continuation of last year's focus on projects in Latin America, Annual Report 1996 will highlight recent projects in Africa. In addition, however, 1996 marked the beginning of JIRCAS's first collaborative project in Central Asia, with the signing of a research agreement with Kazakhstan as is introduced in the Highlights section.

[Continue to Highlights from 1996](#)

HIGHLIGHTS FROM 1996

This past year was marked not only with success in longstanding research activities but also by the establishment of several promising new projects. Important new studies will include research on soybeans in South America, food supply and demand in China, and shrimp viral disease in South East Asia and Oceania. In addition to these new projects in regions with a long history of collaboration with JIRCAS, however, 1996 also marked the intensification of research efforts in Africa and the beginning of joint projects with Central Asian countries.

IMPORTANT NEW PROJECTS

(1) Comprehensive studies on soybean improvement, production and utilization in South America

The soybean, *Glycine max*, is considered one of the four major crops essential for human life, especially as an oil resource for human consumption and as a protein resource for livestock feed. At present the increase of soybean production is important for the stabilization of the world food supply. However, there is no international research institute devoted to soybeans, although there are several international research institutes for other major crops such as wheat, maize, rice, coarse grain cereals and root crops under the Consultative Group on International Agricultural Research (CGIAR).

Soybean production in South America, mainly in the MERCOSUR (South American Common Market including Brazil, Argentina, Uruguay, and Paraguay) countries, amounts to approximately one third of the total world production. Thus the MERCOSUR nations play a major role as leading soybean export countries. However, soybean production in the MERCOSUR countries has been mostly carried out under environmentally vulnerable conditions such as in arid, acid soils with low-fertility level. In addition, the history of soybean production in these countries is relatively short since cultivation was initiated on a large scale only in the 1960s. Scientists anticipate that in the future, continuous cropping, outbreaks of diseases and pests and soil erosion will retard growth, adversely affecting soybean production in this area. Therefore, a comprehensive, multinational research project focused on the development of sustainable and more efficient systems of soybean production in the MERCOSUR countries is important to address these constraints.

The research project entitled “Soybean improvement, production and utilization in MERCOSUR countries of South America” places special emphasis on the following topics: (1) to strengthen the collaboration with JICA, and to utilize CETAPAR (Centro Tecnológico Agropecuario en Paraguay) as the main research site of the project (2) to carry out multidisciplinary studies on soybean improvement and development in the MERCOSUR countries by collaborating with researchers from Japan and South American countries.

Research areas for implementation are as follows: (1) genetics and breeding (2) soil management and pest control (3) crop management and production (4) postharvest technology (5) socioeconomic aspects.

This project is planned to last 10 years starting from April, 1997. During the first year (FY 1997), details of the project will be decided in consultation with counterpart organizations in MERCOSUR countries. A first seminar relating to the project will be held in early 1998.

[Continue to Highlights](#)

(2) Comprehensive studies of China's future food production and demand

The first comprehensive project with China is scheduled to be established on May 28, 1997, marking the beginning of JIRCAS's fifth comprehensive project. It will commence with joint signing among JIRCAS, the Agriculture, Forestry and Fisheries Research Council of the Ministry of Agriculture, and the People's Republic of China at the 16th meeting of the Japan-China Agricultural Science and Technology Exchange Group in Tokyo, and is scheduled to continue for seven years.

A report titled "Who Will Feed China? Wake-up Call for a Small Planet" (L. Brown: The World Watch Institute, 1995) triggered the heightened concerns over China's future food problems. Many Chinese and foreign researchers had made analyses and projections of China's food future, focusing most of their studies on the grain sector. However, the reports revealed little agreement on food production and its demand, most likely due to differences in assumptions, data and estimation approaches. Nevertheless, the following consensus materialized: food demand will increase continuously over the next three decades, and the supply will not meet the demand. Thus, an increase in import demand will accompany the increase in food demand.

Major factors influencing production in China include area of cultivated land, yield of grains, poor quality of farmland, weak response to fertilizer and small-scale farm structure. It is inevitable that more farm land will be used for non-farm uses in the process of rapid economic development. Newly reclaimed land and an increase in the crop index do not seem to have halted the continued tendency towards a decrease in cultivated land area. The crop yield in China is significantly lower than in advanced countries. On the other hand, major factors influencing food demand will include the population expansion, population structure changes due to rural-urban migration, income growth, price of agricultural products and poor infrastructure.

Consequently, due to population expansion and income improvement, the food demand in China will continue to rise. Agricultural production will not keep pace with increasing demand, due to inevitable resource shrinkage, and natural, structural, financial and economic constraints in the yield potentials.

In order to respond to the increasing expectations for a high-quality diet caused by the development of the Chinese economy and the increase of people's purchasing power, this project aims to develop the technologies for sustainable production and utilization of major food resources in China such as rice, soybean, corn and freshwater fishes. More specific objectives of this project are: 1) to establish an effective production and distribution system for agricultural produce in order to cope with the changing supply and demand structure of food, based on the following studies: `evaluation of the dissemination of new technologies in selected areas and their effects on rural and individual farmers' economy, a modeling of supply and demand of food in selected areas and the analysis of the structure of corresponding farming areas and agricultural products b design of a more sustainable and effective control system to improve supply and demand of major foods in selected areas; 2) development of technologies for sustainable and stable production of major food resources based on the following studies: `the evaluation of existing gene resources and the creation of new species from these, athe development and evaluation of environment-friendly agricultural technologies; 3) development of food technologies for improved utilization and distribution of major food resources based on the following studies: `the quality evaluation of major food resources and the development of new food ingredients from these, athe creation of improved preservation and distribution technologies for major food

resources.

The [topics of research subjects](#) to be pursued in this project are shown below and the counterpart research institutes ([Figure 1](#)) will participate in joint studies as necessary to promote the further progress of the projects:

[Click here to continue Highlights](#)

Figure 1: Counterpart research institutes which will participate in this project are shown geographically.

Development of technology for the diagnosis and prevention of shrimp viral disease

Southeast Asia and Oceania are areas of great significance in world prawn culture production. The export of cultured shrimp and prawn provides these countries with substantial economic benefit. However, in recent years, the production of cultured shrimp has greatly decreased due to rapid disease outbreak. The increased severity of widespread viral infection is without a doubt the most significant threat to stable aquacultural production.

In Thailand, the Philippines and Australia, several species of viruses, white-spot baculovirus (WSBV), yellow-head virus (YHV), and penaeid haemocytic rod-shaped virus (PHRV), have been recently isolated from diseased prawns under intensive aquaculture. These types of viruses have caused and continue to pose significant problems for the shrimp aquaculture industry. The countries of Southeast Asia and Oceania are continually faced with the danger of viral intrusion because of the practice of large-scale import and export of larval shrimps among countries in order to supply seed for prawn farming operations. If the seed derives from a viral-infested area, pathogens are likely to be brought in with the seed into pathogen free areas.

Therefore, in order to ensure the stable production of cultured products, especially in the case of intensive culture, it is imperative to adopt preventive countermeasures against viral disease. At present, it is necessary to develop techniques for the accurate diagnosis of viral infection and identification of the source of the infection, as well as methods for viral inactivation. However, it is often the case that pathological and etiological characteristics of significant pathogens are insufficiently understood.

The aim of this new international project is the development of preventive techniques to protect against viral intrusion; the project is scheduled to commence in FY 1997. The techniques which will be developed will enable accurate and quick diagnosis of prevalent shrimp viruses as a basis for the selection of appropriate inactivation methods using disinfectants, ultraviolet radiation and other means.

Research will be executed according to a four-phase plan. First, field work will be conducted to examine the circumstances of disease occurrence, based on the collection of accurate etiological data. In the second phase, laboratory work will be carried out to purify and identify viral particles. In the third phase of this project, steps will be taken to develop virological, serological and genetic diagnoses for newly-classified diseases. In the final phase, trials will be conducted to establish effective disinfectant and control methods for major viral diseases.

The collaborating partner in this project will be the National Institute of Coastal Aquaculture (NICA), Songkhla, Thailand, which is an institute belonging to Thailand's Ministry of Agriculture and Cooperatives. Songkhla is a locality greatly affected by prawn disease outbreaks. The institute itself boasts a large fisheries disease section with an active fish pathology staff and laboratories which are sufficiently well-equipped to undertake the studies forming the backbone of this project. Furthermore, the location of NICA will enable the convenient collection of samples and research material because of its proximity to major shrimp culture farms. On the Japan side, the National Research Institute of Aquaculture of the Fisheries Agency will lend support to this project through the dispatch of various specialists.

As mentioned above, Southeast Asian countries are now faced with difficult problems relating to the

control of shrimp viral disease. This project will contribute to developing a rational means of prevention and control through basic and applied cooperative research.

[Continue to highlights](#)

START OF RESEARCH COLLABORATION WITH KAZAKHSTAN

Central Asia is one of the new research areas which has been targeted for collaboration following the reorganization of TARC into JIRCAS. Central Asia, which stretches from the Tianshan and Pamir mountains in the east to the lower reaches of the Volga River and the Caspian Sea in the west, covers more than four million kilometers over a vast steppe and desert with a wide range of temperatures. The area consists of five independent republics formed after the division of the Soviet Union in 1991: Kazakhstan, Uzbekistan, Kirghizstan, Tajikstan, and Turkmenistan.

Traditional agriculture originally consisted of pastoralism and steppe and oasis agriculture in piedmont and desert areas. Currently, the following activities characterize agriculture in Central Asia: (1) settled cattle raising on grasslands (2) rainfed upland farming on the steppes of northern Kazakhstan (3) large-scale irrigation and oasis agriculture and (4) fish culture in river and lake basins.

The main difficulties confronting agriculture in this country include the deterioration of the steppes and arable land, environmental problems in the Aral Sea basin, and the erosion of genetic resources. To combat these problems, research priorities are as follows: 1) to develop methods of sustainable crop production (primarily wheat) which preserve soil fertility in rainfed uplands 2) to alleviate environmental problems in the Aral Basin including soil salinization caused by agricultural activities such as cotton cultivation based on large scale irrigation, and water pollution arising from the overuse of agricultural chemicals and fertilizers and to 3) develop methods to conserve agricultural resources, including fruits, vegetables, cereals and forage crops as well as animals and fish in inland seas.

MOU signing between JIRCAS and KIA

In 1996, JIRCAS began collaboration with the Kazakh Institute of Agriculture (KIA) for a 5-year research project entitled, "Development of sustainable systems of grassland management and animal production in Central Asia." To initiate this joint project and as the last official mission of his tenure as Director General, in July of 1996 Dr. Keiji Kainuma, Director General of JIRCAS, visited Kazakhstan to sign a Memorandum of Understanding (MOU) between KIA and JIRCAS. Under this MOU, the first JIRCAS staff researcher, a pasture agronomist, joined the collaborative project at KIA, the first project implemented by JIRCAS in Central Asia.

AFRICA SPOTLIGHT

International collaborative projects at JIRCAS encompass all the fields of agriculture, forestry and fisheries and are being carried out with counterpart institutions including international research institutions, national research centers and universities. As part of this year's feature on research activities in African regions, the following pages provide an introduction to collaborative projects with three international research centers in Africa: ICIPE (International Center of Insect Physiology and Ecology), ILRI (International Livestock Research Institute), and WARDA (West Africa Rice Development Association).

Background

Until recently, JIRCAS had centered its efforts on Asia due to geographical and historical reasons. Asian regions attracted JIRCAS efforts because of their overly populated land areas with low farm investment and low level technologies. The share of Asia in the total JIRCAS collaboration still remains about 80 percent in terms of both researchers dispatched and project budget allocations. JIRCAS scientists have had little difficulty working with Asian agriculture because of similarity of Japanese agriculture with monsoon paddy farming in other Asian regions.

From its founding, JIRCAS has been little involved in the issues surrounding agricultural development in Africa. Africa may have simply been too far away to attract the interest of researchers. Extensive semi-dry farming of Sub-Sahara areas is still alien to many Japanese scientists, thus JIRCAS collaboration in Africa has been sporadic and confined to a few very specific research areas such as parasite-induced disease, desert locusts and drought resistant field crops.

Recently, however, food and environmental problems in Africa have come to look far more serious than we had once thought. With its annual population growth of 3 %, very poor infrastructure and political instabilities, Sub-Saharan Africa is likely to suffer from chronic food shortages and malnutrition. Environmental degradation including desertification and urbanization could aggravate the situation, hitting hardest the poor segments of their societies. It may be high time that JIRCAS place more attention on African agriculture issues.

Given its limited resources and experiences, JIRCAS set up a workshop in October 1996 to review the major issues at stake, learn lessons from the past projects and set priorities for future collaboration. The workshop held several meetings and issued an interim report as outlined later. Along with the workshop recommendations, JIRCAS plans to initiate collaborative research with WARDA while continuing valuable collaborative projects on specific subjects with broad applications.

[\(Photo : I. Watanabe\)](#)

(1) Collaborative Research Project with ICIPE on African Locusts

The International Center of Insect Physiology and Ecology (ICIPE), which operates under an international charter, was established in 1970 in Nairobi, Kenya. Its mandate is to conduct research and development in the area of arthropod science with the objective of improving food security, alleviating

poverty, improving human health, contributing to conservation of biodiversity and helping build the capacity of institutions and people in the tropical world, especially in Africa. Currently ICIPE has three major research programs -- disease vector management, plant pest management and arthropod conservation and utilization -- supported by five departmental units: behavioral biology and chemical ecology, applied ecology, pathology and microbiology, molecular biology and biochemistry and social science.

[On the way home from shopping in Niger. \(30 KB\)](#)

[\(Photo : T.Terao\)](#)

ICIPE's work benefits developing countries in three major ways. First, through research and development, the technologies and improved practices that ICIPE develops contribute to improved human health and increased productivity in the agricultural and livestock sectors. In this respect, ICIPE's work with national agricultural research and extension systems in Kenya, Ethiopia, Zambia, Rwanda and Somalia has led to marked improvements in crops and/or livestock productivity in farmers' fields in these countries. Secondly, ICIPE makes a strong contribution to the development of human and institutional capacity in many developing countries, especially those in Africa. The capacity building programs are aimed at equipping scientists as well as front-line practitioners, including farmers, with the skills necessary to deal with pest and vector-related programs through the African Regional Postgraduate Program in Insect Science (ARPPIS), ICIPE collaborates with thirty African universities to train young scientists at the masters and doctoral levels. In addition, through the Practitioner Group Training courses, about 700 trainees from more than 50 countries have been trained since 1977. Finally, particularly in the last four years, ICIPE has helped farmers, especially women farmers, set up sericulture and apiculture based micro-enterprise projects. The objective here is to promote biodiversity conservation through profitable and sustainable utilization of silkmoths and honey bees

Migrant pests such as locusts and grasshoppers invade vast areas of Africa in explosive outbreaks, sometimes causing total devastation of crops and denuding the environment. Among these pests, the desert locust, *Schistocerca gregaria*, presents a special challenge in integrated pest management (IPM). Basic research on the desert locust's biology, behavioral and chemical ecology has provided new insights into crowding (gregarization) and suggested possible methods for controlling the swarming and migratory behavior of this important pest. Chemical ecology studies of the desert locusts in ICIPE provided several new pieces in the puzzle of locust behavior. Now scientists know that the pheromone system of the gregarious desert locust is a complex mixture of volatiles emitted by different developmental stages of the insects and their waste products. Phenylacetonitrile is the major component of the aggregation pheromone which keeps adult locusts in the gregarized phase. An interesting fact is that the adult aggregation pheromone plays a dual role as an aggregant for mature adults and as an accelerant of sexual maturation of immature adults. On the other hand, the nymphal aggregation pheromone retards maturation of the immature adult locusts.

A collaborative research project between ICIPE and JIRCAS entitled, "Locust Management in East and Northeast Africa: Development of Biological IPM", has been in progress since 1995 and has focused on the role of neuroendocrine factors in the sexual maturation of the desert locust. A juvenile hormone mimic prevented adult emergence and prolonged the nymphal stage, at the same time reducing feeding activity. It stimulated, however, precocious mating behavior in the fifth instar nymphs. These results will

be expected to contribute not only to the promotion of basic research on locust reproductive physiology but also to the establishment of new control methods of locusts by insect growth regulators. This project will also identify new uses of edible insects such as locusts, grasshoppers, flies, termites and wild silkmths in rural communities in East African countries. Research in the Maragoli area in Western Kenya has shown that villagers easily distinguish species and the emergence patterns of the termites. Cooked termites are sold not only in the local market but also in some open markets in Nairobi because they can be stored up to 4 days without spoilage. From preliminary surveys, termites play an important role in the daily food consumption in this area during the rainy season and during times of maize shortages. They may be especially valuable for children and pregnant women in need of high calories and enhanced nutrition.

[Continue to Africa Spotlight - \(2\) Collaborative Research at ILRI: Past and Present](#)

(2) Collaborative Research at ILRI: Past and Present

Merging of ILCA and ILRAD

The International Livestock Research Institute (ILRI), sponsored by the Washington-based Consultative Group on International Agricultural Research (CGIAR), started its operation in January 1995. The Institute incorporates the resources, facilities and major research and outreach programs of two former CGIAR centers - the International Laboratory for Research on Animal Diseases (ILRAD, founded in 1973 in Nairobi, Kenya) and the International Livestock Center of Africa (ILCA, founded in 1974 in Addis Ababa, Ethiopia). The work programs of ILRAD and ILCA have been consolidated, streamlined and reoriented. They now support an expanded, global mandate to conduct research on biological, animal and social sciences to improve livestock productivity in sustainable agricultural systems of developing countries. The new Institute, whose headquarters are in Nairobi, will be directly responsible for about two-thirds of all CGIAR livestock and livestock-related research in developing regions. ILRI will also lead the development of a major CGIAR initiative - the Systemwide Livestock Research Programme (SLP) - and participate in other related inter-center initiatives supported by the CGIAR.

TARC/JIRCAS and collaborative research with ILRI

Cooperative research between TARC and the former ILCA was initiated in 1980 to examine the genetic and physiological characteristics of trypano-tolerant cattle. This project has since ended, but it aimed to increase genetic potential in indigenous cattle stocks and to identify strains particularly tolerant to environmental stresses and disease. JIRCAS's current project, entitled "Biochemical characterization of membranes of lymphocytes infected with *Theileria parva* schizonts" was initiated with ILRAD in 1994 and is now being conducted in cooperation with ILRI.

At ILRI's Nairobi campus, researchers are developing a new vaccine against East Coast Fever (ECF), a deadly disease of cattle caused by a single-celled organism, *Theileria parva*. This parasite, transmitted by ticks, costs farmers in Africa more than US\$ 170 million a year in direct losses. The potential of developing a vaccine using a protein referred to as p67, which is found on the surface of the sporozoite form of *T. parva*, has been intensely investigated. JIRCAS and ILRI researchers have found that p67 is a glycosylated protein and have inserted the p67 gene into *Salmonella* bacteria and vaccinia viruses along with a cytokine gene to enhance its effects. Inoculation of these harmless recombinant organisms into cattle has demonstrated that some cattle are protected against severe diseases after lethal challenge.

However, prior to the current project, collaborative background research between ILRAD and TARC had been carried out since 1980. This collaboration focused on the characterization of *Theileria* parasites to improve epidemiological knowledge about the disease, to improve methods of diagnosis, and to develop a "live" vaccine against ECF that is now in use. During this period, TARC/JIRCAS dispatched eight long-term and seven short-term visiting scientists for this program.

[African cattle in Ethiopia.\(Photo:K.Togashi\) \(33KB\)](#)

The objective of the current cooperative study is to characterize the inflammatory reaction of the skin of cattle to the bite of the tick, which feeds on cattle blood and infects the animal with *T. parva* parasites. Since early interactions between the parasite and the bovine immune system have considerable bearing on the success of a vaccine based on "neutralizing" sporozoite parasite forms, a clear understanding of the environment into which sporozoites are delivered is important for the development of optimal vaccination strategies. JIRCAS and ILRI researchers have recently developed a means based on

immuno-histochemical methods of tracing the expression of *T. parva* antigens in tick salivary gland and have nearly completed an examination of this process. In addition, technology for the detection of parasite and bovine cytokine messenger RNA in the skin using non-radioactive *in situ* hybridization is being developed. These endeavors should allow researchers to further identify the mechanisms of *T. parva* infection. The above collaborative research is expected to deepen basic knowledge of the immunology of ECF and accelerate ILRI's development of a novel genetically engineered vaccine against ECF.

[Continue to Africa Spotlight - \(3\)Workshop on Africa agriculture and plans to initiate cooperation with WARDA](#)

3) Workshop on African Agriculture and its interim report

Because of their limited knowledge of African agricultural issues, JIRCAS and the Secretariat to the Agriculture, Forestry and Fisheries Research Council set up a workshop on African agriculture in October 1996. Its purpose was to review major issues in African agriculture, to learn lessons from the failures and successes of past research attempts, to establish research priorities for JIRCAS, and to examine possible collaborative projects. The workshop invited researchers, policy makers and aid agencies to participate in its discussions.

Since its inception the workshop has had four meetings. JIRCAS scientists as well as guest speakers made presentations on the basis of their own experiences and/or research results. The main themes discussed in each meeting are shown in the Table below.

1st meeting (31 October 1996)

- agricultural preconditions and research activities in Africa
- food supply-demand in Africa and its main determinants

2nd meeting (2 December 1996)

- special characteristics of agricultural technologies required for development assistance
- rural development efforts at preventing desertification in Mali

3rd meeting (17 January 1997)

- environmental and resource problems in Africa with particular reference to the State of the World report
- a proposal for developing African-type integrated paddy fields in small catchment areas
- major issues and solutions for African agriculture; experiences of Sasagawa Africa Association

4th meeting (4 April 1997)

- Expectations for contributions from JIRCAS and African researchers towards African development
- proposals for rice farming development in West Africa

After these meetings, the workshop issued an interim report intended to formulate a special research project for Africa. The report recommended that JIRCAS intensify its collaborative efforts in Africa because: (1) Aggravated by high population growth, poor economic performance, desertification, and urbanization, the food, environment and poverty situations in Africa are far more serious than any other region; (2) Africa desperately needs its own version of “green revolution” to overcome the inherent problems of low productivity in agricultural production and marketing; (3) the international community increasingly wishes Japan to play much larger roles in addressing world poverty and environmental problems.

The interim report suggested that given the current resource limitations, JIRCAS's collaborative researches in Africa should take into account the following points. First, they should focus on the development and extension of the technologies that are relevant to the local socioeconomic conditions,

technological levels and farming practices. It would be premature to embark on research requiring high technologies and expenditures. Second, although water is one of the most critical elements, priority should be given to research on small-scale irrigation and increased water efficiency in upland cropping rather than on large-scale, modern irrigated farming.

Third, the recent trends in food balance and farmers' income in Sub Saharan Africa indicate that research aimed at increasing the production and income from major food crops should be given first priority. In this regard, research on rice would be the area in which Japanese scientists could contribute most effectively. Fourth, the recent success in the hybridization of *Oryza Sativa* and *Oryza Glaberrima* at WARDA (West Africa Rice Development Association) is worth noting. Fifth, JIRCAS should continue collaborative research on individual subjects such as desert locusts or animal vaccines if they have broad application possibilities.

On the basis of these suggestions JIRCAS planned to initiate collaborative research with WARDA from 1997 on the inter-specific hybridization of *O. Sativa* and *O. Glaberrima*. The workshop will continue its discussions envisaging the further expansion of JIRCAS activities in Africa.

[Continue to Highlights](#)

ACADEMIC PRIZES AND AWARDS

JIRCAS is pleased to note that in the past few years, many of our staff, including our Director General and two of our Research Division Directors have been the recipients of academic prizes and awards from scientific societies and organs of the media. The following is a brief summary of these achievements which we are proud to include in the Highlights of the 1996 Annual Report.

Mr. Naruo Matsumoto, Researcher in the Environmental Resources Division received the 1997 Encouragement Prize for Soil Science and Plant Nutrition awarded by the Japanese Society of Soil Science and Plant Nutrition for "Nitrogen flow assessment of an agricultural district." The award is given to a rising, young researcher as the Society's recognition of the individual's achievement and promise.

Dr. Yukio Toida, Senior Researcher Crop Production and Postharvest Technology Division received the honorable award from His Majesty Prince Masahito, President of the Dainippon Silk Foundation on November 14, 1996. Dr. Toida has devoted his whole career to the study of the ecology and the protection of mulberry nematodes. In Thailand, he identified the nematode species attacking the Thai mulberry and described four new species of nematodes, including *Meloidogyne suginamiensis*.

JIRCAS AND THE MINISTRY OF AGRICULTURE, FORESTRY AND FISHERIES

MAFF Research Structure

The Japan International Research Center for Agricultural Sciences (JIRCAS) is one of 29 research institutes belonging to the Ministry of Agriculture, Forestry and Fisheries (MAFF), the Government of Japan. In this age, in which we have seen remarkable progress in advanced fields of science and technology including biotechnology, MAFF's research institutes are playing a key role in the development of new technologies to pave the way for further development of the food industry, and promotion of agriculture, forestry and fisheries activities in the 21st century. MAFF's institutes work in close collaboration with local governments, universities, and private research organizations and aim to contribute to the overall prosperity of Japan while making significant contributions to the international community.

Nineteen of the 29 institutes including JIRCAS are directly overseen by the Agriculture, Forestry and Fisheries Research Council (AFFRC), which is a special agency attached to MAFF. The main duties of the AFFRC are overall research planning and coordination, liaison and coordination between research and administration, administration and guidance of the institutes, and research assistance to prefectural organizations and the private sector. The AFFRC is headed by a chairman, and its advisory members consist of independent university faculty members and previous MAFF research institute directors ([Table 1](#)). The remaining 10 institutes, which include one institute devoted to forestry and nine fisheries research institutes, are also attached to the AFFRC. However, they are overseen by the Forestry Agency and the Fisheries Agency, M administrative agencies directly under MAFF. Overall MAFF research Structure is as shown in [Fig.1\(123KB\)](#).

JIRCAS is unique among the 29 research institutes in that it serves as an international research center but is at the same time part of the overall MAFF infrastructure. Thus, it is involved in active exchange and collaboration with the other 28 institutes. JIRCAS is located in the Tsukuba Science City which is about 50 km northeast of Tokyo [Fig.2\(74KB\)](#). Many other MAFF institutes are also located in Tsukuba, and the AFFRC secretariat maintains a Tsukuba office, forming the Tsukuba Institutional Complex. Tsukuba itself is home to numerous other research institutes and experimental facilities belonging to other ministries and agencies of the Japanese Government as well as to the private sector.

Research structure at JIRCAS

JIRCAS has a current staff of 164 including research scientists and administrators. Forty-three staff are located out of Tsukuba at JIRCAS's Okinawa Subtropical Station. JIRCAS is headed by a Director General; the Research Planning and Coordination Division oversees the seven research divisions which are comprised of the Research Information Division, Biological Resources Division, Environmental Resources Division, Crop Production and Postharvest Technology Division, Animal Production and Grassland Division, Forestry Division, and the Fisheries Division as well as the Okinawa Subtropical Station. The Administration Division is responsible for general administrative affairs. Research structure at JIRCAS is delineated in [Fig.3.\(76KB\)](#)

Research Planning and Coordination Division

The Research Planning and Coordination Division in itself does not act as a research division, but rather serves to oversee and support the activities of the Research Divisions and Subtropical Station. The Division consists of four sections which are the Research Planning Section, the Research Coordination Section, the International Relations Section, and the Publication and Documentation Section. In addition, a Research Information Officer is assigned to the Division.

In order to promote the implementation of research programs both overseas and in Japan, the first 3 sections are responsible for the overall planning of JIRCAS research projects, dispatching of researchers on long- or short-term basis, implementation of programs for the invitation of researchers and administrators, and liaison and coordination with international and domestic institutions and agencies. The Publication and Documentation Section is responsible for the collection, classification, and supply of bibliographic materials from both overseas and domestic sources, as well as the release of public relation materials. The Research Information Officer handles the coordination of collaborative activities with the Japan International Cooperation Agency (JICA) and related research institutions and deals with problems pertaining to the exchange of technical information. Additionally, the Division coordinates the organization of various meetings and workshops including JIRCAS's International Symposia.

Administration Division

The Administration Division consists of three sections: the General Affairs Section, the Accounting Section, and the Overseas Support Section. The General Affairs Section is responsible for the management of official documents, personnel-related matters, and social affairs pertaining to JIRCAS staff. The Accounting section handles overall accounting, all budgeting, settlements and wage distribution. Lastly, the Overseas Support Section is in charge of all matters pertaining to JIRCAS's overseas operations, which includes general international affairs, overseas expenditures, and overseas shipments of equipment and materials.

Other

The Okinawa Subtropical Station has its own General Affairs Section which is independent of the Administration Division. Additionally, JIRCAS has two field management sections which oversee JIRCAS's experimental fields. The Okinawa Section is directly under the Subtropical Station management and the Tsukuba Section is attached to the Crop Management and Postharvest Technology Division.

INTERNATIONAL RESEARCH AT JIRCAS

International collaborative projects at JIRCAS encompass all of the fields of agriculture, forestry, and fisheries and are being carried out in collaboration with counterpart institutions including international research centers, national research organizations and universities. The integrative type comprehensive project was initiated with the transformation of TARC into JIRCAS; there are currently four ongoing comprehensive projects in Vietnam, Thailand, Malaysia, and Brazil. In addition, JIRCAS continues to promote the specific, focused type of project carried out at TARC. Details of some of these projects can be found in the description of activities of the JIRCAS research divisions. A summary of all ongoing collaborative projects can be found at the end of this section.

COMPREHENSIVE PROJECTS

In 1996, JIRCAS was involved in four key comprehensive projects in Vietnam, Thailand, Malaysia, and Brazil. These studies were part of the continuation of the comprehensive research system begun in 1995. Under this program, a research coordinator in the Research Information Division assumes the role of project leader, organizing and overseeing the collaboration among numerous research divisions and researchers. During the planning stages of these comprehensive projects, socio-economic studies are conducted to identify the research priorities of the counterpart countries.

[Forward to JIRCAS RESEARCH DIVISIONS](#)

VIETNAM : Farming Systems in the Mekong Delta

Since its inception in 1994, the research program "Evaluation and Improvement of Farming Systems Combining Agriculture, Animal Husbandry, and Fisheries in the Mekong Delta" has been carried out for 3 years in cooperation with Canto University and Cuu Long Delta Rice Research Institute, Vietnam. In order to improve people's nutrition, increase farmers' income and develop rural communities, increased production of rice, livestock, fisheries, and horticultural commodities is necessary. The Mekong Delta possesses good farming systems which combine these various types of husbandry in each farm to maximize income.

[Surveying irrigation methods in the Mekong Delta.\(Photo:S.Matsui\)\(23KB\)](#)

[Livestock grazing in Vietnam.\(Photo:S.Matsui\)\(23KB\)](#)

This research project aimed to clarify the structure of the systems, to identify and develop necessary technology currently lacking in the systems and to specify the conditions for applying the systems to other regions. Currently, we are concentrating our research on developing new methods to grow high yielding rice, for better management of livestock and for aquaculture nurseries for prawn. Last year, we had a workshop in Canto University to review the project and concluded that more close cooperation is necessary.

Vietnam has become the world's second largest rice exporter, shipping out approximately 3.1 million tons last year. Improved irrigation and drainage, the introduction of modern varieties of rice and integrated management of rice production, and the development of a market-oriented economic policy called "Doi Moi" brought about the increased rice production in the Mekong Delta.

The example of the Mekong Delta is encouraging because it demonstrates that increased food production can keep up with population increases. The Mekong Delta possess good resources for agriculture including vast fertile land, huge amounts of river water, adequate temperature and sunshine and a well-educated, diligent labor force. However, they suffer from periodical flooding, large areas of waste land and the threat of salt water intrusion. This cooperative research is earnestly expected to develop technologies for sustainable growth in the area.

[Continue to Sustainable agricultural systems in Northeast Thailand](#)

THAILAND: Sustainable Agricultural Systems in Northeast Thailand

Since the 1960s, large forest acreage has been cleared to make room for upland fields in Northeast Thailand, leading to a reduction in water-holding capacity and to salt accumulation due to the elevation of the groundwater table. In addition, the deforestation of sloping land has made the land highly vulnerable to soil erosion by wind and rainfall. Because of the inadequate application of fertilizer and organic material, soil fertility of the reclaimed fields, which was originally low, has further deteriorated after several years of cultivation. Moreover, precipitation is erratic and the dry season lasts for more than half a year in the area. These environmental constraints as well as the social problems facing Northeast Thailand have restricted agricultural development in the region.

To address these constraints and problems, in 1995 JIRCAS initiated a 7-year research project, "Comprehensive studies on sustainable agricultural systems in Northeast Thailand". This multidisciplinary research project includes soil, crop and livestock sciences as well as economic and social studies. The contents of the project are based on the knowledge gained in previous collaborative research activities undertaken by JIRCAS (formerly TARC) and JICA in Northeast Thailand during the past few decades. Research activities are currently being carried out at the Agricultural Development Research Center in Northeast Thailand (ADRC) and other Thai research institutes affiliated with the Department of Agriculture (DOA), Department of Land Development (LDD), Department of Livestock Development (DLD) and Asian Institute of Technology (AIT).

[Paddy field in the dry season in Khon Kaen, Thailand. \(Photo: M. Oka\) \(22KB\)](#)

The main objective of this project is to develop sustainable farming systems in Northeast Thailand by improving agricultural technologies for crop and livestock production that are readily transferable to local farmers. More specific subjects to be taken up include: 1) evaluation of environmental and biological resources in the area and development of more effective uses of those resources, 2) development of sustainable farming systems in lowland and upland fields, 3) improvement of forage crop management and livestock production with locally available feed resources, 4) development of postharvest technologies for local agricultural products, and 5) economic evaluation of mixed, multiple-cropping agricultural systems. At ADRC, two researchers are studying farming systems and groundwater salinization mechanisms; at the Khon Kaen Animal Nutrition Research Center, DLD, another scientist is studying the improvement of livestock nutrition through the use of sugarcane feeds. Additional JIRCAS researchers are scheduled to initiate studies on the evaluation and utilization of environmental and biological resources available in the region.

[Continue to MALAYSIA: Productivity and sustainable utilization of tropical and subtropical brackish water mangrove ecosystems](#)

MALAYSIA: Productivity and sustainable utilization of tropical and subtropical brackish water mangrove ecosystems

JIRCAS has initiated an integrated research project entitled "Productivity and sustainable utilization of tropical and subtropical brackish water mangrove ecosystems" in collaboration with leading Malaysian scientists that includes the following four research topics: 1) production and decomposition processes in the brackish water mangrove ecosystems, 2) nutrient flux from rivers to the coastal ecosystems, 3) energy flow and carrying capacity in the brackish water mangrove ecosystems and 4) socio-economic evaluation of the brackish water mangrove ecosystems, covering a five year period from 1995-2000.

Among the various research activities of the project, collaborative studies in fisheries are being conducted with the Fisheries Research Institute (FRI) and the University of Malaya (UM). The Forest Research Institute Malaysia (FRIM) serves as a counterpart research organ to integrate the forest-related aspects of the project. The Matang Mangrove Forest Reserve in Perak State and the Merbok Estuary in Kedah State, West Coast of Peninsular Malaysia are serving as research sites. The Matang Mangrove Forest is especially important as a location for analysis of the role of mangrove ecosystems in fish production.

One senior researcher who specializes in the ecology of finfish and squid has been dispatched to the FRI, Penang since November 1995 as a long-term residing scientist. Other researchers specializing in larval fish ecology, life history of crustacea, and soil runoff have been dispatched short-term in supporting roles of one and half years from November 1995 to March 1997.

Since 1995, a seminar has been held annually in Malaysia as a part of the comprehensive project (see the JIRCAS Working Report No.4) to produce integrated, interdisciplinary results through the close collaboration of researchers in different fields.

[Oyster culture in Merbok mangrove estuary, Malaysia.\(Photo:K.Fukusho\)\(25 KB\)](#)

[Continue to BRAZIL: Development of sustainable agropastoral systems in the subtropical area of Brazil](#)

BRAZIL: Development of Sustainable Agropastoral Systems in the Subtropical Area of Brazil

The research project entitled 'Comprehensive Studies of the Development of Sustainable Agro-pastoral Systems in the Subtropical Area of Brazil' emphasizes the development of sustainable farming systems with high productivity in environmentally degraded areas of subtropical Brazil. It focuses on land utilization in the crop-pasture rotation system.

[Wide area soybean cultivation in south central Brazil.\(Photo:H.Eguchi\)\(29 KB\)](#)

[Cattle grazing on agro-pastoral land in Campo Grande,Brazil.\(Photo:M.Kokubun\)\(13 KB\)](#)

To fulfill its research objectives, this project included the following topics: (1) to identify the use of forages for soil improvement and erosion control in addition to their value as pasture, fodder, soil cover and green manure, (2) to establish mixed, multiple-cropping patterns employing soybean as a main crop for the diversification of agricultural products in order to minimize the market risk and to profit local farmers, and (3) to improve the cattle production technologies with disease controls to promote crop-pasture rotation systems. Research studies will mainly be carried out in conjunction with EMBRAPA and JIRCAS, and necessary consultation with CIAT, for 7 years from 1996 to 2002.

In 1996, a pasture agronomist was sent to CNPGC, National Center for Research on Beef Cattle, of EMBRAPA as the first long-term scientist from JIRCAS. He engaged in studies on the introduction and management of forage legumes in mixed, multiple-cropping patterns for soil improvement. Also three short-term scientists of JIRCAS have stayed at CNPGC, CNPSo, National Center for Research on Soybean, and/or the headquarters of EMBRAPA for one to three months. They have investigated the dynamics of soil fertility and plant nutrition in crop-pasture rotation, and the development of a domestic food and agricultural policy simulation model.

[Forward to JIRCAS Research Divisions](#)

[Back to Contents](#)

JIRCAS RESEARCH DIVISIONS

The following pages are an introduction of the activities of JIRCAS's seven research divisions and the Okinawa Subtropical Station. Each summary features an overall explanation of the research thrusts of the division along with a presentation of the highlights of FY 1996.

RESEARCH INFORMATION DIVISION

The Research Information Division of JIRCAS has three main responsibilities relating to overall research operations of the Institute. The first is to collect and analyze information pertaining to the agricultural sciences and the related socioeconomic situation in developing countries. The second is to formulate and coordinate collaborative research projects with developing countries. The third is to develop and operate a computer-based information system in JIRCAS.

[Banjarmasin's Market, South Kalimantan, Indonesia.\(Photo:J.Goto\)\(25KB\)](#)

The Division's research coordinators and senior scientists undertake these tasks through two different approaches. The first is a region-oriented approach with focus on strategically important regions: China, other monsoon Asian regions, arid and semi-arid Asia, Africa, Latin America and developing countries. The second is an issue-oriented approach with emphasis on global problems concerning the environment, food security and rural development. Research coordinators conduct studies on agriculture in specific regions and investigate the need for collaborative studies. They design and coordinate both comprehensive and multi-national projects. Thus far, six projects have been formulated since JIRCAS was established.

In 1994 JIRCAS launched its first integrated-type comprehensive research project in Vietnam dealing with the improvement of combined farming systems in the Mekong Delta. This was followed by the initiation of two research projects in 1995 and one in 1996 on tropical brackish water ecosystems in Malaysia, sustainable agricultural technologies in northeast Thailand and agro-pastoral rotation systems in subtropical Brazil. In 1997, two new comprehensive projects will begin: sustainable production and processing of major food resources in China and technological development of soybean production and utilization in MERCOSUR countries.

The Research Information Division is also involved in analyzing global issues. A sophisticated world food model was developed by the Division in collaboration with MAFF headquarters, the FAO and other international agencies. It is being used to project world food supply and demand and to simulate policy, and the findings of collaborative research are often incorporated into its models. Currently, researchers are attempting to elaborate the model so that the impact of environmental changes can also be analyzed. Rural development strategies are also being studied by the Division with particular emphasis on farming systems research. The Division's social science researchers review recent rural development strategies and assist researchers in the natural sciences who are involved in integrated projects.

Another important task of the Division is to develop and operate the computer-based JIRCAS information system. In addition, the Division has constructed a database of bibliographic articles on tropical agriculture published in Japan which is available to JIRCAS researchers. The Division has developed a comprehensive information system including statistical data, documents and imagery data

base on PC windows and UNIX. JIRCAS researchers have access to this information as well as access to external sources through the Internet system.

In addition, the Division works as the secretariat for the JIRCAS international symposium held every year on a specific research issue. In 1996, a symposium entitled "The biosafety results of field tests of genetically modified plants and microorganisms" was held with 220 participants from 29 countries.

[Topic: A perspective of the rice market situation in Vietnam](#)

BIOLOGICAL RESOURCES DIVISION

Environmental stresses such as drought, high and low temperature extremes, and pest and disease outbreak can result in the serious instability of a crop yield with devastating results, bringing about the starvation and malnutrition of a large number of people in a developing region. In addition, a rapidly growing population rapidly accelerates the deterioration of natural resources, especially in marginal lands, which may lead to further degradation of food production. We are now faced with the need to increase and stabilize agricultural production through methods compatible with the preservation of the environment. To achieve this objective, it is essential to develop agricultural technologies by optimizing the use of biological resources.

In light of the above, the first objective of the Biological Resources Division is to collect, evaluate and preserve germplasm accessions of under-utilized crops and wild relatives, taking into account the rapid genetic erosion occurring on a world-wide scale. In this regard, studies on Andean root and tuber crops are being carried out at the International Potato Center's (CIP) experimental station in Quito, with the assistance of National Agricultural Research Institute (INIAP). Yacon is one of the major natural sources of fructooligosaccharides, accounting for 90% of total sugar content. It was found that yacon has at least 2 different basic chromosome numbers. The normal cultivar is octaploid. This research may open up possibilities for increased utilization of this plant through hybridization breeding and ploidy manipulation as well as identify methods to increase fructan production.

[Local markets can also provide valuable plant genetic resources. Many kinds of wild and cultivated species are sold for medicinal use in Ecuador. \(Photo: K.Ishiki\)\(23KB\)](#)

Secondly, using biotechnological methods, the molecular biology group of the Division, including several visiting scientists, is studying molecular mechanisms of tolerance for environmental stresses in higher plants. The researchers in the Division isolated a number of genes that function in drought tolerance and using stress response from *Arabidopsis* and cowpea plants analyzed the regulatory factors of their genes. This group is studying how to use these genes and regulatory factors for the production of drought-tolerant transgenic crops. This research will contribute to the development of technologies which will help resolve problems relating to the food crisis and environmental degradation in developing countries.

Thirdly, using genetic resources and applying biotechnological procedures, we are implementing collaborative breeding projects in various countries in order to develop new varieties of rice, wheat, soybean, and vegetables characterized by high yield potential and resistance to various diseases and environmental stresses. These new varieties should contribute to the increase and stabilization of agricultural production with lower input in the developing regions. In 1996, soybean viral diseases and nematode pests were investigated for the breeding of resistant varieties in collaboration with the Soybean Institute of the Jilin Academy of Agricultural Sciences, People's Republic of China.

[Topic1.Development of new rice cultivars Hexi 34 and Hexi 35 in Yunnan Province"](#)

[Topic2.New disease resistant varieties of cucumbers and strawberries in China"](#)

TOPIC 1: Development of new rice cultivars Hexi 34 and Hexi 35 in Yunnan Province of the People's Republic of China

A collaborative research project for rice breeding using a wide diversity of genetic resources has been conducted in Yunnan Province of the People's Republic of China since 1982. The new rice cultivars developed through the joint project have been widely grown in and around the Province. In 1996, the total acreage of these cultivars covered more than 170,000 hectares, accounting for nearly 20% of the total rice-growing area in Yunnan.

In 1996, two rice cultivars, Hexi 34 and Hexi 35, were developed and newly released under the project; they will be officially registered by the Yunnan provincial government. Hexi 34 was developed from the cross Yunxi 2 / Dianyu 1, and Hexi 35 from the cross Hexi 15 / Hexi 4. The pedigree of these new cultivars can be traced to some Japanese rice genetic resources: a high-yielding cultivar Todorokiwase, a cool-weather resistant cultivar Narukaze, and blast resistant germplasm lines BL 1 and BL 6 among others.

The principal reason for releasing these two cultivars is that they display a higher yield ability than that of the current japonica rice cultivars grown in Yunnan, which is the most important factor in crop production in China. Hexi 34 and Hexi 35 performed very well in uniform trials conducted at twelve sites representative of the japonica rice growing areas in the central and northern part of Yunnan. In twenty-four tests across twelve locations during a two-year period, the average yield of Hexi 34 and Hexi 35 were 8.55 and 8.80 t ha⁻¹ respectively, compared with 7.10 t ha⁻¹ of the standard cultivar Yunkeng 9.

We conducted a statistical analysis of adaptation based on the data of the uniform trials using linear regression and principal component analysis. The regression coefficients of the mean yield of each environment of Hexi 34 and Hexi 35 were smaller than those of other tested cultivars. These findings indicate that these cultivars are well adapted to various kinds of environments in Yunnan. The results of principal component analysis also revealed the high-yielding characteristics and wide-adaptability of Hexi 34 and Hexi 35.

The cooking and processing qualities of Hexi 34 and Hexi 35 are superior to those of the standard cultivar Yunkeng 9 in Yunnan. Milled kernels of Hexi 34 and Hexi 35 are nonglutinous and nonaromatic; they are translucent in contrast to those of Yunkeng 9, which show a pronounced white belly. Taste panelists rated Hexi 34 and Hexi 35 as satisfactory in sensory tests of steamed rice. Recently, the standard of living in urban areas of China has been rapidly rising, resulting in a remarkable increase in the demand for rice of superior taste. These two new cultivars should meet the demand for good quality rice.

Finally, careful attention should be given to the shift in the frequency of the blast fungus races, because Hexi 34 and Hexi 35 exhibit a race-specific resistance to rice blast disease. These cultivars could be widely grown in and around Yunnan Province, because of their high-yielding ability and high grain quality as mentioned above. However, breakdown of the blast resistance is common in many rice-growing areas, often shortly after the release of cultivars with race-specific resistance. Rice blast is the most devastating disease in japonica rice growing areas. We should develop breeding strategies for durable resistance to reduce the impact of rice blast disease by using the abundant rice genetic resources of Yunnan Province and Japan.

Table 1. Main agronomic characteristics of Hexi 34 and Hexi 35

Character	Hexi 34	Hexi 35	Yunkeng 9(Standard)
Maturity	Medium	Medium	Medium
Plant height (cm)	88	93	115
Lodging resistance	HR	HR	S
Cool-weather resistance	MR	MR	R
Blast resistance	HR	M	R
Grain appearance	Good	Good	Poor
Eating quality	Good	Good	Poor
Yielding ability (%)	112	121	100

HR, highly resistant; MR, moderately resistant; M, moderate; S, susceptible

[Photo:Rice cultivation in a basin near Kunming City, Yunnan Province. Rice plants \(right\) are of a new cultivar Hexi 35. Mountainous regions account for about 84% of the total area in the province. Cultivation of japonica-rice for obtaining high yields is usually conducted in a small number of basins at an elevation of 1,500 to 2,000m. \(32 KB\)](#)

[Forward to Environmental Resources Division](#)

ENVIRONMENTAL RESOURCES DIVISION

A recent estimate suggests that the world population could reach the 6.3 billion mark by the year 2000 and the 6.8 billion mark by 2025. To feed this ever-increasing population, existing agricultural land is likely to be subjected to a higher intensity of cultivation in populous areas, and farmland development is likely to be extended to areas only marginally suited for agriculture. Trade liberalization in recent years has led to a sharp increase in the importation of commercial crops and is encouraging increased production in exporting countries. This may result in excessive load to farmland soils as well as continuous single cropping and deforestation in many countries. Past experience has shown us that these practices accelerate farmland degradation and desertification on a global-scale. Such drastic changes in land use cause climatic transformation over extended regions and bring about unpredictable constraints to existing agricultural and forest ecosystems.

From the middle of this century, patterns of land utilization have been changing due to population expansion. These changes, along with a rapid increase in fossil fuel consumption, have had tremendous impact on the atmosphere through intensified emissions of carbon, nitrogen, and sulfur gases. The annual consumption of fossil fuel now exceeds 5 billion tons of carbon. If the present level of consumption continues, CO₂ concentration will increase by 0.5% per year and double by the middle of the next century. The 1995 IPCC report suggests that a two-fold increase in CO₂ concentrations could cause an increase in mean global surface temperature by about 2 by the year 2100.

Furthermore, research has shown that the atmospheric concentrations of other greenhouse gases such as methane, nitrous oxide and chlorofluorocarbons have also increased greatly within the past two decades. If the effects of these trace gases are taken into account, global warming is estimated to take place more rapidly than in the case where the effects of CO₂ are considered alone. These trace gases move from the troposphere to the stratosphere and participate in the destruction of the stratospheric ozone. The depletion of the ozone layer allows more ultraviolet rays to reach the Earth's surface where millions of species of organisms live without any means of protection from ultraviolet radiation.

To address these problems, this Division is organizing research to identify and develop technologies for the improvement of agricultural activities and the rehabilitation of degraded lands. The target technology must be compatible with the conservation of the environment and ecosystems such as arid lands, wetlands and sloped lands which have long been considered of little use for agriculture. Other projects aim at the development of technology for sustainable agriculture through analyzing mechanisms of nutrient cycling within arable land ecosystems. To conserve the global environment in harmony with agricultural activities, research on sustainable agriculture should be given foremost emphasis.

[Figure1:Protection against soil erosion by using rice terracing to preserve sustainable agriculture in Japan \(Noto Peninsula, Ishikawa Prefecture\)\(23KB\)](#)
(Photo:K.Minami)

["Mechanism of uplifting saline-groundwater in the Phra Yune area, Northeast Thailand"](#)

["The influence of physical properties and rock dissolution"](#)

TOPIC 1: Mechanism of uplifting saline-groundwater in the Phra Yune area, Northeast Thailand

In Northeast Thailand, salt accumulation in soil is thought to derive principally from saline groundwater. Several theories have been proposed to explain this salinization. All of them agree that salinization is related mainly to the presence of a few rock salt strata of the Mahasarakham formation which underlies much of Northeast Thailand. One of the problems to be solved is how salt from the rock salt strata reaches the ground surface. An understanding of this mechanism of uplifting saline-groundwater should contribute to the development of technologies for the utilization of groundwater and the evaluation of water resources in Northeast Thailand.

The Phra Yuen region, which is a salt-affected area, was selected for studying the relationship between geological structure and groundwater flow. Piezometers were installed at every intersecting point of a regular 1 km grid. Intersecting points were set up at 16 stations (A1^A16). At each intersecting point, 3 investigation wells of 5, 10 and 15 meters in depth were set up for monitoring groundwater level (potential head), electric conductivity (EC), and temperature of the groundwater.

Lineament analysis and examination of the upper structure of the Mahasarakham Formation and distribution level of the gravel layer in the Quaternary laterite deposits revealed the presence of G1, F1, F2 and F3 faults. Saline groundwater at stations A1, A5, A9 and A13 was supplied from the G1 faults and that at station of A 11 from the F1 fault. However, not all of the faults were observed to be supply conduits for saline groundwater.

EC values increased rapidly when the groundwater level decreased below 187.4 meters above sea level (Dead Line) at A5. The equi-potential line of 187 meters in the vicinity of A5 was directed to the east side in April, 1995 so that the flux of the groundwater moved up. On the other hand, the equi-potential line of 189 meters was directed to the west in September, 1995. The flux of the groundwater there moved down. When the groundwater level decreases below the Dead Line, the flux of upward groundwater may reach the maximum volume. Saline groundwater may rise from the underground through the fault crack.

[Topic2:The influence of physical properties and rock dissolution](#)

TOPIC 2: The influence of physical properties and rock dissolution

Mechanisms of rock weathering are important in the study of soil genesis. This study dealt with the changes in chemical properties of rocks during experimental weathering. To define characteristics of the rock dissolution by examining the effects of physical properties on their dissolution characteristics, closed-system experiments were carried out using thirteen rock species, i.e., four types of sedimentary rock (limestone, chert, sandstone and tuff), five types of plutonic rock (dunite, gabbro, diorite, granodiorite and granite) and four types of volcanic rock (basalt, dacite, andesite and rhyolite). For each rock type, a clay-size powdered sample (1.000g in weight) and a small block sample ($3.54 \times 3.54 \times 20 \text{mm}^3$) were treated with 50.0ml of distilled water. Electric conductivity of the aqueous solution, as an index of the concentration of dissolved materials, was measured at intervals of several hours over a total of 417 hours.

Results of the experiments using powdered samples indicated that the concentration of dissolved materials is larger in samples having a large amount of ingredient of alkalis, e.g., the mafic rocks dissolved in more abundance than did felsic rocks. On the other hand, this tendency was not recognized in results obtained from the experiments using small block samples. Experiments using small block samples also showed that the rocks with higher porosity have higher rates of dissolution, particularly in the initial phases of the water-rock interaction. In the case of rocks with higher porosity (such as tuff, dacite, andesite and rhyolite), the ratio of the concentration of dissolved materials of the powdered sample to that of the small block sample at the same elapsed time showed peaks with relatively larger values in the initial stages; these gradually lowered in the latter stages. In the case of other rocks with lower porosity, with the exception of limestone, ratios did not peak and showed small values until the final stages. This evidence shows that the concentration of dissolved materials is controlled by the porosity of the rocks.

[Fig.1 Changes in the ratio of electric conductivity of powdered samples to that of small block samples.\(39KB\)](#)

[Forward to Crop Production and Postharvest Technology Division](#)

CROP PRODUCTION AND POST HARVEST TECHNOLOGY DIVISION

Due to the constant increase of the human population, it is urgent to improve crop production technology in order to deal with increasingly severe food shortages. As research demonstrates, food supply problems will become more serious as patterns of food consumption improve in developing countries; with higher incomes and societal development, people will require more meat, fruits, vegetables, and oil.

In the developing regions of today, self-reliance in food, rather than self-sufficiency, is an important objective. There are no definitive models for achieving this goal, but rather various methods to ensure self-sufficiency in context of the natural and environmental conditions of a particular country.

The Crop Production and Postharvest Technology Division conducts studies covering production to storage, as well as the marketing and processing of crop products. Our research activities encompass a variety of disciplines including agronomy, plant protection (insect pests, disease and weed control), agricultural mechanization, irrigation, drainage, cropping systems, food storage, postharvest technology, farm management and agricultural economics.

Because the world-wide total area of arable lands is limited, we believe that sustainable production of agricultural products can be achieved only by increasing overall productivity. For this purpose, various technological problems have to be resolved, but at the same time sustainable agriculture has to be compatible with the preservation of the natural environment. It is necessary to reduce as much as possible the amount of chemical inputs in agricultural endeavors. To achieve this, more research on biological or cultural control systems should be implemented, such as studies on the ecology of insect pests and their natural enemies and the development of methodologies for the prediction of outbreaks of insects and diseases. Thus, "integrated pest management" is strongly called for. Additionally, it is necessary to stress postharvest studies of agricultural products: quality improvement, including safety and the extension of shelf life as well as control of the presence of insects and microorganisms in foodstuffs, is one of the main objectives of this Division. Finally, sustainable production of agricultural commodities can only be supported by the development of sustainable markets. Technology for enhancing the value of agricultural products is being developed with the aim of increasing the incentive of the farmer to promote sustainable production. Economic studies are requisite in furthering the regional development of respective countries.

[Topic1:Distribution of 2,4D hebicide resistant biotype of *Fimbristylis miliacea* \(L.\) in the Muda area, Malaysia](#)

[Topic2:Leaf-cutting ants in Brazil and Paraguay](#)

[Topic3:The root-knot nematode *Meloidogyne* in Thailand](#)

[Tpoic4:Group farming in the Muda area, Malaysia](#)

TOPIC 1: Distribution of a 2,4-D herbicide resistant biotype of *Fimbristylis miliacea* (L.) Vahl. in the Muda area, Malaysia, and its response to several herbicides

Fimbristylis miliacea (L.) Vahl. is one of the most common annual sedges in direct seeded rice fields in the Muda plain, the largest double cropping area in Peninsular Malaysia. In 1989, the 2,4-D resistant biotype was observed in a farmer's field in Kampung Gulau where 2,4-D had been seasonally applied since 1975.

Response of the resistant plants to several herbicides was compared to susceptible plants. Resistant plants recovered after the application of 2,4-D dimethylamine at rates up to 2.78 g a.i./m², equivalent to 32 times of the recommended rate, whereas the growth of susceptible plants was strongly affected at a rate of 0.087 g a.i./m², the recommended rate, and completely controlled at 0.17 g a.i./m² (two times of the recommended rate) or higher. LD₅₀ of 2,4-D dimethylamine to resistant plants was 1.89 g a.i./m², which was 29 times higher than the LD₅₀ to susceptible plants. Resistant plants were also resistant to other phenoxy herbicides, e.g. 2,4-D iso-butylester, 2,4-D ethylester, 2,4-D sodium salt and MCPA, but no difference was observed in reaction toward propanil, paraquat and glufosinate ammonium between biotypes. Resistant plants were not distinguishable from susceptible plants based on morphological characters such as panicle size, spikelet length and nut form.

Distribution of resistant plants, detected by treatment of 2,4-D dimethylamine at a rate of 0.17 g a.i./m², was investigated in 1993 using 100 rice fields which were heavily infested with *F. miliacea* in the Muda plain. Resistant plants were detected in five rice fields, but not in the other 95 fields. It was suggested that 2,4-D resistant *F. miliacea* had not dominated in the area. The proportion of resistant plants decreased from 85.6% in 1992 to 1.7% in 1994 in a monitored field where 2,4-D had not been applied since 1992. Other type of herbicides, replacing phenoxy compounds, could be used to control the 2,4-D resistant biotype based on the results of this study.

■ : Resistant biotype was detected
○ : Resistant biotype was not detected

[Topic2: Leaf-cutting ants in Brazil and Paraguay](#)

TOPIC 2: Possible occurrence of agricultural damage due to invasion of leaf-cutting ants into southern Brazil and Paraguay

The leaf-cutting ant, consisting of two genera *Acromyrmex* and *Atta*, is recognized as one of the most serious agricultural pests in Latin America. While not all species are important pests, it is not well known to what extent and in which localities respective species are serious pests. Farmers who live in ant-free regions of southern Brazil believe that there will be no problem with the ant in the future. To confirm whether or not there are really no leaf-cutting ants in their regions, we performed studies on the biogeographical distributions and densities of the ants in southern Brazil and Paraguay. The data obtained suggested that there was no place immune to invasion by leaf-cutting ants.

We drove by automobile on highways in southern Brazil and Paraguay from 1993 to 1996. We stopped about every 100 km ([Fig. 1](#)), where we counted nests of leaf-cutting ants in an agricultural grassy crop field by one of the following three methods: observation of areas marked by a 500 meter line, observation by naked-eye or with binoculars, and random walking. We surveyed from shorter distances at places reported to be located near margins of distribution limits of leaf-cutting ants. Using the number of nests counted, density of ant nests per hectare could be calculated for every survey site. Heterogeneity of method was inevitable due to the physical conditions of the field (area, location, and geography), time allowed for sampling, and/or biological conditions such as growth of vegetation and presence of domestic animals. This may have prevented us from making precise comparisons of density between sites. However, we consider this data to provide sufficient information concerning which species are distributed in certain locations and at what density. Furthermore, distribution and density of ants are varied between locations, even between neighboring ones. To reduce variation in density among survey sites, we divided the surveyed areas into nine regions and pooled data for each region: south-western region of the São Paulo state (SPSW), north-eastern Paraná (PANE), north-western Paraná (PANW), south-eastern Paraná (PASE), south-western Paraná (PASW), eastern Santa Catarina (STCE), western Santa Catarina (STCW), south-eastern Paraguay (PGSE), and south-western Paraguay (PGSW). We used the mean nest density of each species in each region for this study.

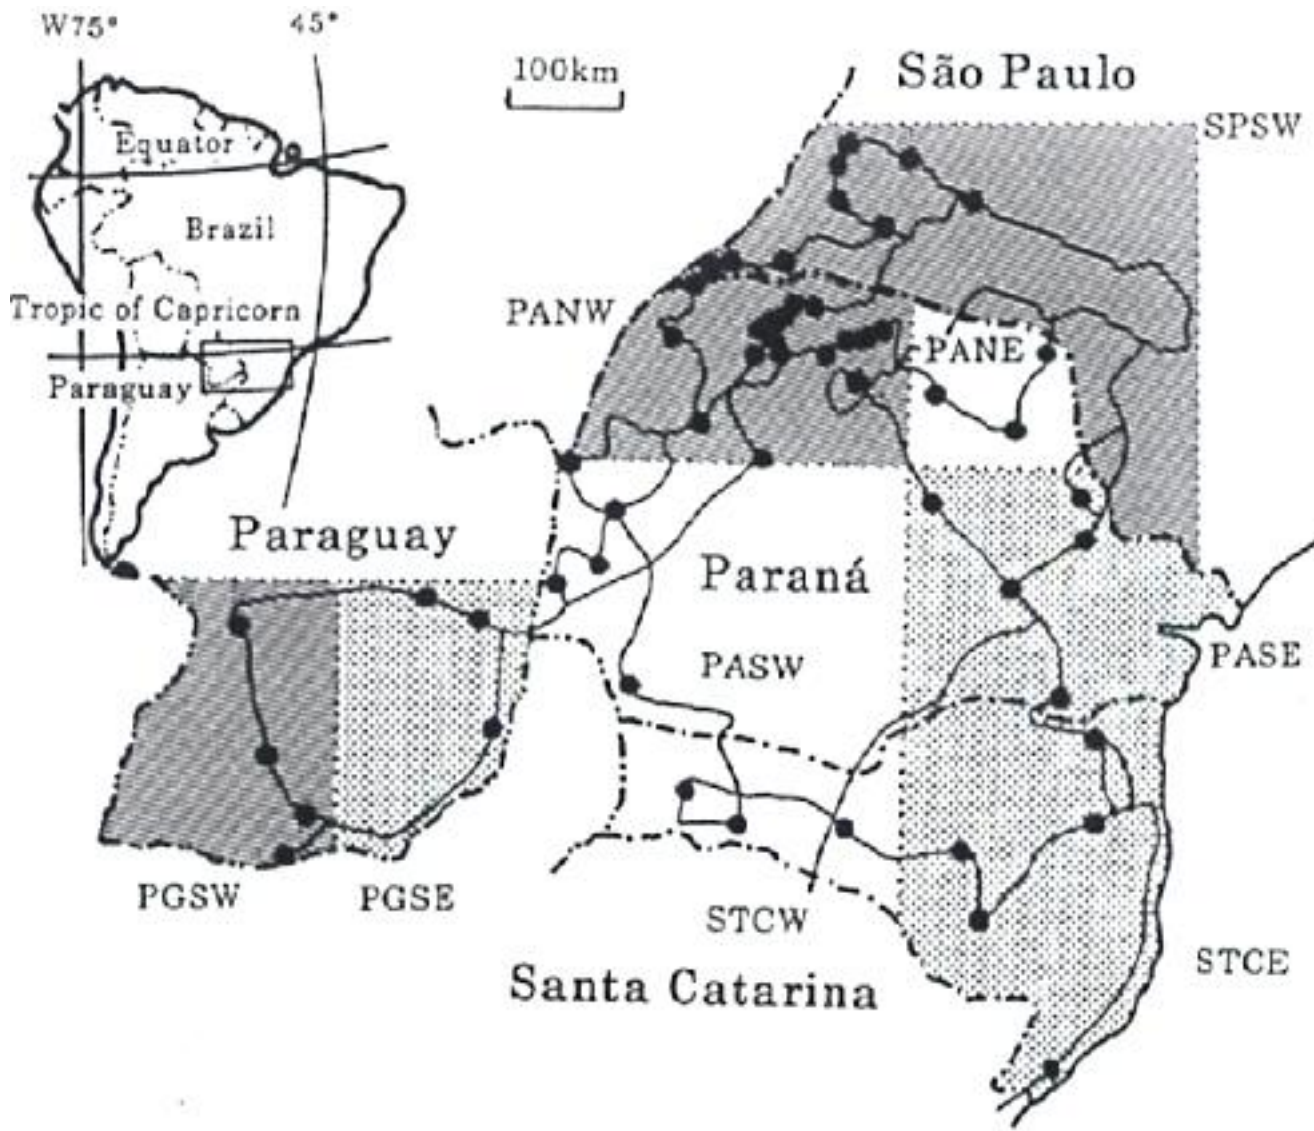

Three and four species of *Acromyrmex* and *Atta*, *Ac. balzani*, *Ac. fracticornis*, *Ac. heyeri*, *At. capiguara*, *At. laevigata*, *At. sexdens*, and *At. Vollenweideri*, were collected at a total of 54 survey sites. We calculated a mean nest density for each species in each region and estimated the degree of agricultural damage by the ants ([Fig. 1](#)). The maximal densities obtained for the two genera *Acromyrmex* and *Atta* were 667 (*Ac. balzani* in SPSW) and 48 (*At. capiguara* in PANW), respectively, while no or few nests were detected in PANE, PASW, or STCW. In other regions ants were distributed with intermediate densities between these two extreme values. We carried out cluster analysis using a centroid method with squared euclidian distances. The results revealed the existence of three groups: one group included PANE, PASW, STCW, and PGSE; the second was composed of PASE, PGSW, and STCE; and the third of SPSW and PANW. The first group was characterized as an ant-free or ant-scarce region, the second as regions where cool-climate preferring species, *Ac. fracticornis*, *Ac. heyeri*, and *At. vollenweideri*, were collectable, the third as regions where hotter-climate preferring species, *Ac. balzani*, *At. capiguara*, and *At. laevigata* were predominant. *At. sexdens* was throughout the surveyed areas, though the taxonomy of this species is still under debate.

Comparison of our data with those obtained in the past by other researchers allowed us to trace the possible routes of expansion of ant distribution and predict probable invasion of leaf-cutting ants in the

future. At least 10 years ago, distributions of *Ac. balzani*, *Ac. fracticornis*, and *At. capiguara* had not been reported or found in PANW. Although *At. vollenweideri* was known in PGSW in these years, our record of the ant in this region is new with the eastern -limit being in Paraguay. This indicates that distributions of these ants have expanded into these regions during this decade. Since the north-limit of the distribution of *At. vollenweideri* is northern Argentina, this ant may not invade into the surveyed regions of Brazil. Similarly *At. laevigata*, the south-limit of which was detected in PANE in this study, may not extend its distribution into more southern regions. On the other hand, the south-limits of both *Ac. balzani* and *At. capiguara* in PGSE and the north-limit of *Ac. fracticornis* in more northern regions in Brazil were reported within this decade. The geographical distribution patterns of these three species strongly suggest that these ants will invade into the ant-free or ant-scarce regions, PANE, PASW, SCTE, and SCTW in which farmers believe that their farmland is protected from invasion by the leaf-cutting ant. Because our results contradict the above, it is considered necessary to widely monitor changes in distributions of leaf-cutting ants in the immediate future.

[Fig.1:Upper left: a map of South America. The rectangle indicates the surveyed area. Lower right: a map of the surveyed area. Country and state boundaries are shown by two- and one-dotted chain lines, respectively. Solid lines indicate highways followed by automobile and surveyed sites are indicated by closed circles. Nine regions could be conveniently established and are distinguished by dotted lines. Regions which commonly have serious problem with ants are hatched, those where problems occur only locally are shadowed, and those where problems are negligible are not marked. All abbreviations for regions are explained in the text. \(45 KB\)](#)

[Topic3:The root-knot nematode Meloidogyne in Thailand](#)

TOPIC 3: Identification of root-knot nematodes (*Meloidogyne*) including a new species based on enzyme phenotypes in Thailand

In Thailand eight species of *Meloidogyne* attacking crops have been recorded. They are *Meloidogyne arenaria*, *M. exigua*, *M. graminicola*, *M. hapla*, *M. incognita*, *M. javanica*, *M. microcephala* and *M. nassi*. Of these, *Meloidogyne incognita*, *M. javanica* and *M. arenaria* occur most commonly and cause serious damage to crops. *M. exigua*, *M. microcephala* and *M. nassi* have not been reported since they were first classified. They appear to be rare and not very significant agricultural pests. Reduction of crop yield caused by these nematodes is estimated to be as much as 5-10% by Thai nematologists. Therefore, development of control measures not only for insect pests but also for the pest nematode is required to increase crop yield in Thailand. Application of nematicides such as carbofuran and chloropicrin to the soil is remarkably effective in decreasing nematode density in the fields. However, concern exists over the disturbance of the ecosystem, causation of environmental pollution or disruption and harmful effects resulting to human beings and other living organisms that may stem from the continuous use of these chemicals.

It was shown in this research that cultural control including crop rotation and application of organic matter decreased the density of *M. javanica* attacking mungbean and increased crop yield. In cultural control of nematodes, accurate identification of species or race is indispensable because the propensity of the nematodes to attack crops varies for each species. Therefore, for the first time in Thailand, we identified *Meloidogyne* species based on enzyme phenotypes through electrophoresis; this is a more reliable method for identifying *Meloidogyne* species than is the observation of morphological characteristics. Esterase (Est) and malate dehydrogenase (Mdh) harbored by female root-knot nematodes were collected and their phenotypes were analyzed through electrophoresis by the Phast System.

In this experiment, one new species and four known species were identified, but two species thought to be new or unrecorded species in Thailand were not determined. *Meloidogyne arenaria* was identified by two distinct bands of Est(A2) and one or three bands of Mdh (N1,N3). Many of the species which had been regarded as *M. javanica* based on morphological characteristics of female perineal patterns in Thailand were identified as *M. arenaria* with two bands of Est. *M. graminicola* was easily determined by one clear broad band of Est(VS1).) *M. incognita* could be distinguished from other species by one band each of Est (I1) and Mdh (N1), and *M. javanica* was identified by three bands of Est (J3) and one band of Mdh(N1). The nematode population collected from weeds in Bangkok showed three bands of Est and two bands of Mdh. Other populations from tomato in Chiang Mai did not show any band pattern. Although these two populations could not be identified, their enzyme phenotypes suggested that they were likely to be new or unrecorded species in Thailand.

The population collected from mulberry in Udon Thani was identified as a new species on the basis of the specific phenotype of one band of Est and two bands of Mdh and the morphological character of female perineal patterns. This is the second recorded new species of the genus *Meloidogyne* in Thailand since the discovery of *M. microcephala* Cliff and Hirschmann, 1984. This new species occurred in large numbers in mulberry fields at the Udon Thani Sericulture Research Center and on some ornamental plants around this area as well as in mulberry fields at Chiang Mai. As sericulture is one of Thailand's important industries, it is urgently necessary to develop methods to prevent mulberry damage caused by this species.

Tpoic4:Group farming in the Muda area, Malaysia

TOPIC 4: Advantages of and Problems in the Management of group farming projects in the Muda area, Malaysia

The new National Agricultural Policy (1992) of Malaysia aims to promote smallholders to entrepreneur farmers through group farming projects. Encouraging farmers to organize into group farming is the one of the urgent issues in the Malaysian Paddy Policy. Especially in the Muda area, which is the largest rice production area of this nation, the Paddy Mini Estate Project (PSP) is considered to be the core farmers group for development. There are two types of group farming, Kelompok Tani and PSP. PSP is the most advanced of the group farming types in the area and its number increased from 16 to 129 during the period 1988- 1995. On the contrary, the number of the Kelompok Tani has not changed much within this seven year period.

Though both Kelompok Tani and PSP are types of group farming project, there are four main differences between them: 1) There is an agreement between PPK (Area Farmer's Association) and PSP members in regard to the rice planting schedule and farming practices. Since PPK is in charge of the administration of government credit for the farmers, PSP members must follow the planting schedule to receive the seasonal credit and must send the yield to a specific mill to settle their debt; 2) PPK provides higher financial assistance to PSP members than to Kelompok Tani members, RM650*¹ and RM250 per relong*² per season, respectively; 3) PPK provides farm machinery and transportation for sending the yield to the mill for PSP member farmers. At the same time, PSP members can use the earnings from the sale of their harvest as capital for PSP activities; and 4)Both PSP and Kelompok Tani members can receive technical assistance from PPK. However, priority is granted to PSP members rather than to Kelompok Tani members. Overall both projects are supervised by PPK, but PSP has a higher commitment to PPK than others.

[Photo:Animal meeting between PSP members and a PPK Officer.\(20 KB\)](#)

One PSP (PSP Matang Pinang) in the Muda area was selected and the functions and characteristics of PSP were clarified. A comparative study between PSP member farmers and non-members was conducted. PSP Matang Pinang is located near the JIRCAS pilot so farmers are quite familiar and cooperative with interview surveys. The total number of respondents was 53: they consisted of 26 PSP member farmers and 27 non-members. There are no limitations on PSP membership. However, operational land size of the PSP members (3.5 relong or 1.0 ha) is slightly larger than non-members (2.4 relong or 0.7ha).The results of the comparison show the PSP members' advantages in farming. Since PSP members can apply for loans easily, they have easy access to fertilizer and chemicals. However, there is no significant difference in the cost of production between PSP members and non-members. PSP members' yield is higher than non-members. Overall PSP members have more resources such as land and farm machinery; as well, their income is higher than non-members . This clearly indicates that PSP activities bring benefit to the members.

The survey also showed, however, that PSP members faced management problems and have some complaints about the flow of information from PPK to them. After analyzing farmers' responses, we found that some of the complaints were the result of misunderstanding among members. The result clearly shows that two-way communication between PPK officers and members is very important to avoid misunderstanding and to create a clear vision of PSP in the future. Listening to the members' opinions is a suggested for resolving future problems.

In addition to the complaints mentioned by the members, we also realized the weakness of PSP. The observations in this survey show that members are highly dependent on the PSP committee members and/or PPK officer. If possible, it is better for all the members to join the meeting and participate in the decision-making process regarding PSP management issues.

At the same time, members are recommended to keep their own farming records to understand their farming condition under the PSP. Financial management, in particular, is controlled by PPX and it is difficult for the members to prepare farming plans and make decisions by themselves. Some of the members just followed what was written on the receipt and documents they received from PPK without examining or understanding them. Further research is needed to focus on how the credit scheme can affect the farmers' attitudes in carrying out their farm management activities.

*1: RM1=¥50, *2: 1relong = 0.298ha.

[Forward to Animal Production and Grassland Division](#)

ANIMAL PRODUCTION AND GRASSLAND DIVISION

Animals in developing countries contribute to the betterment of people's lives in various ways. Animals not only produce meat, milk and hide, which are essential in daily life and are an important source of income, but also generate draft power for tillage and transportation, and produce wastes for use as fertilizer and as a source of fuel. Yet, production related to livestock rearing remains at low levels due to constraints such as the low genetic potential of animals, poor quality and quantity of feeds, prevalence of diseases, harsh climatic conditions, and inadequate management.

The Animal Production and Grassland Division carries out research to achieve a sustainable increase in animal production in harmony with the environment by enhancing the reproductive capacity of natural resources, managing grasslands to secure feed resources, making better use of agro-industrial by-products, controlling invasive animal diseases, and improving management practices.

Two research projects ended successfully in the fiscal year 1996. Those themes and the collaborative research organizations were as follows: (1) Investigation of the response to heat stress of the endocrinological functions in ruminant animals and their relation to milk secretion in tropical areas (Malaysian Agricultural Research and Development Institute). (2) Development of forage crop management in Northeast Thailand (Department of Livestock Development (DLD), Thailand). Currently, six research projects are being carried out abroad on long term assignments (25 years): (1) Improvement of cattle production with locally-available feed resources in Northeast Thailand (DLD),(2) Immunohistorical studies for the development of a vaccine against East Coast Fever (International Livestock Center for Africa (ILRI), Kenya), (3) Improvement of the rearing methods of small livestock (Malaysian Agricultural Research and Development Institute), (4) Improvement of animal production under farming systems combining agriculture, animal husbandry and fisheries in the Mekong Delta (Cantho University, Vietnam), (5) Grassland conservation and sustainable livestock production in Central Asia (KIA, Kazakhstan) and (6) Development of grassland utilization and management under sustainable agro-pastoral systems (CNPGC-EMBRAPA, Brazil). Commencing this year, the last project was initiated in place of the project "Eco-physiological studies on the persistence of tropical pastures in the Latin American Savanna" (CIAT, Colombia).

The following studies were carried out by researchers on short-term assignments (1-3 months): (1) Comparative study of the accumulation of body fat in native Malaysian chickens (Malaysian Agricultural Research and Development Institute); (2) Control of meat quality and fat deposition in native Malaysian chickens (Malaysian Agricultural Research and Development Institute); (3) Studies of the eradication of animal parasitemia in Vietnam (Cantho University); (4) Evaluation of the feeding value of aquatic plants in the Mekong Delta (Cantho University); (5) Improvement of the nutritional condition of livestock under the farming systems in the Mekong Delta (Cantho University); (6) Genetic characteristics of indigenous breeds of cattle in the Philippines (University of Philippines at Los Banos) and (7) Elucidation of the role of the TNF- α gene in trypanosomiasis.

In order to address varied requests for collaborative research from developing countries, which includes incorporating biotechnological applications along with upgrading the overall level of research, the Division is now promoting basic research on the Tsukuba premises as support for overseas activities. At

present a project entitled "Identification of endophytic fungi in pasture plants in tropical regions and their utilization in plants via biotechnological methods" is the focus of domestic research.

[Topic1:Sugarcane as roughage for cattle feeding in the dry season](#)

[Topic2:Estimation of regional feed resources in a barley/rangeland zone in Northeastern Syria](#)

TOPIC 1: Sugarcane as roughage for cattle feeding in the dry season

Dairy production has been well-developed in temperate and cool geographical zones. A feeding system established in these areas is primarily based on preserved feed such as hay and silage. This system requires large machinery with a large scale of operation. On the other hand, dairy activities have been newly introduced into monsoon and savanna zones in the tropics. Generally speaking, dairy production in this region is characterized by its small scale and reliance on man-power. In this system, hay or silage production is not yet practically operational. Farmers rely heavily on rice straw as roughage in the dry season and its poor nutritive value limits the further improvement of dairy production. An additional restraint is that the collection of rice straw is labor- and time-intensive work. On the other hand, sugarcane has unique characteristics. It has high bio-mass production and can remain standing until the end of dry season without withering, which allows farmers to cut it when they need it without processing or preservation. The use of sugarcane as a roughage for cattle feeding was examined in Northeast Thailand, where the number of dairy cattle are rapidly increasing.

A metabolic trial using Brahman cattle was carried out and the metabolizable energy content in sugarcane stalk was calculated to be 9.05 MJ/kg. It was estimated that sugarcane can produce metabolizable energy per hectare nearly 3 time more than that produced by ruzi grass which is the major grass produced in the region.

The feeding trial was carried out using dairy cows owned by a private dairy farm in order to examine the use of sugarcane as roughage for milking cows. Milking cows were given either only rice straw *ad libitum* or chopped sugarcane stalk plus rice straw *ad libitum* as roughage. In addition, both groups were given commercial concentrate feed, the amount of which was determined by the farmer based on body condition as well as the milk yield. In spite of the lower total DM consumption, the milk production of the cows given sugarcane stalk tended to be higher than that of those given only rice straw. Protein content in the milk of those cows was also significantly higher. It was concluded that the energy supply was increased by giving sugarcane stalk, which improved protein content in the milk, while energy supply was not sufficient when only rice straw was given to cows.

Sugarcane stalk can be divided into an easily soluble sugar fraction and a hardly degradable bagasse fraction. It appears that the latter remains in the rumen for a long period without degradation, which suppresses feed intake. Cattle can not consume enough sugarcane stalk to satisfy their energy requirements in spite of its high metabolizable energy content. Sugarcane stalk was proven to be a good quality roughage for cattle in the dry season, if cattle were provided with enough concentrate feed to satisfy not only protein but also energy requirements.

[Fig1:Chopped sugarcane stalk\(37KB\)](#)

[Fig2:Cattle are fond of chopped sugarcane stalk. However, it has to be supplemented with energy and protein sources.\(Photo:T.Kawasima\)\(35KB\)](#)

[Forward to Forestry Division](#)

FORESTRY DIVISION

With the rapid exploitation of arable land because of high food demands, the degradation and devastation of natural forest areas are rapidly progressing, particularly in developing areas. This is bringing about serious economic and environmental problems not only at the local level but also on a global scale. Therefore, the rehabilitation and sustainable management of these forests are urgent issues. Establishment of forest production systems and post harvest technologies for local communities can be viewed as essential means for the reduction of forest devastation.

The Forestry Division covers a wide range of research in developing countries from production to end-use as related to forestry and forest products under the following two research categories: (1) silvicultural and forest management technology; and (2) processing technology of forest products. These projects necessitate disciplines such as silviculture, plant ecology and eco-physiology, soil science, entomology, mycology, forest mechanization, socio-economics, and wood technology.

Forest rehabilitation and the enrichment of devastated and degraded areas are the first steps in developing sustainable management of forest areas. To do so, silviculture, site evaluation and pest control technologies have to be developed in consideration of the conditions of the natural environment.

At present, forest products are a principal trading commodity in 33 developing countries. Sustainable production of these products should be achieved in natural forests and plantations. For such purposes, studies on species behavior, natural regeneration, enrichment planting, and harvesting systems are essential.

Another major reason for forest devastation is the shifting of cultivation by landless farmers. Hence, forest production and planning systems for stimulating the activities of local communities have to be developed. Various lesser-known tree species and forestry products may be in danger of extinction if rapid forest devastation continues. Evaluation studies should be urgently conducted and improvement of current wood processing technology should be given priority.

[A. mangium plantation in Rawang, Selangor, Malaysia.\(31KB\)](#)

[\(Photo:K.Yamamoto\)](#)

[Topic: Some wood properties of Acacia mangium in Peninsular Malaysia](#)

TOPIC: Some wood properties of *Acacia mangium* grown in Peninsular Malaysia

Since it was introduced to Sabah, Malaysia from Australia as an exotic species in 1966, *Acacia mangium* Willd. has become one of the major fast-growing plantation species for timber and pulp production in Asia. Currently plantation area covers over 150,000 hectares world wide. In Indonesia, especially in East-Kalimantan and Sumatra, thousands of hectares are being planted each year with this species. In spite of its importance for sustainable timber resources in the future, until recently comprehensive characteristics of *A. mangium* wood were not fully understood. In order to identify the basic wood properties of *A. mangium*, collaborative research work has been conducted with the Unit of Wood, Paper, and Coating unit of the School of Industrial Technology, University of Science, Malaysia. Three *A. mangium* trees free from the heart rot disease were used in this study. The age of trees harvested were 9, 11 and 6 years in Byram Forest Reserve, Pulau Pinang, in Rawang, Selangor, in Bidor, Perak, Malaysia, respectively.

Several important wood characteristics of *A. mangium* have been found since the research project commenced in 1995. Wood near the pith has lower density and a shorter length of fibers than the outer surrounding wood ([Figure 1](#)). This indicates that *A. mangium* has juvenile wood near the pith. The existence of juvenile wood may be one of the reasons that the inner heartwood of *A. mangium* is subject to heart rot attack. In fact, the incidence of heart rot of *A. mangium*, aged two to nine years old, was reported to range from 0 to 50% in a recent survey at Sabah Forestry Development Authority, Sabah, Malaysia.

The inner heartwood of *A. mangium* sometimes has a higher moisture content than the adjacent outer heartwood or sapwood ([Figure 2](#)). An increase in moisture content in the heartwood region normally refers to wetwood which has been identified as an abnormal type of heartwood caused by decay or a wound. Existence of the wetwood in tropical wood species has not yet been reported. As close relationships between inorganic concentrations and moisture contents in wetwood have been described in the literature, radial distributions of 4 major elements from alkali metals and alkaline earth metals in *A. mangium* were examined by inductively coupled plasma optical emission spectroscopy. Concentrations of potassium (K) and magnesium (Mg) in *A. mangium* stem wood and sap showed a maximum value in the outermost sapwood and then decreased gradually toward the sapwood-heartwood boundary. There were no obvious variations within the heartwood ([Figure 3](#)). The changes from sapwood to heartwood indicated a close relationship between heartwood formation and inorganic elements. Radial distribution patterns of sodium (Na) and calcium (Ca) did not show a clear trend. All analyzed samples possessing wetwood (Rawang and Bidor sample trees) or even non-wetwood (Byran sample tree) generally retained lower inorganic contents in heartwood than in sapwood ([Figure 3](#)). The close relationship between inorganic concentrations and moisture contents, as reported in the wetwood of temperate species, was not recognized in *A. mangium*. The characteristics and origin of wetwood may differ from temperate species to tropical ones. The origin of water in the wetwood of *A. mangium* is an important scientific issue that remains to be clarified.

FISHERIES DIVISION

As an initial phase (1994-1998) of international collaborative activity in the field of fisheries, the Fisheries Division has initiated five research projects in Asian countries, e.g., fisheries resources management in Malaysia and Indonesia, aquaculture in Thailand and Vietnam, and fisheries product processing in China. In addition to these studies, however, in 1996 the Division implemented a project for the development of technology to diagnose and prevent shrimp viral diseases. A summary of this project, scheduled to begin in 1997, can be found in the Highlights section.

As a first international collaborative research project on fisheries resource management, "Production and sustainable utilization of brackish water mangrove ecosystems" has been initiated with the Fisheries Research Institute (FRI) and the University of Malaya (UM). The project involves the integration of studies dealing with the brackish water mangrove and is conducted on a multidisciplinary basis including fields related to fisheries, forestry, agriculture, and socio-economics. One senior researcher has already been dispatched by JIRCAS to Penang to oversee the project, as a long-term residing scientist, and several short-term scientists specializing in fish larval ecology, crustacean ecology and marine chemistry have participated in this project. In addition to working with the above counterpart organizations, JIRCAS is receiving the active cooperation of the Marine Fisheries Resources Development and Management Department of the Southeast Asian Fisheries Development Center (SEAFDEC) regarding the fisheries aspects of the comprehensive project. Another project involving fisheries resources management, "Studies on the life history of major coastal fishes in Indonesia based on otolith analysis", has also been initiated with the Central Research Institute of fisheries (CRIFI), at the Research Institute for Coastal Fisheries (RICF), CRIFI, in Maros, South Sulawesi, Indonesia. The project aims to clarify ecology and life history of important coastal fishes for the establishment of methods of resources management. One researcher has been dispatched to Maros as long-term residing scientist.

In addition to the Division's earliest collaborative research project on aquaculture, "Development of sustainable aquaculture technology in Southeast Asia" with the Faculty of Fisheries, Kasetsart University, in Bangkok, Thailand, another project, "Evaluation and improvement of farming systems combining agriculture, animal husbandry, and fisheries in the Mekong Delta", has been initiated with the College of Agriculture, Cantho University in Cantho, Vietnam. The project involves the integration of studies dealing with square farming on a multidisciplinary basis including fields related to rice production, animal husbandry, freshwater aquaculture, and socio-economics. The fisheries aspects of this integrated project relate to freshwater aquaculture as follows: 1) fry production technology of fish and prawns, 2) disease prevention methodology for fish and prawns and 3) utilization of new feed resources for freshwater aquaculture. To oversee the fisheries aspects of the project, a JIRCAS researcher specializing in crustacean endocrinology and three short-term Fisheries Agency scientists specializing in fish disease and fisheries nutrition have been dispatched short-term to Cantho, Vietnam.

[\(Photo:M.Sano, Seikai National Fisheries Research Institute\)](#)

[An integrated farm in Omon,Cantho Province,Vietnam\(Photo:M.N Wilder, JIRCAS\)\(33KB\)](#)

Concerning fisheries product processing, a collaborative research project, "Study on post harvest and processing of freshwater fish in China", has been initiated with the Faculty of Food Science and

Technology, Shanghai Fisheries University. Two senior researchers have already been successively dispatched to Shanghai, and short-term scientists specializing in post harvest technology have visited to lend support to the project.

Intensive aquaculture has been well-developed in recent years and has become one of the most important industries in many countries, but self-contamination and fish disease in culture ponds have given rise to serious environmental and social problems. Therefore, fish disease protection has been given priority as a topic of collaboration under the JIRCAS Visiting Research Fellowship Program in which one scientist has been invited from the Central Research Institute of Fisheries, Indonesia to initiate cooperative studies in Tsukuba during a two-year period. Current and future Tsukuba Fellows are expected to become core scientists in JIRCAS's counterpart institutions and to contribute to the continued development of collaborative study.

[Topic1: Molting and reproduction in the giant freshwater prawn, *Macrobrachium rosenbergii*: Endocrinology and potential aquaculture applications](#)

[Topic2: Development of sustainable aquaculture technology in Southeast Asia](#)

TOPIC 1: Molting and reproduction in the giant freshwater prawn, *Macrobrachium rosenbergii*: Endocrinology and potential aquaculture applications

Successful prawn culture depends on many factors and requires the integration of knowledge from diverse fields. Sound economic and environmental management are essential to the efficiency of operations while expertise in the engineering and design fields are almost always necessary to set-up and construct facilities. However, basic understanding of the biology and physiology of the animals being targeted remains fundamental and most significant in the establishment of sustainable aquacultural production. In shrimp culture today, inducing reproduction in captivity and controlling disease remain obstacles to successful culture. Solving these technological problems will depend greatly on basic laboratory research and field work.

The giant freshwater prawn, *Macrobrachium rosenbergii*, is a commercially important crustacean species cultured extensively throughout Southeast Asia. While wide-spread viral infection has been a problem of increasing magnitude in the culture of seawater species of the *Penaeus* genus, disease outbreak has not been of significant concern in freshwater species such as *M. rosenbergii*. Rather, in the case of species of the *Macrobrachium* genus, it is important to be able to effectively control maturation and reproduction under artificial conditions in order to produce the larval "seed" prawns which will be raised to market size by aquaculturists and fish farmers. In Vietnam, where JIRCAS is currently implementing a comprehensive project entitled "Evaluation and improvement of farming systems combining agriculture, animal husbandry and fisheries in the Mekong Delta", *M. rosenbergii* is considered an important target species by the Vietnamese Government, and its aquaculture is being actively promoted. Farmers have traditionally depended on wild sources to obtain seed for aquaculture but are now faced with dwindling resources and a shortage of natural spawners. It is therefore necessary to increasingly rely on artificial seed production in the Mekong Delta.

JIRCAS is currently implementing basic studies concerning the endocrinology of molting and reproduction in *M. rosenbergii* as part of the Mekong Delta project. Research is being conducted both at the project site, Cantho University's College of Agriculture, in Cantho Province, Vietnam in collaboration with Vietnamese counterparts, and on JIRCAS's Tsukuba premises. In addition, although not directly related to the project, some of these studies have been carried out under the JIRCAS Visiting Fellowship Program at Tsukuba.

In *M. rosenbergii* and most other species of decapod crustacea including crabs and lobsters, the physiological processes of molting and reproduction are inextricably linked and under the control of various hormones. Crustaceans, which are arthropods, bear much endocrinological similarity to insects, and differ greatly from vertebrate species. However, compared with insects, which have been studied more widely, little is known about endocrinological mechanisms in Crustacea.

It is well-established that ecdysteroids such as 20-hydroxyecdysone serve as "molting hormone" in Crustacea and are excreted from a tissue known as the Y-organ. On the other hand, peptides (molt-inhibiting hormone: MIH) originating in the sinus gland complex of the eyestalks exert negative influence on molting. In *M. rosenbergii*, molting occurs approximately once per month accompanied by growth of the animal. In females, reproduction occurs in synchronization with the molt cycle during which vitellogenin (yolk protein) is produced and ovaries develop and mature. This process is also under the inhibition of an eyestalk hormone: vitellogenesis-inhibiting hormone (VIH). In hatcheries and on

prawn farms, the technique of eyestalk ablation has long been employed to induce female maturation; the basis of this is the removal of the eyestalks and thus the removal of the source of these inhibitory hormones.

While much progress has been made regarding negative control of molting and reproduction, it is unclear whether positive control mechanisms exist. Regarding molting, it is still not known what causes ecdysteroid titers in the hemolymph (crustacean blood) to surge just before a molt. It is also not known how the negative effects of VIH are lifted, enabling the animal to produce vitellogenin for uptake into the ovaries. In insects, juvenile hormone (JH), which is a larval developmental hormone, also appears in the adult female to stimulate yolk protein production and uptake. At JIRCAS, we are interested in the functioning of juvenoid substances in *M. rosenbergii* and are attempting to determine whether such hormones exert similar influences in crustacean species. At present, we have detected a JH-precursor molecule, methyl farnesoate (MF) ([Figures 2a,b](#)), in the hemolymph of *M. rosenbergii*. It was expected that MF would be present in only females undergoing ovarian maturation, but it was detectable in both females and males without connection to reproductive events. MF was also seen to fluctuate during the molting cycle, suggesting involvement together with ecdysteroids in regulating molting.

We are also characterizing the nature of the vitellogenin molecule in *M. rosenbergii* and examining how it is produced. Vitellogenin initially appears in the hemolymph mid-way through the molt cycle and is then taken into the oocytes as vitellin. By analyzing vitellogenin electrophoretically, we found that it is composed of three polypeptide components of molecular weights 199, 102 and 92 kilodaltons. The 199 kilodalton component is always first to appear during the course of vitellogenin synthesis. We subsequently plan to examine the involvement of MF and putative ovarian factors in the control of this process.

Another research theme we are pursuing at JIRCAS is that of osmoregulatory control in relation to reproduction. While *M. rosenbergii* is primarily a freshwater species, it migrates to brackish water during times of spawning. The female broods eggs attached to the abdominal area for about three weeks until hatching. Newly-hatched larvae can not survive in freshwater and are required to spend about one month in low salinity before returning to fresh water areas. Adults have the ability to survive in both freshwater and brackish water, but larvae do not. We are interested in how this osmoregulatory ability develops and what physiological mechanisms govern this. We are currently examining the involvement of MF and whether juvenoid substances function to control the activity of ion regulatory enzymes such as Na/K-ATPase.

Finally, at Cantho University, we are conducting applied experiments to examine the effects of feed quality and level and stock origin on reproduction in female prawns under captive conditions. In Vietnam, there are presently four national freshwater prawn hatcheries. Production is usually achieved, but females often mature precociously. This inhibits overall growth, but more importantly, it leads to diminished egg batches and low survival rates of larvae. It is often difficult to obtain high-quality larvae. In the current experiments, we are monitoring growth, reproductive state, and vitellogenin levels in prawns of natural and artificial origin subjected to representative feeding regimens practiced by farmers in the Mekong Delta. These studies will be expanded later in order to examine the effects of various environmental factors such as water temperature, salinity levels, and daylength.

Up until the present, JIRCAS personnel accompanied by researchers from the Fisheries Agency's National Research Institute of Aquaculture and the Seikai National Fisheries Research Institute have traveled to Vietnam to work on the project, but in FY 1997, Vietnamese counterparts will spend several months at JIRCAS to conduct further analysis of samples and data and to promote overall cooperative research. These collaborative studies, both in Japan and in Vietnam are expected to contribute to current knowledge concerning the endocrinology of *M. rosenbergii* and to enhance potential for culture applications in context of the JIRCAS's Mekong Delta project.

TOPIC 2: Development of sustainable aquaculture technology in Southeast Asia

In recent years, many Southeast Asian countries including Thailand have promoted an intensive form of aquaculture to increase product volume along with economic growth. As a result, aquacultural production, especially that of prawns and shrimps, has increased markedly in a short period of time ([Fig. 1](#)). However, in some countries and regions, intensive aquaculture practices have been reduced or discontinued because of the occurrence of severe outbreaks of disease affecting the animals under culture. Therefore, it has become apparent that certain difficulties exist in maintaining high productivity using intensive aquaculture. To achieve sustainable aquacultural production in Southeast Asia, basic studies relating to aquaculture sciences, such as genetics, physiology, pathology and nutrition of fish and prawns are required. JIRCAS believes that technology contributing to sustainable aquaculture can be developed through basic studies related to aquaculture sciences.

In 1994, collaborative studies covering a five-year period were initiated between the Japan International Research Center for Agricultural Sciences (JIRCAS) and the Faculty of Fisheries, Kasetsart University, Thailand. The first half of the research program emphasized genetic research to promote basic studies related to aquaculture sciences. At the outset, to develop methods for detecting genetic variability in breeding, a manual for isozymic analysis of 20 aquatic animal species economically important to Thailand fisheries was prepared. The manual describes how-to techniques for sample collection and preparation, starch-gel electrophoresis, and isozyme staining and contains instructions concerning how to use these techniques to discern isozymic loci, estimate genetic variability, and calculate genetic divergence. The genetic variability of wild populations of catfish (*Clarias macrocephalus*) was analyzed using this manual.

Wild populations of catfish collected from five localities indicated in [Fig. 2](#) were examined using genes at eleven loci controlling nine enzymes as markers. An isozymic analysis concluded that, because most of the pairs of five populations showed significant differences in all the allele frequencies at more than one locus, the populations examined were genetically independent of each other. Furthermore, based on the genetic distances among the six local populations of catfish, the dendrogram revealed that genetic relationships of the populations could be determined ([Fig. 3](#)). The relationships between the populations of Prachin Buri and Chachoeng Sao, or Pattani and Yala were very close genetically, whereas the relationship between the Chiang Rai and Pattani (or Yala) populations was genetically distant. A vertical dotted line was drawn across the dendrogram to delineate a group with a distance of 0.01. A genetic distance of 0.01 was considered to correspond to a local race level based on the results of analyses of many kinds of animals. Using this vertical dotted line, the five local populations were divided into two groups, which indicated the differentiation of local races into north/central and south groups. The distribution of this species was strongly related to geographical distance or geographical regions in Thailand. The country of Thailand consists of three regions: the central plains, northeastern plains and southern plains. In this research, these three wide regions could be differentiated as a whole with respect to catfish strain, which suggested the possibility of genetic segregation of wild populations. It is important to identify local strains for breeding in aquacultural applications, since hybridization among local races can lead to heterosis, enabling increased productivity.

The steady increase in world population requires that a sustainable and highly productive form of aquaculture be promoted as quickly as possible. Increased productivity based on selective breeding and

adoption of technologies adapted to the regions in which they are practiced is expected to contribute to the promotion of sustainable aquacultural production.

OKINAWA SUBTROPICAL STATION

The Okinawa Subtropical Station is located in Japan's southernmost city, Ishigaki (2,100 km southwest from Tokyo). The station is the only national research organization carrying out agricultural research under subtropical conditions.

Research at the Station includes: (1) introduction, acclimatization and cultivation of tropical vegetables; (2) improvement of tropical crops and development of breeding methods; (3) introduction and cultivation of new cultivars of tropical fruits; (4) improvement of methods for rapid generation advance for hybrid populations of rice and wheat; (5) studies of viral diseases and insect pests of tropical plants; (6) utilization of soil microorganisms and genetic regulation of nutrition in tropical crops, and (7) international collaboration for the improvement of agricultural technology in the tropics. Under (7), researchers from developing countries are invited to undertake advanced studies at the International Collaboration Section of the Station. In 1996, ten researchers from eight countries participated in the Visiting Research Fellowship Program. In this program, emphasis is placed on studies for the optimum utilization of bio-resources for conservation of the environment and sustainable agricultural production in the tropics.

[Topic2:Cryopreservation of taro shoot tips \(*Colocasia esculenta* \(L.\) Schott\) by vitrification](#)

[Topic3:Detection of capsid antipain proteins of viruses in papaya using protease inhibitor](#)

TOPIC 1 : Large-scale production of lateral shot seedlings of sugarcane using hydroponic systems

On the Nansei islands of Japan where typhoon and drought frequently occur, sugarcane is a major crop. However, production of sugarcane, especially at the time of planting and harvesting, requires so much labor that few farmers are interested in growing it. The harvesting of sugarcane has greatly improved through mechanization by sugar manufacturing companies, but the planting of rooted cuttings is still done one at a time using a planter. Although the rearing of high-nodal position tiller seedlings has already been developed through machine setting, this requires cultivation of the mother plant to the desired length of lateral shoots. The growth of the lateral shoots, however, is unstable. Thus sufficient production of high-nodal-position tiller seedlings cannot be guaranteed.

The JIRCAS Okinawa subtropical station developed low input hydroponics, allowing cultivation of sugarcane by the large-scale production of lateral shoot seedlings. In this system, sugarcane stem cuttings placed vertically in the nutrient solution were allowed to develop roots in the lowest node and in large portions of the first, second and third levels of lateral shoots. As observed in the field, lateral shoot production was found only in the upper three nodes, whereas in the hydroponic system, lateral shoots developed in almost all the nodal positions. Thus, we were able to show that using a hydroponic system, a great number of lateral shoots could be produced in just a small area. Also using this system, we examined the effects of various culture media on the elongation of lateral shoots. The results showed that Magic Soil and Jam Breaker, which are both made from chemical fibers, are the best media for lateral shoot production. Moreover, when this system was placed inside the pipe house, where the climate for sugarcane growth can be kept at optimum temperatures, production of lateral shoots was observed within a short period. Weeding and chemical application was also kept at a minimum so that nutrient deficiency problems could be avoided.

Since it is now possible to produce a large number of lateral shoot seedlings from a mother plant, the above research will contribute to the development of a stable, mechanized planting scheme.

[Figure1:Sugarcane greenhouse cultivation.\(21KB\)](#)

[Topic2:Cryopreservation of taro shoot tips \(*Colocasia esculenta* \(L.\) Schott\) by vitrification](#)

TOPIC 2: Cryopreservation of taro shoot tips (*Colocasia esculenta* (L.) Schott) by vitrification

Through recent remarkable technical progress, cryopreservation is recognized as a practical and efficient tool for long-term storage of vegetatively-propagated plant germplasm. However, cryopreservation of tropical species still has been less extensively investigated than that of cold hardy species. Although cells and somatic embryos of about 30 tropical species have been well-preserved in liquid nitrogen (LN₂), information on the effective cryopreservation of shoot primordia of tropical species is still limited. This project aims to develop simple techniques for the efficient and stable cryopreservation of shoot tips of vegetatively propagated tropical crops.

Among different strategies for successful cryopreservation, the vitrification method was applied because the handling of explants by this method is relatively simple and the method has been reported to be successful with complex tissues such as meristems rather than cells. The principle of the vitrification method is to dehydrate a specimen by exposing it to a vitrification solution of a high osmolality, thus altering the condition of intracellular water. This also allows for the penetration of antifreeze substances in the vitrification solution so that the specimen is vitrified by rapid cooling in LN₂. A procedure for vitrification was successfully developed for shoot tips of taro, one of the common and most important tuber crops grown throughout the humid tropics and sub-tropics.

The conditions of the vitrification method were investigated in detail and optimized by using *Colocasia esculenta* (L.) Schott var. *antiquorum* cv. Eguimo as experimental material. We concluded the following concerning the successful cryopreservation of taro shoot tips: (1) conditioning culture with a high concentration of sucrose (120g/l) is very effective for raising and stabilizing post thaw survival compared with the shoot tips from the plants raised on the medium with 30g/l sucrose, a common condition for *in vitro* multiplication of taro, (2) proper size of shoot tips should be used, (3) preculture of dissected shoot tips with 0.3M sucrose prior to the cryogenic procedure improved post-thaw survival, and (4) loading is an essential procedure to improve tolerance to the dehydration by PVS2, a vitrification solution used in this study. The finalized protocol is summarized in Table 1.

Shoot tips which successfully vitrified and warmed using this protocol resumed growth within 7 days and developed shoots directly without intermediate callus formation (Fig. 1a). Almost all the shoot tips that survived were successfully transferred to soil in pots (Fig. 1b). No morphological abnormalities were observed in plants developed from cryopreserved shoot tips.

The protocol developed was applied to different cultivars of triploid and diploid taro and post thaw survival rates of 67-100% were obtained for the different genotypes (Table 2). The protocol is considered valuable for the long-term preservation of taro germplasm and further studies are needed to expand the applicability of this procedure to other species belong to the family *Aracea*.

Table 1.	Protocol developed for cryopreservation of taro shoot tips by vitrification
Step 1:	Culture the shoot tip donor plants on Murashige and Skoog medium(MS) supplemented with 120g/l sucrose for three weeks (conditioning culture)
Step2:	Dissect shoot tips shoot tips (0.5-0.8mm in length, apical dome + 1-2 leaf primordia)
Step3:	Preculture the shoot tips on MS containing 0.3M sucrose for 1 night at 25°C
Step4:	Treat the precultured shoot tips with a loading solution [2M glycerol + 0.4M sucrose] for 20min at 25°C
Step5:	Expose the loaded shoot tips to PVS2 [30%(w/v) glycerol + 15%(w/v) ethylene glycol +15%(w/v) DMSO + 0.4M sucrose] for 10min at 25°C

- Step6:** Directly plunge into liquid nitrogen (LN₂) and store
- Step7:** Rapidly rewarm the cryopreserved shoot tips in a 40°C-water bath
- Step8:** Soak the shoot tips into 1.2M sucrose for 10min at 25°C
- Step9:** Reculture the shoot tips on two layers of blotting paper over MS supplemented with 0.3M sucrose
- Step10:** Transfer the shoot tips to MS containing 0.1M sucrose for regrowth of plantlets

Fig. 1. A) Taro shoots formed from cryopreserved shoot tips by vitrification. Dead shoot tips turned white whereas those which survived showed a green color. B) Taro plants developed from cryopreserved shoot tips by vitrification.

[Back to Contents](#)

MISCELLANEOUS PROJECTS OUTLINE

In addition to international collaborative projects, JIRCAS conducts a variety of miscellaneous projects: domestic projects, in cooperation with other MAFF institutes; commissioned research, principally in cooperation with universities; cross-ministry/agency projects currently with the Science and Technology Agency and the Environment Agency; and special allotment projects.

DOMESTIC PROJECTS

Collaborative operations pertaining to the Agriculture, Forestry and Fisheries Gene Bank
(Biological Resources Division and Okinawa Subtropical Station, 1989-ongoing)

Comprehensive research on ordering mechanisms of agriculture, forestry and fisheries ecosystems and elucidation of optimal means of governance
(Animal Production and Grassland Division, 1995-1998)

Development of methodology to forecast changes in the structure of the production and consumption of agricultural products in the context of internationalization
(Research Information Division, 1995-1997)

The elucidation of endophyte functions to develop new forms and qualities
(Animal Production and Grassland Division, 1996-1998)

Comprehensive research pertaining to trade and industry in the realm of agriculture, forestry and fisheries, resources, and the environment
(Crop Production and Postharvest Technology Division, 1996-2000)

New usages for wheat crops: The development of high-quality field crops and their utilization technology
(Okinawa Subtropical Station, 1996-2005)

Development of an agricultural information evaluation tool using GIS interface
(Research Information Division, 1997-2002)

Studies on the improvement of crop adaptation to high temperature stress
(Okinawa Subtropical Station, 1997-2001)

COMMISSIONED RESEARCH

Distribution and ecology of *Vigna* species in tropical regions of Asia
(Biological Resources Division in cooperation with The University of the Ryukyus, 1994-1996)

Desertification in cool, dry areas and accompanying changes in systems of agricultural dynamics
(Environmental Resources Division in cooperation with Nihon University, 1995-1997)

Evaluation of salinity tolerance in wild species of rice and elucidation of tolerance mechanisms
(Okinawa Subtropical Station in cooperation with The University of the Ryukyus, 1996-1999)

RESEARCH PROJECTS WITH OTHER GOVERNMENT AGENCIES AND MINISTRIES

In cooperation with the Science and Technology Agency

Oceanographic investigations: Fluctuations in tropical mangrove forests and evaluation of possible influences
(Forestry Division, 1990-1997)

Global research network: set-up of data-base for changes in desertification
(Environmental Resources Division, 1994-1996)

Study on endocrine responses of somatotropin in livestock animals in tropical environments
(Animal Production and Grassland Division, 1996)

Biology of the asiatic palm weevil, *Rhabdoscelus lineaticollis*, a new sugarcane pest in Okinawa
(Okinawa Subtropical Station, 1996)

Development of an integrated long term monitoring method for transpiration
(Environmental Resources Division, 1996)

In cooperation with the Environmental Agency

Research for the development of technology to inhibit the production and emission of methane and nitrous oxide from agricultural fields
(Environmental Resources Division, 1995-1997)

MAFF SPECIAL RESEARCH ALLOTMENTS

Stabilization of rice culture under water stress in the tropics utilizing a broader spectrum of genetic resources
(JIRCAS in cooperation with the International Rice Research Institute (IRRI), 1994 - 1999)

Sustainable cultivation of upland crops in the semi-arid tropics
(JIRCAS in cooperation with International Crops Research Institute for the Semi-Arid Tropics)

INVITATION PROGRAMS AT JIRCAS

As part of JIRCAS's role as an international research center, we have implemented several systems for the invitation of foreign researchers and counterpart administrators. These programs serve to facilitate the exchange of information and opinion concerning agriculture, forestry and fisheries administration and to strengthen international research ties with scientists and administrators in other countries. Below is a description of two of our fellowship programs. Beginning in 1998, application materials will be available via the JIRCAS website.

JIRCAS Visiting Research Fellowship Program at Okinawa

This program was initiated in FY 1992 before TARC was reorganized into JIRCAS. Post-doctoral level scientists are invited to conduct research for a period of one year at the Okinawa Subtropical Station. Research focuses on important topics related to tropical agriculture in developing countries. Research themes are divided into several major categories: 1) Development of techniques for environmental control by using plants and microorganisms specific to the tropics and subtropics; 2) Studies on mechanisms of heat-tolerance of tropical and subtropical crops; 3) Identification and evaluation of salt-tolerant crops; and 4) Evaluation and development of long-term conservation techniques of genetic resources of vegetatively propagated crops in the tropics and subtropics. Ten fellows are generally chosen every year and begin their term on October 1 ending September 30 of the following year. Recent activity is summarized below. More information on the Okinawa Fellowship Program can be obtained by contacting the International Relations Section, Japan International Research Center for Agricultural Sciences, 1-2, Ohwashi, Tsukuba, Ibaraki, 305-8686, Japan. (Tel.: 81-298-38-6335 Fax: 81-298-38-6337 Telex: 3652456 JIRCAS J)

[A list of the 1996 Okinawa Research Fellows](#)

JIRCAS Visiting Research Fellowship Program at Tsukuba

A program similar to the Okinawa Visiting Research Fellowship Program has been implemented on the Tsukuba premises since October 1995. The fellowship aims at the promotion of collaborative research to address various problems confronting countries in the developing regions. The program allows for the invitation of 6 researchers per year. Four persons are engaged in 2-year projects at JIRCAS and 2-3 scientists carry out short-term (5 months) projects at the National Institute of Agrobiological Resources (NIAR). More information on the Tsukuba Fellowship Program can be obtained by contacting the International Relation Section, Japan International Research Center for Agricultural Sciences, 1-2, Ohwashi, Tsukuba, Ibaraki, 305, Japan. (Tel.: 81-298-38-6335 Fax: 81-298-38-6337 Telex: 3652456 JIRCAS J)

Other fellowships for visiting scientists

The Government of Japan sponsors a post-doctoral fellowship program for both Japanese and foreign scientists through the Science and Technology Agency (STA). The program places post-doctoral fellows in national research institutes throughout Japan according to research theme and prior arrangement with a host for a term of generally 1-3 years. Fellowships can be undertaken in any of the ministries and many fellows are currently working at the various institutes of MAFF. At present, the following four visiting scientists are residing at JIRCAS: Dr. O.A. Welker (Germany), Biological Resources Division; Dr. B.A. Yakubov (Republic of Uzbekistan), Biological Resources Division, Dr. Chien Hsiaoping (People's Republic of China), Research Information Division, and Dr. Mingyuan Du (People's Republic of China), Environmental Resources Division. In addition, two Japanese fellows, Dr. N. Aoki and Dr. T. Urao, are also conducting research at JIRCAS.

TOPIC 3: Detection of capsid antipain proteins of viruses in papaya plant using protease inhibitor

The papaya leaf-distortion mosaic virus (PLDMV) and P strain of papaya ringspot virus (PRSV-P) cause serious diseases of papaya (*Carica papaya* L.), which have only been partially controlled by conventional methods. An alternative control method is to coat protein mediated protection through the transfer and expression of the viral capsid protein (CP) gene in papaya.

Western blotting is commonly used for the serological detection of CPs of viruses. Thus far, however, no CP band of papayas viruses has been detected by western blotting when they were extracted directly from papaya plants. Since it was presumed that CP was digested by papain (sulfhydryl protease) in papaya tissues during extraction, an attempt was made to detect them by inhibiting the enzyme activity of papain.

Antipain isolated from culture filtrates of *Actinomices* has been reported as a specific enzyme inhibitor of papain. It was found that CP was clearly detected when 0.1-1 mg/ml of antipain was added to the extraction buffer at the first step of western blotting procedure (Fig. 1), and modified western blotting for papaya's viruses was established. This method is expected to accelerate the transgenic papaya production.

[Fig.1 Procedure of western blotting for detecting papaya viruses.\(52 KB\)](#)

TOPIC 2: Estimation of regional edible feed resources in a barley/rangeland zone in Northeastern Syria

Within the dry marginal lands in West Asia and North Africa which receive an annual precipitation between 200-300mm, barley cropping and rangeland grazing for small ruminant production are the main land use systems. In these systems, native plants in rangelands comprise the major feed resources during winter and spring, whereas barley stubbles after the harvest contribute during dry summer and autumn.

In such systems, rapid land degradation is being accelerated by overgrazing, fuel cutting and inappropriate cropping. Estimation of the feed resource distribution and the carrying capacity of livestock in a whole region are fundamentally important to avoid degradation problems through improved land use systems.

In the Abdul Aziz test zone of 95,000 ha, northeastern Syria, feed resources were classified into 8 groups using Landsat TM data assisted by a series of vegetation surveys to monitor changes in botanical composition and aerial biomass. As presented in figure 2, the classified feed resources are barley (yellow), fallow (brown), forests (green), and five native vegetations of various plant components (red, reddish brown, charcoal, blue and gray).

The total edible feed biomass is 63,000 tons per year, where barley cropping contributes 68% of the biomass from 32% of the total area. The natural plants, shrubs and herbaceous species on rangelands contribute 31% of the total biomass from 61% of the area.

This study revealed the regional distribution of feed resources and the quantitative assumption of edible biomass, which is the key information for setting a maximum number of small ruminants in the region without degradation risks. This method can be applied in similar arid environments to lead to sustainable livestock production and land use development.

[Figure 1: Stubble grazing after barley harvest in early May. Until the end of the dry season, local animals stay in villages for grazing in the fields. From September, animals will be moved to hilly rangelands where they graze on native plants grown mainly during the rainy season. \(October to April\). \(32 KB\)](#)

TOPIC 2: New disease resistant varieties of cucumbers and strawberries in China

The urban areas of China require a stable supply of fruits and vegetables because of recently increasing demand. Cucumber is one of the major vegetables cultivated in the Shanghai region, but it is susceptible in the field to *Fusarium* wilt and downy mildew. The cucumber varieties also tend to exhibit low yield and late maturity. Strawberries are a main fruit, and their demand is also increasing remarkably in Shanghai. However, varieties with strong disease resistance and high fruit quality in forcing culture are lacking.

Therefore, we attempted to develop new varieties of cucumbers and strawberries with good disease resistance, high-yield ability and high quality by using the genetic resources of Japan and China and adapting them to the Shanghai area.

1) New cucumber variety Hu 116 and Hu 119. Hu 116 is a F1 variety (Photo.1) which was derived from a cross between 0202-1-1 (progeny line of Rensei) and SK-11 (progeny line of Shinkoufushinari 11) and has early maturity. Hu 116 has been observed to have high resistance to *Fusarium oxysporum* sch.f.sp.cucumerinum and *Pseudoperonospora cubensis* Rostowzew in the results of an early testing method and in the field. Hu 116 has many female flowers and its yield is about 10 to 15% higher than Shinkoufushinari 11. The fruit length is about 21 to 24 cm. The skin color is deep green and has few nodules or spines.

Hu 119 is a F1 variety, which was derived from a cross between 0202-1-1 and 019-2 (progeny line of Chinese variety). Hu 119 has shown a similar degree of resistance to *F. oxysporum* and *P. cubensis* as Hu 116. Hu 119 has lower female flower bearing ability than Hu 116, but it produces steady harvesting during the growing period. Like Hu 116, the fruit quality is good. Hu 116 and Hu 119 are adapted to the semi-forcing culture found in the whole of the Shanghai area and the area of Jhejiang, Jiangsu, Shandong, and Sichuan.

2) The new strawberry variety Shinkyoku 1 and Shinkyoku 2 . The new strawberry varieties Shinkyoku 1 and Shinkyoku 2 were selected from hybrid seedlings crossed between Japanese strains. The total yield of Shinkyoku 1 continuing until April is higher than that of Toyonaka or Hokouwase. The fruit is large in size, about 11-14g, conic in shape and has a shiny scarlet skin color. The contents of soluble solids in the fruits were considerable, rating between 8 and 10 on the Brix scale. The flesh is firm and the skin is hard, so this new variety has good transportability. In Shanghai, strawberry anthracnose, which is caused mainly by *Colletotrichum acutatum* Simmonds, is also caused by *C. fragariae* Brooks. Shinkyoku 1 has higher resistance to the above anthracnose species than Hokouwase and also has resistance to gray mold.

The harvesting season of Shinkyoku Q' is earlier than that of Toyonoka. The yield within the year (from November to December) and the early yield from November to February is higher than Toyonok', thus this variety has many early fruits. The fruit is large, about 10-11g in the weight, conically shaped, and shiny scarlet in color. It is also very sweet, but moderately sour and very juicy, making it quite tasty. The fruit also has a high vitamin C content. Shinkyoku Q has higher resistance to *Colletotrichum acutatum*

Simmonds and *C. fragariae* Brooks than Hokouwase. Shinkyoku 1 and Shinkyoku 2 are well adapted to the forcing culture of the Shanghai area.

JIRCAS 1995 ANNUAL REPORT

Message from the Director General

*Director General
Keiji Kainuma*

Orientation of Research Activities at JIRCAS

More than two years have passed since JIRCAS was established on October 1, 1993. During that time I have had the opportunity of visiting a large number of countries and organizations where JIRCAS staff are engaged in or plan to carry out collaborative research. I have held discussions with both researchers and administrators, signed memorandums of understanding with several institutions, and attended meetings organized by the CGIAR and its technical advisory committee. During these visits, I was able to observe agricultural activities in a wide range of environments where climatic conditions and infrastructure level differ greatly. As a result, I was able to renew my understanding of the significance of requests for cooperative research with JIRCAS on the part of many countries seeking to secure a sustainable production of food in order to cope with projected population increases and increased demand for diversified food products.

JIRCAS is currently engaged in worldwide comprehensive research activities covering all of the fields of agriculture, including animal husbandry, forestry and fisheries. At JIRCAS, the priorities and orientation of research are determined based on research requests from organizations in various foreign countries, detailed surveys conducted by JIRCAS staff members and other researchers from various institutes affiliated to the Ministry of Agriculture, Forestry and Fisheries, and discussion held during the JIRCAS Advisory Committee Meeting. Research themes are aimed to address urgent issues concerning international agriculture, including global environmental problems. The major aspects of our medium-range research plans (First term, until the year 2003) are outlined below.

Overseas activities

One of the characteristics of JIRCAS research activities overseas is the undertaking of comprehensive and multidisciplinary projects in order to address problems on a large scale such as systems of agriculture or global environmental problems. Such collaborative projects for which a memorandum of understanding has been concluded with various research organizations are currently being implemented in Thailand, Malaysia and Vietnam or are being planned in Brazil as well as in China and other regions ([Table 1](#)). Needless to say, collaboration between researchers in the fields of natural sciences and socio-economics is essential for the formulation and execution of these projects.

In addition to our comprehensive projects, emphasis is being placed on projects for the solution of specific problems pertaining to agriculture, forestry and fisheries as well as on studies that could contribute to the generation of new projects. In 1995, more than 40 researchers were dispatched on long-term assignments to 15 countries to carry out collaborative research with national research institutes, universities, and centers affiliated to the CGIAR ([Table 2](#)). In addition, each year approximately 180 researchers and administrators visit a large number of countries with the objectives of carrying out research on a short-term basis, investigating the possibility of future research collaboration, and holding discussion about the initiation or promotion of collaborative research.

Importance of research carried out in Japan

With the completion of new research facilities on our Tsukuba premises (highlighted in Annual Report 1994), we have become able to promote new research activity which had previously been carried out mainly at our Okinawa Subtropical Station. Presently, facilities include a plant biotechnology unit, and fisheries science and earth science laboratories, and equipment for remote sensing studies and econometric analyses. These facilities are enabling JIRCAS to address problems in agricultural research common to both foreign countries and Japan by providing a solid base for research overseas. In addition, we have recently implemented our JIRCAS Visiting Research Fellowship Program at Tsukuba in order to bring overseas researchers to Tsukuba for training and collaboration.

Role of the Okinawa Subtropical Station

The Okinawa Subtropical Station is located on Ishigaki Island in the southernmost part of Japan and plays a major role in the promotion of JIRCAS's research activity related to tropical and subtropical agriculture. Studies on tropical and subtropical plant resources and investigations aimed at the introduction of new crops are being carried out, taking advantage of Okinawa's climatic conditions and location in the subtropical zone. At the same time, the station contributes significantly to the development of agriculture in the Okinawa area. In addition, the JIRCAS Visiting Research Fellowship Program at Okinawa, whereby 10 post-doctoral researchers are invited each year from overseas countries, is playing a role in the fostering and development of researchers in the developing regions and paving the way for future research collaboration with a large number of countries. The Okinawa Fellow Program was originally implemented under JIRCAS's forerunner, the Tropical Agriculture Research Center (TARC). The continued refinement of this program is one of JIRCAS's major goals.

Problems for the future

JIRCAS is currently working out plans strategies to adopt up until the year 2003. In addition to actively promoting research collaboration, JIRCAS will have to meet the demand for the training of researchers through the implementation of the visiting research fellowship programs, strengthening of relations with various research organizations in the Asia Pacific Region, and the organization of workshops in collaboration with the CGIAR research centers. The effective utilization of limited human and material resources is a major challenge for JIRCAS in the coming years.

Note about Annual Report 1995

Commencing with this year's issue of the JIRCAS Annual Report, while covering all of JIRCAS's

activities throughout the world, we will be featuring several close-up articles on research collaboration in a specific region or country. This year, we will be highlighting some of our activities in Latin America with an article on the implementation of a new "Integrative-type Comprehensive" project in Brazil in the "Highlights from 1995" section, and an introduction of "Research sites around Latin America" in the "International Research at JIRCAS" section to be found as part of our research overview.

Table.1 Major collaborative research projects between national agricultural research organization and JIRCAS

1.	Breeding of rice and vegetable resistant to diseases and environmental stresses (China)
2.	Development of technology for the evaluation of soybean genetic resources in Northeast China(China)
3.	Evaluation and improvement of farming systems combining agriculture, animal husbandry, and fisheries in the Mekong Delta(Vietnam)*
4.	Development of sustainable agricultural technology in Northeast Thailand*
5.	Development of sustainable aquaculture technology in Southeast Asia(Thailand)
6.	Productivity and sustainable utilization of tropical and subtropical brackish water mangrove ecosystems (Malaysia)*
7.	Development of methods of control of biotic agents injuring rice plants under direct seeding culture in Malaysia(Malaysia)
8.	Rehabilitation of secondary degraded (Malaysia)
9.	Methods of cultivation of soybean in cropping systems with low inputs in Indonesia(Indonesia)
10.	Evaluation of changes in agricultural production structure associated with economic development and clarification of agricultural development trends using model analysis
11.	Development of technology for sustainable management of grasslands in Central Asia (Kazakhstan)
12.	Comprehensive studies on the development of a sustainable agro-pastoral system in the subtropical zone of Brazil*

* Comprehensive projects

Table 2. On-going collaborative research projects between CGIAR-International Research Centers, and JIRCAS

IRRI(Philippines)	Stabilization of Rice Culture under Water Stress in the Tropics Utilizing a Broader Spectrum of Genetic Resources
ICRISAT (India)	Sustainable cultivation of upland crops in the semi-arid tropics Analysis of environmental changes in agricultural land after forest clearing in the tropics and development of sustainable land use systems
CIMMYT (Mexico)	Improvement of high-yielding wheat varieties through biotechnological procedures
IITA (Nigeria)	Studies on eco-physiological characteristics of cowpea in the savanna area of West Africa
CIP (Peru)	Characterization, evaluation and utilization of genetic resources of local Andean root and tuber crops
ILRI (Kenya)	Biochemical characterization of membranes of lymphocytes infected with <i>Theileria parva</i> schizonts
CIAT (Colombia)	Eco-physiological studies on upland rice roots in relation to adaptability to savanna soil in South America Eco-physiological studies on the persistency of tropical pasture plants in the savanna of Latin America
AIT	(Asian Institute of Technology, Thailand) Mechanical Properties of Typical Soils in Northeast Thailand for Construction of Irrigation Facilities
ICIPE	(International Center of Insect Physiology and Ecology, Kenya) Biorational approaches to long-term and Sustainable Management of desert locust

HIGHLIGHTS FROM 1995

This past year was marked by JIRCAS's first external review since its reorganization from TARC on October 1, 1993, the implementation of the "integrative-type" comprehensive research project, and the initiation of the JIRCAS Visiting Research Fellowship Program at Tsukuba. In addition, Director General Dr. Kainuma was honored with the Alsberg-Schoch Memorial Award from the American Association of Cereal Chemists, and several other members of the staff were also the recipients of academic and scientific awards.

JIRCAS Research Review 1995

In 1995, JIRCAS underwent an external research review for the first time after its reorganization from the former Tropical Agricultural Research Center (TARC) conducted according to the Implementation Plan of Research Review framed by the Agriculture, Forestry and Fisheries Research Council (AFFRC) Secretariat of the Ministry of Agriculture, Forestry and Fisheries (MAFF). The research review was performed within a one-year schedule covering the fiscal year from April 1995 to March 1996, with the objective of furthering international agricultural research on the Japan side. The review consisted of three segments with the first review being held within JIRCAS (April to October) followed by the second review conducted by members of the AFFRC (October 18-19), and the third and final review carried out based on the discussion and indications presented during the second review (until March 1996).

In the first research review, a review group consisting of JIRCAS staff members was organized to examine research issues in accordance with the AFFRC's Plan for International Research Promotion, and JIRCAS's Basic Research Plan of JIRCAS during the half-year phase and to debate the following: 1) research priorities, 2) situation and current status of research implementation, 3) cooperation and collaboration with related internal and external organizations, 4) internal research activities and 5) research manpower. The outcome of the first review was summarized, and a main report and supplementary documents were prepared for purposes of the second review.

The second review was held at JIRCAS in attendance of the review group of the AFFRC including three reviewers from universities and MAFF officials. The JIRCAS side presented an introduction of the present research situation especially focusing on the extension of overseas research sites following the reorganization of TARC into JIRCAS and the implementation of new collaborative research projects including comprehensive projects. In addition, JIRCAS outlined recent research highlights relating to information systems, biotechnology, and sustainable production. During the course of the review, the following major subjects were discussed: 1) future research priorities; 2) research promotion and 3) effective management of research.

For the third segment of the Research Review, JIRCAS submitted a report based on indications and comments of the second review in discussion with the review group of AFFRC. The JIRCAS Research Review was concluded with a final presentation of the overall processes and summary of the review at a meeting of the AFFRC held on March 19, 1996

Based on the investigations conducted during the Research Review, it was concluded that JIRCAS is fulfilling its role as a core institute in implementing international collaborative research, initiating cooperation and fostering connections among domestic and overseas research organs, and promoting the

exchange of information in the realm of international agricultural research. The investigation also highlighted JIRCAS's ongoing involvement in the cultivation of human talent, both domestically and overseas. Finally, regarding the future direction of agricultural research, giving consideration to issues concerning world food supply and global-scale environmental problems together with the many specific, regional problems facing world agriculture, it was deemed necessary for JIRCAS to place utmost importance on developing *comprehensive-type* research programs, encompassing all of the fields of agriculture, forestry and fisheries with emphasis placed on sustainable productivity.

Highlights 1995

Initiation of the "integrative-type comprehensive" research project at JIRCAS with introduction of a new project to be implemented in Brazil

Background

The Tropical Agriculture Research Center (TARC) was reorganized into the Japan International Research Center for Agricultural Sciences (JIRCAS) on October 1, 1993, and since, JIRCAS has defined its goals as contributing to the promotion of the sustainable development of

agriculture, forestry and fisheries activities in the developing regions of the world. Through the implementation of a variety of collaborative research programs, JIRCAS continually aims to foster close relationships between overseas research organizations and Japanese domestic organizations.

JIRCAS continues to pursue the specific, focused research programs along the lines of those which were carried out at TARC, but as part of its new role as an international center, has also initiated a new type of project, the "Integrative-type Comprehensive Research Project". Three comprehensive projects have already commenced in Vietnam in the Mekong Delta, in Malaysia and in Northeast Thailand. The fourth comprehensive research project entitled "Comprehensive Studies on the Development of Sustainable Agro-pastoral Systems in the Subtropical Area of Brazil (Agro-pastoral)" is scheduled to be implemented in fiscal year 1996. In the planning of a comprehensive project, a research coordinator in the Research Information Division takes on the role of project leader to work in close collaboration with the directors of the relevant research divisions and the researchers who are involved in the project. During the planning stages of the project, socio-economic studies are undertaken to identify the research priorities of the counterpart countries.

Focus on Brazil Project

Details of the progression of the first three comprehensive projects can be found in the JIRCAS Research Divisions section, as relevant to the activities of each particular division. As one of this year's Annual Report's close-up feature articles on research activities in Latin America, the new program will be introduced below to provide an overview of the scheduled research activities and formulate an overall impression of the character of a JIRCAS Comprehensive Project.

Research background, topics and counterparts

The subtropical area of Brazil in the "Agro-pastoral" project has been recognized as one of the origins of modern agriculture in South America. This area, where the continuous cultivation of field crops has been carried out on a large scale in context of a major agriculture system with extensive cattle grazing, is extremely important to the food supply and economy of Brazil at present. This area encompasses about 400 thousands km² (approximately equal to Japan's total territory), and is a triangle of land connecting the cities of Londrina, Botucatu, Ribeirao Preto and Campo Grande. The area is additionally characterized by the settlement of hundreds of thousands of Japanese-Brazilian farmers who are mainly engaged in providing the essential food commodities designated for the megalopoli of Sao Paulo and Rio

de Janeiro.

In this subtropical area of the country, a large increase of agricultural products was achieved through the continuous extension of arable land and a high dependence on the net primary productivity of fertile land with minimum input. As a result, a great part of this area has become transformed into environmentally vulnerable land while the efficiency of production has remained unchanged at low levels without improvement of existing agricultural technology. Growth retardation due to continuous cropping, prevalence of disease, pest outbreak, and soil erosion inevitably threaten the agriculture in this area, serving as major constraints to agricultural sustainability and productivity.

This new comprehensive research project is thus focused on the development of sustainable farming systems with high productivity in environmentally-degraded areas in subtropical Brazil. Emphasis will be placed on land utilization based on a crop-pasture rotation system and research collaboration will be carried principally in conjunction with the Brazilian Agricultural Research Corporation (EMBRAPA). In addition, JIRCAS will hold consultation with the International Center for Tropical Agriculture (CIAT), drawing on the latter's extensive experience in crop-pasture system development in South American countries, and with the JATAK International Center of Agriculture Technology, the primary nongovernmental organization for Japanese-Brazilian farmers.

The following areas of research are to be implemented: (1) survey and evaluation of indigenous and traditional methods of agricultural land utilization, (2) multifaceted studies for the development of a sustainable crop-pasture rotation system [including *a*) mixed and multiple cropping agricultural systems employing soybean as a main crop for field crop diversification, *b*) introduction and management of forages in mixed, multiple-cropping patterns for soil improvement and erosion control, *c*) dynamics of soil fertility and plant nutrition under crop-pasture rotation *d*) control of deteriorative agents, e.g., pathogens, pests and weeds, under crop-pasture rotation *e*) management of grazing cattle under crop-pasture rotation), (3) Socioeconomic evaluation of crop-pasture rotation from the standpoint of a farming-systems approach, and lastly (4) on-farm participation research of the newly developed "agro-pastoral system". The expected duration of the project is 7 years, starting from April 1996 to March 2002.

JIRCAS Visiting Research Fellowship Program at Tsukuba

On October 1, 1993, the Tropical Agriculture Research Center (TARC) was reorganized into JIRCAS. Since its establishment in 1970, TARC has been engaged in collaborative research activities consisting of the dispatching of researchers to various institutes located in tropical and subtropical areas to promote the development of agriculture, animal husbandry and forestry in these regions. Many substantial results were obtained.

However, there has been a recent growing awareness of the importance of conducting collaborative research while making use of the high level of research opportunities available in Japan. To achieve this objective, the Visiting Research Fellowship Program at Okinawa was implemented in 1992 to enable 10 outstanding doctorate-level researchers representing counterpart institutes located in tropical and subtropical countries to carry out collaborative research for a period of one year at the Okinawa Subtropical Station of the Center. Okinawa was selected in view of the similarity of the research priorities and climatic conditions to those in the tropical and subtropical regions.

With the transformation of TARC to JIRCAS, fisheries was added to the already-targeted research fields and international research activities were expanded to include the temperate and cooler regions in order to more comprehensively address the problems of food production and conservation of natural and environmental resources confronting developing countries. In this context, JIRCAS has additionally implemented the Visiting Research Fellowship Program at Tsukuba which commenced this past year in October, 1995. The program allows invited researchers and their JIRCAS hosts to take advantage of the research environment in the Tsukuba Science City, which in Japan serves as a strong base for scientific research and development in many basic disciplines. Promising, young researchers representing JIRCAS's counterpart institutes are the targets of this program, and there is much expectation that they will take initiative and leadership in developing collaborative research programs in order to address the agriculture, forestry and fisheries problems facing the developing areas.

Under the Fellowship Program, a total of 6 researchers will be invited per fiscal year to carry out research pertaining to one of several themes listed below ([Table 1](#)). Four researchers will undertake long-term projects for a period of 2 years and 2 researchers will be engaged in short-term projects for a period of 5 months. The long-term researchers will carry out collaborative research at JIRCAS, while the short-term fellows will conduct research at the National Institute of Agrobiological Resources (NIAR) at Tsukuba.

Table1**RESEARCH THEMES****Long - term projects*****I.Methods for optimum utilization of biological resources***

- 1) Analysis of plant responses to environmental stresses and gene expression
- 2) Development of DNA-based assay for indexing plant diseases
- 3) Development of practical methods for the evaluation of the quality of indigenous crops and for the analysis of components and functionality of foods
- 4) Methods for the development of livestock breeds with high productivity through crossing with indigenous species
- 5) Development of methods for the diagnosis and prevention of diseases affecting aquatic for fresh water and marine aquaculture

II.Analysis and evaluation of the impact of climatic and anthropogenic factors on environmental resources

- 1) Relation between climatic change and biomass in agro-ecosystems
- 2) Investigation of the process of rock weathering through the analysis of rock surface by electron spectroscopy

Short-term projects

- 1) Methods for the analysis and preservation of *biodiversity*
- 2) Production of new biological resources through the application of biotechnological procedures
- 3) Methods for the analysis and control of biological functions

ACADEMIC PRIZES AND AWARDS

JIRCAS is pleased to note that in the past few years, many of our staff, including our Director General and two of our Research Division Directors have been the recipients of academic prizes and awards from scientific societies and organs of the media. The following is a brief summary of these achievements which we are proud to include in the Highlights of Annual Report 1995.

DIRECTOR GENERAL AND DIRECTORS OF THE RESEARCH DIVISIONS

Dr. Keiji Kainuma, Director General of JIRCAS was awarded the Alsberg-Schoch Memorial Award by the American Association of Cereal Chemists (AACC) on November, 6, 1995 for his outstanding contributions to starch science including molecular-level research on the starch molecule. Dr. Kainuma was invited to San Antonio, Texas to the annual convention of the AACC to deliver his award address entitled “The winding road to the double helix structure of the amylopectin molecule” in which he outlined an original approach adopted to assign a double helix structure to the amylopectin molecule leading to the first double helix model of a native carbohydrate as proposed by Kainuma and French in 1972.

Dr. Katsuyuki Minami, Director of the Environmental Resources Division and his research group were awarded the 5th Nikkei Excellence Prize for Global Environment Research sponsored by the Nihon-Keizai Shinbun (Japanese Economic Journal) for their exhaustive studies on the “Analysis of the mechanism of methane emission and its quantitative assessment from agro-ecological systems” on November 16, 1995. **Dr. Minami** also received the Prize for Agricultural Sciences in Japan, 1996 and the 33rd Yomiuri Prize sponsored by the Japan Society of Agricultural Sciences in conjunction with Yomiuri Press on April 5, 1996 for work entitled “Impact assessment of agro-systems on global change and its mitigation strategy” in recognition of outstanding scientific publication.

Dr. Koji Kawashima, Director of the Crop Production and Postharvest Technology Division and collaborators received the Science and Technology Agency’s 55th Award for Inventions of Distinction for “A method to preserve quality of agricultural products and food” on April 25, 1996. The new technology involves releasing high pressure carbon dioxide of agricultural products in sealed containers in order to eliminate adult insects, larvae, pupae and eggs.

JIRCAS RESEARCH STAFF ACCORDING TO RESEARCH DIVISION

Biological Resources Division

Kazuo Nakashima, Ph.D. received the Young Scientist Award from the Phytopathological Society of Japan for “Characterization of phytoplasmas associated with rice yellow dwarf, sugarcane white leaf and sesame phyllody diseases” on April 2, 1996. The award is given to a rising, young researcher as the Society’s recognition of the individual’s achievement and promise. **Kazuko Yamaguchi-Shinozaki, Ph.D.** received the Botanical Society of Japan’s Young Scientist Award for “Gene suppression and signal transduction in plants under water-stress conditions” on Oct. 2, 1993, also in recognition of outstanding contribution as a rising scientist.

Crop Production and Postharvest Technology Division

Yuji Kohgo, Ph.D. received the Award of the Japanese Society of Soil Mechanics and Foundation Engineering for “Verification of a generalized elastoplastic model for unsaturated soils” on March 2, 1995. The award is given by the Society in recognition of outstanding scientific publication.

Fisheries Division

Marcy N. Wilder, Ph.D. received the Zoological Science Award from the Zoological Society of Japan for “Accumulation of ovarian ecdysteroids in synchronization with gonadal development in the giant freshwater prawn, *Macrobrachium rosenbergii*” on October 9, 1992. The award is given by the Society in recognition of outstanding scientific publication.

Okinawa Subtropical Station

Yuhō Maetsu received the Science and Technology Agency’s 37th Prize for Inventive Originality and Distinguished Service for the development of an improved soil sampler for the testing of negative water pressure on April 15, 1996. **Tetsu Maoka** received the Young Scientist Award from the Japanese Society of Plant Pathology for “Studies on the papaya ringspot virus” on April 2, 1996. The award is given to a rising, young researcher as the Society’s recognition of the individual’s achievement and promise. **Makoto Yamamori** received the Japanese Society of Breeding’s Young Scientist Award for “Production of waxy wheats” on April 2, 1996 also in recognition of outstanding contribution as a rising scientist.

JIRCAS AND THE MINISTRY OF AGRICULTURE, FORESTRY AND FISHERIES

MAFF Research Structure

The Japan International Research Center for Agricultural Sciences (JIRCAS) is one of 29 research institutes belonging to the Ministry of Agriculture, Forestry and Fisheries (MAFF), the Government of Japan. In this age, in which we have seen remarkable progress in advanced fields of science and technology including biotechnology, MAFF's research institutes are playing a key role in the development of new technologies to pave the way for further development of the food industry, and promotion of agriculture, forestry and fisheries activities in the 21st century. MAFF's institutes work in close collaboration with local governments, universities, and private research organizations and aim to contribute to the overall prosperity of Japan while making significant contributions to the international community.

Nineteen of the 29 institutes including JIRCAS are directly overseen by the Agriculture, Forestry and Fisheries Research Council (AFFRC), which is a special agency attached to MAFF. The main duties of the AFFRC are overall research planning and coordination, liaison and coordination between research and administration, administration and guidance of the institutes, and research assistance to prefectural organizations and the private sector. The AFFRC is headed by a chairman, and its advisory members consist of independent university faculty members and previous MAFF research institute directors ([Table 1](#)). The remaining 10 institutes, which include one institute devoted to forestry and nine fisheries research institutes, are also attached to the AFFRC. However, they are overseen by the Forestry Agency and the Fisheries Agency, M administrative agencies directly under MAFF. Overall MAFF research Structure is as shown in [Fig.1\(123KB\)](#).

JIRCAS is unique among the 29 research institutes in that it serves as an international research center but is at the same time part of the overall MAFF infrastructure. Thus, it is involved in active exchange and collaboration with the other 28 institutes. JIRCAS is located in the Tsukuba Science City which is about 50 km northeast of Tokyo [Fig.2\(74KB\)](#). Many other MAFF institutes are also located in Tsukuba, and the AFFRC secretariat maintains a Tsukuba office, forming the Tsukuba Institutional Complex. Tsukuba itself is home to numerous other research institutes and experimental facilities belonging to other ministries and agencies of the Japanese Government as well as to the private sector.

Research structure at JIRCAS

JIRCAS has a current staff of 164 including research scientists and administrators. Forty-three staff are located out of Tsukuba at JIRCAS's Okinawa Subtropical Station. JIRCAS is headed by a Director General; the Research Planning and Coordination Division oversees the seven research divisions which are comprised of the Research Information Division, Biological Resources Division, Environmental Resources Division, Crop Production and Postharvest Technology Division, Animal Production and Grassland Division, Forestry Division, and the Fisheries Division as well as the Okinawa Subtropical Station. The Administration Division is responsible for general administrative affairs. Research structure at JIRCAS is delineated in [Fig.3.\(76KB\)](#)

Research Planning and Coordination Division

The Research Planning and Coordination Division in itself does not act as a research division, but rather serves to oversee and support the activities of the Research Divisions and Subtropical Station. The Division consists of four sections which are the Research Planning Section, the Research Coordination Section, the International Relations Section, and the Publication and Documentation Section. In addition, a Research Information Officer is assigned to the Division.

In order to promote the implementation of research programs both overseas and in Japan, the first 3 sections are responsible for the overall planning of JIRCAS research projects, dispatching of researchers on long- or short-term basis, implementation of programs for the invitation of researchers and administrators, and liaison and coordination with international and domestic institutions and agencies. The Publication and Documentation Section is responsible for the collection, classification, and supply of bibliographic materials from both overseas and domestic sources, as well as the release of public relation materials. The Research Information Officer handles the coordination of collaborative activities with the Japan International Cooperation Agency (JICA) and related research institutions and deals with problems pertaining to the exchange of technical information. Additionally, the Division coordinates the organization of various meetings and workshops including JIRCAS's International Symposia.

Administration Division

The Administration Division consists of three sections: the General Affairs Section, the Accounting Section, and the Overseas Support Section. The General Affairs Section is responsible for the management of official documents, personnel-related matters, and social affairs pertaining to JIRCAS staff. The Accounting section handles overall accounting, all budgeting, settlements and wage distribution. Lastly, the Overseas Support Section is in charge of all matters pertaining to JIRCAS's overseas operations, which includes general international affairs, overseas expenditures, and overseas shipments of equipment and materials.

Other

The Okinawa Subtropical Station has its own General Affairs Section which is independent of the Administration Division. Additionally, JIRCAS has two field management sections which oversee JIRCAS's experimental fields. The Okinawa Section is directly under the Subtropical Station management and the Tsukuba Section is attached to the Crop Management and Postharvest Technology Division.

[Back to Contents](#)

INTERNATIONAL RESEARCH AT JIRCAS

International collaborative projects at JIRCAS encompass all of the fields of agriculture, forestry and fisheries and are being carried out in collaboration with counterpart institutions comprising international research centers including the CGIAR, national research organizations and universities. As detailed in the "Highlights" section, the integrative-type comprehensive project was initiated with the transformation of TARC into JIRCAS; there are currently 3 ongoing comprehensive projects in Thailand, Malaysia, and Vietnam, with the fourth destined to commence in fiscal year 1996 in Brazil. In addition, JIRCAS continues to promote the specific, focused type of project carried out at TARC; details of some of these projects can be found in the description of activities of the JIRCAS Research Divisions. As part of this year's feature on research activities in Latin America, the following pages provide an introduction of research activities at 3 international research centers: CIP, CIMMYT and CIAT. A summary of all ongoing collaborative projects can be found at the end of this section.

RESEARCH SITES AROUND LATIN AMERICA

[For collaborative research at CIP-Quito click here](#)

Collaborative Research Project with CIMMYT on Wheat Maize Crosses

The International Maize and Wheat Improvement Center (CIMMYT) was established in 1966 in Mexico, following the implementation of a special research program sponsored by the Mexican Government and the Rockefeller Foundation. CIMMYT, with headquarters at E1 Batan, 45 km northeast of Mexico City, and with 15 regional offices in the developing countries, implements research and training programs related to the production of maize and wheat. Major activities include the development and worldwide distribution of improved varieties, the conservation of genetic resources, and the production of documentation related to new knowledge concerning these crops.

CIMMYT developed new wheat varieties in the 1960s characterized by stable stem rust resistance, photoperiod insensitivity and semi-dwarfness. These characters enabled the adaptation of these varieties far beyond Mexico to many other countries and developing areas. This resultant rapid growth in wheat production led to the so-called "green revolution." In the post-green revolution, breeding methodology is being continually refined, and breeding strategy is being carried out in terms of agroecological region.

At present, the use of haploids is of great interest to wheat breeders, since the production of haploid plants followed by chromosome doubling enables the creation of genetically homozygous lines. The successful production of doubled haploids provides the most rapid method for developing homozygous breeding lines with favorable uniformity in selection procedures, and complements conventional breeding programs. JIRCAS has been promoting the technical development of wheat haploid production

through wide crosses in collaboration with the International Center for Agricultural Research in the Dry Areas (ICARDA). It is possible to obtain, for example, wheat haploids from wide crosses using wheat as the female parent and a perennial species, *Hordeum bulbosum* L. as the pollen parent. After fertilization, the chromosomes of the pollen parent are eliminated from the hybrid zygote resulting in the production of wheat haploids. This method is limited since the success of haploid production depends strongly on the wheat genotypes used for crosses.

Recent reports have indicated that crosses of wheat with maize pollen result in the production of wheat haploids across diverse wheat genotypes. In addition to maize, selected species from the *Panicoides* subfamily, such as pearl millet and sorghum, also provide an alternative pollen source for wheat haploid production. A collaborative research project between CIMMYT and JIRCAS has been in progress since 1993 and has focused on the development of wheat — maize crosses for producing and utilizing wheat haploids for breeding purposes and genetical analyses. The current cooperative studies related to wheat haploids include the development of methods for long-term storage of maize pollen, genetic analysis of drought tolerance, and evaluation of various breeding schemes. Technical development for the efficient production of wheat haploids is expected to contribute to the promotion of basic research projects as well as conventional breeding programs.

Collaborative Project with CIAT: Upland Rice Research for Sustainable Development of Acid-soil Savanna in South America

CIAT (Centro Internacional de Agricultura Tropical), based in Colombia, is one of the three international agriculture centers situated in Latin America. CIAT has conducted high-level scientific work and has contributed significantly to agricultural development world-wide for more than a quarter of a century by concentrating its efforts on 4 programs: bean, cassava, rice and tropical forages. In 1992, CIAT initiated three new programs, tropical lowlands, hillsides and land use in context of natural resources management in order to further promote research leading to sustainable agriculture development.

CIAT and JIRCAS (since TARC days) have enjoyed a long history of collaboration in research on tropical pastures since 1977 in which JIRCAS dispatched seven pasture scientists to the Tropical Forage Program of CIAT. Throughout this project, the development of highly productive pastures consisting of both legumes and grasses was been pursued. The development of seed-coated pellet fertilizer is one of the research highlights which arose from this project. At present, an ecophysiologicalist from JIRCAS is investigating the mechanism of legume persistence in pastures in order to develop suitable methods of management for the maintenance of legumes.

In addition, a new collaborative project on upland rice was initiated in January 1992. This project is also aiming at achieving sustainable development of the vast expanses of savanna covered with strongly acid soils seen in some parts of Latin America. The productivity of native pastures could be substantially increased through the introduction of improved pastures together with appropriate fertilizer application and soil management. However, the problem remain that improved pastures undergo degradation with time, and it is very difficult to renovate them because of the initial cost incurred by the farmers.

To address these problems, CIAT introduced a rice/pasture system in the late 1980s. In this system, the pasture is sown with upland rice and fertilizer is applied at the beginning of the rainy season. After 4 months, rice is harvested, and earnings can cover the initial cost of establishment, while the pasture grows well with organic matter derived from rice roots and stems as well as residual fertilizers. This system was implemented with the release of a new variety of upland rice which is high-yielding, has good grain quality, and is tolerant to acid soils. Breeding was initiated by CIAT in 1982, through crosses of indica rice (high-yielding variety with slender shape, good grain quality) with tropical japonica rice variety (tolerant to soil acidity). However, since the mechanism of tolerance of this variety has not yet been elucidated, the development of effective screening techniques for further improvement of similar types of tolerant varieties could not be realized.

JIRCAS initiated a collaborative project within the framework of CIAT's Rice Program and has dispatched a crop physiologist to pursue on-site research(?). The strategy of the research project is 1) to analyse changes in soil condition in fields of upland rice on acid savanna soils in relation to the growth of roots of upland rice, 2) to expose rice plants to soil-limiting factors prevailing in the area (high Al, or low pH, P, Ca, Mg) in order to reveal genotypic differences between tolerant and susceptible varieties, 3) to identify physiological and/or biochemical mechanisms controlling differences in tolerance (e.g. root exudates with chelating ability of elements) and 4) to develop rapid and accurate screening methods based on these mechanisms. Varieties were found to differ in Al tolerance as well as tolerance to low Ca and Mg contents of soils (see Research Divisions section). At present, the analysis of root exudates is also being pursued. A simple screening method based on Al tolerance is already in use in the selection of potential parents in the breeding program.

Savannas in Latin America cover vast areas which are under-populated and under-utilized. Although the soils tend to be acidic with low fertility levels and therefore must be used carefully, the topography is flat, precipitation is abundant and evenly distributed, temperature is high and the physical properties of the soils are adequate. It is anticipated that this collaborative project will contribute to the improvement of the management and utilization of these valuable natural resources for sustainable utilization.

Collaborative Research at CIP-Quito

The International Potato Center (CIP) with headquarters in La Molina near Lima in Peru has recently celebrated its 25th anniversary. CIP started with a mandate to carry out research for potato food security which was subsequently expanded to include research on sweetpotato and Andean Root and Tuber Crops (ARTCs). In 1989, CIP established a research station in Ecuador within the site of the National Agricultural Research Institute (INIAP) on the outskirts of the capital city, Quito. CIP-Quito is located at an altitude of 3058 meters above sea level, and is the closest to the equator and second highest among CIP's worldwide network of research sites.

Ecuador, one of the world's richest countries in terms of biodiversity, is divided into three eco-regional areas. Mountainous highlands run in the center of the country from north to south, and tropical lowlands lie on the coastal plain and in the Amazon basin to the west and east of the mountains. Among its biodiversity, Ecuador provides a large number of plant species as food crops. The wide range of climatic conditions, from tropical rain forest on the east coast and the Amazon jungle to the cold zone in the highlands of the Andes, has resulted in the development of a broad variety of species.

In addition to the well-known potato, the Andes are home to nine other lesser-known root and tuber crops: achira (*Canna edulis*, Cannaceae), ahipa (*Pachyrhizus ahipa*, Leguminosae), arracacha (*Arracacia xanthorrhiza*, Umbelliferae), maca (*Lepidium meyenii*, Cruciferae), mashua (*Tropaeolum tuberosum*, Tropaeolaceae), mauka (*Mirabilis expansa*, Nyctaginaceae), oca (*Oxalis tuberosa*, Oxalidaceae), ulluco (*Ullucus tuberosus*, Basellaceae), and yacon (*Polymnia sonchifolia*, Compositae), but most of these crops are seldom cultivated today in the Andes. The ARTCs were lost from the scientific scope until recently in spite of their importance as high-yielding food crops on the Andean highlands and their potential for new food materials as well as for industrial and medicinal uses.

The lack of basic biological information on ARTCs has hindered their improvement as well as the management of these genetic resources. In order to gain basic biological and agronomical information and to help in improving and maintaining ARTCs, in 1993, the Japan International Research Center for Agricultural Sciences (JIRCAS) initiated a joint project entitled "Cytogenetical Characterization and Evaluation of Andean Root and Tuber Crops" with CIP, which is being carried out at CIP's experimental station in Quito, with the assistance of INIAP.

In the course of the research project, it was found that yacon has at least 2 different basic chromosome numbers, and the normal cultivar is octaploid. We also observed a decimodiploid cultivar which could be derived from an intervarietal hybrid between 2 morphological groups. Yacon is one of the major natural sources of fructooligosaccharides, accounting for about 90% of the total sugar content. This research may open up possibilities for increased utilization of this plant through hybridization breeding for ploidy manipulation and fructan production.

Another ARTC, achira, produces the largest starch granules among all plant species. Since the starch is highly digestible and has a low gelatinization temperature, it has much potential for food and industrial uses. We noted that achira has a fragile part on a single particular chromosome and observed broken chromosomes at the centromere in root tip cells of all varieties, which may account for the fact that many researchers have considered that there were aneuploid varieties. We also found that the rhizome position is very important for starch production regardless of polyploidy level. There are 3 rhizome positions; epigeal, endogeal and hypogeal. Cultivars with epigeal rhizomes always produce a large amount of total starch. This characteristic could be used as a breeding index for improving starch production. We are

currently attempting to promote triploid breeding for improving achira for purposes of starch production.

In addition to cytogenetic studies, research on the ecophysiological characteristics of these crops with emphasis placed on adaptation to various environmental conditions as well as studies on the biochemical composition of the crops are necessary to be promoted. We anticipate that the results obtained through this collaborative project should contribute to the conservation and better utilization of these valuable genetic resources, the ARTCs.

RESEARCH INFORMATION DIVISION

The Research Information Division of JIRCAS has three main responsibilities relating to overall research operations of the institute. The first is to collect and analyze information pertaining to agricultural sciences and the related socio-economic situation in developing countries. The second is to formulate and coordinate collaborative research projects. The third is to develop and maintain a computer-based information system in JIRCAS.

Studies on agriculture, forestry and fisheries in developing countries are conducted by two groups of research coordinators and senior scientists. The first group takes a region-oriented approach by assigning themselves to five regions: monsoon Asia, arid and semi-arid Asia, Africa, Latin America and developed countries. The research coordinator in charge of developed countries looks at how these countries have applied research strategies to agriculture in developing countries as well as how international agricultural research institutes search for and conduct concerned collaborative research projects with developing countries.

The second group of research coordinators takes a problem-oriented approach by conducting studies involving three major topics: the environment, food problems, and rural development. The research coordinator handling environmental problems has been focusing on development of technology for the rehabilitation of soils with salt accumulation in the Central Asia. Another research coordinator and a senior research scientist are working on developing new world food models and making a long-term projection of the world food situation in collaboration with the Policy Planning Division of MAFF, the International Food Policy Research Institute (IFPRI), and the FAO. A research coordinator and a senior research scientist assigned to rural development have conducted an intensive study visit in various regions of Indonesia and India.

Research coordinators are committed to formulate and coordinate collaborative research projects based on their studies on regional agriculture or agriculture-related problems. In 1994, JIRCAS launched its first integrative research project "Evaluation and improvement of farming systems combining agriculture, animal husbandry, and fisheries in the Mekong Delta." One research coordinator serves as the project leader and chairs a working group consisting of the directors of the relevant Research Divisions and the involved researchers. In 1995, JIRCAS commenced the following two integrative projects: "Productivity and sustainable utilization of tropical and subtropical brackish water ecosystems" is a collaborative project with Malaysian research institutes and universities, and "Development of sustainable agricultural technology in Northeast Thailand" is follow-up of a project conducted by JICA which had been completed in 1994. A fourth integrative project "Development of a sustainable agro-pastoral system in the subtropical area of Brazil" will be commenced in collaboration with the Brazilian Agricultural Corporation (EMBRAPA).

The Research Information Division is also in charge of the development of computer information processing technologies such as data base management, geographic information system construction, local networking application of multi-media computer for promoting dissemination and utilization of research information. The Division is now developing a comprehensive information system including statistical data (JIRCAS-STAT), documents such as travel reports and imagery data (JIRCAS-INFO) based on PC windows and UNIX with the addition of social sciences as a new research field at JIRCAS.

The three responsibilities of Research Information Division remain in the course of development and

undergo constant revision and reorganization as our information system continues to develop.

[TOPIC: JIRCAS-STAT, A statistical database system for world agriculture, forestry and fisheries](#)

JIRCAS-STAT, A statistical database system for world agriculture, forestry and fisheries

In order to facilitate analytical work for the planning of research projects and assistance of global research such as the world food demand-supply projections, the Division has constructed a statistical database system which enables the handling of a large variety of socio-economic time series data in an integrated manner.

Using this database system, the user can look up needed data simply by selecting the regions, items and years of interest. The user can arrange the data in various types of tables. In addition, using the combined software, a graphical display of the data and statistical /econometric analyses can also be carried out easily.

Most of relevant data published by international organizations dating up to present(?) have been stored in the database using a common format. The database covers yearly statistics related to the fields of agriculture, forestry and fisheries including general indicators such as population figures, GDP, and land usage values. In addition, the database includes data arranged according to products, with references to production, trade, food balance sheets and food aid.

Data Stored in the JIRCAS-STAT database

<u>Contents</u>	<u>Number of time series(in thousands)</u>	<u>Storage Space(in MB)</u>
Population, Land use, Production (F.A.O)	200	50
Trade (F.A.O)	310	99
Food Balance Sheets (F.A.O)	540	128
Forestry Fisheries (F.A.O)	140	36
USDA. OECD. WB	130	113

The advantage of this system is its userfriendliness. As it is based on the Windows operating system which is currently the most widely-used system for personal computers, users do not need to learn any special commands. Because of the original approach employed in this system of transforming a modern relational database structure into a suitable structure for a statistical time series data, the database has advantage of great efficiency in terms of both processing speed and data storage space.

The system is being used in the preparatory work of the Division's econometric model analysis of the world food market. It has already been installed in several locations of the headquarters of the Ministry of Agriculture, Forestry and Forestry. Within a year it will also be available through an information network for remote users in the Ministry. In addition, a database system for documents and photographs is being constructed in the Division.

BIOLOGICAL RESOURCES DIVISION

Environmental stresses such as drought, high and low temperature extremes, and pest and disease outbreak can result in the serious instability of a crop yield with devastating results, bringing about the starvation and malnutrition of a large number of people in a developing region. In addition, a rapidly growing population rapidly accelerates the deterioration of natural resources, especially in marginal lands, which may lead to further degradation of food production. We are now faced with the need to increase and stabilize agricultural production through methods compatible with the preservation of the environment. To achieve this objective, it is essential to develop agricultural technologies by optimizing the use of biological resources.

In light of the above, the first objective of the Biological Resources Division is to collect, evaluate and preserve germplasm accessions of under-utilized crops and wild relatives, taking into account the rapid genetic erosion occurring on a world-wide scale. In this regard, studies on mungbean germplasm, which had been carried out at the Chai Nat Field Crops Research Center in collaboration with the Department of Agriculture, Thailand, since 1987, were completed in 1995 and recent progress in this research field was reviewed during the workshop held in Bangkok, Thailand on August 17, 1995. The proceedings of the workshop were published as JIRCAS Working Report No.2.

Secondly, using biotechnological procedures, we are studying the mechanisms of tolerance to environmental stresses in higher plants at the molecular level. The molecular biology group of the Division including several visiting scientists is studying the molecular mechanisms of drought tolerance in *Arabidopsis thaliana*, *Vigna unguiculata* and other higher plants. These studies will be integrated with the overseas research activities of the Division, especially with a project involving drought-tolerant cowpeas, *Vigna unguiculata*, in the sub-Saharan regions conducted at the Kano Station of the International Institute of Tropical Agriculture.

Thirdly, using genetic resources and applying biotechnological procedures, we are implementing collaborative breeding projects in various countries in order to develop new varieties of rice, wheat, and vegetables characterized by high yield potential and resistance to various diseases and environmental stresses. These new varieties should contribute to the increase and stabilization of agricultural production with lower input in the developing regions. In 1995, a new research project on the use of soybean genetic resources for the implementation of a breeding program in northeastern China was initiated at Jilin, China, in collaboration with the Soybean Institute of the Jilin Academy of Agricultural Sciences.

[TOPIC1:Use of stored pearl millet pollen in wheat haploid production](#)

[TOPIC2:Screening cowpea lines for drought tolerance and its expression in roots.](#)

TOPIC 1: Use of stored pearl millet pollen in wheat haploid production

The use of haploids in plant breeding programs is of great interest to breeders, since the production of haploid plants followed by chromosome doubling enables the breeder to obtain genetically homozygous lines. The successful production of doubled haploids provides the most rapid means for developing recombinant lines with favorable uniformity in selection procedures, and serves as a complement for conventional breeding programs. JIRCAS (formerly TARC) has been promoting technical development of haploid production in wheat (*Triticum aestivum* L.) through wide crosses in collaboration with the International Center for Agricultural Research in the Dry Areas (ICARDA), Syria, and the International Maize and Wheat Improvement Center (CIMMYT), Mexico.

Up until the present, significant technical advances have been attributed to pollen selection from subfamilial species and application of plant growth regulators. However, this type of methodology always requires viable pollen at the time of pollination and restricts haploid production duration. An adequate pollen storage technique has the potential to resolve this disadvantage. In a previous study, maize (*Zea mays* L.) pollen stored at an ultra-low temperature produced haploid wheat embryos, but the frequencies were greatly reduced. Pearl millet (*Pennisetum glaucum* (L.) R. Br.) is an alternative pollen source for haploid production of wheat.

The effects of drying and freezing on the viability of pearl millet pollen and the crossabilities of wheat with stored pearl millet pollen were examined in this study. Freshly collected pollen of 40-50 % water content germinated at frequencies of 70-80 %. Dried pollen of 5-7 % water content after two hours of drying showed germination frequencies of 40-50 %, and also maintained similar germination frequencies after the freezing process. In crosses of wheat variety Norin 61 with the pearl millet pollen stored for one month, the embryo formation frequencies ranged from 17.4 to 27.5 % which were comparable the frequency obtained in a cross of fresh pollen ([Fig. 1](#)). After five months of storage, the frequencies still kept similar values at storage temperatures of -80 and -190°C, but were greatly decreased at -20°C. All of the plants regenerated from embryos were wheat haploids carrying a complement of 21 chromosomes ([Fig. 2.](#)). These results suggest that pearl millet pollen is more tolerant to drying and freezing than maize pollen, and that pearl millet pollen stored at ultra-low temperatures is an efficient haploid production source for wheat.

TOPIC 2: Screening cowpea lines for drought tolerance and its expression in roots.

Cowpea is a leguminous crop particularly important in savanna areas of West Africa and is well- adapted to semi-arid conditions. However, because of the risk of erratic rain fall and long dry spells, much higher drought tolerance is required in cowpea in order to utilized it as an effective crop.

Nine-hundred cowpea germplasm lines were screened in the field during the 1990-91 dry season. Selected lines were further screened using pots in which soil moisture content was maintained at 3% (w/wet weight) every day. Drought-tolerant as well as drought-susceptible varieties were further evaluated in the field during the dry season. Plants were sown after the last rain and were allowed to grow using only residual soil moisture. Drought-tolerant lines grew very vigorously and yielded about 1 ton per ha, although usually grown traditional and improved varieties yielded less than 500 kg per ha and susceptible lines less than 300 kg per ha ([Table 1](#)). These tolerant lines are expected to perform well and show more stable yields in drier areas. However, because the characteristics of these seeds are not preferred among local farmers, these lines are being considered for use as parent lines for drought-tolerant breeding.

Drought-tolerant lines are usually well-adapted in dry conditions, and therefore, are likely to have good root characteristics. In order to investigate the important root features for adaptation under dry conditions, the root distribution patterns of drought-tolerant and susceptible lines of cowpea were compared. Plants were grown in thin root boxes measuring 56cmW x 76cmH x 4cmD. Boxes were buried in soil to maintain soil temperature close to that of the natural soil. After growth of 12 days to 3 weeks, roots were fixed with on a pin board and soil was washed out with a gentle shower.

Clear differences were observed in root distribution in deeper zones between drought-tolerant and susceptible lines ([Fig. 1](#)). Drought-tolerant lines had a wider distribution of roots in the deeper zones of the root systems in comparison with drought-susceptible lines which had only tap roots penetrating deeply with less branching. It is considered that a wider distribution of roots in the deeper zone is important in concentrating scarce soil solutions in deeper soil layers.

[Fig. 1. Root distribution patterns of drought-tolerant and susceptible lines of cowpea.](#)(32 KB)

Drought tolerance and root character are two important, but independent factors complementing each other in developing adaptation ability to dry conditions. It is important to accumulate these factors in the cowpea which is an important agricultural crop. Efforts are being made to combine these factors with other characteristics such as early maturational ability, as well as diseases, insect pest and parasitic weed resistance to contribute to the stable production of cowpea in the Sahelian area.

Table 1. Grain yields of drought-tolerant lines (upper 4 strains), traditional and IITA-released cultivars (middle 3 strains) and drought-susceptible lines (bottom 3 strains) of cowpea. Yields are shown per plant and per area.

ENVIRONMENTAL RESOURCES DIVISION

A recent estimate suggests that the world human population will reach the 6.3 billion mark by the year 2000 and the 6.8 billion mark by 2025. To feed this ever-increasing population, existing agricultural land is likely to be subjected to a higher intensity of cultivation in populous areas, and farmland development to be extended to areas only marginally suited for agriculture. Trade liberalization in recent years has led to a sharp increase in import of commercial crops and is encouraging increased production in exporting countries; this may result in excessive load to farmland soils, continuous single cropping and deforestation in such countries. Past, unfortunate experiences have shown us that these practices have accelerated farmland degradation and desertification on a global-scale. Such drastic changes in land use cause climatic transformation over extended regions and bring about unpredictable constraints to existing agricultural and forest ecosystems.

From the second half of this century, patterns of land utilization have been changing due to population expansion. These changes, along with a rapid increase in fossil fuel consumption has tremendous impact on the atmosphere through intensified emissions of carbon, nitrogen, and sulfur gases. The annual consumption of fossil fuel now exceeds 5 billion tons of carbon. If the present level of consumption continues, CO₂ concentration will increase by 0.5% per year and double by the middle of the next century. The IPCC report (1990) suggests that a two-fold increase in CO₂ concentrations can potentially cause an increase in global mean surface temperature ranging from 1.5 to 4.5°C.

It has furthermore been shown that the atmospheric concentrations of other greenhouse gases such as methane, nitrous oxide and chlorofluorocarbons have also increased greatly within the past two decades. If the effects of these trace gases are taken into account, global warming is estimated to take place more rapidly than in the case where the effects of CO₂ are considered alone. These trace gases move from the troposphere to the stratosphere and participate in the destruction of the stratospheric ozone. The depletion of the ozone layer allows more ultraviolet rays to reach the earth surface where millions of species of organisms live without any means of protection from ultraviolet radiation.

To address these problems, research projects in this division are being organized to identify and develop technologies for the improvement of agricultural activities and rehabilitation of degraded lands. The target technology must be compatible with the conservation of the environment and ecosystem such as of arid lands, wetlands and sloped lands which have long been considered of little use for agriculture. Other projects aim at the development of technology for sustainable agriculture through analyzing mechanisms of nutrient cycling within arable land ecosystems. To conserve the global environment in harmony with agricultural activities, research on sustainable agriculture should be given foremost emphasis.

[TOPIC 1: Distribution patterns and characteristics of Philippine lowland soils](#)

[TOPIC 2: Mechanisms of acid-soil tolerance of upland rice](#)

[TOPIC 3: Options for mitigating methane emission from tropical rice paddy fields](#)

TOPIC 1: Distribution patterns and characteristics of Philippine lowland soils

In the Philippines, increases in rice production are very much needed, considering the rapid population increase in recent years. Thus, studies to clarify the fertility characteristics of the Philippine lowland soils in order to establish their real potential for rice production are highly required. The present study aimed to characterize the Philippine lowland soils from a pedological viewpoint in reference to factors such as parent material, climate, and topography.

The thirty-two major lowland soils from six lowland rice areas were selected in this study. Out of the soils examined, fifteen soils were considered to be irrigation water aquic, while the seven soils were regarded to be ground water aquic. Setting the dry month as <100 mm of rainfall, the ground water aquic soils were found only in the relatively humid areas with f4 dry months per year. In connection with the change in topography from natural levee to back swamp, in Central Luzon with >4 dry months per year, the increasing influence of irrigation water was obvious, while in Bicol with <2 dry months per year, the increasing influence of ground water was recognizable. Thus, the importance of rainfall and topographic conditions for profile development was verified.

Philippine lowland soils had high organic matter status, high base status, high clay and high available silica contents, as well as a high content of 14 + minerals, mostly smectite, compared with other tropical Asian lowland soils. However, there were some observed regional differences, e.g., with organic C and total N contents, reflecting the difference of rainfall condition among the regions.

This study shows that the various characteristics of the Philippine lowland soils are essentially controlled by the basic nature of the parent materials. In view of this, the Philippine lowland soils can be considered to have relatively high potentiality for rice production among the tropical Asian paddy soils. However, diversity of the soil characters is induced by two conditions, rainfall and topography, which may cause differences in soil fertility among regions and within a region, respectively. Thus, based on the knowledge obtained in this study, to develop proper soil management techniques leading to higher yield and sustainable rice cropping, is highly required.

[Photo:Photomicrograph of Fe coatings of a root channel \(tubular mottles\), typical in ground water aquic soils. 35KB](#)

TOPIC 2: Mechanisms of acid-soil tolerance of upland rice

The savannas of South America (Cerrados and Llanos), which extend more than 2.4 million hectares, up until now, have been utilized only for extensive ranching due to their acidity and low fertility of soil. In this research, a new rice-pasture system was developed and introduced to these ecosystems as an alternative sustainable cropping system. In this cropping system, upland rice germplasm which has tolerance to soil acidity is a necessity. The physiological mechanisms of tolerance to soil acidity are, however, not well understood. Therefore, the mechanisms of acid tolerance were investigated by comparing tolerant and susceptible genotypes with the aim of obtaining basic information for the development of efficient screening methodology.

In field experiment on liming response, the susceptible genotypes yielded less at a liming rate lower than 300 kg/ha, whereas the tolerant ones showed no yield reduction even at 0 kg/ha liming. These results indicated a clear genotypic difference in terms of tolerance to soil acidity among upland rice germplasm. In actual farming practice, soil pH decreased to 4.3 and aluminum concentration in soil solution increased to the toxic level only at the middle and late growth stages, which showed that toxicity due to high aluminum may occur only at these stages. This acidification process was found to be enhanced by fertilization using KCl and urea.

The mechanisms of tolerance to aluminum can be distinguished as: 1) internal tolerance - aluminum is absorbed into the plant symplasm but is detoxified and 2) exclusion - the entry of aluminum into symplasm is in general blocked. In an enclosed pot experiment using savanna soils, the tolerant variety maintained higher soil pH in the pots and thus maintained lower aluminum concentration in soil solution. When the tissue concentration of aluminum was same in both varieties, growth was also the same. These results indicated that, as one of the exclusion mechanisms, the ability of maintaining higher soil pH around the roots is an important mechanism of aluminum tolerance in upland rice.

TOPIC 3: Options for mitigating methane emission from tropical rice paddy fields

The atmospheric concentration of methane (CH_4) has been noted to be increasing rapidly in recent years. Because it is a radiative trace gas (greenhouse gas) and takes part in atmospheric chemistry, this rapid increase could be of significant environmental consequence. Of the wide variety of the sources for atmospheric CH_4 , rice cultivation is identified as one of the major sources of CH_4 emission, and in particular, tropical rice paddy fields are significant because more than 70% of the world's rice acreage is located in this region. This research was aimed at measuring CH_4 flux from rice paddy fields and at developing the options for mitigating CH_4 emission from tropical rice paddy fields.

Field measurements performed at 9 sites in Thailand showed a large variation in CH_4 emission rates among the sites. The average emission rates during the rice cultivation periods ranged from 1.1 to 23.0 $\text{mg m}^{-2} \text{hr}^{-1}$. The results indicated that soil properties and agronomic practices including water and organic matter management affected CH_4 emission rates from rice paddy fields.

Application of rice straw to paddy soils prior to flooding increased total CH_4 emission 3.8- to 10.4-fold. The largest CH_4 flux was observed in the early stage of cultivation at the rice straw- applied plot, whereas it was observed in the latter stage at the plot without rice straw application. Green manure application also increased CH_4 emission significantly. On the other hand, some organic amendments such as palm oil wrung residue and complehumus did not affect CH_4 emission rates significantly. The results suggest that promoting aerobic degradation of organic matter by composting or incorporation into soil during the off-season drained period decreases CH_4 emission from tropical rice paddy fields.

Instrumentation for measuring CH_4 flux in Thailand

CROP PRODUCTION AND POSTHARVEST TECHNOLOGY DIVISION

Due to the constant increase of the human population, it is urgent to increase crop production in order to deal with increasingly severe food problems. The status of the food supply will become more serious as it is realized that patterns of food consumption are being improved in developing countries: people will require more meat, fruits, vegetables and oil in accordance with social development and achievement of higher incomes.

In the developing regions of today, self-reliance in food, rather than self-sufficiency is an important objective. There are no common models for achieving this goal, but it may be considered that there are various ways to go about this in context of the natural and environmental conditions of a particular country.

The Crop Production and Postharvest Technology Division is carrying out studies covering production to storage, as well as the marketing and processing of crop products, and our research activities encompass a variety of disciplines including agronomy, plant protection (insect pests, disease and weed control), agricultural mechanization, irrigation, drainage, cropping systems, food storage, postharvest technology, farm management and agricultural economics.

Because the world-wide total area of arable lands is limited, we view that sustainable production of agricultural products can be achieved only by increasing overall productivity. For this purpose, various technological problems have to be resolved, but not withstanding that sustainable agriculture has to be compatible with the preservation of the natural environment. It is deemed necessary to reduce as much as possible the amount of chemical inputs in agricultural endeavors, and to achieve this, more research on biological or cultural control systems should be implemented, such as studies on the ecology of insect pests and their natural enemies and development of methodology for the prediction of outbreaks of insects and diseases. Thus, "integrated pest management" is strongly called for. Additionally, it is necessary to stress postharvest studies of agricultural products; quality improvement including safety and the extension of shelf life as well as control of the presence of insects and microorganisms in foodstuffs is one of the main objectives of this division. Finally, sustainable production of agricultural commodities can only be supported by the development of sustainable markets. Technology for enhancing the value of agricultural products is being developed with the aim of increasing the incentive of the farmer to promote sustainable production. Economic studies are requisite in furthering the regional development of respective countries.

[TOPIC 1: Ecology of weedy rice \(*Oryza sativa* L.\) and its control strategy in direct seeded rice fields in Malaysia](#)

[TOPIC 2: Reproductive strategy of the parasitoid fly, *Exorista japonica* \(Diptera: Tachinidae\): clutch size regulation with host density](#)

TOPIC 1: Ecology of weedy rice (*Oryza sativa L.*) and its control strategy in direct seeded rice fields in Malaysia

Weedy rice, which is locally known as padi angin in Malaysia, shows many undesirable traits such as easy grain shattering. The presence of weedy rice was initially reported in Projek Barat Laut Selangor in 1988, and thereafter, similar infestation problems were detected in the Muda rice area in 1990. Serious conditions became obvious in 1993, with a total of 168 ha becoming infested in this area. Weedy rice inflicts crop loss by reducing the yield and quality of commercial rice. The problem is now noted to occur frequently in direct seeded rice fields, and is apparently increasing with the spread of direct seeding rice culture in tropical Asia.

[Photo: Grain shattering of the rice crop before harvesting \(20KB\)](#)

In this research, it was found that weedy rice plants show continuous variation in morphology; although they showed many close similarities to modern rice cultivars, they differed from the latter in terms of culm length, leaf color, grain size, pericarp pigmentation, and awn and panicle form. Detailed survey of their morphologies showed that the majority (93%) of weedy rice plants had longer culms than modern cultivars, 34% had pigmented grains, and 39% had grains with long awns. DNA analysis using randomly amplified polymorphic DNA (RAPD) markers revealed that the genetic structure of weedy rice plants was also of close similarity to cultivated rice, indicating that the Malaysian weedy rice (padi angin) could have originated from cultivated rice.

Based on a survey we conducted by interviewing farmers in the Muda and Tanjung Karang rice areas, we found that weedy rice infestation was more serious in dry seeded rice fields and less so in wet seeded fields. Seedling establishment in dry seeded fields is more unstable because it is subject to the vagaries of uncertain rainfall. Poor establishment of such dry seeded rice was sometimes observed to be compensated by volunteer seedlings which emerged from shed seeds in the previous season. It was with this emergence of volunteer seedlings that weedy rice was found to occur. In the first season (off-season) of 1987, volunteer seedling culture was practiced in nearly 40% of total rice fields, where farmers depended on volunteer rice seedlings for the season crop. Volunteer seedling culture decreased in the off-seasons from 1988 to the early 1990's, when dry seedling culture was encouraged to save irrigation water because of an on-going shortage of water supply from irrigation dams. The practice of dry seeding culture associated with volunteer rice seedlings was therefore considered to be the most important factor causing infestation of weedy rice in Malaysia, although seed contamination too, was considered to be a factor exacerbating weedy rice problems in the above areas.

Weedy rice emerges earlier than dry seeded cultivated rice, resulting in its competitive advantages over cultivated rice. In seriously infested fields where weedy rice plants occupied 35% of total rice plants, the rice grain yield was reduced to 3.2 ton/ha, which was 50% to 60% of the rice yield in the absence of weedy rice infestation. Plants with pigmented and/or awned grain and colored pericarp will also reduce the quality of rice grains.

Weedy rice showed wide variation in seed shedding behavior. Seed shedding started at eight days after heading in the earliest shattering type, and earlier shattering resulted in a higher shattering rate. seeds were classified into several grades, i.e., hard threshing, easy threshing, easy shattering, very easy shattering and spontaneous shattering type. The result of a germination test using fresh dry seeds

immediately after shedding indicated that the degree of seed dormancy of the spontaneous shattering type was higher than that of the intermediate shattering type. However, seed dormancy was absent at three months after shedding, suggesting that Malaysian weedy rice required less than three months to overcome its seed dormancy. This trait may be desirable for weedy rice to emerge in the next season of double rice cropping in Malaysia.

Mimicry of cultivated rice, seed dormancy and tolerance to rice herbicides are qualities of weedy rice which cause difficulties in controlling it, and costs farmers in eliminating it. The results of this ecological study suggested that no single technique would have superior effectiveness in controlling weedy rice, and integrated control measures based on ecological methods should be applied in order to overcome these problems. Culture practices which would be effective in reducing weedy rice populations are as follows;

- (1) Land preparation: Repeated rotovation is effective to reduce weedy rice population in rice fields. Weedy rice seedlings which are promoted to emerge by the first or the second rotovation will be buried in the soil by the second or the third rotovation. Intensive land preparation is also effective in obtaining uniform seedling establishment of broadcasted rice as well as reducing weedy rice population.
- (2) Seed purity: Certified seeds are required to preventing contamination by weedy rice. However, the capacity of seed production of government seed suppliers is not sufficient for rice production in consideration of total rice cultivation areas. More than two-thirds of areas under cultivation are suspected to be planted using farmers' own seeds from the previous crop.
- (3) Seedling establishment: Uniform and rapid seedling establishment of seeded rice could have advantages over weedy rice in terms of stronger competitive ability. Tillage for mixing seeds with soil and pressing the soil surface with a roller after sowing are recommended for uniform seedling establishment.
- (4) Manual weeding: Many farmers have noted that manual weeding is the most effective practice for controlling weedy rice. However, it cost farmers physically and economically. Moreover, there are difficulties in walking in broadcasted rice fields and carrying out the identification of weedy rice. Making a narrow ditch to walk in the field, or doing row seeding or drill seeding would help farmers to practice manual weeding. Successful farmers could identify weedy rice by leaf sheath color at early to middle stage of rice cultivation.
- (5) Chemical control: Herbicide usage before land preparation is effective to reduce the seed population of weedy rice in the field. Paraquat, glufosinate and glyphosate are available, and rotovation after herbicide usage increases their effectiveness. Few herbicides are available for after seeding in rice fields. Breeding of rice highly tolerant to herbicide would aid in the chemical control of weedy rice. Weedy rice, however, will continue to evolve physiologically and metabolically similar to rice cultivars. Continuous usage of herbicide resistant cultivar would cause herbicide resistant weedy rice to develop, through crossing and natural selection in the rice fields. Information on mating performance of weedy rice, gene transfer between weedy rice and cultivated rice, and genetic structure in rice fields is necessary for further investigation of the evolution of weedy rice.

TOPIC 2: Reproductive strategy of the parasitoid fly, *Exorista japonica* (Diptera: Tachinidae): clutch size regulation with host density

The family of Tachinidae flies is considered to contain very important potential biological control agents. There have been, however, relatively few studies on the biology of tachinid flies as compared with their parasitoid counterparts, the parasitic wasps; one reason may be that the culture of tachinids has many difficulties. In order to employ the tachinid fly as a biological control agent, it is first essential to not only develop rearing techniques for these insects, but also to conduct fundamental studies on their biology.

Exorista japonica, the species which attacks the common armyworm *Mythimna separata*, is also an important natural enemy of the common cutworm *Spodoptera litura*, and the cabbage armyworm *Mamestra brassicae*. It has been reported that *E. japonica* sometimes deposits supernumerary eggs on a single host in the field. Unanswered questions such as relating to the optimal clutch size necessary for maximizing the reproductive success of the female fly or whether a female fly can regulate clutch size in response to host density need to be solved before introducing this parasitoid into the field.

A member of JIRCAS's research staff has already established a rearing procedure for *E. japonica* and predicted that the optimal clutch size of *E. japonica* parasitizing a last-instar larva of the common armyworm, will gain maximum fitness varying 1-10 in response to the rate of host encounter, host density per unit area (patch) and oviposition ability the time of host encounter. To verify this prediction required clarification of whether the flies really regulate clutch size according changes in these factors. Therefore, the effects of host encounter rate and host density per patch on the oviposition decisions of *E. japonica* females were studied in the laboratory.

To determine the effect of host encounter rate and host density per patch on oviposition, either 1, 2 or 5 host larvae were simultaneously presented to a female of *E. japonica* at the intervals of 1 min, 2 h or 24 h. Host presentation was repeated three times for the female at the same interval as the rate of host encounter. For each experiment, the number of eggs laid per oviposition bout, clutch size and time spent in a patch were recorded. Since it is sometimes very difficult to determine one bout from the series of oviposition behaviour, a bout of oviposition in this study was defined as oviposition during the time of entering the patch to leaving it.

As a result, a female fly decreased clutch size as the rate of host encounter and host density per patch increased (Fig. 1 (a), Tukey-Kramer's method, $p < 0.05$), and also decreased the number of eggs per bout as the rate of host encounter increased and as host density per patch decreased (Fig.1 (b), Tukey-Kramer's method, $p < 0.05$). Under the same host densities, the parasitoids tended to stay for shorter durations in a patch at the interval of 1 min than at those of 2 h and 24 h (Fig. 1 (c), Tukey-Kramer's method, $p < 0.05$). On the other hand, time spent in a patch at an interval of 1 min increased with host density, although there was not significant difference among time in a patch at other intervals with increasing host density. Figure 1 (d) shows percentage of hosts oviposited with one or more than one egg (percentage parasitism). The flies parasitized 100 % of hosts at all intervals when given one host per patch. When given 2 or 5 hosts, percentage parasitism increased as the rate of host encounter decreased, but rapidly decreased as the result of flies leaving the patch with unparasitized hosts when host density increased (χ^2 -test, $p < 0.05$).

In this study, hosts were provided to a female fly not only at different time intervals but also with different host densities, and flies laid more eggs in a bout as host density increased even at the same intervals in which hosts were encountered. When a parasitoid encounters a host in a short interval, there is the possibility that oviposition is limited by egg shortage, but not by the ability to recognize host density. However, the results of this investigation revealed that *E. japonica* regulated the number of ovipositions and left the patch with matured eggs that could still be oviposited. This study has indicated that flies are able to regulate the number of eggs in a bout because of having the ability to not only recognize host density according to the rate of host encounter, but also host density within a patch.

ANIMAL PRODUCTION AND GRASSLAND DIVISION

Animals in developing countries contribute to the betterment of people's lives in various ways. Animals not only produce the meat, milk, eggs and hide which are essential in daily life and are an important source of income, but also generate draft power for tillage and transportation, and produce wastes for use as fertilizers and source of fuel. Yet, production related to livestock rearing remains at low levels due to constraints such as low genetic potential of animals, poor feeds in terms of quality and quantity, prevalence of disease, harsh climatic conditions, and inadequate management.

The Division carries out research in order to achieve a sustainable increase of animal production in harmony with the natural resources of the environment by enhancing reproductive capacity, securing feed resources by improvement of grassland areas or better utilization of agro-industrial by-products, controlling invasive animal diseases and improving management practices.

Three research projects ended successfully in the fiscal year of 1995. The themes and the collaborative research organizations were as follows: 1) Development of genetic evaluation for trypano-tolerance and meat and milk production in African cattle with the International Livestock Research Institute (ILRI, Ethiopia); 2) Geographical information systems for characterization and analysis of rangelands in West Asia and North Africa with the International Center for Agricultural Research in Dry Areas (ICARDA); and 3) Mineral nutrition research in tropical ruminants with the Malaysian Agricultural Research and Development Institute (MARDI), Malaysia.

Currently, six projects are being carried out abroad on long-term assignments (2-5 years): 1) Immunohistorical studies for the development of vaccine against East Coast Fever with ILRI, Kenya; 2) Ecophysiological studies on the persistency of tropical pastures in the Latin American Savanna with the Centro Internacional de Agricultura Tropical (CIAT); 3) Development of technology for forage crop management in Northeast Thailand with the Department of Livestock Development (DLD), Thailand; 4) Improvement of cattle production with locally-available feed resources in Northeast Thailand with DLD; 5) Improvement of raising technology of small livestock in the tropics with MARDI; and 6) Utilization of by-products in pig feeding and utilization of livestock excreta as biogas and feed resources of fish with Cantho University, Vietnam. The last one was initiated from this year as part overall of JIRCAS's comprehensive project "Integrated research on farming systems combining agriculture, animal husbandry and fisheries in the Mekong Delta".

Additionally, the following studies were carried out by researchers on short-term assignments (1-3 months): 1) Genetic characteristics of indigenous breeds of pigs in the Philippines with University of the Philippines Los Banos (UPLB); 2) Manufacturing of good quality silage under tropical conditions (DLD); 3) Rumen characteristics and digestibility of feeds in ruminants (DLD); and 4) Control of body fat in chickens (MARDI).

In recent years, requests for collaborative research from developing countries have become diversified including incorporating applications in biotechnology along with upgrading the overall level of research. As a result, the Division is promoting basic research as a support for overseas activities at the Tsukuba campus on the following subjects: 1) identification of endophytic fungi in pasture plants in tropical regions and their utilization in plants via biotechnological methods; 2) investigation of endocrinological responses to heat stress in ruminant animals in relation to milk secretion.

TOPIC 1: Processing of urea molasses blocks for ruminant animals in Malaysia

Despite the abundance of agro-byproducts, Malaysia is still a net importer of feed by virtue of the basic and conventional ingredients used for animals. Malaysia imports maize, soy bean and fish meal to levels of more than M\$ 500 million annually. Molasses and palm kernel cake (PKC) are common agro-byproducts in the country and urea molasses block (UMB) is a promising feed supplement for ruminant animals. We have established processing methodology that can be utilized on a semi-commercial scale together with the Malaysian Agricultural Research and Development Institute (MARDI) in a collaborative research program.

We designed and set a processing line which consisted of a convey system, a semi-automatic weighing system, a cutter-mixer, a vertical mixer and a horizontal mixer in a building (approx. 100 m²) built at MARDI. More than fifty formulae of UMB were examined in terms of extent of mixing, solidification speed and palatability in animals. The best spectra of formulae that suits the processing line and shows good palatability performance is shown in [Figure 1](#)(9KB). The UMB which were processed based on the formulae were evaluated by animal field trials. Live weight in animals supplemented with UMB was significantly greater than in animals supplemented by imported UMB as verified in several of the trials [Figure 2](#)(20KB). The formulae and processing procedures were then applied to semi-commercial UMB production in Malaysia.

Fig.1 Septra of formulae

TOPIC 2: Utilization of oil palm frond silage as feed in the tropics

In Malaysia, self-sufficiency in beef, milk and mutton is low because of the shortage of feed resources for ruminants. However, the country leads the world in palm oil production and produces annually 1.7 million ton of oil palm frond (OPF) on a dry matter basis as by-products from the palm oil industry. At the present time, OPF is left discarded on the oil palm estates and not utilized. Given this situation, a collaborative study between the Tropical Agriculture Research Center (TARC), presently JIRCAS and the Malaysian Agricultural Research and Development Institute (MARDI) was initiated to develop uses of OPF as ruminant feed.

Firstly, a method for preserving OPF as silage was examined, and chemical analysis and digestion trials with Kedah-Kelantan bulls were conducted in order to evaluate the nutritive value of OPF silage. Secondly, two feeding trials were carried out to confirm the possibility of practical utilization of OPF silage for cattle feed. In the feeding trials with 24 Australian Commercial Cross fattening bulls, the effects of OPF level in the diet on feed intake, growth and meat production in the bulls was determined.

In feeding trials with 27 Sahiwahl-Friesian lactating dairy cows, feed intake and milk production were compared among three dietary treatments of 50% (on dry matter basis) tropical grass diet, 30% OPF diet and 50% OPF diet. Finally, the results of the collaborative study were announced at a press conference in MARDI to assist the transfer of the new technology to the livestock industry in Malaysia.

It was found that high quality silage could be prepared by packing OPF in a silo under anaerobic conditions. The nutritive value of OPF silage was found to be as high as rice straw. The concentrates: carcass ratio was reduced by increasing the OPF level in the diet, which indicated that dietary energy in OPF could be used for meat production by the bulls ([Table 1](#)). The efficiency of dietary energy utilization for milk production was higher in animals given 30 or 50% OPF diet treatment than in those on a 50% tropical grass diet treatment, which showed that the feeding value of OPF was not less than that of tropical grass ([Table 2](#)).

After the press conference, continuous visits and requests for information, demonstrations and training sessions on processings technique of OPF have been conducted by producers, farmers and extension agencies. Some farmers have already adopted the technology as shown in Plate 1. More than 100 units of the same chipper machine as examined in the collaborative study have been sold to farmers to chop OPF for feeding. The role that this research played in helping to develop the livestock industry in Malaysia was recognized by the awardance of a prize "The best research team in MARDI in 1992" to the research staff involved in the collaborative study

TOPIC 3: Analysis of association of dna markers and quantitative trait loci (QTL) effects

The genotype of QTL which affects trypanotolerance or milk yield has not been determined directly. However, it has become possible to identify QTL genotype directly using DNA markers linked closely to QTL. Many microsatellites have been detected in recent years. Thus, DNA markers such as microsatellites have widened the possibility to identify genotypes of QTL directly.

Simple association analysis procedures were developed for use in situations such as where the sire's marker and QTL's genotype are doubly heterozygous and observations for milk yield and the like are taken from the sire's offspring. As an example tested using the developed procedure, ninety QTL were assumed to be located equally among chromosomes, and flanking markers were assumed to be located surrounding a QTL. The relationship between true marker effects and estimated marker effects surged by limiting the number of markers. That is, the relationship surged when the top 30 largest markers were adopted instead of all markers. In addition, the influence of two combinations of heritability of 0.2 and 0.4 on the relationship was also compared.

The relationship was higher in the heritability of 0.4 than in that of 0.2. As a result, it has been shown that the effectiveness of using DNA markers to increase selection accuracy is justified when the effect of each QTL is genetically large in the case of limiting the number of markers in the order of size or higher heritability. Thus, it is indicated that QTL with large effects should be adopted in selection.

Table 1. Correlation coefficients between true and estimated DNA

Maker effects

0.2	0.5089	0.6623
0.4	0.5909	0.7423

TOPIC 4: Establishment of a long and accurate PCR (LA-PCR) method for mitochondrial dna rflp analysis in domesticated and wild pigs

We established a simple method for the amplification of domesticated and wild pig mitochondrial DNA (mtDNA), which is 15.2kb in length, and for mtDNA RFLP analysis using the long-accurate PCR (LA-PCR) method with the "hot start" technique. Single primer sets (35-mer) were used to amplify mitochondrial DNA (mtDNA) of 15.2kb excepting the D-loop region. LA-PCR conditions were as follows: one cycle of 94°C, 30 cycles of 98°C (20 sec) and 68°C (20 min) followed by 10-min extension at 72°C. LA-PCR was carried out using the Takara LA PCR kit ver.2. Genomic DNA (about 500 ng) as the DNA template was extracted from peripheral white blood cells and hair roots. The usefulness of the present method for mtDNA amplification and mtDNA RFLP analysis was confirmed in Luzon native pig and Luzon wild pigs in the Philippines. We collected blood samples from seven native pigs (Bontoc: Mountain province and Banaue: fugaro province), and from six native pigs originating from Pangasinan and Batangas province. We have also collected hair samples from two Luzon wild pigs; Luzon warty pig (*Sus philippinensis*) and Palawan bearded pig (*Sus barbatus*). The mtDNA types of the two wild pigs were distinctly different from those of European and Chinese pigs and differed from each other as well. There were found two types of mtDNA in the Luzon native pigs. One of the mtDNA types may originate from Duroc or Berkshire breeds. The other type is similar to that of the Ryukyu wild pig.

TOPIC 5: Degradation hazard modelling and mapping of a small ruminant production systems in WANA

In dry areas, the agriculturally marginal regions receive an annual rainfall between 200-300 mm and are significantly susceptible to land degradation, since both cropping and livestock production are often practiced in the same fragile environment. Geographical resource analyses in such an environment provide efficient assessment and mapping of land conditions, of hazardous areas for protection and conservation, and of potential areas for development.

Within the framework of a collaborative program with ICARDA (International Center for Agricultural Research in the Dry Areas), a series of geographical resource studies was conducted during 1992-95 in the Abdal Aziz test zone (40°07'30"-30'E, 36°15'-30'N), northeastern Syria, typical of small ruminant production systems found widely in the marginal barley/rangeland zones of West Asia and North Africa (WANA). In this system, native plants on rangelands grown under the seasonal rains contribute to local animals as the main feed resource during winter and spring, whereas barley stubble in the harvested fields serve as a feed source during dry summer and autumn.

A resource map database of the test zone was compiled with the following parameters: 1) elevation, 2) slope, 3) direction of slope, 4) vegetation cover, 5) soil type, 6) degradation degree and 7) degradation extent (magnitude of terrain affected) within a GIS (Geographic Information System). Neural Network modelling (NEURO92) was applied, to estimate degradation variables using the resource map database.

Accuracy rates obtained by the modelling for the degree and extent of degradation were 86% and 79%, respectively. These two variables were mathematically multiplied to obtain "degradation hazard" as an evaluation index ([see Fig. 1](#)). The distribution of the high hazard evaluated areas was unique at the site of two stony soil types.

The evaluation was found valid by examination of the actual ground conditions in the northern foothill and plain areas, where many erosion gullies were identified. However, in very moderate southern slopes, severe degradation could not be identified as was evaluated by the modelling. It was considered that the local climate and resource utilization variables (grazing, cropping) should be included in the modelling.

[Fig. 1 Degradation hazard mapping \(rank 4 = hazardous areas\), a bird's-eye view from southeastern corner of test zone](#) (25KB)

FORESTRY DIVISION

Mangrove forest area on the Malaysian Peninsula (Photo:

M. Oka)

With the rapid exploitation of arable land because of high food demands, the degradation and devastation of natural forest areas are rapidly progressing, particularly in developing areas. This is bringing about serious economic and environmental problems not only at the local level but also on a global scale. Therefore, the rehabilitation and sustainable management of these forests are urgent issues. Establishment of forest production systems and postharvest technologies for local communities can be viewed as essential means for the reduction of forest devastation.

The Forestry Division covers a wide range of research in developing countries from production to end-use as related to forestry and forest products under the following two research categories: 1) silvicultural and forest management technology; and 2) processing technology of forest products. These necessitate disciplines such as silviculture, plant ecology and eco-physiology, soil science, entomology, mycology, forest mechanization, socio-economics, and wood technology.

Forest rehabilitation and enrichment of devastated and degraded areas are the first steps in developing sustainable management of forest areas. To do so, silviculture, site evaluation and pest control technologies have to be developed in consideration of the conditions of the natural environment.

At present, forest products are a principal trading commodity in 33 developing countries. Sustainable production of these products should be achieved in natural forests and plantations. For such purposes, studies on species behavior, natural regeneration, enrichment planting, harvesting system, etc. are essential.

Another major reason for forest devastation is the shifting of cultivation by land-less farmers. Hence, forest production and planning systems for stimulating the activities of local communities have to be developed. Various lesser-known tree species and forestry products may face danger of disappearance from the Earth if rapid forest devastation continues. Evaluation studies should be urgently conducted and improvement of current wood processing technology should be given priority.

[TOPIC 1: Environmental performances of dipterocarps to environmental stress- special emphasis on water relation](#)

[TOPIC 2: Stimulation of growth of naturally regenerated seedlings in selectively logged-over secondary dipterocarp forests](#)

TOPIC 1: Environmental performances of dipterocarps to environmental stress- special emphasis on water relation

Many studies have been carried out on the ecology and productivity of tropical tree species. However, much of these work has been descriptive and ecological in approach with very few studies on the ecophysiological characteristics of the species of interest. This research aimed to take into account such factors ... for several tropical tree species of ... importance.

According to the water relation parameters obtained in this study, the capacity for maintaining positive turgor appeared to be low in shaded and well-watered nursery seedlings of dipterocarps ([Fig. 1](#))12KB. On the other hand, leaves of the exposed trees had fully adapted to stress of water deficiency morphologically as well by maintaining positive turgor through osmotic adjustment.

Assimilation of CO₂ is essential for plant growth. The lower rate of net photosynthesis (P_n) observed in dipterocarps compared with fast growing species can explain slower growth of the former. However, *Hopea odorata* had a P_n equivalent to that of fast growing species and had very high water use efficiency (WUE). Decrease in P_n with increasing and decreasing temperature was relatively small in *H. odorata* and *Shorea platyclados*, suggesting that these species have high adaptability for changing temperature. From these photosynthetic characteristics, *H. odorata* and *S. platyclados* could be recommended as possible species for open planting.

Midday depression of G_w was observed in most of the species measured in this study. G_w started to decrease when leaves received full sunlight and/or when vapor pressure difference between leaf and ambient air reached above 10hPa. On the other hand, in *A. mangium* which is well known as a fast growing and drought tolerant species, G_w remained relatively constant even under full sunlight and VPD above 10hPa.

Since photosynthetic CO₂ uptake is strongly controlled by stomatal opening, P_n during daytime was reduced by the reduction of G_w. However, the reduction of transpiration rate (Tr) was relatively small because of increasing VPD, which stimulates evapotranspiration with increasing temperature and decreasing air humidity.

The leaf water potential (ψ_w) was in accordance with the pattern of the transpiration rate (Tr), and was low during midday when Tr was high. In tall trees, difference in gravitational potential (ψ_g) also caused a lowering of ψ_w of the upper canopy. In addition, low soil-to-leaf hydraulic conductance (L) in the tall trees limited water uptake from soil. Thus, minimum ψ_w was lower in the tall trees than in the small trees, resulting in severer water stress, and thus, in lower G_w and lower P_n in the former trees.

In *A. mangium*, soil-to-leaf hydraulic conductance (L) was remarkably high. High L enabled this species to keep ψ_w less negative for the same transpiration rate when compared to dipterocarps ([Fig 2](#))12KB. In this species, keeping water deficit low through high L resulted in maintaining high G_w during daytime when the transpiration rate was high.

From these results, it appears that low growth seen in dipterocarps may likely be caused by stomatal closure during daytime, which strongly reduces photosynthetic CO₂ uptake, as well as relatively lowers

net photosynthetic rate. In this study, low soil-to-leaf hydraulic conductance in dipterocarps limited water availability and thus, caused a lowering of leaf water potential especially in mature tall trees. Nursery grown seedlings of dipterocarps were susceptible to water stress because of their low ability for maintaining positive turgor. On the other hand, the leaves of the exposed trees had adapted to the stress of water deficiency morphologically and maintained positive turgor through osmotic adjustment.

In conclusion, when planting seedlings of dipterocarps, it is recommended to precondition prior to transplanting in order to enhance the capacity of the seedlings to cope with water stress. In addition, partial shading after transplanting can help maintain gaseous exchange through stomata, and is also advised in order to avoid turgor loss, which may cause mortality of seedlings.

TOPIC 2: Stimulation of growth of naturally regenerated seedlings in selectively logged-over secondary dipterocarp forests

The hill forests of Peninsula Malaysia consisted of abundant commercial trees predominated by Dipterocarps. Almost all of these forests are under utilization for timber production. When the forests are harvested, loggers must follow the government's logging regulations known as the "Selective Management System (SMS)". Under this system for selective logging, only trees with trunks over 40 to 60 cm in diameter can be cut and other young trees must be left remaining.

However, the present logging methods are still not suitable to ensure the survival and growth of young trees, saplings and seedlings because logging roads are densely located on hill crests where useful seedlings such as *Shorea curtisii* and other dipterocarps are well-regenerated and heavy machines severely disturb the ground surface. In addition, surviving seedlings do not grow well after logging in spite of improvement of conditions of light via removal of canopy trees.

The purposes of this study were to answer two questions: 1) what causes retardation of seedling survival and growth after logging? and 2) how can the growth of surviving seedlings be stimulated? We selected one ha of a secondary forest 5 years after logging which was rich in *S. curtisii*. This area enclosed approximately 1,100 seedlings of this species (H<1.0m). The seedlings were continuously distributed on the hill crests and upper slopes, and the seedlings formed a distinct pattern similar to that seen in natural forests except for in locations directly on the logging roads. No seedlings were observed to have had survived and regenerated on the logging roads after commercial operations (Fig.). Therefore, dense road networks appear to be one of the major causes of seedling disappearance where road areas occupy up to 10% of forest area.

Various types of ground floor vegetation grow on the hill forests. A stemless palm is one of these dominant undergrowths which covers 28% of the area and is associated with *S. curtisii*. The palm starts growing vigorously after logging because of improvement of light conditions due to the removal of canopy trees. The palm is therefore a strong competitor of *S. curtisii* seedlings and many of the latter die back because of shade brought about by growth of the overlaid palm. Removal of the palm seedlings would be an effective method for accelerating growth of *S. curtisii* seedlings and would enable convenient and low-cost methods of management in the field (Photos 1 and 2). The rate of canopy opening which is a parameter of light reflection value on the seedlings was greatly improved from 1.7% to 4.3%. As sapling growth rate was 4.5% at this point, seedlings would be freed from suppression of light deficiency by using these removal methods.

FISHERIES DIVISION

As an initial phase (1994-1998) of international collaborative activity in the field of fisheries, the Fisheries Division has initiated five research projects in Asian countries, eg., fisheries resources management in Malaysia and Indonesia, aquaculture in Thailand and Vietnam, and fisheries product processing in China.

An international collaborative research project on fisheries resource management “Production and sustainable utilization of brackish water mangrove ecosystems”, has been initiated with the Fisheries Research Institute (FRI) and the University of Malaya (UM). The project involves the integration of studies dealing with the brackish water mangrove and is conducted on multidisciplinary basis including fields related to fisheries, forestry, agriculture, and socio-economics. One senior researcher has already been dispatched by JIRCAS to Penang to oversee the project, as a long-term residing scientist, and three short-term scientists specializing in fish larva ecology, crustacean ecology, and marine chemistry have participated in this project. In addition to working with the above counterpart organizations, JIRCAS is receiving the active cooperation of the Marine Fisheries Resources Development and Management Department of the Southeast Asian Fisheries Development Center (SEAFDEC) regarding the fisheries aspects of the comprehensive project. Another project involving fisheries resources management, “Study on life history of coastal fish in Indonesia”, has also been initiated with the Central Research Institute of fisheries (CRIFI), at the Research Institute for Coastal Fisheries (RICF), CRIFI, in Maros, South Sulawesi, Indonesia. The project aims to clarify ecology and life history of important coastal fishes for the establishment of methods of resources management. One researcher has been dispatched to Maros as long-term residing scientist.

[Surveying mangrove forests in Malaysia \(Photo: K.Fukusho\)](#) (21 KB)

In addition to the Division’s earliest collaborative research project on aquaculture, “Development of sustainable aquaculture technology in Southeast Asia” with the Faculty of Fisheries, Kasetsart University, in Bangkok, Thailand (introduced in the JIRCAS Annual Report 1994), another project, “Evaluation and improvement of agro-forestry-animal husbandry-fisheries (AFAF) combined farming systems in the Mekong Delta”, has been initiated with the College of Agriculture, Cantho University in Cantho, Vietnam. The project involves the integration of studies dealing with square(?) farming on a multidisciplinary basis including fields related to rice production, animal husbandry, freshwater aquaculture, and socio-economics. The fisheries aspects of this integrated project relate to freshwater aquaculture as follows: 1) fry production technology of fish and shrimp, 2) disease protection methodology for fish and shrimp (?) 3) utilization of new feed resources for freshwater aquaculture. To oversee the fisheries aspects of the project, two short-term scientists specializing in crustacean endocrinology and fish disease, respectively, have been dispatched to Cantho, Vietnam.

Concerning fisheries product processing, a collaborative research project, “Study on post harvest and processing of freshwater fish in China”, has been initiated with the Faculty of Food Science and Technology, Shanghai Fisheries University. One senior researcher has already been dispatched to Shanghai, and one short-term scientist specializing in post harvest of fish had visited to lend support to the project.

Intensive aquaculture has been well-developed in recent years and has become one of the most important industries in many countries, but self-contamination and fish disease in culture ponds has given rise to serious environmental and social problems. Therefore, fish disease protection has been given priority as a topic of collaboration under the JIRCAS Visiting Research Fellowship Program at Tsukuba in which one scientist has been invited from the Central Research Institute of Fisheries, Indonesia to initiate cooperative studies in Tsukuba during a two-year period. He is expected to become a core scientist as a representative of one of JIRCAS's counterpart institutions for the continual development of collaborative study.

[TOPIC: Productivity and sustainable utilization of brackish water mangrove ecosystems](#)

TOPIC: Productivity and sustainable utilization of brackish water mangrove ecosystems

Tropical and sub-tropical mangrove forests serve as nursery grounds for fish, crab, sea shell, shrimps and other crustacea. However, urbanization, resort development, expansion of farmland, and construction of aquaculture ponds have destroyed the forests and resulted in ecological problems including pollution of surrounding waters, advanced soil erosion, and runoff of soil into the sea. The excessive utilization of brackish water area based on inadequate information about the production mechanisms of the ecosystems has resulted in the destruction of these mangrove ecosystems. It is required, therefore, to evaluate the biological productivity and carrying capacity of brackish water mangrove ecosystems with emphasis placed on the sustainable utilization of the mangrove forest. In this context, a new collaborative study, "Brackish water mangrove ecosystems" has been initiated in Malaysia where there are number of scientists interested in these problems, many well-managed research sites, and a large accumulation of knowledge.

The project is integrative and aims to evaluate the biological productivity of brackish water mangrove ecosystems in order to identify criteria for sustainable utilization of the areas from three viewpoints: aquatic production in mangrove areas, bank functioning and the prevention of soil erosion, and involvement and damaging aspects of hurricanes and cyclones. To achieve the fisheries-related objectives of this project, analyses of biological productivity, the food chain, energy flow, and carrying capacity in the brackish water mangrove ecosystems are necessitated. In addition, evaluating the effects of development in brackish water areas from a socio-economic is also considered important.

Among the various research activities of the project, collaborative studies in fisheries are being conducted with the University of Malaya and the Fisheries Research Institute. The Matang Mangrove Forest Reserve in Perak State and the Merbok Estuary in Kedah State are serving as research sites. The Matang Mangrove Forest is especially important as a location for the analysis of the role of mangrove ecosystems on fish production.

One senior researcher who specializes in larval ecology of finfish and squid, has already been dispatched to the FRI, Penang, Malaysia as a long-term residing scientist, and other researchers specializing in larval fish ecology, life history of crustacea and soil runoff have been dispatched short-term in supporting roles. Integrated studies like this project which are conducted in collaboration with research organizations belonging to several ministries and universities in Japan are still unusual and harbor many bureaucratic difficulties. Therefore, the success of this project has the possibility to stimulate the initiation of many other integrated studies encompassing a wide range of researchers representing varied fields of sciences in the future.

OKINAWA SUBTROPICAL STATION

Main Entrance to the Okinawa Subtropical Station

The Okinawa Subtropical Station is located in Japan's southernmost city, Ishigaki (2100 Km southwest from Tokyo). The station is the only national research organization carrying out agricultural research under subtropical conditions.

Research at the Station includes: 1) introduction, acclimatization and cultivation of tropical vegetables; 2) improvement of tropical crops and development of breeding methods; 3) introduction and cultivation of new cultivars of tropical fruits; 4) improvement of methods for rapid generation advance for hybrid populations of rice and wheat; 5) viral diseases of tropical insects and plants; 6) utilization of soil microorganisms and genetic regulation of nutrition in tropical crops, and 7) international collaboration for the improvement of agricultural technology in the tropics. Under 7), researchers from developing countries are invited to undertake advanced studies at the International Collaboration Section of the Station. In 1995, ten researchers from nine countries participated in the Visiting Research Fellowship Program. In this program, emphasis is placed on studies for the optimum utilization of bio-resources for conservation of the environment and sustainable agricultural production in the tropics.

[TOPIC 1: Soil losses from pineapple fields and its control](#)

[TOPIC 2: Low input hydroponics](#)

TOPIC 1: Soil losses from pineapple fields and its control

[Photo: An example of rill erosion due to pineapple cultivation on Ishigaki Island, Okinawa](#) (12 KB)

For the last three decades, soil loading due to erosion in coastal marine environments has been serious in the Ryukyu Islands with coral reefs surrounding these islands being damaged by soil loading. Using LANDSAT TM data, great amounts of red soil accumulated near estuaries were detectable. Large-scale pineapple cultivation is one reason for the above soil loss. Pineapple fields receive an annual average rainfall of 2,100 mm with a slope ranging from 20 to 150 m in length and from 0 to 8 degrees in gradient. Since the growth of pineapple plant is very slow, fields are not covered for a long time, such that soil erosion in pineapple fields becomes a serious problem. Rill erosion occurs frequently along the road for agricultural practices, like spraying of chemicals and shipping of products (Fig. 1)??.

In order to alleviate erosion hazards, the effects of organic mulch, cover crops, and nontillage planting were investigated in field plots. Ground nut (*Arachis pintoi*) and weeping lovegrass (*Eragrostis curvula*) were selected as cover crops. Each of them was planted on the lower edge of a slope. The alleviation of soil losses in the plot with weeping lovegrass was 1/110 of the control plot, for 12 months after the planting of pineapple (Table 1). For investigation of the effects of nontillage planting, pigeonpea (*Cajanus cajan*) was cut down about four months after the seedling stage, and then pineapple was planted without plowing. The alleviation of soil losses in the plot of nontillage planting was 1/14 of the control plot for 8 months after the planting of pineapple (Table 2).

In conclusion, we recommend that farmers employ both cover crops and nontillage planting for the protection of soil surface. Organic mulch is less suitable because of the scarcity of labor and materials. Counter-measures for the alleviation of soil erosion should be undertaken urgently in the Ryukyu Islands.

Table 1. Effect of cover crops on the alleviation of soil erosion in pineapple fields (1993-94)

Plots	Cumulative soil losses (kg m ⁻²)		
	4 months	8 months	12 months
Control	0.00	1.12	7.48
Weeping lovegrass	0.01	0.02	0.07
<i>Arachis pintoi</i>	0.00	0.01	0.01
Organic much*	0.00	0.00	0.03

* Napiergrass was used.

Table 2. Effect of nontillage planting on the alleviation of soil erosion in pineapple fields (1994-95)

Plots	Cumulative soil losses (kg m ⁻²)		
	4 months	8 months	12 months
Control	0.82	1.01	1.80
Weeping lovegrass	0.02	0.07	0.61
<i>Arachis pintoi</i>	0.30	0.72	1.84
Organic mulch*	0.00	0.00	0.04

* Napiergrass was used.

TOPIC 2: Low input hydroponics

Low input hydroponics system at the Subtropical Station

Areas under problem soils such as salinized, acid sulphatized, and sandy soil, are continually increasing world-wide. Hydroponics may be a suitable alternative for crop production in such regions. However, common hydroponics systems in our country are electron energy intensive, and operation of them is complicated and requiring chemical analysis of nutrition.

The JIRCAS Okinawa Subtropical Station is currently developing and testing hydroponic systems which do not require the consumption of electricity. This new hydroponics system is simple and easy to operate. The nutrient tank is positioned higher than cultural bed, such that nutrient solution flow to the bed occurs automatically via the action of gravity. Necessary amounts of nutrient solution in the canal under the bed are reserved by a floating bulb system. Supply of nutrient to upper side is achieved through capillary action by using a liquid absorbent sheet, root barrier sheet and polyvinyl alcohol material chips. In this system crops can absorb enough nutrient based on natural ability and there is no operation necessary to maintain complicated nutrient conditions. The operator only needs to prepare new nutrient solutions when the tank level decreases.

Melon, tomato, chinese cabbage, sweet potato and radish were cultured using this system at the JIRCAS Okinawa Subtropical Station. All crops grew normally. Melons required 90 days from seedling until harvest. Each melon plant totally absorbed 60 little nutrient solution. The yield was comparable with that obtained in usual ground culture.

MISCELLANEOUS PROJECTS OUTLINE

In addition to international collaborative projects, JIRCAS conducts a variety of miscellaneous projects: domestic projects, in cooperation with other MAFF institutes; commissioned research, principally in cooperation with universities; cross-ministry/agency projects currently with the Science and Technology Agency and the Environment Agency; and special allotment projects.

DOMESTIC PROJECTS

Collaborative operations pertaining to the Agriculture, Forestry and Fisheries Gene Bank(Biological Resources Division and Okinawa Subtropical Station, 1989-ongoing)

Development of new genetic types of paddy crops for the enlargement of consumer demand
(Okinawa Subtropical Station and Biological Resources Division, 1989-1995)

Comprehensive research on ordering mechanisms of agriculture, forestry and fisheries ecosystems and elucidation of optimal means of governance
(Animal Production and Grassland Division,1995-1998)

Comprehensive research on the breeding of transgenic plants
(Biological Resources Division and Okinawa Subtropical Station,1989-1995)

Development of methodology to forecast changes in the structure of the production and consumption of agricultural products in context of internationalization
(Research Information Division,1995-1997)

The elucidation of endophyte functions to develop new forms and qualities
(Animal Production and Grassland Division,1996-1998)

Comprehensive research pertaining to trade and industry and fisheries,resources,and the environment
(Crop Production and Postharvest Technology Division,1996-2000)

New usages for wheat crops: The development of high-quality field crops and their utilization technology
(Okinawa Subtropical Station,1996-2005)

COMMISSIONED RESEACH

Useful plant species and evaluation of their functioning and potential usages
(Okinawa Subtropical Station in cooperation with Tokyo University of Agriculture,1992-1995)

Distribution and ecology of Vigna species in tropical regions of Asia

(Biological Resources Division in cooperation with the University of the Ryukyus,1994-1996)

Desertification on cool,dry areas and accompanying changes in systems of agricultural dynamics

(Environmental Resources Division in cooperation with Nihon University,1995-1977)

Evaluation of salinity tolerance in wild species of rice and elucidation of tolerance mechanisms

(Okinawa Subtropical Station in cooperation with the University of the Ryukyus,1996-1999)

[Click here continue to Research projects with other government agencies and ministries](#)

RESEARCHPROJECTS WITH OTHER GOVERNMENT AGENCIES AND MINISTRIES

In cooperation with the science and Technology Agency

Oceanographic investigations: Fluctuations in tropical mangrove forests and evaluation of possible influences (Forestry Division,1990-1997)

Global research network: set-up of data-base for changes in desertification
(Environmental Resources Division,1994-1996)

Evaluation of environmental adaptation of tropical fruit tree based on photosynthetic and photochemical activity (Okinawa Subtropical Station,1995)

Research on slope stability via groundwater monitoring and the development of methods for quantitative analysis
(Crop Production and Postharvest Technology Division,1995)

Studies on molecular lineage in tropical species of Asian phytoplasmas
(Biological Resources Division,1995)

In cooperation with the Environmental Agency

Ecology and environments of tropical mangrove forests: structural analysis
(Forestry Division.1990-1994)

Tropical tree species and facets of environmental adaptation
(Forestry Division,1990-1994)

Generation of alluvial efflux, elucidation of mechanisms of occurrence,and development of prevention on the Nansei Islands of Okinawa
(Okinawa Subtropical Station,1991-1995)

Construction of an analytical model for climactic warming in the Asia-Pacific region (Research Information Division,1991-1996)

Research for the development of technology to inhibit the production and emission of methane and nitrous oxide from agricultural fields
(Environmental Resources Division,1995-1997)

MAFF SPECIAL RESEARCH ALLOTMENTS

Stabilization of rice culture under water stress in the tropics utilizing a broader spectrum of genetic resources

(JIRCAS in cooperation with the International Rice Research Institute (IRRI),1994-1999)

Sustainable cultivation of upland crops in the semi-arid tropics

(JIRCAS in cooperation with International Crops Research Insitute for the Semi-Arid Tropics (ICRISAT),1994-1999)

INVITATION PROGRAMS AT JIRCAS

As part of JIRCAS's role as an international research center, we are implementing several systems for the invitation of foreign researchers and counterpart administrators. These programs serve to facilitate the exchange of information and opinion concerning agriculture, forestry and fisheries administration and to strengthen international research ties with those in other countries. Below is a description of our current programs.

Administrative Invitation

Under this program, administrators in JIRCAS's counterpart organization are invited to the premises for purposes of holding discussion and conducting review of on-going research projects in order to ensure smooth running of collaborative projects.

Administrators are additionally introduced to related MAFF research organs. Finally, the program provides the opportunity for the exchange of information and opinion on the administrative level concerning policy-making, project design, etc., thereby contributing to a deeper mutual in the realm of international cooperation. Thirty-eight persons visited JIRCAS in FY 1995, including 12 international symposium invitees. Invited administrators are summarized below:

Counterpart Researcher Invitation

This program provides for the invitation of a period for up to 6 months of a counterpart researcher engaged in collaborative work with a member of the JIRCAS research staff. The counterpart carries out in-depth research at JIRCAS or other MAFF research institute, or at a national university. The purpose of the program is to strengthen research activity being carried out abroad and to provide opportunity for exchange on the researcher to researcher level. Fifteen researchers were invited in FY 1995. Invited researchers and their activities are summarized below:

JIRCAS Visiting Research Fellowship Program at Okinawa

Screening and evaluation of salt-tolerant rice strains at the Subtropical Station

This program was initiated in FY 1992 before TARC was reorganized into JIRCAS. Post-doctoral level scientists are invited to conduct research for a period of one year at the Okinawa Subtropical Station. Research focuses on topics of importance relating to tropical agriculture in respective developing countries. Research themes are divided into several major categories: 1) Development of techniques for environmental control by using plants and microorganisms specific to the tropics and subtropics; 2) Studies on mechanisms of heat-tolerance of tropical and subtropical crops; 3) Identification and evaluation of salt-tolerant crops; and 4) Evaluation and development of long-term conservation techniques of genetic resources of vegetatively propagated crops in the tropics and subtropics. Ten fellows are generally chosen every year and begin their term on October 1 ending September 30 of the following year. Recent activity is summarized below. More information on the Okinawa Fellowship Program can be obtained by contacting the [International Relation Section, Japan International Research Center for Agricultural Sciences, 1-2, Ohawasi, Tsukuba, Ibaraki, 305, Japan. (Tel: 81-298-38-6335 / Fax: 81-2987-38-6337 Telex: 3652456 JIRCAS J)]

from October 1994 to September 1995

Development of techniques for environmental control by using plants and microorganisms specific to the tropics and subtropics

Bayani-Espiritu	University of the Philippines	Enumeration of population, characterization, estimation of activity, and detection of methane-oxidizing bacteria in paddy soils
Lukman Gunart	Central Research Institute for Food Crops Indonesia	Study on <i>Azospirillum</i> inoculation and application to application of rice straw and methane emission under lowland conditions in subtropical paddy soil
Mbangu Olive Musoko	International Institute of Tropical Agriculture (IITA) Cameroon	Effectiveness of different populations of indigenous VAM fungi from acid and alkaline soil
Nampiah Sukano	Bogor Agricultural University Indonesia	Development and symbiotic function of indigenous VA mycorrhizal fungi in acid soil

Studies on the mechanism of heat-tolerance of tropical and subtropical crops

Ancha Srinivasan	JIRCAS India	Mechanisms of heat tolerance during reproductive growth of chickpea and pigeonpea
Hassan Mohamed Rashad	Cairo University	Physiological studies on the mechanism of tolerance in some cabbage varieties

Identification and evaluation of salt tolerance crops

Abdul Baset	Bangladesh Rice Research Institute (BRRI)	In vitro culture and screening some wild and cultivated rices for salt tolerance
-------------	---	--

Ningsheng Xu	Yunnan Academy Agricultural Sciences China	The physiological responses of some rice varieties from yunnan to salt stress
Evaluation and development of long-term conservation techniques of genetic resources of vegetatively propagated crops in the tropics and subtropics		
Nguyen Tien Thinh	Nucleat Research Institute Vietnam	Study on cryopreservation of tuber crop plants (taro and sweet potato)
Tie Gang Lu	Institute of Botany Academia Sinica China	Long term conservation and evaluation of yams
from October 1995 to September 1996		
Development of techniques for environmental control by using plants and microorganisms specific to the tropics and subtropics		
Lukman Gunart	Central Research Institute for Food Crops Indonesia	Mutagenesis of <i>Azospirillum</i> on exopolysaccharide production and IAA excretion and its effect on the growth of lowland rice
Dianou Deyeri	Institute d'Etudes et de Research Agricoles Burkina Faso	Isolation and characterization of methanotrophic and methanogenic bacterias from a subtropical paddy field
Studies on the mechanism of heat-tolerance of tropical and subtropical crops		
Lin Baiqing	Institute of Vegetables & Flowers China	The roles of hydroxyproline-rich glycoproteins (HRGPs, extensin) in susceptible and resistant genotypes of <i>Brassica pekinensis</i> Rupr. response to heat treatments
Harvinder Singh Talwar	ICRISAT India	Studies on physiological basis of heat tolerance in groundnut (<i>Arachis hypogaea</i> L)
Padmanaban Annamalai	University of Madras India	Development of OCR based marker for heat tolerance and cloning of its related genes in <i>Brassica oleracea</i> var. capitata L.
Identification and evaluation of salt tolerance crops		
Lin Hongxuan	China National Rice Research Institute China	Genetic characterization of salinity tolerance in rice and its wild relatives, and introduction of salinity tolerance into rice germplasm mainly through biotechnological procedures
Armenia Mendoza	University of the Philippines The Philippines	Physiological and biochemical mechanisms of genotype variability in response to salt stress in rice callus and somatic hybrids
Somesong Chotechouen	Chinat Field Crops Research Center Thailand	Physiological responses of rice seedlings after solinization, and in vitro selection of EMS-treated cell suspension cultures of rice of salt tolerance
Evaluation and development of long-term conservation techniques of genetic resources of vegetatively propagated crops in the tropics and subtropics		
Nguyen Tien Thinh	Nuclear Research Institute Vietnam	Development of techniques for in vitro conservation of tropical root crops
Pius Michael Kyesmu	University of Jos Nigeria	Cryopreservation of the west African tuber crop "Rizga" (<i>Plectranthus esculentus</i> N. E.Br.)

[Click here to continue JIRCAS Visiting Research Fellowship Program at Tsukuba](#)

JIRCAS Visiting Research Fellowship Program at Tsukuba

Selection of experimental prawns for research on crustacean pathology and endocrinology at the Fisheries Division

A program similar to the Okinawa Visiting Research Fellowship Program has recently been implemented on the Tsukuba premises from October, 1995 (see Highlights 1995). The fellowship aims at the promotion of collaborative research to address various problems confronting countries in the developing regions. The program allows for the invitation of a total of 6 researchers per year. Four persons are engaged in 2-year projects at JIRCAS and 2 scientists carry out short-term (5-month) projects at the National Institute of Agrobiological Resources (NIAR). More information on the Tsukuba Fellowship Program can be obtained by contacting the [International Relation Section, Japan International Research Center for Agricultural Sciences, 1-2, Owashi, Tsukuba, Ibaraki, 305, Japan. (Tel: 81-298-6335 / Fax: 81-298-38-6337 / Telex: 3652456 JIRCAS J)]

Long-term at JIRCAS from October 1995 to September 1997

Methods for optimum utilization of biological resources

Lin Qiang	Guangxi Agricultural University, China	Analysis of plant responses to environmental stresses and gene expression
Zhu Weiming	Jiangsu Academy of Agricultural Sciences, Institute of Genetics, China	Development of a DNA based assay for indexing plant diseases
Muharijadi Atomomarsono	Research Institute of Coastal Fisheries, Indonesia	Development of methods for the diagnosis and prevention of diseases affecting aquatic animals for fresh water and marine aquaculture
Chang Qing	Xinjiang Institute of Biology, Pedology, and Desert Research, China	Investigations of the process of rock weathering through the analysis of rock surfaces by electron spectroscopy

Short-term at NIAR from October 1995 to March 1996

Production of new biological resources through the application of biotechnological procedures

Pallavolu Maheswaran Reddy	Soil Microbiology-ISWD International Rice Research Institute The Philippines
Ahmed Abou-Salha	Agricultural Genetic-Engineering Research Institute Egypt

Other fellowships for visiting scientists

The Government of Japan sponsors a postdoctoral fellowship program for both Japanese and foreign scientists through the Science and Technology (STA). The program places post-doctoral fellows in national research institutes throughout Japan according to research theme and prior arrangement with a host scientist for a term of generally 1-3 years. Fellowships can be undertaken in any of the ministries and many fellows are currently working at the ministries and many fellows are currently working at the various institutes of MAFF. At JIRCAS, there are no Japanese fellows at present, but the following four visiting scientists are presently residing at JIRCAS: Dr. O.A. Welker (Germany), Biological Resources Division; Dr. B.A. Yakubov (Republic of Uzbekistan), Biological Resources Division; Dr. Chien Hsiaoping (People's Republic of China), Research Information Division; and Dr. Mingyuan Du (People's Republic of China), Environmental Resources Division.

SIMPOSIA AND WORKSHOPS

1) INTERNATIONAL SYMPOSIA

Since 1967, TARC has sponsored an international symposium every year for purpose of promoting scientific exchange and accurately gauging and responding to the agriculture, forestry and fisheries needs of the world's developing areas. A theme of central importance is chosen and around ten researchers and administrators from concerned research institutes and international agencies are invited as speakers. The symposia are of ordinarily held in joint sponsor ship with a relevant scientific society. JIRCAS will continue to sponsor these symposia and held its first symposium in FY 1994 since its establishment from TARC into JIRCAS. The programs from FY 1995 is shown below:

INNOVATIVE WEED MANAGEMENT STRATEGY FOR SUSTAINABLE AGRICULTURE

(Held July 24-28 in Tsukuba, Japan in conjunction with the Asian-Pacific Weed Science Society, the Weed Science of Japan Association for Advancement of Phyto-Regulators)

Session I : Present Status of Weed Problems in Sustainable Agriculture

Opening Address

Inaugural address by Keiji Kainuma, Director General, Japan International Research Center for Agricultural Sciences (JIRCAS)(Japan)

Welcome address by Toru Sato, Director General, Secretariat of the Agriculture, Forestry and Fisheries Research Council (Japan)

Welcome Address

Eitaro Miwa, Deputy Director General, Secretariat of Agriculture, Forestry and Fisheries Research Council (Japan)

Technical Reports

Noxious weeds in Asian tropics and their control. U. Suwunnamek, Department of Agronomy, Kasetsart University (Thailand)

The succession of noxious weeds in tropical Asian rice fields with emphasis on Malaysian rice ecosystems. M. Azmi and B. Baki, MARDI Rice Research Center (Malaysia)

Weedy rice problems in Southeast Asia and control strategy. H. Watanabe, JIRCAS (Japan)

Implementation of integrated weed management for sustainable rice Production. P. Vongsaoj, Botany and Weed Science Division, Department of Agriculture (Thailand)

Sustainability in rice weed management. Keith Moody, International Rice Research Institute (IRRI) (The Philippines)

The contribution of no-tillage crop production to sustainable agriculture. A. D. Worsham and G. G. Ngabhushana, Department of Crop Science, North Carolina State University (USA)

Weed management in rubber plantations with special reference to minimum tillage cultivation. S. Tjitrosemito, SEAMEO BIOTROP (Indonesia)

Closing Address

Jiro Harada, Vice President, Asian-Pacific Weed Science Society (APWSS)

Session II: Innovative Trends of Herbicide Use for Sustainable Agriculture

Opening Address

H. Hamaguchi, Elf ATO Chem. (Japan)

Technical Reports

Current status of rice herbicide use in the tropics. N. K. MUDA Agricultural Development Authority (Malaysia)

Long term concepts of herbicide use in paddy fields in Korea. J. O. Guh, College of Agriculture, Chonnam National University (Korea)

Technical innovation in herbicide use. M. Kamoi and K. Noritake, Research Institute of the Japan Association for the Advancement of Phyto-regulators (Japan)

Effectiveness and behaviors of soil-applied herbicides. Y. W. Kwon, Department of Agronomy, Seoul National University (Korea)

Allelopathic compounds as naturally occurring herbicides. C. H. Chou, Institute of Botany, Academia Sinica (Taiwan)

Herbicide safeners: Recent advances and biochemical aspects of their mode of action. K. Kreuz, S. Farago, S. Murakami and H. C. Steinruecken, Ciba Crop Protection, R&D Weed Control (Switzerland and Japan)

Current status of herbicide-resistant weeds and their management strategies. J. C. Cotterman, Dupont Agricultural Products (USA)

Current and future herbicide risk assessment in Europe and United States. W. L. Chen, Global regulatory, Toxicology and Environmental Chemistry, DowElanco (USA).

[Click here to continue \[Symposia And Workshops \(2\) Special Programs\]](#)

2) SPECEAL PROGRAMS

Group photo of participants in the "methance" international workshop

INTERNATIONAL WORKSHOP ON PADDY FIELDS: SUSTAINABLE AGRICULTURE AND CONTROL OF GREENHOUSE GAS EMISSIONS

This international workshop was sponsored by the Office of Environment Policy Coordination (OEPC), JIRCAS, MAFF and the Mitsubishi Research Institute, Inc. and -was held at the Tsukuba Science City on March 7-8, 1996. The workshop reviewed the current status and future prospects for the role of rice cultivation in the promotion of sustainable agriculture and conservation of agro-ecosystems, and examined the current situation regarding the control of greenhouse gas emission from rice fields. The subject matter relating to greenhouse gas emission was highly evaluated by related researchers. The main objective of the workshop was to discuss how rice paddy fields serve in the promotion of sustainable agriculture and how measures can be undertaken for the mitigation of methane and nitrous oxide emissions from rice paddy fields. The workshop consisted of five introductory reports and overviews, eight country reports and twelve case study, reports. At the opening of the OEPC and Dr. K.Kainuma, Director General of JIRCAS, gave welcoming addresses.

Introductory and overview reports

The role of rice paddy fields in the promotion of sustainable agriculture and conservation of agro-ecosystems. K. Minami, JIRCAS (Japan)

Sustainable agriculture and the conservation of agro-ecosystems in Korea. W.G. Bae, Sustainable Agriculture Division, Ministry of Agriculture, Forestry and Fisheries (Korea)

Nitrous oxide emission from rice fields. J. R. Freney, CSIRO Division of Plant Industry (Australia)

A regional analysis of human alteration of nitrogen cycling: The role of agriculture. R. Howarth, Ecology and Systematics, Cornell University (USA)

Agricultural impact on soil consumption of atmospheric methane. A. R. Mosier, United States Department of Agriculture (USDA/ARS) (USA)

Country reports

An option for reducing methane emission from rice fields in China. Z.Cai, Institute of Soil Science, Chinese Academy of Sciences (China)

Methane emission from rice fields in India. N. Sethunathan, Central Rice Research Institute, (India)

Classification of Philippines rice soils according to methane production potential. R. Wassmann, International Rice Research Institute(IRRI)(The Philippines)

Preliminary inventory of methane from flooded paddy field in Malaysia. M.Y. Yusoff, University Pertanian Malaysia (UPM-SERDANG)(Malaysia)

Research on methane emission from rice fields in Thailand. P. Chairroj, Department of Agriculture (Thailand)

Relationships between ambient methane concentration and flux from rice fields as affected by microclimate conditions. Y. A. Husin, Department of Forest Resources Conservation, Bogor Agricultural University (Indonesia)

Measurement of methane emission and mitigation options in Korean rice fields. Y. S. Lee, National Agricultural Science and Technology Institute (Korea)

Possible over estimation occurring in extrapolating methane emission rates from rice paddy fields. K. Yagi, National Institute of Agro-Environmental Sciences (Japan)

The twelve case study reports presented in the second session were concerned with methane and nitrous oxide emission and sink in rice paddy fields. In addition, a data book for sustainable agriculture in paddy fields was distributed to the participants with the following contents: environmental externalities of paddy field framing, sustainable agriculture and conservation of the agro-environment in Japan, and climate change and paddy field farming.

JIRCAS INTERNATIONAL SEMINAR: RESEARCH CAPACITY OF NEWLYSTRUCTURED ICIPE AND RELATED RESEARCH INVESTIGATIONS

In order to resolve many of the serious problems concerning food, supply, hunger and poverty alleviation that face north African countries, it is urgent to develop a means for elimination of the desert locust which causes severe damage to agricultural produce. Dr. Hans Herren, Director General of the International Centre of Insect Physiology and Ecology (ICIPE), other ICIPE staff, and related domestic researchers were invited JIRCAS to give lectures in a special international seminar on March 13, 1996.

- Greetings, K. Kainuma, JIRCAS Director General (Japan)
- The new ICIPE and its place in research and capacity: Building for sustainable development. Hans R. Herren, ICIPE Director General (Kenya)
- Roles of kairomones in host location behaviour of parasitic wasps. S. Takahashi, Kyoto University (Japan)
- Some aspects of the arthropod chemical ecology research at ICIPE. A . Hassanali, ICIPE Deputy Director General (Kenya)
- Role of pubescence in resistance of cassava to the cassava green mite, *Mononychellus tanajoa*. H. Kanno, Tohoku NAES (Japan)
- Testis development and imaginal diapause in lepidopteran insects. S. Hiroyoshi, Okinawa Prefectural Agricultural Experimental Station (Japan)
- Hormonal control of development and behavior in the desert locust associated with phase variation. S. Yagi, JIRCAS (Japan)

SEMINAR ON SUSTAINABLE UTILIZATION OF COASTAL ECOSYSTEMS FOR AGRICULTURE, FORESTRY AND FISHERIES IN DEVELOPING REGIONS

Population increase and growth of the economy accelerate the development of coastal areas in tropical and sub-tropical areas; mangrove forests found along the sea coast can be particularly vulnerable. Urbanization, resort development, expansion of farmland, and aquaculture operations have in recent years contributed considerable to the destruction of mangroves, and have resulted in serious worldwide problems involving increased water pollution, soil erosion, soil run-off, and red tide occurrence. Thus, the excessive utilization of brackish water areas, based on inadequate information concerning mechanisms of renewal within these ecosystems, has brought about their destruction. JIRCAS's comprehensive research project, *Productivity and sustainable utilization of tropical and subtropical brackish water mangrove ecosystems* aims to clarify mechanisms of biological productivity in brackish

water ecosystems, with emphasis placed on sustainable utilization of these areas.

In order to review knowledge accumulated thus far on mangrove ecosystems, discuss the status of methodology for monitoring the ecosystems, and formulate overall project direction, this joint seminar was held in Malaysia with counterpart research organs, the University of Malaya (UM), the Fisheries Research Institute (FRI), and the Forestry Research of Malaysia (FRIM). The main seminar was held on December 12, 1995 at the Hotel Equatorial International in Kuala Lumpur, with a satellite symposium being held at the FRI in Penang. The program of speakers is shown below.

Main seminar

Meiofauna and macrobenthos

- Evaluation of the relationship between decomposed logging residues and biomass in logged-over mangroves at Matang, Peninsulare Malaysia. Shamusudin Ibarahim, FRI (Malaysia)
- Macrobenthos in mangrov shores. A. Sasekumar, UM (Malaysia).

Prawns and fish

- The prawn-mangrove connection - facet or fallacy? Chong Ving-Ching, UM (Malaysia)
- Differences in the structure of fish assemblages in Matang and Merbok mangroves in the west coast of Peninsular Malaysia and their ecological significance. Ahamd Husin bin Alias, FRI (Malaysia)

Runoff of soil into brackish waters

- Soil losses from pineapple fields in Ishigaki Island. K. Sugahara, JIRCAS (Japan)
- Effects of soil discharge on coastal marine environment. K. Tanaka, JIRCAS (Japan)

Food-chain, aquaculture and socio-economic aspects in mangrove areas

- Analytical method for the food-chain in aquatic ecosystems. S. Hayase, JIRCAS (Japan)
- Development of aquaculture in mangrove habitats. Choo Poh Sze, FRI (Malaysia)
- Some socio-economic aspects of local communities near mangrove forest areas, Lim Hin Fui, FRIM (Malaysia)

Satellite Symposium

- Opening address by Ibrahim bin Saleh, FRI (Malaysia)
- Current situation of Malaysia fisheries and research works. Chee Phail Ean, FRI (Malaysia)

Current situation of Japanese fisheries and research works, S. Kawahara, JIRCAS (Japan)

Current situation of Japanese mariculture and research works. K. Fukusho, JIRCAS (Japan)

- Closing address by K. Fukusho, JIRCAS (Japan)

3) JIRCAS WORKSHOP SERIES: FACETS OF INTERNATIONAL AGRICULTURAL RESEARCH

In addition to the annual international symposia, JIRCAS additionally sponsors research workshops focusing on specific themes several times per year. Workshops are hosted by the relevant JIRCAS research divisions and are attended by JIRCAS staff, speakers invited from various government research institutes, private companies and universities. The following have been held at JIRCAS in the period covered by this annual report.

1) Jan. 26,1996	Current problems relating to livestock disease in Africa and prospects for future research collaboration <i>(Animal Production and Grasslands Division)</i>
2) Feb. 23,1996	Development in Asian villages: Current problems and concerns <i>(Research Information Division)</i>
3) Mar. 22.1996	Development of sustainable agriculture in Northeast Thailand: Current topics <i>(Biological Resources Division)</i>

[Click here continue to \[Symposia And Workshops \(4\) International Research Seminars\]](#)

4) INTERNATIONAL RESEARCH SEMINARS

International research seminars are held throughout the year informally, with 1 to 3 Japanese or foreign guests, or JIRCAS staff giving a presentation on some topic of interest to international agricultural research. Six seminars were held in FY 1995 as follows:

May. 8, 1995	Genetic resources in the <i>Vigna</i> genus <i>N. Egawa, JIRCAS (Japan)</i> <i>N. Tomooka, NAIR(Japan)</i> <i>Y. Takaishi, The University of the Ryukyus (Japan)</i>
Sep. 14, 1995	Applications of genetic engineering and molecular markers in potato breeding <i>K. Watanabe, CIP (Peru)</i>
Nov. 8, 1995	Research activity at WARDA (West Africa Rice Development Association) <i>R. Ishii, The University of Tokyo (Japan)</i>
Nov. 13, 1995	Applications of systems dynamics in agricultural research <i>M. Tsuiki, National Agriculture Research Center (NARC)(Japan)</i> <i>T. Monma, Tohoku National Agricultural Experiment Station (Japan)</i>
Nov. 15, 1995	Pest control in cotton fields in China <i>Y. Guo, Institute of Plant Protection (People's Republic of China)</i>
Nov. 30, 1995	Overview of world food demand <i>A. Womack, International Food Policy Research Institute (USA)</i> <i>G. Shuler, International Food Policy Research Institute (USA)</i>

5) ANNUAL MEETING FOR REVIEW AND PROMOTION OF RESEARCH

The 1995 Annual Meeting for Review and Promotion of Research for International Collaboration is held usually in February on JIRCAS premises, approaching the end of the fiscal year. The purpose of the meeting is to review and evaluate the year's activities in detail in preparation for the subsequent fiscal year period. All of JIRCAS's operations are outlined, and research achievements deemed of particular importance are highlighted (see Research Overview; Research Division). The meeting is held in the attendance of JIRCAS directors and invited representatives from the Agriculture, Forestry and Fisheries Research Council (AFFRC), the Forestry Agency, the Fisheries Agency, and various MAFF institutes. In this year's Meeting, emphasis was placed on environmental studies and the importance of furthering research activity aimed at the development of sustainable agriculture. In particular, discussion focused on how to further promote collaborative activities with the People's Republic of China as part of JIRCAS's overall research strategy until the year 2003.

6) JIRCAS RETURN SEMINARS

At JIRCAS, researchers returning abroad from overseas dispatches or research projects give an oral presentation accompanied by the preparation of a written summary of activities and report of research results to JIRCAS staff. These sessions termed "JIRCAS Return Seminars" and are given during the interim or upon the completion of research projects and dispatches. Such seminars are ordinarily held twice per month: in one year, approximately 50 scientists give presentations.

Effects of modification of culture conditions on varietal differences in rice cell culture

In a liquid culture for suspension culture, 2 kinds of basal media, N6⁵⁾ and R2¹⁵⁾, are widely used in combination with 2,4-D, sucrose, proline, etc. Both media were developed for cell culture of Japonica type rice in terms of promotion of cell proliferation and callus formation from explants, and the composition of the media was characterized by low levels of ammonium sulfate, 3.5 and 2.5 mM, respectively, as reduced nitrogen sources. [Fig. 1 A-C](#) shows a comparison of callus proliferation between 'Nipponbare', 'Koshihikari' and 'IR24', when the calluses derived from mature embryos were cultured in a liquid medium containing R2 basal medium, 1 mg/L 2,4-D and 30 g/L sucrose. Japonica type variety Nipponbare is one of the varieties most frequently used for biotechnological research. Nipponbare produced yellowish-white calluses and grew vigorously in this culture medium while Japonica type variety Koshihikari produced brown calluses and grew poorly. The scutellum of the embryo of the Indica type variety IR24 enlarged in the liquid medium but ceased to proliferate. In this study, 50 varieties from 4 varietal groups, Japonica type, Indica type, Javanica type and Indica-Japonica crossed varieties were classified into the 3 types described above in terms of callus proliferation in this medium as follows: Nipponbare type, Koshihikari type and IR24 type. [Fig. 2](#) shows that in the 50 varieties from the 4 varietal groups, the callus growth rate varied during the seven-day-culture period from 1.0 to 7.5 and that the Koshihikari and IR24 type varieties showed a lower level of growth. Based on these results, Koshihikari and IR24 were selected as recalcitrant varieties for improving the culture conditions.

In this study, it was assumed that specific constituents of the medium inhibited callus growth in some varieties, such as Koshihikari, IR24. To verify this hypothesis, experiments were conducted to remove the factors affecting varietal differences by modifying the medium composition. Improved composition by which the calluses of the 2 recalcitrant varieties and of Nipponbare could proliferate was eventually identified ([Fig. 1 D-F](#)). Ammonium sulfate and sucrose concentrations were considered to be the factors that inhibited the growth of the calluses of Koshihikari¹³⁾. The growth rate of the Koshihikari callus was almost identical with that of the Nipponbare callus, when alanine was added to the medium instead of ammonium sulfate as reduced nitrogen source and, in addition, the sucrose concentration decreased from 3 to 0.375%. In IR24, sucrose and medium pH were considered to be responsible for the poor response in culture. IR24 could be cultured in a liquid medium when the medium used for the Koshihikari varieties was improved with the following additional modifications: (1) Maltose replaced sucrose. (2) The pH of the medium decreased from 5.8 to 4.5. Furthermore, the addition of proline at a concentration of 10 mM promoted callus growth in the 3 varieties. The composition of the modified medium (Medium C) is shown in [Table 1](#) together with that of the initial medium (Medium A).

With the modified culture conditions, 50 varieties from 4 varietal groups were tested and the growth rates are shown in Fig 3. Koshihikari did not show any browning of calluses and all the tested IR24 varieties could be cultured under the modified conditions. The callus growth rates in the liquid medium ranged from 2.6 to 4.4. There were smaller differences in the callus growth rate compared to that under the initial conditions. These results indicated that the modified conditions developed in this study were applicable to a wider range of rice varieties.

Prediction of Pork Production Structure and Consumption in China

Chien Hsiaoping

Research Information Division, JIRCAS

Pork consumption in recent years has shown two main characteristics. The first one is that per capita pork consumption in the urban areas seems to have hit a peak already. The second one is that consumers' consumption preference has shown variations (from frozen meat to fresh meat, and from fat meat to lean meat, with a tendency to high quality consumption). These new trends have also resulted in changes in the production structure.

1 Pork production structure

1) Breeding scale

The main form of pork production is the family-scale hog raising. The average number of hogs raised in a farm is four per household (shipment + stock). Usually, one is for self-consumption. According to the data supplied by the Ministry of Agriculture, farms raising less than six hogs accounted for 94% of the total hog-raising farms in 1995. However, the number of farms raising more than six hogs has been increasing since 1986.

2) Production composition

Pork production in 1998 amounted to 38,840,000 tons, and the supply per capita was 31 kg. In the early 1980s, pork production accounted for more than 90% of the whole meat production, and now it accounts for 68%. This is partly due to the changes in consumers' preference in consumption, and partly influenced by the new policy of promoting the consumption of products derived from feed-saving-type stock raising in recent years, including herbivorous animal products (cow and sheep), poultry meat products that are produced with efficient feed-to-meat conversion rates, and marine products. At present, poultry meat and beef production accounts for 28%. However, the pork-predominant production structure will remain.

3) Regional distribution of production

A large proportion of pork production is carried out in the southern regions. In 1998, the production share of the southern regions was 65%, in contrast to the 35% share in the northern regions. In the past, pork production was heavily concentrated in Sichuan Province, but in the 1990s many provinces began to enhance their own self-supply capabilities. Among them, the northeastern region has taken the advantage of being a major grain production base and has markedly increased pork production in recent years. Also, as a result of the changes in consumers' consumption preference, it has become more difficult for Sichuan Province to adjust its production to meet the market demand, and the domestic pork production is facing a possible redistribution among provinces.

4) Feed in hog raising

The production structure based on the family-scale hog raising has resulted in a long breeding period and a low turnover rate. The low lean-meat rate characterizes the meat thus produced, since formula feed has not yet replaced the traditional feeding method. Nevertheless, as the commercial production is expanding, large-scale hog raising has begun to emerge, which in turn has stimulated the demand for feed. The formula feed production for hog raising had been increasing at an annual rate of 12% between 1991 and 1996 to 20,000,000 tons, accounting for 39% of the total formula feed production. Considering the large scale of pork production, however, the share of the formula feed for hog raising is still quite small. As the production moves rapidly to meet the needs of the commercial market, the demand for formula feed is expected to increase further.

2 Forecast for pork consumption

The future pork consumption per capita in the urban and rural areas has been analyzed, respectively. The simulation conducted from 1996 to 2010 covered a 15-year period in total, and the results are shown in Table 1. The base line of the analysis follows the average expansion rate in the past 16 years (1980 to 1995). The high and low predictions are obtained by moving the point up and down from the expansion rate of this base line. Compared with the urban areas, the income elasticity of demand in the rural areas is larger, indicating a possible future increase in pork consumption as the rural economy further develops. On the other hand, pork consumption in the rural areas is less influenced by price fluctuations, reflecting the self-supply and self-sufficiency conditions there.

Accordingly, pork consumption in the urban areas will only increase slightly, and the low prediction forecasts a decrease. The high prediction puts the amount of consumption per capita in the urban areas at 20 kg. On the other hand, a steady increase of pork consumption is predicted for the rural areas, with the amount of consumption per capita reaching 18 kg in 2010, about the same level as that in the urban areas. Taking into consideration the population trend to urbanization, the total amount of direct consumption is predicted to reach 3,540,000 tons (low prediction) or 37,000,000 tons (high prediction) in 2010, an increase of about 12,000,000 tons from 23,200,000 tons in 1996. As the population and income increase, the pork production and consumption will certainly expand further.

Medium-scale hog raising in Sichuan

Table 1. Analytical results of prediction of per capita pork consumption (period 1996-2010)

	Income elasticity	Price elasticity	R ²	D.W.
Urban	0.345	-0.133	0.92	2.24
(t value)	(6.62)	(-5.15)		
Rural	0.585	-0.051	0.95	1.93
(t value)	(10.07)	(-2.05)

畜産	95. 10-97. 9				3	2	1					
作物保護	95. 11-98. 3				1	1	1					2
農業経済	96. 8-97. 8	97. 12-99. 12		2	2	1	3					
環境				1			1					
水産				2	3	2	2				2	1
流通加工						1	1					
管理調査			11	4	2	4	3	3	3	2	8	2
合計	4	2	11	9	12	12	13	3	3	2	10	5

表2 プロジェクトによる主要成果

1. メコンデルタ農業の自然、社会立地の特異性を明らかにした。
2. ファーミングシステムの主要な技術構造を解明した。
3. 個別技術の改善に向けた成果として、①稲の後期重点追肥技術、②主要病害抵抗性遺伝子解明、③寄生虫防除による養豚効率改善、④オニテナガエビの生長・脱皮・成熟に関わる内分泌の機構解明等
4. メコンデルタ農業経営の主要構造を明らかにした。
5. 今後のファーミングシステム発展の可能性を示すことができた。

表 1 不耕起栽培の普及面積の推移 (1,000ha)

国	1973/74	1983/84	1996/97
ブラジル	1	400	6,500
アルゼンチン	—	—	4,400
パラグアイ	—	—	500
ウルグアイ・ チリ・ボリビア	—	—	250
アメリカ	2,200	4,800	19,400
オーストラリア	100	400	1,000
世界合計			38,700

R. Derpsch(1998) による推定値。

表2 各技術分野における問題点と改善方向

技術分野	問題点	改善方向
土壌の物理性	土壌下層の緊密化	下層の透水性・通気性改良技術
土壌の化学性	土壌下層の養分不足	下層への施肥技術
病害	土壌伝染性病害の多発	土壌伝染性病害の防除技術
雑草	除草剤への依存度増大	耕種的防除法
作付け体系	大豆／小麦体系への偏り	作付け体系の多様化

図 1 土壌中のアンモニア態窒素の変化
0日目のアンモニア態窒素を100%として表した。

図 2 土壤から発生する亜酸化窒素の変化
植物を生育させなかった土壤中、窒素を与えない区を対照区、窒素を与えた区を無植物区とした。

図 3 アンモニア酸化細菌数の変化
窒素を与えず植物も無い区を対照区、窒素を与えたが植物のない区を無植物区とした。

図 4 *B. humificans* による硝化抑制機構

表 1 4-MU-*N*-Acetylchitooligosid を基質とした陽性クローンの酵素活性

クローン	酵素活性 (μ Unit/ml) ¹⁾		活性比 (dimer/trimer)
	dimer ²⁾	trimer	
グループ A			
CHF2778	7.63	10.36	0.74
CHF2601	15.81	26.16	0.60

注) 図中A-Eの文字は表2の農家を示す

表 1 処理区の窒素施用時期と施用量 (Nkg/ha)

処理 番号	播種1 週間後	分けつ 始期	分けつ 盛期	穂孕期	合計
1	40	40			80
2	40		40		80
3	40			40	80
4	40	40		40	120
5	40		40	40	120
6	40	40	40		120

注) P₂O₅は40kg/ha、K₂Oは30kg/ha。いずれも基肥施用

図2 窒素施肥法と収量構成要素 (1996/97 乾季)

注) 登熟度 = 登熟歩合 × 千粒重 (精粒)

図中の数字は表1の処理区番号を示す

表2 ソンハウステートファーム水田の水深 (cm)

農家	1996年 月/日						
	4/28	5/12	5/26	6/9	6/23	7/7	7/21
A	8	23	25	29	26	6	—
B	—	10	13	24	20	20	0
C	8	1	8	18	21	9	0
D	8	13	15	18	21	9	0
E	—	0	2	9	3	0.5	0

注) 1996年雨季において異なる5農家の圃場を調査

表2 各階層の平均経営面積の変遷

(ha/戸)

農家階層	1974	1980	1988	1996
土地無し	0.2	0.2	0.2	0.0
1ha以下	0.4	0.5	0.6	0.7
1-2ha	1.8	0.8	1.2	1.4
2ha以上	1.4	1.1	1.2	3.3

注) 調査時点(96年)に在村する農家から聞き取ったもので、すでに流出した小農、土地無し農民は調査対象になっていないことに注意

表 1 階層別農業所得の構成

(単位：百万ドン、%)

農家階層	稲作作期			畑作	畜産	養魚	合計	
	合計	冬春	春夏					夏秋
土地無し	0.0	0.0	0.0	0.0	0.0(0)	0.1(100)	0.0(0)	0.1(100)
1 ha 以下	7.8(65)	4.9	1.3	1.7	1.2(10)	2.2(18)	0.8(6)	11.9(100)
1 - 2 ha	12.0(47)	8.3	2.4	1.3	3.0(12)	7.8(31)	2.8(11)	25.5(100)
2 ha 以上	42.7(81)	26.3	9.0	7.4	4.8(9)	1.2(2)	3.8(7)	52.4(100)

注 1) 調査当時のレート：1USドル=11,000ドン

2) 平均純農業所得に占める各部門の構成比率を示す。カッコ内はその構成比率で単位は%

3) 冬春作は乾期作、春夏作、夏秋作は雨期作に相当する

表3 階層別水稲生産費（ドン/kg）および収量

農家階層	生産費（作期別）			水稲収量 （3期合計）
	冬春	春夏	夏秋	
1ha 以下	969	1,092	723	15.8t/ha
1 - 2ha	1,130	1,292	794	14.8
2ha 以上	720	958	663	15.9

注) 機械、建造物の償却費は含まない

表1 タイの畑地土壌から発生する亜酸化窒素

	地域	土 壌	測定 期間 (日)	窒素施用区 N ₂ O-N発生量 N ₂ O-Nmg/m ²	窒素無施用区 N ₂ O-N発生量 N ₂ O-Nmg/m ²	(1N--N)発生量	
						肥料-N a* (%)	b**
コンケン	東北	Oxic Paleustults	106	28.9	10.9	0.12	0.24
チェンマイ	北	Typic Ochraqualfs	78	19.6	11.9	0.08	0.16
ナコンサワン	中央	Typic Calciustalfs	106	40.3	10.0	0.25	0.48
プラプフタバ	中央	Oxic Paleustults	110	35.1	12.2	0.19	0.37

*: 肥料を入れない畝間部については窒素肥料施用区と無施肥区とでN₂O発生量に差がないと仮定した場合

** : 畝間部についても畝上と同程度にN₂O発生量に差があると仮定した場合

参考: 温帯畑地における施肥窒素に対するN₂O放出比について、測定された46例の中央値が0.33%であった
(八木一行 農業環境技術研究所 資源・生態管理科研究集録 (1997) より)。

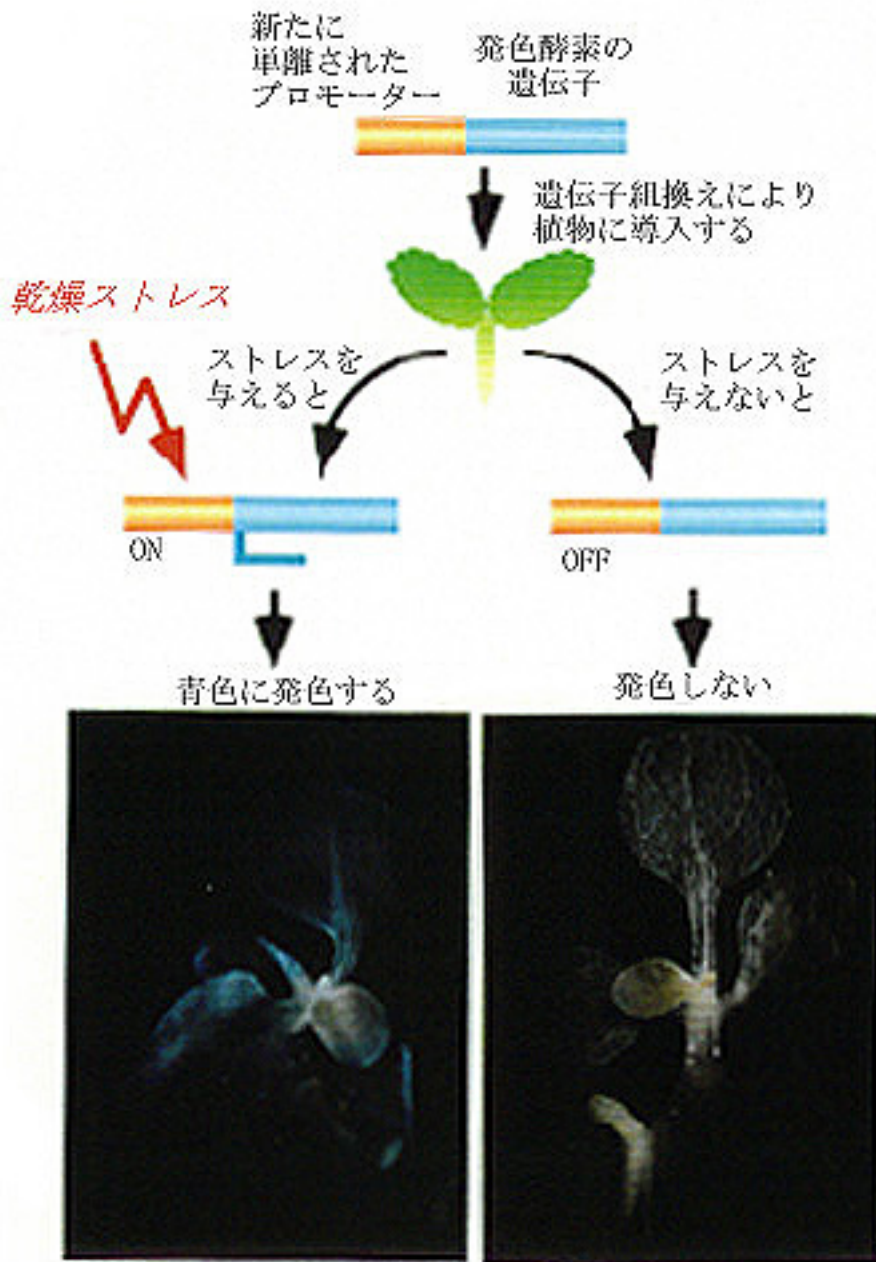

図2 乾燥ストレス誘導性プロモーターの働き

新たに単離した乾燥ストレス誘導性プロモーターを青い色素の合成酵素β-グルクロニダーゼの遺伝子と結合して植物に導入した。得られた形質転換体は乾燥ストレスを与えると青く染まった。

図1 植生指数PD54に基づく植生の多寡程度

図 2 植生指数PD54に基づく植生の変動程度

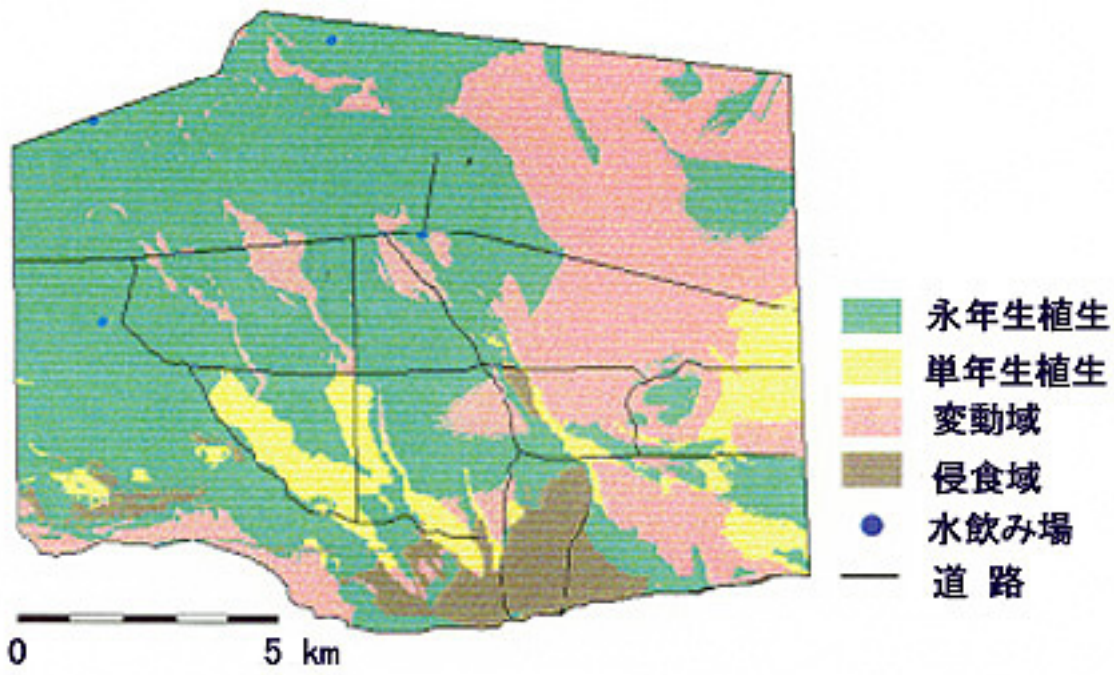

図3 ニューラルネットワークモデルによる植生変動評価

表 1 各要因を除いた場合の判別精度の変化

多寡	除外要因 判別精度 (%)	地 貌	水 系	土 壤	植 生	傾斜度	距 離 1	距 離 2
		67.90	69.00	67.90	69.74	71.59	59.04	70.85
変動	除外要因 判別精度 (%)	地 貌	水 系	土 壤	植 生	傾斜度	距 離 1	距 離 2
		67.90	69.00	67.90	69.74	71.59	59.04	70.85

[具体的データ] 合系34号及び合系35号の主要特性

系統名：合系34号 組合せ：雲系2号／~~海~~檢1号

特性：長所 1. 多収 2. 良質

短所 1. 出穂揃い

系統名：合系35号 組合せ：合系15号／合系4号

特性：長所 1. 多収

短所 1. いもち病抵抗性

特性	合系34号	合系35号	雲梗9号(比較)
熟期	中生	中生	中生
草型	偏穂重型	穂重型	穂重型
出穂期(月.日)	8.04	8.01	8.03
成熟期(月.日)	9.19	9.12	9.16
稈長(cm)	69.2	76.1	99.1
穂長(cm)	18.3	17.3	15.8
穂数(本/m ²)	423	374	386
芒の多少・長短	無	無	無
ふ先色	黄白	褐	黄白
脱粒性	難	難	難
耐倒伏性	や強	や強	弱
耐冷性	や強	や強	強
いもち病抵抗性遺伝子型*	—	Pi-i	+
葉いもち	—	中	やや強
穂いもち	—	中	強
籾重(kg/a)	79.5	86.1	71.1
同上標準比(%)	112	121	(100)
籾千粒重(g)	24.8	25.9	22.9
玄米外観品質	上下	中中	中下
炊飯米食味	中中	中中	下中
調査地	雲南省農業科学院(昆明市桃園村、標高1916m)		
調査年次	1993~1994年(雲南省中北部区域試験)		

* 合系34号は未知の真性抵抗性遺伝子を保有している。遺伝子型「+」の雲梗9号は既知の抵抗性遺伝子を保有していない。

図1. ムダ地区におけるグループ・ファーム組織数の変遷

表1 P S P加入の利点と問題点 (加入農家 26 戸の複数回答)

	利 点	問 題 点
借入金	農業投入材用の借入金が可能 (77%) 非農業用途 (食費・教育費) 用の借入金が可能(27%)	借入金申請手続きが遅い (12%) 借り入れ返済の締め切りが厳しい(4%)
農業資材の入手	非農業用資材や委託料金が安く手にはいる (62%) 無料で農業が配布されることがある (4%)	資材価格が多くの小売店より高い (8%) 委託料金の設定が非加入農家と変わらない(8%)
行政との関連		農業関係機関との連携が非効率 (19%) 行政のコントロールが強い(4%)
技術情報	普及院から技術的指導を受けられる(27%) 他の加入農家を観察して知識が得られる(4%) 圃場で問題発生時、加入農家が相談にのってくれる(4%)	普及職員との討議が不足(4%) 普及員が圃場まで見回りにこない(4%)
農家間の関係	共同作業が時間や体力の節約になる(12%) 加入農家のための積立金がある(7%) 加入農家の親睦旅行がある(4%) 加入農家間で農業用具/機械の貸し借りができる(4%) 加入農家間の相互補助 (冠婚葬祭) がある(4%)	共同作業に従わない者がいる(15%) 借入金の返済をしない者がいる(4%) 借入金を飲食費に使ってしまう者がいる(15%)

表 2. 調査農家の概要と経営上の問題点

	加入農家(%)	非加入農家(%)
経営耕地面積(ha)	1.7	1.2
家族労働力数 (人)	1.1	1.3
収穫量 (kg/ha)	4934.3	450.5
経営問題 (複数回答)		
問題あり	10 (38.5)	18(60.0)
病害虫発生	4	9
農業技術情報の発生	2	6
低収量	1	3
雇用労働力不足	1	3
土地の高度	2	1
雑草繁茂	1	1
天候不順	1	1
農業機械の不足	1	0
経営者の高齢化	1	0
地代の高騰	1	0
経営費の増加	0	1
圃場管理の時間がない	1	0
何も問題はない	10(61.5)	9(36.0)
回答無し	0(0.0)	1(4.0)

図2 調査農家の経営費と稲作粗収益

図1 タイ東北部における作物の代謝エネルギー生産量
(ギガジュール/ヘクタール/年)

表1 さとうきび茎部の給与が乳牛の体重、乳量、乳質に及ぼす影響

処理	稲藁のみ給与	さとうきび茎部給与
さとうきび茎部の採食量(KgDM/day)	-	5.33
稲藁の採食量(KgDM/day)	6.69	1.00
配合飼料の採食量(KgDM/day)	6.50	5.88
体重の変化(Kg/3weeks)	7	9
乳量(Kg/day)	8.49	8.90
乳質(%) 脂肪	4.57	4.79
蛋白質	3.45	3.73*
乳糖	4.14	4.15
全固形分	12.9	13.4
無脂固形分	8.29	8.58

表2：フィリピン2カ所における湛水土壤中直播適応品種（8-10品種平均）と対照品種（2品種平均）の苗立ちと収取量。湛水土壤中直播機を使用し1993年乾期に実施。フィリピン国立稲研究所との共同研究。

調査項目	品種	Los Baños	Muñoz
苗立ち率(%)	適応	80.5 a	57.4 a
	対照	64.0 b	24.6 b
苗個体乾物重(mg)	適応	12.8 a	8.6 a
	対照	8.5 b	6.8 b
収取量(kg/ha)	適応	7600 a	6600 a
	対照	7500 a	6270 b

平均値に付けた文字 (a, b 等) が異なる時は5%レベルで統計的に有意な差があることを示す。

表3：各種除草レベル下での湛水土壤中直播適応品種 IR41996-50-2-1-3と対照品種 PSBRC 4の収取量と発生した雑草の乾物重。1993年乾期。

品種	除草レベル	収取量(kg/ha)	雑草乾物重(kg/ha)
IR41996-50-2-1-3	完全	6000 a	241 c
	選択	6300 a	292 c
	無除草	5200 b	1536 b
PSBRC 4	完全	5000 b	671 c
	選択	5000 b	1550 b
	無除草	3100 c	3480 a

平均値に付けた文字 (a, b 等) が異なる時は5%レベルで統計的に有意な差があることを示す。

表1：ブランコヤドリバエの人工飼育*

培地の種類	供試卵数	発育した幼虫(%)		囲蛹殻形成 (%)	ファネル形成 (%)	成虫 (%)
		I 齢	III 齢

JIRCASにおける監事の役割

監事 加藤 邦彦

近年、会社などで金銭の使い込み等の違法行為が行われたとの報道がテレビ等でよく出てきます。そして、これらの報道のたびに「監事はいったい何をしていたのか？」というきびしい問いかけがあります。一方、独立行政法人における監事による監査は始まったばかりでこれまで手探り状態で進んできました。このため、監事の役割については理解されていない点が多々ありますので、以下に、JIRCASの業務との関連で監事の仕事について述べてみます。

JIRCASの業務

JIRCASは5年ごとに業務運営に関する「中期目標」を農林水産大臣より指示され、これに基づいて「中期計画」を作成し、農林水産大臣に申請し、認可を受けます。さらに、「中期計画」に基づいた年度計画を作成し、農林水産大臣に届け出ます。そして、年度計画に従い業務を行った後、年度が終了したら、年度計画に定めた項目ごとにその実績を記入した年度報告書を独立行政法人評価委員会（以下「独法評価委員会」と略す。）に提出し、評価を受けます。

監査

監事は毎年定期監査を年度終了後に行いますが、これには上述の年度報告書が基になります。監査には業務監査と会計監査があり、業務監査ではセンターの業務がその目的を達成するために合理的かつ能率的に運営されているかどうかを監査し、会計監査はセンターの会計に関する事務処理が法令その他諸規程に従い適正に行われているかどうかを監査します。監事は監査結果をとりまとめ理事長に報告します。また、JIRCASが農林水産大臣に毎年提出する書類の内、財務諸表および決算報告書には監事の意見を付す必要があります。

監査の役割

通則法において、「独立行政法人は業務の内容を公表すること等を通じて、その組織および運営の状況を国民に明らかにするよう努めなければならない。」（第3条2）とされています。上述の独法評価委員会への年度報告書の提出もその例です。評価委員は報告書に基づいて評価を行うわけですから、もし、報告書の内容に間違いがあったり、実体とかけ離れていたりしたらJIRCASは正しい評価を受けられなくなります。そんなわけで、監査の第一の目的は報告書の内容に誤りがないか、実体にあったものであるかどうかを検証することにあります。JIRCASの業務内容は膨大ですから短期間の監査で内容のチェックを行うことは不可能です。そのため以下の日常業務を行っています。

監事の日常業務

1 会計月次報告の検討

毎月一回監事室において会計月次報告を監査官が説明し、これについて常勤監事および非常勤監事が質問、コメント等を行い、回答を求めています。

2 会議等への出席

役員会は3か月に1回、常任幹部会は毎週1回、運営会議は1か月に1回、各種委員会、帰国報告会等はその都度開かれ、常勤監事および非常勤監事が出席し内容を把握するとともに必要な時は意見を述べています。

成果情報

香り米品種を 精米から判別する

食料利用部 吉橋 忠

タイの香り米 カオドマリ105

タイの東北部では、ポップコーンのような香りを持った香り米品種カオドマリ105 (Khao Dawk Mali 105; 英名 Jasmine) が、生産されています。我が国では香り米は「ねずみ米」などとも言われ、一般的な品種ではありませんが、国際的にはその香りが好まれるため、重要な品種です。香り米の需要は、東南アジア・東アジア地域の経済発展と共に、高まっていますが、このカオドマリ105を他の地域で栽培をしても、高品質な香り米を収穫することが出来ません。そのため、需要に供給が追いつかない状況が続き、タイ国内で生産される他の品種に比べ、高値で取り引きされています。

精米から品種を判別する

このため、香りのしない品種の米を混ぜる不正が発生していました。国家間で大口で取り引きされる香り米に対して、「香りがしない」との理由で受け取りが拒否されるなどの問題も発生しています。我が国では、米は玄米として流通していますが、国際的には嵩張らず、すぐに消費できる精米として流通しています。玄米では発芽させた後に、草型を見ることで、品種を判別することは比較的容易ですが、精米は発芽しませんので、粒径と粒長の比をもとに判別が行われていました。このため、粒形が同じような品種が混入された場合、従来の判別方法は無力でした。

米一粒から極微量のDNAを取り出す

品種は、遺伝子、つまりDNAの違いに起因しています。精米の中には極微量ではありますが、DNAが含まれています。このDNAを効率的に取りだし、違いを明らかにすることで、品種の判別を行うことが出来ます。このためには精米一粒一粒から、DNAを取り出さなければなりません。米の成分の

多くは澱粉で占められていて、この澱粉はDNAを取り出す際に邪魔になります。これを高野豆腐がスポンジ状になる原理を利用して、効率的に除くことを出来る方法を開発しました。(図1) この方法を利用することで、効率的にDNAを精米

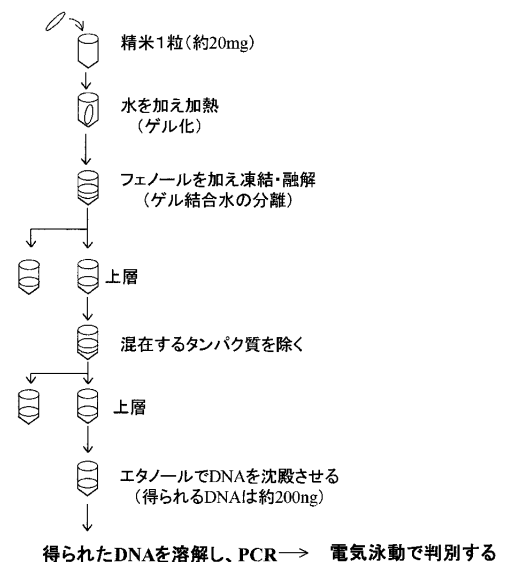

図1 新たに開発した簡易DNA抽出法
精米をゲル化し、そのゲルの結合水と共にDNAを効率よく抽出する。

から取り出すことが出来るようになりました。

混米の検出

抽出されたDNAは、マイクロサテライト多型という、親子鑑定に使われる方法で品種を判別することが出来ます。図2に、実際に市場で入手した「カオドマリ105」として売られている精米を分析した例を示します。このように、一見しただけでは判らない混米を、高精度で判別することが出来ます。残念ながら、DNAを利用した品種の判別は、コストがかかりますので、一般的に利用することは出来ませんが、国家間大口取引の際には、有効な品質評価・保証法として利用することが出来ます。

図2 カオドマリ105市場品への適用
クアラルンプール市場品ではランダムに選んだ5粒のうち“1”が混米・バンコク市場品では“1, 2, 5”が混米であることが判別できた。

賞

「エビ類の生理化学研究と 養殖への応用」が評価され、 「日本女性科学者の会」奨励賞を受賞 水産部のマーシー・ワイルダーさん

水産部のマーシー・ニコル・ワイルダーさんは、「甲殻類の生理化学的基礎研究と養殖技術への応用」(JIRCASニュース23号)に関する研究業績が評価され、平成13年6月に第6回「日本女性科学者の会」(鈴木益子会長)の奨励賞を受賞しました。

ワイルダーさんは、ハーバード大学を卒業後、昭和62年に文部省の国費留学生として来日し、東京大学大学院で水産学を専攻し、東南アジアに多く生息する大型の淡水エビである「オニテナガエビ」を対象に、その脱皮・生殖・胚発生に関する基礎的研究を開始しました。平成5年にはこの研究で博士号を授与され、平成6年に国際農林水産業研究センターに入所し、現在もオニテナガエビの生理化学的研究を続けています。これまでの研究成果で特許も申請し、ベトナムとの国際共同研究の中で稚エビ生産技術として普及しつつあります。

理科系の女性研究者は、仕事を続けていく上で、結婚、出産、転職という大きなハードルに直面します。「日本女性科学者の会」は、理科系の研究者であった女性800名を対象にアンケート調査をした結果、仕事を辞めた理由のトップは出産・育児の33%で、次いで結婚の28%ということでした。勤続年数

では73%が10年以下で、3～4年が最も多く、歳をとり職場で昇任するに従って女性の比率が低くなるという現実も示されました。ワイルダーさんは大学を卒業して今年で14年で、JIRCASに入所してから8年目になりますが、その間、精力的に研究を推進し、一貫した基礎的研究とその応用技術の成果が認められ今回の受賞になりましたが、一方で、JIRCASでは外国のお客さんが多いため、英語が母国語のワイルダーさんは大変貴重な人材であり、いろいろな支援業務もお願いしてきました。平成7年に始まった英文のアンニュアルレポート作成では、企画調整部の一員として多大なる貢献をしています。また、明るい性格、他人への思いやりと責任感の人一倍強いワイルダーさんは、入所早々に研究所の人気者になり、職場を明るくするという「マーシー効果」の言葉も生まれました。

JIRCASの女性研究者はまだ1桁台で10%にも満たない数ですが、JIRCASのパートナーである開発途上国の研究所・大学には多くの女性研究者がいます。JIRCASの女性研究者の今後の活躍にエールを送ります。

受賞 「フクユタカ」などの大豆 新品種の育成で農林水産大臣表彰 生物資源部の異儀田和典さん

生物資源部の異儀田和典さんは、九州農業試験場（現：（独）農業技術研究機構・九州沖縄農業研究センター）時代に、永年にわたって大豆新品種の育成に取り組み、大品種の「フクユタカ」をはじめ、「アキシロメ」、「トヨシロメ」などの有力品種を次々と育成し、九州地方を中心とした暖地における大豆生産の安定化に大きく寄与しました。この業績により平成13年4月9日に、農林水産省において功績者表彰（農林水産大臣賞）を受賞しました。

異儀田さん達が育成した「フクユタカ」は、豆腐加工用の大豆として飛び抜けて高い品質をもっており、豆腐業界の評価が非常に高く、収量も多いことから、平成3年以降、全国1位の作付け面積を誇っており、平成11年の作付け占有率は18.5%にもなっています。異儀田さんは、この他にも中国・近畿地方を中心とした温暖地での栽培

に適し、豆腐加工に優れた品種「ニシムスメ」や、近畿・中国各県が一斉に奨励品種として採用の動きにある新品種「サチユタカ」の育成にも携わりました。

また、大豆特有の青臭みの原因となる脂質分解酵素・リポキシゲナーゼを全く含まない「いちひめ」、「エルスター」という品種を世界ではじめて育成し、世に出しました。この2種類は、新しいタイプの良質蛋白質を豊富に含んだ新しい食品素材として大いに期待されています。

さらに異儀田さんは、西日本ではじめての納豆用品種である「すずおとめ」の育成にも係りました。この納豆用品種は、九州産の大豆で作った納豆として熊本市のマルキン食品からデビューし、今年の3月10日から熊本県、福岡県を中心に本格的な販売に入っています。

こうした多彩な大豆品種を育成したことが、水田転作用の大豆作を発展させることにつながり、国の農業政策に対して多大な貢献をしたことが認められ、今回の受賞となりました。

中間評価会議

「東南アジアにおける穀類の ポストハーベストロス低減技術の開発 (収穫後損耗防止プロジェクト)」中間評価 及びワークショップ

食料利用部長 林 徹

標記プロジェクトは平成12年から5年間の計画で実施されているものであり、「主要穀類（主に米）収穫後の損耗調査及び品質劣化要因の解析」、「主要害虫・微生物種の周年動態及び被害発生・抑制機構の解析」、「資材低投入型乾燥技術、天敵・生理活性物質等を利用した生物的防除技術の開発」の3つの中課題で構成されている。

プロジェクトの中間評価会議及びワークショップが、平成13年11月29日にJIRCAS国際会議室において21名の参加のもと開催された。参加者の内訳は、評価委員3名、日本人研究者12名（北海道農業研究センター2名、食総研2名、JIRCAS8名）、タイ人カウンターパート6名であった。午前にはワークショップが開催され、「タイにおける害虫防除の現状」（Ms. Auranuj Kongkanjanaタイ農業局昆虫動物部長）、「タイにおける貯穀害虫防除の現状」（Ms. Porntip Visarathanonthタイ農業局貯穀害虫研究グループ長）、「天然物を用いた貯穀害虫の防除」（Dr. Gassinee Trakoontivakornカセサート大学食品開発研究所研究次長）、「農産物の品質評価の現状と課題」（Dr. Warunee Varanyanondカセサート大学食品開発研究所研究長）、「タイにおける穀物の乾燥技術」（Dr. Somchart Soponronnaritキングモンクット工科大学教授）の5課題の講演が行われた。

午後には開催された中間評価会議においては、日本人研究者により各実施課題ごとに研究成果が発表され、それぞれの成果について討議が行われ、評価がなされた。その結果、プロジェクトが開始されて実質1年余

りしか経過していないが、概ね順調に進捗しているとの評価がなされた。しかし、米の収穫後損耗の量的把握が不十分、害虫関係の担当者の変更に対する懸念、タイとの一層の連携強化の必要性の3点が指摘された。それに対して、翌11月30日に日本人研究者及びタイ人カウンターパートが参加してワーキンググループを開催し、パトンタニ稲研究所での貯蔵実験の設計の見直し、損耗実態調査地点の追加、害虫関係研究者の増強と必要に応じたタイへの派遣、プロジェクト責任者のタイへの派遣と現地での調整により対応することにした。また、具体的な成果として「タイ米、害虫、天敵鑑定の作成」、「簡易トラップによる害虫汚染実態の解明と天敵、植物を用いた制御システムの開発」、「天敵、天然物質、短時間高温乾燥(自然エネルギー利用)を組み合わせた技術の開発」、「簡易迅速乾燥・冷却技術とMA貯蔵を組み合わせた技術の提言」を目指してプロジェクトを推進することで合意した。

Workshop and Mid-term Evaluation Meeting of the Postharvest Project
JIRCAS, 2001.11.29

シンポジウム報告

第8回JIRCAS 国際シンポジウム報告

国際情報部 国際研究情報官 矢島 正晴

世界の発展途上地域では依然として人口増加と貧困が大きな問題となっており、人々は食料確保のために森や林の木を伐採し農地を開墾せざるを得ません。新たに開墾された農地では新たな水需要が増加し、伐採による森林の減少は大地の貯水能力をも衰えさせます。現在、このような水不足はアジア、アフリカなどの各地に広がっており、「水不足の圧力は世界人口の1/3に達し、2025年には3人のうち2人に及ぶ」と予測されています。

このように、発展途上地域の大部分を含む乾燥・半乾燥地帯や降雨の不安定な天水農業地帯では、持続的な農業生産を目指した水利用の向上に関する新たな研究の展開が必要とされています。

そこで、第8回JIRCAS国際シンポジウムでは、「発展途上地域における持続的農業と水問題 — 水利用の向上を目指して—」と題し、「水問題」を中心検討課題として、2001年11月27-28日に筑波国際会議場（エポカルつくば）において、内外から200名（海外より12カ国、25名）を超える国公立機関、大学、民間企業等の研究者、NGOの参加者を得て

開催されました。

シンポジウムでは16名の講演者により、世界の水資源の動向、食料・環境の安全確保と水、農業における水利用の変遷に関する基調講演と、①作物の遺伝・育種・生理生態的特性からみた耐乾性作物開発とその利用、②栽培管理技術からみた農耕地の水利用の現状と向上の可能性、③開発途上国における農業生産と生産安定化の可能性（天水農業および乾燥・半乾燥地農業における水管理の現状と生産安定化の可能性）について話題提供が行われました。さらに、ポスターセッションでは最近の成果を中心に24課題の報告が行われました。

総合討論では、2003年に日本で開催される第3回世界水フォーラム事務局から世界の水問題と同フォーラムの活動状況、さらにJIRCAS (TARC)の最近の水関連国際共同研究の報告に引き続き、今後の国際共同研究の展開方向について活発な意見交換が行われ、JIRCAS、国際研究機関、途上国研究機関、大学等の間で調和のとれた研究協力と連携の強化が確認されました。

帰国報告会の概要

平成13年4月から9月までにJIRCASで開催された帰国報告会の概要は以下の通りです。

年月日	演題	発表者	所属
H13.05.08	農牧輪換システムにおける熱帯牧草の特性	菅野 勉	JIRCAS畜産草地部
H13.05.08	ブラジル東北部の2種のセラード土壌におけるイオウおよび微量元素の可給度ーダイズの生育阻害要因としてのイオウおよびホウ素ー	檀田木世子	JIRCAS生産環境部
H13.05.08	大豆の干ばつ耐性検定法の開発	大矢 徹治	JIRCAS生産環境部
H13.06.28	インドネシア・西ジャワ高原の温帯野菜生産における技術的問題と現地適応技術の模索	山田 盾	JIRCAS生産環境部
H13.06.28	小農経営における温帯野菜作の社会経済的定着条件の解明	小杉 正	JIRCAS国際情報部
H13.07.09	大豆・米等を中心とする食品加工保全流通技術の開発	辰巳 英三	JIRCAS食料利用部
H13.07.25	道路建設と熱帯林減少：インドネシア・スマトラ島におけるゴム農村の事例	宮本 基枝	JIRCAS林業部
H13.07.25	熱帯産未利用木質資源の有効利用のための技術開発ーオイルパーム廃残物の利用研究ー	田中 良平	JIRCAS林業部
H13.07.25	熱帯天然林を対象とする低インパクト伐採技術の開発	佐々木尚三	JIRCAS林業部
H13.08.27	メコンデルタにおける窒素フローの評価と地域資源利用技術の開発	渡邊 武	JIRCAS生産環境部
H13.08.27	タイ東北部の畑作付け体系における深根性マメ科作物の導入が耕地生産力に及ぼす影響の解明	有原 丈二	農研機構・作物研究所
H13.09.03	タイ東北部における土壌保全型作物生産技術の開発	桜木 信幸	JIRCAS生産環境部
H13.09.03	タイにおける貯穀害虫とその天敵の発生状況	高橋 敬一	食品総合研究所
H13.09.25	アグロパストラルシステムにおける熱帯牧草の特性	菅野 勉	JIRCAS畜産草地部

表紙の写真説明

国際農林水産業研究センター 小坂 清巳

熱帯から温帯にまで広がるブラジルでは南米原産の果物はもちろんアフリカやアジアから伝わった果物も栽培されています。コーヒー（右上）はエチオピア辺が原産です。赤く熟した果実は乾燥して黒くなってから収穫していました。

レイシ（右下）は東南アジアでおなじみですが、ブラジルでは最近栽培されるようになったばかりなのでまだ珍しい高価な果物です。

クダモントケイソウ（果物時計草）（左下）はブラジル原産のつる草です。世界各地の亜熱帯地域や熱帯の涼しい高地でよく栽培されています。花は大きくて見事です。果実は熟すと黄色や赤紫になり、実の中には甘酸っぱいゼリーに包まれた種がたくさん入っています。このゼリーから、ジュースやアイスクリーム、ジャムを作ります。

カペロジーニャ（左上）はブラジル語で「毛の多い果物」という意味です。直径3cmくらいの黄色の甘い実の生る山の木を屋敷に植えているといった感じで栽培果物とはいえません。

巻頭言

国際研究協力への一つの視点

企画調整部長 野口 明德

1. 国際協力の理念の変遷

この春に独立行政法人となったJIRCASはその役割に大きな変化は無いが、活動のあり方に変容が求められており、その概要は当ニュース26号の巻頭言として紹介されているので参照されたい。前者の役割は、「開発途上国との研究協力を通して、世界の食料・環境問題の解決に貢献することであり、もって開発途上地域における環境と調和した農林水産業の持続的発展に寄与し国際社会における責務を果たす」ことにある。この大きな役割の底流には、人道主義があると言えよう。(社)国際農林業協力協会が発行する「国際農林業協力」(第22巻、6・7号：通巻第100号記念特集号)において、紙谷 貢氏は日本の海外農業開発協力の理念の変遷に触れられており、その一部を筆者なりにまとめてみると、

～1960	開発途上地域の生産力の拡大と工業化の推進
1970代	人道主義+世界経済の安定化と反映に向けての国際協調 「最貧層の人々に設定すべきミニマムな生活水準」 Basic Human Needs：BHN（基礎生活分野）アプローチ
1980代	成長重視の開発戦略が再び脚光
1990代	開発途上国経済の開放体制化(構造調整プログラム) BHN+参加型開発戦略へ 地球環境問題、貧困問題への対処

のようになり、同様に紙谷氏が指摘されている課題を抜粋して筆者なりにまとめると、

- ・ 初期から現在も相手国の要請に応える→特定分野に関する技術移転が大多数
- ・ プロジェクト方式でもいくつかの技術的分野の集合体←PCM手法、PDMのより一層の浸透が望ましい
- ・ 参加型開発のプロジェクト形成への動きがもつと期待される
- ・ PRA（Participatory Rural Appraisal：参加型農村調査）などの手法に基づく農村生活総合調査（Baseline Survey）の必要性

のようになる。

2. 研究協力における課題

JIRCASは開発途上地域から多くの研究協力を求められているが、その特徴と課題として、①協力要請の分野が多様化しつつある、②各分野および複合分野に対応し得る人材が不足気味である、③人材を組織的、系統的に教育訓練する体制・規模を職員定員枠などから十分に構築しがたいなどが挙げられる。そして、独立行政法人化後の厳格な評価に応えるためには、④として、自己保全にむけて個別分野の研究協力に集中する可能性の高まりなどが挙げられよう。これらの課題をいかに乗り越えて行くかの構想をJIRCASは捻出しなければならないと考えている。日本のODAは世界トップの地位を得て久しい。しかし、研究協力が基本的に人材によるとすれば、この分野でもトップの地位をしめるとは残念ながら言い難い。両者が同等でなければならぬかどうかはともかく、より多くの研究協力参加者が輩出されて然るべきと考えるのは筆者ばかりではないだろう。

3. 人材育成・確保のプログラム

農林水産業分野で国際研究協力を推進し、開発途上地域の研究者などを育成しているのはJIRCASだけではなく、程度の差こそあれ、他の多くの研究機関も開発途上地域との研究交流を進めており、その過程の中で現地研究者の育成にも務めている。ここに着目すれば、人材育成・確保は日本内部からのみではなく、開発途上地域からもその視野を拡大し、それぞれでほぼ個別的に推進している人材育成・確保プログラムとも言えるものの大同団結があっても良いのではなかろうか。すなわち、こうした統合プログラムを通して、内外の優れた人材を育成し、各分野および複合分野に対応し得る人材を確保して行く構想である。同時に考えるべきは、育成した人材が、たとえば、現地リーダーあるいは現地での研究推進者として活躍できる環境を整えることが肝要と考えている。

成果情報

パパイア奇形葉モザイクウイルス (PLDMV) の全塩基配列

沖縄支所 眞岡 哲夫

(現 農業技術研究機構北海道農業研究センター生産環境部ウイルス病研究室)

パパイアのウイルス病

パパイアがウイルス病に感染すると、果実にリング状の病斑があらわれ、病徴が激しい場合には果実が奇形化する (写真)。このような果実はとうてい

商品にはなりえないので、農家は経済的な大打撃を被る。パパイアウイルス病は沖縄以南の熱帯アジア地域をはじめ世界中に発生しているが、その主な病原は、パパイア輪点ウイルスパパイア系統 (PRSV-P) とパパイア奇形葉モザイクウイルス (PLDMV) の2つである。このうち

PLDMVは、これまでわが国固有のウイルスとされてきたが、近年台湾各地にも発生していることがわかり、被害が東南アジア各国にまで広がるのが懸念されている。JIRCAS沖縄支所では、この病気を撲滅するため、病原ウイルスの遺伝子の解析を進めてきたが、このほど世界ではじめてPLDMVの全塩基配列を解読することに成功した。

PLDMVの遺伝子構造

PLDMVは、10,153塩基の1本のRNAからなり、長大な読み取り枠 (ORF) が存在した。ORFは、3,269アミノ酸からなり、10種類のタンパク質がコードされていた (図1、表1)。各タンパク質のアミノ酸配列を、PRSV-Pや他のウイルスのタンパク質と比較したが相同性は低く、PLDMVが独立したウイルス種であることが判明した。

図1 PLDMVの遺伝子構造

解明したウイルス遺伝子の利用

近年、PRSV-Pの外被タンパク質 (CP) 遺伝子を組み込んだウイルス抵抗性パパイア品種「サンアップ」がハワイで育成された。この品種は、PRSV-Pに高い抵抗性を持ち、ウイルス病に悩んでいたハワイの栽培農家に急速に普及した。しかし著者らの実験では「サンアップ」は、ハワイのPRSV-Pには抵抗性を示すものの、PLDMVやアジアのPRSV-Pには抵抗性を持たなかった。そこで、アメリカ農務省・コーネル大学・JIRCASが協力し、今回明らかになったPLDMVの遺伝子と、アジアのPRSV-Pの遺伝子を組み合わせることで導入することにより、アジア地域のパパイアウイルスに対して広い抵抗性をもつ組換えパパイアの作出を行うことになった。1999年にコーネル大学で導入遺伝子の構築を行い、アメリカ農務省ハワイ農業試験場でパパイアカルスへ遺伝子を導入した。現在、JIRCAS沖縄支所で導入遺伝子を含むパパイアカルスから植物体を再分化しており、ウイルス抵抗性パパイアの作出に一条の光が見えてきた。この共同研究が実を結び、アジア地域からパパイアのウイルス病が撲滅される日が来ることを期待している。

表1 PLDMVのタンパク質と機能

名称	アミノ酸数	機能
P1	480	細胞間移行、プロテアーゼ
HC-Pro	458	アブラムシ伝搬、プロテアーゼ
P3	348	プロテアーゼ関連因子?
6K1	52	?
CI	635	ヘリカーゼ
6K2	52	?
NIa-Vpp	187	ゲノム結合タンパク
NIa-Pro	243	プロテアーゼ
Nib	521	ポリメラーゼ
CP	293	外被タンパク

新規プロジェクト 研究

インドシナ天水農業 地帯における水資源の 効率的利用と収益性の向上

生産環境部長 伊藤 治

東南アジアでなぜ天水農業研究なのか？

東南アジア地域*は、熱帯多雨林及び熱帯季節林（熱帯モンスーン）地帯に属し、水資源には比較的恵まれている。また、大河の流域では灌漑施設の整備が進んでおり、潤沢な水資源を使った水田農業が主体となっている。

しかし、インドシナ半島の内陸部に位置する東北タイ地域は、乾期がきつく、台地状の地形であることから熱帯サバンナ気候に属し、水田と畑が錯綜する天水農業地帯である。この地帯では、インディカ種の稲作に畑作、畜産を加えた複合的な経営が行われているものの、乾期には全く降雨がないほか、雨期の始期、終期においても降雨が不安定なため、生産が安定せず、かつ生産性も低い。また、タイ東北部に隣接するラオスも天水農業地帯であるが、生産性が一層低い地域である。

この地帯での農業生産を安定させるためには、このように水の確保が不安定であることから、個別の農家レベルにおける丘陵地の土地の傾斜等地形をも考慮し、ため池の地理的分布や地下水の状況などを含めた集水域レベルでの水資源の効率的利用のための技術開発に取り組むことが必要である。また、これらの技術を適正化し現地に定着させるために、集水域内全域の農家の実証研究が必要である。

このため、タイ東北部及び隣接するラオスの天水農業地帯を対象に、平成14年度から平成20年度にわたって水資源の有効利用を核とした農畜産物生産に係わる技術開発と実証研究を行う。

なお、本プロジェクトで得られた成果は、南・西アジアやアフリカに広がるより条件の厳しい天水農業地帯を対象とした技術開発研究への波及効果も期待できる。

研究内容

- (1) 水資源の賦存量評価と利用率向上に向けた営農体系の制約要因の解明
 - ①地域内の水資源賦存量の評価
 - ②ため池、地下水の利用活性化条件の解明
 - ③水資源利用の高度化に向けた営農体系の制約要因（経営、水共同管理体制等）の解明

- (2) 水資源の利用効率向上技術の開発
 - ①不安定・分散型水資源の有効集配水技術の開発
 - ②水資源の効率的利用に向けた熱帯野菜・果実等の栽培技術の改良
 - ③耐乾性に優れた高収量飼料作物の育成と利用法の開発
- (3) 農民参加型研究手法による技術の実証・適正化
 - ①水の利用率と付加価値の高い営農体系に向けた受益者ニーズ認定と技術の共同試験
 - ②営農体系変革による小流域管理の効率化のガイドライン開発

プロジェクト 研究

国際プロジェクト研究 平成13年度の実施状況

タイ東北部における持続的農業技術の 確立のための開発研究

本プロジェクトでは、タイ東北部において地域資源利活用促進による持続性のある農業の展開方向を提示するため、①環境資源と生物資源の特性評価及びその有効利用技術の開発、②水稲乾田直播や野菜飼料作物の導入を始めとする水の効率的利用と土壌の損耗防止を目的とした生産技術システムの確立、③経営安定化のための家畜飼養技術の確立等、ポストハーベストまで含めた、多角的・総合的な研究を推進し、多作物、有畜農業生産システムの構築を図り、地域の農地保全と農業振興に資することを目的に研究が進められてきた。本年度は7年間のプロジェクトの最終年に当たるが、長期在外研究員5名、短期派遣者27名、招へい者12名により、現地の関連研究組織との緊密な連携を保ちつつ研究推進を行った。本年度の主要研究成果としては、1) サトウキビやパイナップルは植物内生菌による窒素固定能を有し、適切な肥培管理により窒素施肥量の軽減が可能である、2) サトウキビの近縁種であるエリアンサスは耐湿性が高く、深い層にまで達する根系により脊薄で酸度の高い土壌条件に優れた適応力を有する、3) 東北タイの天水田地で、乾田直播栽培の導入が収量確保による増収の可能性が高く、また不耕起と組み合わせることによる一層の省力化が期待できる、4) サブソイル耕による硬盤層破碎で雨期作における透水性が向上し土壌流亡が軽減され、雨期作トウモロコシに対しては発芽促進や深根

機械による播種作業

化を促す、5) サブソイラーと施肥・植付機を結合した部分深耕同時施肥・植付機を開発し、これにより、サトウキビの耕起から植付けまでの作業工程を簡略化でき、耕起・植付作業の燃料消費量・作業時間を削減できる、等が挙げられる。

ブラジル中南部における 持続的農牧輪換システムの開発

ブラジルは広大な可耕地を有する南米最大の国家である。ブラジルの農牧業は多大な発展の可能性を備えており、21世紀の世界の食料需給にも多大な貢献をなすことが期待されている。しかし、このような期待に応えるためには、現行の資源収奪型で環境破壊的な前近代的形態の農牧業から、高位安定型で持続的な特性を備えた体系の農牧業に変革することが不可欠と考えられる。このことから、本プロジェ

ブラジルで放牧されているネローレ種の牛

クトにおいては、技術研究と社経研究を総合しつつ、牧草地と農耕地を相互に輪換するシステムを確立することによって、牧草地の地力増進や耕地の土壌劣化防止を実現するとともに、牧草地への穀実・園芸作物の導入によって、作目の多様化を実現し、市場リスク回避を通じた日系農家等の中小農の経営安定にも貢献することなどを主要な目的とする総合研究を推進している。平成13年度は、農牧輪換条件下における窒素の動態の経時的・定量的把握、牧草の生

プロジェクト 研究

産性、牧草による窒素・リン酸吸収機構の解明などの研究を進めた。また、硝化抑制牧草の選択、GISを用いた牧草生産力の推定、農牧輪換システムの社会経済的評価及びブラジルの低湿地に適した牧草と草地造成方法などの研究を行った。

中国における主要食料資源の 持続的生産及び高度利用技術の開発

中国は、改革開放政策と市場経済への移行により著しい経済発展を遂げつつある。人口増加と所得向上により、食料需要の増大と食料消費の質的・量的変化をもたらす一方、食料需給の地域バランスが乱れ、その安定化が中国農業の最大かつ緊急の課題となっている。そこで、社会経済研究を土台に、主要食料の持続的生産及びそれらの高度利用技術の開発を目的とする総合型プロジェクト研究を複数の研究機関との共同研究により実施する。研究開発の対象に水稻、大豆、トウモロコシ、淡水魚を選定し、技術開発に伴う農業経済への波及効果を検討しながら、生産性向上及び農林水産物の高度利用技術の開発を進める。

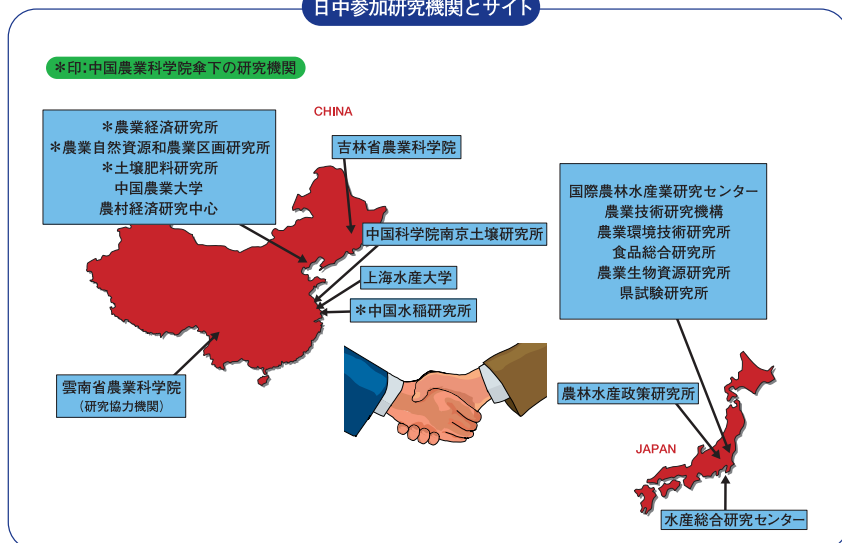

本年度は、昨年度末の中間推進評価会議の評価結

果を受けて、プロジェクトの研究課題について一部統合、延長、追加した。研究分野内及び分野間の一層の連携協力を進めてプロジェクト後期の研究計画の効率的な推進を図った。

長期派遣（4名）、短期派遣（のべ22名）及び研究管理者・共同研究者の招聘（9名）により、すべての研究課題について研究を実施した。中課題「食品加工流通技術の開発」から研究成果情報候補として3件を提出した。また、中課題「大豆遺伝資源の特性評価と利用及び新技術による大豆新品種素材の開発」では、吉林省農業科学院大豆研究所との共同研究により大豆新品種4系統が登録された。

プロジェクトの円滑な実施のため、第20回日中農業科学技術交流グループ会議（5月29～30日、東京）及び第6回日中農業研究連絡調整会議（5月31日、つくば）において、研究機材の免税措置と査証取得手続きの迅速化、日中共同研究の推進における中国側研究機関の人的及び財政的措置、日中共同研究の推進体制など、共同研究実施上の問題点や評価のあり方について協議した。今後、引き続き、各研究課題間の連携・協力を密にするとともに、他の技術協力案件との調整や中国側研究機関の再編、統合への対応を行う。

日中参加研究機関とサイト

南米諸国における大豆の高位生産・ 利用技術の総合的開発研究

大豆は、たんぱく、脂肪を多く含み、イネ、小麦とならぶ世界の重要作物である。大豆の生産量増大は世界の食料需給の安定化に不可欠の課題である。南米諸国は世界の大豆生産の1/3を占めさらに比重は増加すると見られている。しかし、南米諸国の大豆はまだ歴史が浅く、不良環境下での栽培やシストセンチュウなどの蔓延など、解決すべき課題を抱えている。本プロジェクト

プロジェクト 研究

パラグアイにおける大豆の不耕起栽培

トは持続可能な生産に関する課題にポストハーベストと社会経済分野の研究を加え、南米における大豆の総合的生産・利用技術開発を目指して実施している。研究推進に当たっては、多国間協力による研究実施と国際協力事業団との協力・連携を重視した。平成13年度は、大豆の種子成分の遺伝的改良、DNAマーカーの開発、持続的生産のための土壌管理、干ばつ耐性検定法、大豆主要病害の発生実態解明及び耐虫性育種などの研究を長期、短期派遣により実施するとともに、大豆の病害抵抗性遺伝子に関連するDNAマーカーの開発も実施した。さらに、干ばつストレス、大豆病害、耐病性育種部門については、招聘研究を行った。

さらに、平成13年3月22日には中間評価会議が国際農林水産業研究センターにて開催された。また、平成13年12月13日及び14日に南米大豆に関するワークショップがブラジルのパラナ州ロンドリーナ市のEMBRAPA大豆研究センターにて開催された。

西アフリカにおける米増産のための 稲種間交雑種の活用に関する研究

サハラ砂漠以南のアフリカ諸国では、農業生産の長期的な停滞や人口増加のため、慢性的な食糧不足

が続いている。この地域では、都市への人口の集中や生活形態の変化に伴って食料消費形態も変わり、米の消費が急速に伸び輸入が大幅に増大している。JIRCASは、西アフリカ地域における稲作の生産性および所得の向上に貢献することを目的とし、WARDAとの共同研究を行っている。

遺伝資源及び育種関連ではアジア・アフリカ稲を含む多様な遺伝資源（455品種/系統）の幼苗期の乾燥ストレス耐性をスクリーンハウス内で検定し、乾燥ストレス耐性の供与親として有望な7品種を選抜した。さらに、短期派遣の九州大学平尾助手

コートジボワールでの稲刈り

と共同で、アフリカ稲の生理学的形質の評価とそれを支配する遺伝子の座乗位置を推定するために、九州大学で育成された“アフリカ稲染色体部分置換系統”の栽培試験を行い、生理学的形質を評価した。

社会経済学関連の研究は2カ国を中心に行われている。コートジボワールでは、昨年度後半より開始した稲作農民調査を継続し、調査を完了した。現在、データの入力と分析を進めている。また、今年度は、稲作農民と地主の関係についてより詳細な調査を開始し、現在継続中である。ガーナでは、昨年度より開始した稲作農民調査について、補足調査を続けた。（次号に続く）

帰国報告会の概要

平成13年10月から平成14年3月までにJIRCASで開催された帰国報告会の概要は以下の通りです。

年月日	演題	発表者	所属
H13.10.15	熱帯モンスーン地域における広域水田用水量を節減する配水管理手法の開発	堀川 直紀	JIRCAS生産環境部
H13.10.15	地表水と地下水の複合利用のための現地調査	濱田 浩正	JIRCAS企画調整部
H13.10.22	持続型農牧輪換システムにおける熱帯牧草および作物の養分吸収・利用特性の解明 — 熱帯牧草および作物の窒素吸収および利用 —	中村 卓司	JIRCAS生産環境部
H13.10.22	東北タイにおける畑作経営の現状と改善方向 — サトウキビ生産を中心に —	安藤 益夫	JIRCAS国際情報部
H13.10.29	メコンデルタ・ファーミングシステムにおけるバイオダイジェスター技術の経営的評価	山田 隆一	JIRCAS国際情報部
H13.12.03	東北タイの農業生態系における養分循環の解明	松本 成夫	JIRCAS生産環境部
H13.12.03	東北タイにおける耕畜結合高度化のための畑作付体系の策定	松尾 和之	JIRCAS生産環境部
H13.12.03	東北タイ砂質土壌におけるサトウキビ作の耕起法改善のための作業機の開発	屋代 幹雄	農研機構・東北農研センター
H13.12.14	中国の食糧生産とWTO加盟	山下 憲弘	JIRCAS国際情報部
H13.12.21	遺伝子欠損マウス等を用いたトリパノソーマ感染抵抗性機構の解明	中村 義男	JIRCAS畜産草地部
H14.01.15	マングローブ域における自然浄化機能の解明	下田 徹	JIRCAS水産部
H14.01.15	淡水漁業資源の有効利用技術の開発	横山 雅仁	JIRCAS水産部
H14.02.21	コムギ倍加半数体集団を用いた耐病性のQTL解析	末永 一博	JIRCAS生物資源部
H14.02.21	ダイズ急性枯死症に対する抵抗性検定法の開発	本間 善久	JIRCAS生物資源部
H14.03.19	南米産大豆品種の種子成分の遺伝的改良	菊池 彰夫	JIRCAS生物資源部
H14.03.19	西アフリカにおけるイネ遺伝資源の特性評価と新品種素材の育成	常松 浩史	JIRCAS生物資源部

表紙の写真説明

国際農林水産業研究センター 小坂 清巳

ブラジル南部のロンドリーナでは9月ころになると春になり、いろいろな花が咲きます。コーヒー（左下）：白い花が枝にびっしりと一斉に咲きます。コーヒー畑が良い香りに包まれるそうです。ロゼレ（右下）：オクラの花とよく似ています。未熟な果実は赤色の皮をしていて、酸っぱい味がします。ジャムやシロップを作りますが、ブラジルに移住した日本人は塩漬にしてウメボシの代用にしたので“はなうめ”と呼んでいました。火炎樹（右上）：熱帯の強い日差しに良く似合うオレンジ色かかった赤色の花です。花の後には莢豆がついてマメ科の特徴がわかります。街路樹としてよく植えられています。ラズベリー（左上）：木イチゴです。イチゴは熟すと黒紫色になります。ケーキ屋さんの裏庭に植えられていました。

巻頭言

世界の水産食品と JIRCASの活動

水産部長 福田 裕

水圏の食料生産力

宇宙船から見ると青々と広がる地球上の水圏は、地球表面の7割を占め、しかも最も深い所は1万メートルを越えるので、生物が生息する場所は陸上を遙かにしのぐ容積を持っています。しかし、外洋は大きな容積を持つにも拘わらず、栄養塩が希薄であるため、生物生産能力はあまり高くなく、従って水圏全体でも陸上より低い生産能力しか持っておりません。食糧生産の場所としてみると、陸上では第一次生産物の穀類が主要な食糧となっているのに対して、水圏の一次生産物の植物プランクトン等は残念ながら食料として利用し難く、我々人類は高次生産物である魚介藻類を専ら食料として利用しています。

漁獲量の動向

1999年の世界の総漁獲量は1億3千7百万トン記録しました。穀物生産量が1990年代に入り横ばいの状態を続けているのに対して、水産物は1990年に比べて1.3倍と著しい増加を示しましたが、海洋の水産物供給量はそろそろ上限に近づきつつあるとの認識が一般的です。1999年について国別に漁獲量をみると、かつて世界一だった日本は1989年に中国に首位の座を奪われ、4位の661万トンとなりました。一方、中国は4750万トンと世界の生産量の約35%を占め圧倒的な首位に君臨しています。中国の漁獲統計に疑問を挟む経済学者もいますが、割り引いて考えても中国の漁獲量の伸びはめざましく、世界の漁業生産量を押し上げているのが中国です。中でも淡水養殖漁業生産量が大きな割合を占めており、世界の内水面地域が新しい漁業生産の場として期待されています。次いで、イワシ類を主漁業とする南米のペルーは844万トンで3位、チリは559万トンで5位と続きます。

2010年の水産物消費予測

2010年には、世界の人口は70億3千万人になると予想されており、1億トンから1億2千トンの水産食料が必要になるとFAOでは推計しています。漁獲量の約3割が非食用となることを考慮すると、1千万トンから4千万トンの不足が予想されます。しかも、世界的に消費の多い国は、日本を始め中国、イ

ンド、インドネシア、マレーシア、フィリピン、タイ等アジア諸国であります。ヨーロッパでは肉食が中心ですが、アジアのモンスーン地帯では米を主食としながら多様な魚食文化が育まれてきました。近年、この地域の所得の伸びが著しいことも考慮すると、2010年にはこの地域で6900万トンの水産食料が必要となります。つまり、世界中の水産食料の半分以上がアジア地域で消費されるることになります(図参照)。

JIRCAS水産部の活動

以上の背景のもと、JIRCAS水産部ではアジア地域において水産食料の安定的供給のために、三つの国際共同研究に取り組んでいます。第一は、フィリピン、マレーシア、及びタイと協力して行われている「マングローブ汽水域における魚介類の持続的生産システムの開発」です。この共同研究は、荒廃劣化するマングローブ沿岸水域において、水産重要種の持続的漁業生産に向けた資源評価研究を行うとともに、マングローブ林の持っている自然の栄養成分や環境保全機能を活用して、低投入型の養殖技術の開発を目指します。第2の研究は「オニテナガエビの生殖機構の解明」です。この共同研究は、ベトナムメコンデルタの伝統的な複合的農業の一環として、稲作と組み合わせた淡水エビ養殖への応用技術として発展が期待されています。第3の研究は、「中国淡水漁業資源の利用技術の開発」です。この共同研究は、急増する中国淡水漁業資源の有効利用のため、淡水魚の冷凍すり身やフィッシュ・ミールの製造技術の開発を目的として行われており、多くの成果を上げてきました。

成果情報

離島地域のサトウキビ 生産をめぐる動向

海外情報部 銭小平

1世帯1ヶ月の砂糖消費支出は126円（平成12年5月～11月の全国平均）であり、うち大都市部（人口100万人以上）、中都市（人口15～100万人未満）、小都市（人口5～15万人未満）と人口5万人以下の小都市のそれぞれの消費支出は、106円、116円、127円、166円という順になり、都市の人口規模が大きくなると、砂糖の消費支出が少なくなる傾向がある。また、サトウキビの主産地である沖縄の消費支出が177円と最も多く支出している。都市別の小売価格（6ヶ月平均）を見ると、最も安い広島は177円/kgと比べ、那覇は246円/kgと高い。主産地でありながら、精製糖工場が本土にあるため、上白糖として戻って来ると逆に高くなった。砂糖を合理的な価格で安定的に供給し、需要の拡大を図るため、平成12年10月から新たな砂糖制度がスタートした。粗糖関税の撤廃、輸入糖調整金の減額など経営の合理化、市場原理の円滑な利用等が求められている。このような情勢の中で、今回生産現場を見る機会があった。

離島地域のサトウキビ生産が盛んに行われている。基幹作物でありながら、近年野菜を中心とする園芸作物、畜産の増加に伴い、サトウキビを取り巻く環境が変化している。種子島のサトウキビ農家は昭和49年から平成3年まで4500戸～4800戸で推移したが、近年では減少しつつあり、平成11年では3000戸となった。また平均栽培面積は0.8haで、平成5年の0.6haより上昇し、栽培面積が150a以上の農家数が増えている。石垣でも同じような傾向が見られた。農家にとって後継者の不足や担い手の高齢化、市場化への対応等の問題を抱えながら、経営の効率化を図ることが重要であり、その取り込みが始まっている。

経営の効率化を進めるには、栽培

技術の要因以外に、機械化の促進、複合経営への転換、間作、輪作による土地利用の高度化などが要求される。種子島ではサトウキビの総合利用の視点から飼料用キビの研究開発が進められ、全株の飼料利用を目指し、キビの生産と他の産業との連携を図っている。例えば、餌としての梢頭部、敷料としてのバガスと畜産農家の堆肥との交換、製糖過程で分離された糖蜜を飼料と混ぜることによって、牛の食欲を増進し、牛乳の風味も増すことで、キビの付加価値が高まり、島内で飼料を供給することは大きなメリットがある。石垣では21haのサトウキビを作っている大規模農家の話を聞くことができた。労働力は60才台の夫婦と後継者の次男の3人で、株出管理、定植、収穫など一貫して機械化し、側枝苗技術も導入して、将来3割まで側枝苗で作りたいとしている。以前パインナールも生産したが、加工工場の閉鎖によって、全部キビに転換し、大規模化を図った。短期間で見た限り、離島地域でのサトウキビの生産は他産業との連携を図りながら複合経営していくか、専業で大規模化するかは今後の大きな課題となるであろう。

大型機械による収穫作業（石垣）

国際プロジェクト研究 平成13年度の実施状況

インドネシアにおける地域農業システムの評価と その総合的改善のための技術開発

インドネシアでは、その自然環境と開発の歴史に応じた多様な農林水産業が展開されており、農業・農村の発展はその農業形態とともに地域の多様な社会状況等に応じて大きく異なる。ジャワ島では、近年の急激な都市化と工業化の進展により、優良農地が減少し、都市と農村の地域間格差が拡大するなど、農村を取り巻く社会環境が大きく変化している。他方ジャワ島以外の島々では厳しい農業・生活環境や適正技術の開発の遅れが農業の発展を阻んでいる。このような状況の中で、地域の伝統的農法や農民の意向に配慮した適正技術の開発及び普及等により農業所得の向上や農村の発展を図ることが緊急の課題となっている。そこで、低地農業から傾斜地農業まで多様な農業形態が存在するジャワ島において、代表的な農業形態地域の農業システムなどについての特性評価を行うことにより、発展を阻んでいる社会経済的・技術的課題を解明し、地域農業システムの総合的改善に資する。

本研究は、平成12年3月の中間評価会議の結果をふまえ、ジャワ島中央部のレンバン周辺地域の温帯野菜を中心とするファームシステムに関する共同研究に重点を移してきている。本年度は、長期派遣研究者2名（野菜研究所及び農業社会経済開発研究所）のほか、各分野に短期で研究者を派遣し各課題を実施した。また、13年3月には、日本及びインドネシア双方の研究者及び研究管理者による会議をレンバンで開催し、各課題間の連携と円滑な実施に向けての討議を行った。温帯野菜生産技術分野では連作障害、特にネコブ病、混作の不適切な考え方、病虫害及び乾期の水不足と発芽不良などの重要な問題点を明確にした。これらをふまえ、現在、耕種的対策としての輪作や休耕、初期成育の保護による連作障害の軽減対策などを検討中

である。地理情報システム研究においては、調査対象地区について、自然条件（降水パターン、地形など）とともに土地利用・管理状況を考慮した土壌浸食危険度評価のためのモデル開発を行った。また、対象地域全体の土地利用現況と農家の作付け意向などについては、農民参加型による踏査

図1 西ジャワ州の高原地帯における野菜の段々畑

線手法により明らかにした。温帯野菜生産農家の経営及び流通構造については、各農家の作業体系や出荷体制、生産者組織などの役割に関するデータの情報収集・解析を行った。その中で、流通段階における価格決定のメカニズムなどが明らかとなった。さらに、混作を主体とした野菜ファームシステムの中での在来作物や果樹の民族植物学的調査を引き続き行い、その結果についてのデータベースを構築中である。

メコンデルタにおける新技術の開発・導入と持続的 ファームシステムの実証

ベトナムは長い戦乱と経済混乱の末、新たな経済政策の下で米生産の急速な増強を達成し、現在は、中国と並び、高い経済成長率を誇っている。米生産の中心地メコンデルタ地帯では、持続的複合農業の一形態と言える、水稲作を基礎とした、園芸、畜産、水産を組み合わせた複合経営が展開されている。

図2 ベトナムメコンデルタの運河を行く

本プロジェクトの目的は、この持続的複合農業の技術的、経営的構造を解明し、複合経営各々の技術の改善方策の検討、技術の開発及び開発に伴う経営的・経済的評価、予測を行い、地域に適したより合理的な農林畜水複合技術体系を確立することである。

本年度は、昨年度に1名加えた、4名の長期在外研究者により経営的・経済的評価を行うと共に、技術体系の構造解明、技術の開発に当たった。これら4名の研究者でカバーできない研究分野は短期派遣により集中的に現地研究を実施した。また、管理者招聘、カウンターパート招聘により、相手側研究者を招き協力体制を強化した。さらに、ベトナム側と密接な協力体制を築くため、11月27～29日にかけてクーロンデルタ稲研究所において、ベトナム側研究者とJIRCAS側研究者とのワークショップを開催し、それぞれの課題の成果

プロジェクト 研究

の検討及び本プロジェクトの今後の方向等について討議した。本年度の研究では、水稲では雑草防除法、播種量や施肥法、籾乾燥機の改善、豚では地域飼料の栄養価の評価や給餌の試み、衛生改善、果樹ではメコンデルタにおける苗供給システムの調査や洪水被害の実態調査、モデル圃場におけるIPMを利用した栽培法の開発、水産ではエビ一稲ファーミングシステムの改良と種苗供給法の改善、最適養魚密度の決定、物質循環では村内窒素フローのさらなる調査推定、植物残渣堆肥の投入とその効果の推定、経営では投入技術の効果検定、各種果樹及び魚の流通実態の解明が行われるなど、それぞれの分野で新たな進展が認められた。

東南アジアにおける穀類のポストハーベストロス低減技術の開発

高温多湿な東南アジアにおいては、穀物の収穫後の損耗率は高く、少なく見積もっても、20~30%以上と推定され、こうした高い損耗は収穫直後の不十分な乾燥による品質劣化や貯蔵中の害虫

図3 精米所内に発生したコクゾウムシ

等に起因すると推定されている。また、これまで先進国で行われてきたような各種くん蒸剤の使用は、健康や環境への危害の問題、残留による穀物汚染の問題が指摘されている。そこで、自然エネルギー又は籾殻・稲藁等のローカルエネルギーを活用した資材低投入型乾燥保全技術の開発、並びに、天敵及び害虫抑制効果を有する生理活性物質等を利用した生物的防除技術の開発を目的にプロジェクトを実施している。

本年度は、一部課題の統合による効率化を図りながら、タイにおける米の収穫後損耗要因の解明、天敵の採集、害虫抑制効果のある天然活性物質の同定と作用機構の解明、タイの籾乾燥施設の問題点の把握と改善方法の明確化を行った。また、中間評価会議及びワークショップを開催した。評価結果は概ね良好であったが、収穫後損耗の量的把握が不十分との指摘、害虫関係の担当者の変更に対する懸念、タイとの一層の連携強化への要望が出された。

熱帯林再生のためのアグロフォレストリー技術の確立

開発途上地域においては森林の消失と劣化が急速に進み、その一方ではユーカリやアカシア等の外来早成樹種を用いた単純な人工林やオイルパーム、ゴム等のプランテーションが拡大しており、熱帯林のもつ生物多様性と持続性を低下させる大きな要因となってい

る。本研究では、これらすでにある早成樹人工林を多様性のある熱帯林へと再生させるため、地域住民の参加するアグロフォレストリーシステムを導入することにより、人工林の間伐跡等に生じた空間において成育が可能な熱帯果樹・薬用植物・野菜・キノコ等の弱光利用型作物を組み合わせた農林複合生産技術を開発する。さらに、天然林に近い人工林には好陰性の在来樹種を導入し、多様性豊かで経済的価値も備えた熱帯林へと回復させるシステムを開発する。

本年度はサバ州内の試験候補地での現況調査、試験地設定を進め、アグロフォレストリー生産環境に適した樹種として生育特性等が異なる8樹種を選定し、間伐試験地を設定した。試験地の現況調査からマンガウム林の下層には86種もの植物が生育していること、マンガウム人工林内には唐辛子や観葉植物等が自生しており、多様な植物を林内で育成できる可能性等を明らかにした。また、試験地内に植栽する作物として、果樹8種類、作物5種類、葉草5種類を有用性、耐陰性、市場性等を考慮して選定した。

荒廃草地を対象とするフィリピンでは、平成12年度に設定した2つの試験地において在来樹種6種、果樹5種の2年間の初期成長及び生残率を調査し、標高の異なる試験地での生残率、成長量で樹種による違いが明確に認められた。また、閉鎖林床においてもよく成長する果樹2種は、被陰を利用したアグロフォレストリーに適した果樹として期待できることがわかった。

図4 傾斜地における複数の作物栽培

マングローブ汽水域における魚介類の持続的生産システムの開発

アジア地域では、沿岸域にマングローブ林が繁茂して高い魚介類の生産が得られているが、都市・農地開発等によるマングローブ林の伐採と共にマングローブ林の養殖池への転用による環境劣化・破壊、さらに疾病発生における薬剤の多投入等の問題が生じている。また魚肉蛋白質への需要及び高級魚への嗜好増大により、沿岸水域の水産重要魚種の資源量涸渇が危惧されている。

このため、本プロジェクトでは、沿岸水域における水産重要魚種の持続的漁業生産に向けた資源評価研究を行うとともに、本種の乱獲防止、資源保護及び漁民の収益向上のために、水産重要種の養殖システムを構築する。この養殖研究ではマングローブ林の自然循環機能を活かした低投入型の養殖技術を確立し、さらに収益性向上のためマングローブ水域に生息する比較的高価な新規及び

プロジェクト 研究

在来魚介類の飼育生産技術を開発する。

これらを総合した持続的な生産システムを導入した場合の経営・経済便益等を明確化することにより、マングローブ汽水域における持続的な生産システムの普及・推進に資する。

図5 汽水域のマングローブ林

研究の乏しいゴマフエダいの栄養特性に関して、①本種幼魚の飼料中至適タンパク質含量、至適タンパク質／エネルギー比を明らかにし、また本種は魚体に多量の脂肪を蓄積すること、肉食性だが飼料中の炭水化物を比較的有效に利用できることがわかった。一方、栄養塩を加えたマング

ローブ湿地では、アンモニアは6時間後には1/3の濃度となり、2日後には消失した。硝酸塩濃度は2日後に、リン酸塩濃度は9日後に0となった。クロロフィルa量は、添加したアンモニアが枯渇した2日後に最も高い値を示したが、その後大きく減少しており、アンモニアとの相関が示唆された。

フィリピンのマングローブ汽水域では、スネークヘッド、ナマズのEUS (Epizootic Ulcerative Syndrome)、ティラピア及びグルパーの体表及び咽頭寄生leech (蛭類)、グルパーの単生類寄生虫、ミルクフィッシュの外部寄生虫 (Amyloodinium)、ウシエビのウイルス性疾病 (MBV、HPV) 及び細菌性疾病 (Vibrio harveyi) が発生していた。大量死したグルパーの脳及び網膜組織ならびにCPEが観察されたSSN-1細胞培養上清についてウイルス性神経壊死症(VNN)特異的プライマーを用いてRT-PCRを行ったところVNN特異性のあるバンドが検出された。このグルパーから分離されたウイルスは、病理組織学的観察、SSN-1細胞によるウイルス分離、VNN特異的プライマーを用いたRT-PCR法による検出、電顕観察の結果から魚類ノダウイルスに属するVNN原因ウイルスであることが明らかとなった。本症例はフィリピンにおけるVNNの初記載となる。

半島マレーシアにおけるマングローブ汽水域の水産重要種フエダイ類の漁獲量は、この10年間平均6百トン／年で、養殖生産量は約1.7千トンであった。ハタ類漁獲量は1978年以降は平均3.3千トン／年とそれ以前の約1.7倍に増加した。マングローブ汽水域で操業されている漁具はバグネット、バリヤーネット、底刺網、かご網及びプッシュネットの5種類である。魚類消化管内容物では、フエダイ類は稚魚が橈脚類 (コペポダ) とアミ類、若齢魚はエビ類と魚類、ハタ類の若齢魚はカニ類を摂餌していた。

海外養殖エビ類ウイルス病の診断・防除技法の開発

東南アジアは世界で有数のエビ養殖が盛んな地域であり、これら養殖産業が地域経済の基盤を為している。しかし、エビ養殖場ではその規模の拡大に伴い著しい被害をもたらすホワイトスポットシンドロームウイルス(WSSV)等のウイルス病が発生し、深刻な問題となっている。現在、これら養殖エビのウイルス病に対する効果的な治療法はなく、疾病防除には広域的な防疫対策をとり疾病の蔓延を予防することが不可欠である。したがって、本課題ではこれらウイルス病のエビ養殖場における発生状況を調査し、正確かつ迅速な疾病の診断技法として血清学的診断法の開発を試みる為にWSSVに対する単クローン抗体の作製を行うと共に、消毒剤等を用いたエビ病原ウイルスの不活化手法を開発した。

マレーシアの半島部では、ウイルス病被害により多くのエビ養殖場が事業を断念して放置された状態であった。WSSV感染症が確認されたペナン州及びケダ州に於ける疾病の発生要因は、移入した種苗に病原体が付着していたことが示唆されている。

単クローン抗体の作成は、まず、健康エビへのウイルス感染試験、罹病エビからのウイルス回収、濃縮及び精製したウイルスを抗原としたマウスへの免疫、及びマウス脾細胞とミエローマ細胞との細胞融合を行う。次に融合細胞を培養し、コロニー形成後、ウイルスに特異的な抗体を産生している細胞を選択し、これらを限界希釈により純化させ培養する。その結果、細胞融合では90%以上と高い率での融合細胞のコロニー形成が認められ、これら細胞の中で268株に感染エビ抗原に対して抗体を産生した。さらに、この中で38株にウイルスに特異的な抗体の産生が示されているが、その後のサブクローニング及び培養過程で細胞株が減少し、最終的に単クローン抗体産生株として3株を得て保存している。ウイルスの不活化試験において、ホルマリンでは0.25%以上、次亜塩素酸ナトリウムの有効塩素濃度では0.5ppm以上、イソジンのポビドンヨードでは1.25ppm以上、エタノールでは30%以上の濃度でエビの死亡率が0%となり、次亜塩素酸ナトリウム及びイソジン等のハロゲン系消毒剤は低濃度でも非常に効果のあることが判明している。

図6 エビウイルス病による養殖ブラックタイガーの大量斃死

成果情報

平成13年度国際農林水産業研究成果情報一覧

成果情報名	自然立地的要因に基づく東北タイ・コンケン周辺地域の農業適地評価と土地利用現況の比較
担当	国際情報部 山本由紀代、Somsak Sukchan (タイ土地開発局)
分類	研究
要約	東北タイ・コンケン周辺地域を対象に、土壌図・地形図等の主題図を用いて自然立地的要因に基づく農業適地評価を行い、衛星データから判別される土地利用と比較することによって、土地利用の実態や適合性を面的・定量的に把握できる。

成果情報名	マイクロアレイを用いた高等植物の転写因子DREB1Aが制御する環境ストレス耐性遺伝子群の同定
担当	生物資源部 篠崎和子、春日美江、圓山恭之進、安部洋、関原明、篠崎一雄
分類	研究
要約	乾燥・塩・低温ストレス耐性が向上したDREB1A遺伝子組換えシロイヌナズナでは適合溶質合成酵素、解毒酵素、高分子の保護因子であるLEAタンパク質等多様な遺伝子が複合的に機能していることが、cDNAマイクロアレイを用いる解析により明らかになる。

成果情報名	ダイズリポキシゲナーゼアイソザイムの改良簡易迅速検出法
担当	生物資源部 菊池彰夫
分類	研究
要約	青臭み因子であるダイズリポキシゲナーゼアイソザイムの脱色反応利用選抜法を改良することによって、微量の同一検定試料と微量の検出溶液を用い、L-3検定後、L-1検定を続けて行い、全有、L-3欠失、L-1・L-2二重欠失および完全欠失個体を簡易、迅速に検出することが可能となる。

成果情報名	分子マーカーを利用した小麦赤さび病抵抗性遺伝子Lr34及びLr46の効率的な選抜法
担当	生物資源部 末永一博、坂智広
分類	研究
要約	小麦の倍加半数体系統群において、育種に広く利用されている赤さび病抵抗性遺伝子Lr34及びLr46に連鎖するマイクロサテライト(SSR)マーカーを組み合わせるにより、両遺伝子を識別して赤さび病に対する抵抗性の効果を明らかにでき、赤さび病抵抗性系統を効率的に選抜できる。

成果情報

成果情報名	東北タイ砂質土壌での硬盤層破壊による土壌保全と作物根域拡大
担当	生物環境部 松尾和之、Chairoj Wongwiwatchai (コンケン畑作物研究センター)、屋代幹雄 (東北農研)
分類	研究
要約	東北タイの砂質土壌畑作地帯における主要作物のサトウキビの圃場では、大型トラクタによる頻繁な耕起によって一般に硬盤層が形成される。この硬盤層の一部をサブソイル耕で破壊すると、雨期中の透水性が向上するため土壌流亡が軽減され、土壌深部への根域の発達が促される。

成果情報名	エリアンサス属植物の飼料作物育種素材としての生育特性
担当	生産環境部 松尾和之、松本成夫、Taweesak C. (コンケン家畜栄養研究センター)
分類	研究
要約	エリアンサスは耐湿性が高く、深い層にまで達する根系により乾期の下層土壌水の利用が可能となり、植え付け2年目にはネピアグラスに匹敵する乾物生産能を示し、特に低窒素施肥条件や土壌pHが低い条件で生育が優れる傾向にある。

成果情報名	サトウキビの部分深耕同時施肥・植付機
担当	生産環境部 屋代幹雄 (東北農研)、松尾和之、Chairoj Wongwiwatchai (コンケン畑作物研究センター)
分類	国際
要約	東北タイの砂質土壌におけるサトウキビ栽培における低コスト・省エネルギー化を図るために、サブソイラーと施肥・植付機を結合した部分深耕同時施肥・植付機を開発した。これにより、サトウキビの耕起から植付けまでの作業工程を簡略化でき、耕起・植付作業の燃料消費量・作業時間を削減できる。

成果情報名	サトウキビにおける植物内生菌による窒素固定
担当	生産環境部 安藤象太郎、松本成夫、Sompong Meunchang (タイ農業局)、Praphan Prasertsak (タイ農業局)、Srisuda Thippayarugs (タイ農業局)、大脇良成 (中央農研)
分類	研究
要約	タイで栽培されているサトウキビは、植物体中全窒素の約2～3割の窒素を窒素固定によって獲得することができる。

成果情報名	東北タイの天水田稲作地帯における乾田直播栽培の適用性
担当	生産環境部 梶木信幸、田村治男、Uthai Arromratana (タイ農業局)、Tawachai Na Nagara (タイ農業局)
分類	国際
要約	東北タイ天水田稲作地帯において、乾田直播栽培の導入が移植労力の不足と降雨の不安定性を克服する手段として効果的であり、移植稲並の収量を得ることができ、また不耕起と組み合わせることによる一層の省力化が期待できる。

成果情報名	東北タイ天水田における畦畔漏水防止技術
担当	生産環境部 藤森新作 (農工研)、小倉 力、梶木信幸
分類	国際
要約	東北タイ天水田地帯において土壌保水力を向上させるためには、止水シートの挿入、または土壌固化剤 (マグネシア系固化材) による畦畔造成が有効であり、土壌浸食防止・漏水抑制の効果が高い。

成果情報

成果情報名	東北タイ天水田土壌では含水比が20%であると水稲は出芽し、雑草は抑制される
担当	生産環境部 森田弘彦（九州沖縄農研）、椛木信幸
分類	国際
要約	砂質土壌の多い東北タイの天水田土壌で乾田直播を行う場合、土壌含水比が20%であると水稲カオドマリ-105の出芽には影響を与えずに、カヤツリグサ科雑草の発生を抑制できる。
成果情報名	広域灌漑地区における雨量計密度の評価
担当	生産環境部 堀川直紀
分類	行政
要約	少ない雨量観測点から降雨分布特性を推定する方法を用い、熱帯モンスーン地域の降雨分布例を示すとともにこれから雨量計密度を評価する方法を開発した。
成果情報名	アーバスキュラー菌根菌がブラジルサバンナにおける暖地型イネ科牧草の乾物生産量とリン吸収量に及ぼす影響
担当	畜産草地部 菅野勉（畜産草地研）、斎藤雅典（畜産草地研）、安藤康雄、中村卓司、M.C.Macedo（EMBRAPA肉牛研究センター）
分類	研究
要約	ブラジルサバンナに生育する暖地型イネ科牧草の乾物生産とリン吸収は、土着のアーバスキュラー菌根菌（AM菌）によって促進され、その効果は、土壌pHが低いほど大きい。また、牧草の中では、 <i>Brachiaria brizantha</i> と <i>B.decumbens</i> のAM菌依存度が高い。
成果情報名	ブラジルサバンナの低湿地に適した牧草と草地造成方法
担当	畜産草地部 菅野勉（畜産草地研）、川上隆治（全拓連）、吉村義則（畜産草地研）、魚住 順（東北農研）
分類	国際
要約	ブラジルサバンナに広がる低湿地の牧草地造成には、湛水中の生存が可能な <i>Brachiaria humidicola</i> が最も適している。 <i>B. humidicola</i> 草地を播種造成する場合は雨季後半に低湿地の冠水が退いたのちトラクターによる作業が可能になる5月頃の播種が適している。
成果情報名	タイ東北部におけるホルスタイン種乾乳牛のエネルギー要求量
担当	畜産草地部 尾台昌治、川島知之（畜産草地研）、Pimpaporn Pholsen（コンケン畜産研究センター）、Witthaya Sumamal（コンケン畜産研究センター）、Taweesak Chuenprecha（コンケン畜産研究センター）
分類	研究
要約	タイ東北部のホルスタイン種乾乳牛では、エネルギー出納は大豆粕の給与（CP）水準が高くなるに従いエネルギー蓄積量が増加する。乾乳牛の維持に要する代謝エネルギー（ME）要求量は409KJ/BWK g0.75である。
成果情報名	電解水を用いた豆腐原料大豆の微生物制御技術
担当	食料利用部 辰巳英三、斎藤昌義、趙朝輝（中国農業大学）、李再貴（中国農業大学）、李里特（中国農業大学）
分類	研究
要約	大豆浸漬水として酸性電解水、又は、混合電解水を用いることにより、豆乳や豆腐の品質を損なうことなく、大豆由来の微生物を効果的に殺菌することが可能となる。

成果情報

成果情報名	中国における高品質ビーフンの加工法
担当	食料利用部 辰巳英三、成明華（中国農業大学）、李里特（中国農業大学）、李再貴（中国農業大学）、江正強（中国農業大学）
分類	研究
要約	異なるアミロース含量のジャポニカ・インディカ米の中で、アミロース含量20%以上のインディカ米を用いたビーフンの食味評価が高い。また、原料米を2時間浸漬後に水挽きすると湯溶けが少なく食感が向上する。河粉の食感向上のためには、原料の10%を予備糊化させ、残りの米粉スラリーと均一に混ぜた後蒸煮するとよい。

成果情報名	オイルパーム空果房からの高純度セルロースパルプの調製
担当	林業部 田中良平、Wan Rosli Wan Daud（マレーシア理科大学）
分類	研究
要約	オイルパーム空果房に対して環境負荷の少ない方法でパルプ化・漂白を行ない、既存の工業製品に近い性質を有する高純度セルロースパルプを調製し、熱帯産未利用木質資源からファインケミカルズ原料を製造することができる。

成果情報名	中国産淡水魚類筋肉の鮮度変化の特徴
担当	水産部 横山雅仁、陳舜勝（上海水産大学）
分類	研究
要約	中国において養殖生産量の多いハクレンおよび草魚は、官能検査による品質評価ならびにK-値の変化の特性から判断すると、即殺後の適切な温度管理により、鮮魚として3日間の流通が可能である。

成果情報名	養殖エビで発生しているウイルス病の単クローン抗体を用いる診断
担当	水産部 大迫典久（養殖研）
分類	研究
要約	養殖エビに深刻な被害を与えているホワイトスポットシンドロームウイルス(WSSV)は、単クローン抗体を用いる血清学的診断法によって検出できる。

成果情報名	遺伝分析に有用なサイインゲン細胞質雄性不稔系統
担当	沖縄支所 江川宜伸、塚口直史（生研機構）、鈴木克己、庄野真理子
分類	研究
要約	雄性不稔細胞質をもつサイインゲン品種「黒種衣笠」を1回親（種子親）とし、他の品種を反復親として戻交配を続けることにより細胞質雄性不稔系統を育成できる。これらの系統を用いれば、雑種を作出するのが極めて容易である。

成果情報

成果情報名	トマトのミトコンドリア型sHSPの高温ストレスに対する機能
担 当	沖 縄 支 所 庄野真理子、Jian Liu (Shandong Teachers University)、Jshwal Singh (Indian Institute of Sugarcane)、Jiral Ud Din (Land Resources Research Institute)、三宮一幸 (生研機構)、鈴木克己、塚口直史 (生研機構)、江川宣伸
分 類	研究
要 約	トマトのミトコンドリア型スモールヒートショックプロテイン (MT-sHSP) は、高温ストレスによる酵素の失活を防ぐ働き (分子シャペロン作用) がある。

成果情報名	サトウキビ初期生育促進のための選抜指標として重要な比葉面積
担 当	沖 縄 支 所 寺内方克、松岡誠、中川仁、中野寛
分 類	研究
要 約	葉面積の拡大が緩慢なサトウキビでは、長期間に及ぶ初期生育が収量を制限しており、比葉面積が小さいことがその原因となっている。比葉面積には遺伝的変異がみられることから、初期生育の速い品種の育成に比葉面積および葉の長さや厚さなどの関連形質を選抜指標として利用できる。

成果情報名	カンキツグリーニング病を媒介するミカンキジラミの分布はゲッキツの分布と一致する
担 当	沖 縄 支 所 河野勝行、中田唯文、高橋敬一、小西和彦 (農環研)、安田耕司 (農環研)、吉松慎一 (農環研)
分 類	研究
要 約	カンキツグリーニング病を媒介するミカンキジラミは、ミカン科のゲッキツが分布する奄美大島以南の南西諸島において恒常的に発生しているので、カンキツグリーニング病が未発生のこれらの島々では、本病の侵入に対する警戒が必要である。

成果情報名	アカホシカメムシの捕食性天敵ベニホシカメムシの生態的特性
担 当	沖 縄 支 所 河野勝行、高橋敬一
分 類	研究
要 約	ベニホシカメムシは、ワタ・オクラなどのアオイ科作物の重要害虫であるアカホシカメムシ類だけを捕食する狭食性の捕食者であり、高い増殖力を持ち、短日下でも非休眠であることから、アカホシカメムシ類に対する有力な捕食性天敵として位置付けられる。

成果情報名	水稻の登熟期におけるメタン発生と稲根圏のメタン酸化細菌数には稲品種間差がある
担 当	沖 縄 支 所 安達克樹、中村乾、B.Wang (沖縄招へい研究員)、D.Dianou (沖縄招へい研究員)、B.M.Espiritu (沖縄招へい研究員)、G.Oyediran (沖縄招へい研究員)、W.Chaitep (沖縄招へい研究員)、仙北俊弘
分 類	研究
要 約	亜熱帯水田の稲根圏にはメタン酸化細菌Methylosinus spp.が生息し、稲根圏の菌数は水田からのメタン発生量が多くなる出穂期から登熟期にかけて増加する。水稻の登熟期におけるこの菌数とメタン発生流量とは稲品種間で有意に差がある。

詳しくは、「国際農林水産業研究成果情報 第9号」2002年6月発行 ISSN 1341-5131を参照して下さい。

表紙の写真説明

カピバラ（左上）：乾季の放牧地（右上）
雨季の放牧地（左下）：豚の放牧飼育（右下）

カピバラ（ブラジル）：南米に住むネズミの仲間の野生動物です。普通のネズミのような長い尾はなく、体重は50Kg位になります。川や池の水辺に群れを作って住んでいて草を食べます。時には川辺の畑のトウモロコシを食べに出てくることがあるそうですが、人とのかわりは余りないようです。
放牧地の牛（ブラジル）：雨季（夏）放牧地と乾季（冬）の放牧地の違いが良くわかる。雨の多い10月から3月頃は牧草の生育が良いので牛は太っているが、乾季になると牧草は枯れてえさ不足のため牛の成育は停滞する。
放牧飼育している豚（アルゼンチン）：家族経営の小規模農家で行われていたトウモロコシ、小麦、大豆、牧草の輪換畑作体系の中で、牧草地で豚の放牧をしていた。写真は母豚と小屋。

巻頭言

独立行政法人化と 研究の新展開

理事長 井上 隆弘

1. 国際農林水産業研究センター（JIRCAS）の独立行政法人化

1970年、農林省熱帯農業研究センター（TARC）として発足したJIRCAS（1993年改名）は、2001年4月1日をもって農林水産省から独立し、独立行政法人として再出発しました。これは、国が行う政策の企画立案部門とその実施部門のうち、実施部門を独立行政法人に行わせようという中央省庁再編の一環として実施されたものです。新しい法人は、国の制約の枠にとらわれることなく、法人の理事長が裁量権を持って最も効果的、効率的な方法で国民のための役割を果たす責務があり、その方法は法人の主体性に任されています。その代わりにその結果が的確であったかどうか厳格に評価されます。

2. JIRCASの役割

我が国の食料自給率は低く（熱量換算40%）、世界の主要先進国の中で最低です。日本国民は耕地面積の2倍以上を海外の土地に依存しながら生活を営んでいます。新しい食糧・農業・農村基本計画では、2010年度の食糧自給率の目標値を45%と決めました。我が国の農林水産情勢、食料消費の動向から見て、この目標の達成には相当の努力が必要です。一方、地球規模で見ると、とくに開発途上国を中心とし、人口の増加と環境の悪化が進み、今後、世界の食料生産が人口増加に追いつけるかどうか疑問視されています。こうした状況を考えると、我が国が国際協力を通して世界の食料生産、特に開発途上地域の食料生産の向上に寄与することはきわめて重要です。世界の食料・環境問題に対する国際貢献は、とりもなおさず我が国の食料・環境問題でもあります。

JIRCASの役割は、「開発途上国との研究協力を通して、世界の食料・環境問題の解決に貢献することであり、もって開発途上地域における環境と調和した農林水産業の持続的発展に寄与し国際社会における責務を果たす」ことです。この役割は、これまでと基本的には変わるものではありません。具体的には、

- ①世界の農林水産業の動向、国内外の研究開発動向及び技術開発の方向を明らかにしつつ、
- ②農林水産物の環境に調和した持続的生産技術、農

林水産物の品質評価・流通・加工技術、開発途上地域における遺伝資源及び生物機能の解明と利用技術、環境資源の特性評価と生物多様性の保全技術などの開発の研究等を行うことになりました。その際、我が国の農林水産業への波及と影響を考慮しつつ研究を実施することは言うまでもありません。

3. JIRCASの活動

JIRCASは農業、畜産業、林業、水産業、社会経済分野などに関する幅広い専門研究を総合的に展開するため、以下の活動を行います。

- ①研究者を海外に派遣し、開発途上国の要望を取り入れながら共同研究を行います。
- ②高度な施設や技術を必要とするため、海外での研究実施が困難な研究については、国内で研究を行います。
- ③開発途上国研究者の資質向上のため、途上国から研究者を招聘し、つくば及び沖縄で共同研究を実施します。
- ④世界の農林水産業の動向や関連研究情報の収集・分析・広報に力を入れ、インターネットの活用や使いやすい情報システムの開発などを行います。
- ⑤海外から著名な研究者を招き、国際シンポジウム・セミナー等を開催します。本年は国際シンポジウムとして、「開発途上地域における持続的農業と水問題」として11月27日～28日に開催を予定しています。
- ⑥国内の国際協力機関が行う開発途上国技術援助などに対し研究成果に基づいて支援します。
- ⑦開発途上地域を中心とする世界の食料・農業・環境の動向や重要問題について、継続的に調査・分析を行い、必要に応じて行政機関や国際援助機関等に対して提言を行います。

以上に述べたJIRCASの役割を着実に果たすためには、競争的かつ開放的な研究環境のもとで、創造的な研究を計画的・重点的に行い、しかもその結果が公正・透明となるような組織運営をすることが大切です。役職員が一体となって大きな成果を挙げるよう努力したいと思います。

特別コーナー

独立行政法人 国際農林水産業研究センター中期目標

第1 中期目標の期間

独立行政法人国際農林水産業研究センター（以下「センター」という。）の中期目標の期間は、平成13年4月1日から平成18年3月31日までの5年間とする。

第2 業務運営の効率化に関する事項

運営費交付金で行う事業については、中期目標の期間中、毎年度平均で、少なくとも前年度比1%の経費節減を行う。

1 評価・点検の実施

独立行政法人評価委員会（評価委員会）の評価結果は、資源配分、業務運営等に適切に反映させる。評価委員会の評価の効率的かつ効果的な実施に資するため、センター自らにおいても、運営状況、研究成果について外部専門家・有識者等を活用しつつ、業務の点検を行う。また、研究職員については、公正さと透明性を確保した業績評価を行い、評価結果は研究資源配分等に反映させる。

2 研究資源の効率的利用

外部資金の獲得、研究資源の充実・効率的利用、施設機械の有効利用等を図る。

3 研究支援の効率化及び充実・高度化

研究業務の高度化に対応した高度な専門技術・知識を有する者を配置する等、研究支援業務の効率化、充実・強化を図る。また、必要に応じ、外部委託等の活用を図る。

4 連携、協力の促進

他の独立行政法人との役割分担に留意しつつ、研究目標の共有、共同研究、人的交流の促進を行い、独立行政法人全体としての農林水産業等に関する研

究水準の向上を図る。また、研究の効率的な実施のため、国公立機関、大学、民間、海外機関、国際機関等との共同研究等の連携・協力及び研究者の交流を行う。

5 管理事務業務の効率化

事務処理の迅速化、簡素化、文書資料の電子媒体化等による管理事務業務の効率化を行う。

6 職員の資質向上

職員への研修、資格取得等の促進を通じた資質向上に努める。

7 海外滞在職員等の安全と健康の確保

海外滞在職員等の安全及び健康の確保に努める。

第3 国民に対して提供するサービスその他の業務の質の向上に関する事項

1 試験及び研究並びに調査

(1) 重点研究領域

平成11年7月に制定された「食料・農業・農村基本法」及びその理念や施策の基本方向を具体化した「食料・農業・農村基本計画」並びに平成11年11月に策定された「農林水産研究基本目標」に示された研究開発を推進するため、センターにおいては、「開発途上地域における農林水産物の環境に調和した持続的生産技術」、「開発途上地域における農林水産物の品質評価・流通・加工技術」、「開発途上地域における遺伝資源及び生物機能の解明と利用技術」、「開発途上地域における環境資源の特性評価と生物多様性の保全技術」等に関する研究を重点的に推進する。その際、経済活動や社会活動のグローバル化の進展を受けて、我が国の農林水産業への波及と影響についても考慮しつつ、国際的な連携・協力による国際共同研究を実施する。また、緊急に解決すべ

特別コーナー

き問題については、研究開発を積極的に推進する。

(2) 研究の推進方向

研究に係る目標の作成に当たって、次のように定義した用語を主に使用して段階的な達成目標を示す。また、研究対象等を明示することにより、達成すべき目標を具体的に示す。

取り組む：新たな研究課題に着手して、試験及び研究を推進すること。

解明する：原理、現象を科学的に明らかにすること。

開発する：利用可能な技術を作り上げること。

確立する：技術を組み合わせて技術体系を作り上げること。

ア 開発途上地域の食料需給改善のための農林水産業の動向解析、国内外の研究開発動向の把握及び技術開発方向の解明

(ア) 世界の食料需給の動向解析と共同研究に係わる総合戦略の策定

a 内外の資料の収集、整理、分析等を迅速に行うため、主要な開発途上国、国際機関等との間で情報ネットワークの構築を図るとともに、国際共同研究の中期的な総合戦略を策定する。

b 中国主要省等について需給動向解析用モデルを開発し、世界の需給動向解析用モデルの精度を高める。

(イ) 開発途上地域における食料・環境に係わる地域特性及び発展方向の解明

インドネシア、ベトナム、西アフリカ等の総合プロジェクト実施地域を中心に、

a 農林水産業の発展阻害要因と技術的・経済的発展方向を解明する。

b 持続的なファームングシステムの確立のための社会的・経済的・技術的視点を明確化し、問題点と展開方向を解明する。

イ 開発途上地域の農林水産業の持続的発展のための研究開発

(ア) 開発途上地域における農林水産物の環境に調和した持続的生産技術の改良・開発

タイ、マレーシア、ブラジル等の総合プロジェク

ト実施地域を中心に、

a 持続的生産を可能にするための窒素等の物質循環の解明と評価手法を開発する。

b 稲・畑作物の現地に適した省力・省資源的栽培技術を開発する。

c 稲・大豆等の現地における主要病害虫の発生生態を解明する。

d 農牧輪換システムに適したイネ科牧草の生理・生態学的特性を解明し、低利用飼料資源の栄養特性評価を行う。

e 現地における牛・豚等の生理学的特性と主要疾病の実態を解明する。

f 熱帯低質林への有用樹種の植込み等天然更新補助技術を開発する。

g 環境と調和した地域固有水産生物の増養殖技術を開発する。

(イ) 開発途上地域における農林水産物の品質評価・流通・加工技術の改良・開発

タイ、マレーシア、中国等の総合プロジェクト実施地域を中心に、

a 現地で生産されている米等の基本的な品質特性を解明する。

b 温湿度等の環境条件と連動した米・大豆等の品質劣化の簡易防止技術を開発する。

c 熱帯地域のオイルパーム廃材等低利用木質資源の高度利用技術を開発する。

d 淡水魚等低利用水産物のすり身等への有効利用技術を開発する。

(ウ) 開発途上地域における遺伝資源及び生物機能の解明と利用技術の開発

西アフリカ、中国等の総合プロジェクト実施地域を中心に、

a 乾燥耐性等の有用形質について、関連するプロモーターの単離等を行い、遺伝的特性を解明する。

b 稲等の病虫害抵抗性等の有用育種素材を開発する。

c 独立行政法人農業生物資源研究所が実施するジーンバンク事業のサブバンクとしてセンターバンク(独立行政法人農業生物資源研究所)と連携しつつ、遺伝資源の収集、評価及び保存を行う。

特別コーナー

(エ) 開発途上地域における環境資源の特性評価と生物多様性の解明

タイ、インドネシア、マレーシア等の総合プロジェクト実施地域を中心に、

- a リモートセンシング技術を用いた環境資源の特性評価と土地利用の変動を解明する。
- b 熱帯林の持続性と再生のためのアグロフォレストリー技術の導入条件を解明する。
- c マングローブ汽水域の養殖を中心とした農林水産業の振興・活性化を図るための生物生産過程を解明する。

(オ) 沖縄における研究

- a インゲンマメ、稲等を用いて耐暑性及び耐塩性のメカニズムを解明する。
- b アグロバクテリウム等を用いて、サトウキビ等の優れた特性を有する育種素材を開発する。
- c マンゴー、パパイヤ等の熱帯・亜熱帯果樹の特性を評価し、大量増殖に資する基盤技術を開発する。
- d 熱帯・亜熱帯に発生するカンキツグリーンング病等の重要病害虫の発生生態を解明する。
- e 熱帯・亜熱帯島嶼の生産不安定要因を解明し、節水・省肥栽培等の対策技術を開発する。
- f 稲等の世代促進における出穂特性等の変異固定技術を開発する。

2 専門研究分野を活かした社会貢献

(1) 分析、鑑定

行政、各種団体、大学等の依頼に応じ、センターの有する高い専門知識が必要とされる分析、鑑定を実施する。

(2) 講習、研修等の開催

講習会の開催、国公立機関、民間、大学、海外機関等外部機関からの研修生の受入れ等を行う。

(3) 行政、国際機関、学会等への協力

行政、国際機関、学会等への専門家の派遣、行政等への技術情報の提供等を行う。

3 成果の公表、普及の促進

(1) 成果の利活用の促進

研究成果はデータベース化やマニュアルの作成、共同研究等により積極的に開発途上地域等での利活用の促進を図る。

(2) 成果の公表と広報

研究成果は、積極的に学術雑誌等への論文、学会での発表等により公表するとともに、主要な成果については各種手段を活用し、積極的に広報を行う。

(3) 知的所有権等の取得と利活用の促進

重要な研究成果については、わが国の農林水産業等の振興に配慮しつつ、特許等の取得により権利の確保に努めるとともに、民間等における利用の促進を図る。また、育種研究成果については、国の命名登録制度を活用しつつ、優良品種の育成・普及に努める。

第4 財務内容の改善に関する事項

1 収支の均衡

適切な業務運営を行うことにより、収支の均衡を図る。

2 業務の効率化を反映した予算計画の策定と遵守

経費節減目標を踏まえた運営費交付金の交付を受けることを前提に中期計画の予算を作成し、当該予算による運営を行う。

第5 その他業務運営に関する重要事項

人事に関する計画

(1) 人員計画

期間中の人事に関する計画（人員及び人件費の効率化に関する目標を含む。）を定め、業務に支障を来すことなく、その実現に努める。

(2) 人材の確保

研究職員について、任期付任用制度の活用、職の公募等により、内外の優れた人材を確保する。

成果情報

海外エビウイルス病の 診断・防除技術の開発

水産部 主任研究官 大迫 典久

東南アジアエビ養殖の問題点

タイ、マレーシア、インドネシアといった東南アジアは、世界でも有数のエビ養殖が盛んな地域ですが、最近、エビ養殖場ではその規模の拡大に伴ってウイルスによる病気が発生し、重要な問題となってきています。現在、エビのウイルス病に対する治療法がないことから、病気を早期に発見して蔓延を予防することが強く望まれています。そこで、東南アジア地域で現在発生しているウイルス病の発生状況を調べ、病気の正確かつ迅速な診断が行える方法を開発するために“海外エビウイルス病の診断・防除技術の開発”プロジェクトを実施しています。

エビ養殖場の現状

東南アジアのマレーシアにある国立水産研究所と共同研究が実施され、マレーシア各地のエビの養殖場を訪問して養殖場の環境や実際に発生している病気について調査しました。その結果、どの地域でもウイルス病による被害が深刻で、非常に多くの養殖場が事業を断念して養殖池を放置している状況であり、特にマレーシア半島の西海岸に位置するペナン州及びペラ州ではウシエビのウイルス性疾病であるホワイトスポット症による大量斃死を実際に確認しました。

これらの病気の発生を調べたところ、ウイルスが感染してきた経路は養殖池に入れた稚エビから持ち込まれたことが明らかとなり、稚エビについて病気の診断をすることが、病気の発生を防ぐことに重要であることがわかりました。

エビウイルス病の診断方法

現在エビウイルス病の診断方法として、ウイルスの遺伝子の一部を増幅して調べるPCR法が一般的に行われています。マレーシアで発生したエビウイルス病もこの方法で診断が可能かどうかを調べ、その結果、十分診断が可能であることがわかりました。しかしながら、この方法では単価の安いエビに対して多額の検査費用が掛かってしまい、しかも診断には特定の装置や検査技師の訓練が必要な上、検査結果がでるまでに時間が掛かるなどの問題点があります。そこで、経費が掛からず養殖現場での応用が可能で、しかも正確かつ迅速に診断が行える手法として、ウイルスに対する単クローン抗体を用いた診断方法について検討しました。単クローン抗体の作成方法は、まず野外調査で採集したウイルスを健康なエビに接種して感染させ、増殖させたウイルスを回収した後、今度はこれをマウスに接種しました。こうしてエビウイルスに対する抗体をマウスに作らせ、抗体産生細胞を含むマウスの脾臓細胞とミエローマ細胞（マウスの癌細胞）とを融合させました。この様にして作成された一つの融合細胞は特定の抗体を産生する一つの細胞が癌細胞と融合したもので、やがて増殖して特定の抗体のみを持続的に産生するようになります。様々な抗体を産生する幾種類もの融合細胞が同時にできるので、その中からウイルスと特異的に反応する抗体を産生する細胞を選別し、選別された細胞を培養して得られた抗体を単クローン抗体としました。単クローン抗体の作成の結果、マウスの脾臓細胞とミエローマ細胞との融合は90%以上と高い率でのコロニー（細胞群集）形成が認められ、血リンパを用いた間接蛍光抗体によるスクリーニングでは感染と非感染との間に差が認められた株が36株ありました。その後培養及びサブクローニング（細胞株の純化）の過程を経て、現在までにウイルス特異反応を保持する3株の単クローン抗体が得られています。今後は、これらを高精度の診断薬として利用するために反応強度を増大させることが必要と考えています。なお、この研究でマレーシア水産局に於ける水産疾病の診断・防除の重要性が再認識され、水産防疫センターが国立水産研究所に隣接して建設されました。

マレーシアで発生したエビウイルス病（ホワイトスポットシンドローム）による養殖ブラックタイガーの大量斃死

プロジェクト 研究

「中国食料」プロの ワークショップ

国際研究調整官 池田 良一

(現農業技術研究機構作物研究所稲研究部長)

総合型プロジェクト研究「中国における主要食料資源の持続的生産及び高度利用技術の開発」(略称「中国食料」プロ)では、今年度が研究期間(1997～2003年)の中間年に当たるので、中間推進評価会議を開催した。まず、会議の前日にワークショップを開いて、中国の共同研究機関から招聘した研究管理者等から中国における本プロジェクト研究の背景と重要性などの説明を受け、次いで翌日の中間推進評価会議では日本側研究担当者が中課題ごとの研究推進状況と今後の進め方を説明した上で、効果的な中間推進評価会議にしようと試みた。

ここでは、2月1日(木)に国際農林水産業研究センターで開催されたワークショップの概要を報告する。最初に、当センター井上隆弘所長、中国農業部国際合作司亜非処王維琴

副処長、国際研究課土屋正課長および中国農業科学院国際合作与産業発展局国家地区李淑雲処長の挨拶があった。続いて、本プロジェクトの立ち上がりから関わって来た野口生産利用部長が、これまでの経緯と全体像について概要を説明した。中国側の共同研究機関の研究管理者が発表した課題は以下のとおりである。発表は中国語か日本語で行われ、中国語の場合には、逐次通訳によった。

- 1) 中国の農業問題とその取り組み：①農村経済研究中心の劉志仁研究員、「中国農業の現状及び新世紀の政策的課題」、②農業自然資源和農業区画研究所の唐華俊所長、「中国における農業資源の現状及び主要農産物の供給課題」、③農業経済研究所の朱希剛前所長、「中国農業における新たな発展段階：農家収入の増加」。
- 2) 環境保全型農業研究から：

①土壤肥料研究所の黄鴻翔副所長、「中国における化学肥料の使用及び環境保全型農業技術発展の可能性」、②南京土壤研究所の朱建国研究員、「農業汚染が太湖水質に与える影響の評価・農業生態システムにおける主要要素循環の研究」。

- 3) 中国水稻研究所の張志涛副所長、「中国における稲作の発展と害虫防除」。
- 4) 大豆およびトウモロコシの研究から：①吉林省農業科学院の馮巍院長、「吉林省農業科学院における研究紹介」、②吉林省農業科学院大豆研究所の劉凱所長、「中国東北大豆遺伝資源の評価及び利用研究」。
- 5) 中国農業大学の李里特副校長、「中国農業及び農産物加工利用の概況」。
- 6) 上海水産大学の周応棋校長、「淡水漁業資源の有効利用に関する中日共同研究の展望」。

総合討論では、各発表に対する個別の質疑応答の後、中国政府の農業投資および中国農産物の品質について論議され、中国側から①中国政府は今後農村における道路、水資源、電気などインフラ整備に関する投資を進めると予想されること、②品質を高めるために市場システムの整備が必要であり、政府は農産物の加工も支持しているの、最近成果が見られること、さらには③WTO加入後には緑の政策実行も考えられるとの説明があった。

なお、中間推進評価会議の翌日(2月3日(土))には、日中友好協会つくば支部主催のカスミグループ食品流通システム見学会が催され、日中両国から合計20名が参加した。

「中国における主要食料資源の持続的生産及び高度利用技術の開発」
ワークショップ 2001年2月1日

国際シンポジウム

第8回JIRCAS国際シンポジウム 開発途上地域における持続的農業と水問題 —水利用の向上をめざして—

国際情報部 国際研究情報官 矢島 正晴

世界規模での水問題

現在、60億人を突破した世界人口は、2025年には80億人に達すると予想され、「世界的な水不足」による干ばつや飢餓の拡大が危惧されています。すでに、世界人口の3分の1が水不足に見舞われており、2025年には全体の3分の2に達すると予想されています。生活水準の向上や生産体系の変化などに伴う水需要の増加、都市部と農村部での水利用の競合、地球の環境変動に伴う降水量やパターンの変化など、世界の水資源の需要と供給を巡る状況は、一層深刻化してきています。

持続的農業と水問題

農業においては、水不足の生じている地域に対して、ダムや水路等の建設を中心に施設整備が行われ、大きな成果をあげてきました。しかし、これらの大規模な施設整備は、建設や維持管理に多くの費用を必要とするばかりでなく、生態系など、環境への影響も懸念されるようになってきました。

サトウキビ畑における点滴チューブの設置作業。モーリシャスではサトウキビ畑の約7%で水利用効率の良い地中点滴灌漑が行われている

このため、発展途上地域では、限られた水資源を有効に利用する工夫が従来にも増して必要とされ、農民自身により建設可能な溜池や簡易貯水槽の利用、土壌水分の効果的な利用と管理、さらに作物による水の利用効率の向上を目指した節水栽培など、小規模ながらも効果的な技術開発が求められています。また、「水問題」を考える場合

に重要なことは、これらの技術が各地域の自然環境だけでなく、伝統や農村の習慣と強い結びつきを持っていることです。このことから、「水」に関わる技術開発を行う場合には、地域固有の伝統や習慣も踏まえたものでなければなりません。

「水問題」は単に乾燥地や半乾燥地の問題ではありません。降雨の不安定な天水農業地帯においても

同様の問題を抱えています。「水問題」の解決は持続的な農業生産や農村生活の安定に寄与するばかりでなく、バランスのとれた地球環境を維持していく上で、極めて重要な課題と言えるでしょう。

センターピボットによるサトウキビ畑の大規模灌漑

そこで、内外の識者を招聘し、世界の水資源や食料生産と水需要の動向、歴史的な水利用技術の系譜と水利慣行等に関する基調講演に引き続き、以下の課題について検討を行い、今後の研究方向を探ります。

1. 作物の遺伝・育種・生理生態的特性からみた耐乾性作物開発とその利用
2. 栽培管理技術からみた農耕地の水利用の現状と向上の可能性
3. 開発途上国における農業生産と生産安定化の可能性

○日時：平成13年11月27日（火）及び28日（水）
○場所：つくば国際会議場

遺伝子組換えによる植物の耐乾性増強。バイオテクノロジーを利用した、乾燥に強い作物の開発が期待されている

第8回JIRCAS国際シンポジウムのご案内 「開発途上地域における持続的農業と水問題」 －水利用の向上をめざして－

日時：平成13年11月27日（火）及び28日（水）
場所：つくば国際会議場
 つくば市竹園2-20-3（電話：0298-61-0001）
申し込み：第8回JIRCAS国際シンポジウム事務局
 FAX：0298-38-6342
 e-mail:symp8@ml.affrc.go.jp
問い合わせ：国際農林水産業研究センター
 国際情報部 矢島 正晴
 電話：0298-38-6345

プログラム

27（火）

10：00 基調講演

1. 気候変動下における世界の水資源の動向
虫明功臣（東京大学生産技術研究所）
2. 開発途上地域の水需要の動向と農林水産業
Dr. David Molden (IWMI)
3. 世界の農業水利慣行の発展過程と今後の課題
海田 能宏（京都大学東南アジア研究センター）

13：00 セッション1

作物の遺伝・育種・生理生態的特性からみた耐乾性作物開発とその利用

1. 作物の生理生態的特性・多様性利用による干害軽減の現状と可能性
稲永 忍（鳥取大学乾燥地研究センター）
2. 耐乾性作物育種の現状と可能性
Dr. Rodomiro Ortiz (IITA)
3. バイテク育種による耐乾性作物作出の現状と可能性
篠崎和子（JIRCAS）

15：30 セッション2

栽培管理技術からみた農耕地の水利用の現状と向上の可能性

1. 耕地における水収支の現状と水利用効率の向上
Dr. Rony Wallach (The Hebrew University of Jerusalem)
2. 土壌水分の利活用と生産安定化の可能性
長谷川周一（北海道大学大学院農学研究科）
3. 作物の節水栽培法の現状と可能性
Dr. Peter Thorburn (CSIRO Sustainable Ecosystems)

28（水）

9：30 セッション3

開発途上国における農業生産と生産安定化の可能性

1. 天水農業における水管理の現状と生産安定化の可能性
伊藤 治（JIRCAS）
Dr. John S. Caldwell*（JIRCAS）
凌 祥之*（農業工学研究所）
Dr. Chayasit Aneksamphant*（タイ土地開発局）
2. 乾燥・半乾燥地農業における水管理の現状と生産安定化の可能性
西牧隆壮（国際協力事業団）
Prof. Ali A. Al-Jaloud*（KACST）
狩野良昭*（国際協力事業団）

13：00～14：30 ポスターセッション

16：45 セッション4

総合討論

論点：今後必要とされる研究課題と連携協力

*コメンテーター

表紙の写真説明

現農業環境技術研究所 岡 三徳

ラオスとの共同研究の事前調査のため、タイのコンケンからメコン河畔のノンカイを越え、乾季のビエンチャンに入った。この町にも、タイやカンボジアと同じ町並みと人々の喧噪がある。カメラに向けた女性は、マーケットの隅でメコン河畔の畑でとれる多くの野菜を売っている。手前には、バナナの大きな花房、丸いナス、長ササゲ、ハヤトウリ、奥にはトマト、ショウガ、カボチャが並ぶ。マーケットに並ぶ野菜や多くの食材は、ビエンチャンの人々の豊かな暮らしの中に、長く育まれてきたものである。メコン河が南北に貫くラオスには、中南部の水田地帯から北部山岳地の畑地帯まで、多様な土地利用と農業が展開されている。タイ東北部とも隣接するラオスへの共同研究の拡大に向け、今後とも継続した調査が望まれる。

巻頭言

国際共同研究に 求められる新たな視座

理事 諸岡 慶昇

開発途上諸国の地域研究

この春から独立行政法人としてスタートしたJIRCASは、地球規模の食料・環境・エネルギー等の問題から見た研究の重要度や、わが国の食料安全保障への関わり方を視野に、開発途上諸国を対象とし概ね4地域に研究の重点化を図ることとしている。1つは膨大な人口を有し世界の食料需給の上できわめて重要な意味を持つ中国地域、2つは歴史的経済的にわが国との関係が深く農林水産業を基幹部門とする東南アジア地域、3つは世界の食料基地として多くの役割が期待される南米地域、4つはサブサハラを中心に多くの栄養不足の人口を抱え、基礎食料生産のための協力が求められるアフリカ地域である。

直近のOECD開発援助委員会(DAC)リストでは、152ヶ国が開発途上諸国で、先進国への移行国及び先進国を含めた世界のほぼ7割を占めている。当センターでは、そこから先の4地域の研究ニーズに沿う十ヶ国相当に拠点を置き、現地での実証研究と国内における基盤研究を連動させる地域研究(Area study)を進めている。こうした共同研究を中心とした研究の推進に当たっては、昨今の国際情勢の大きな変化を背景に、以下の見方に立つ新たな視座が重要と考えている。

共同研究の連携課題

1つは、ボーダーレス化を強める国際関係への対応視点である。農産物の対日輸出攻勢を契機に、開発途上諸国の経済開発に対する協力問題が大きな話題となっている。近接する諸国との交易摩擦はその代表例であるが、わが国と同様のモンスーン・アジアの農業は、その経済成長のテンポとは別に、相互の研究協力が不可欠なテーマを数多く含んでいる。

例えば大陸部の東南アジアで生まれ中国を経て日本へ飛来し、稲作に大きな被害を及ぼすトビイロウンカの研究は、問題を共有する複数国が互いに協力しあう方が研究に大きな弾みがつく。また、温暖化の広がりや資材投入型の集約農業が耕地や水質の急速な劣化を招いている環境問題は、わが国も深く関わり今後さらに増幅する傾向を強めている。

JIRCASではこうした研究の進展を先導的に担いつつ、何をなすべきかを主体的に捉えながら、中期計画の下で国民に対し説明責任を備えた研究と取り組む所存である。

技術と人のハーモニーを求めて

2つは、技術と文化の相互関係を読み解く視点である。科学技術の成果はそれぞれの国の受容の度合いに強く左右されるが、開発途上諸国を対象とした研究では、先端科学の導入と農林水産業の現場に近い技術研究の推進バランスを、どう調和させるかという問題にしばしば直面する。新たな技術を手に入れた途上諸国を訪ねると、村に漂うつましい社会関係に感動したり、さまざまな作物を植え込む伝統的な作付け体系に、多様性や持続性の点で学び教えられる場面によく出会う。先進国が成長の過程で見落としてきた文化や伝承技術が、共同研究に関与すると逆により鮮明に映し出されてくる。これからの半世紀は、暮らしや生きる価値観を求めて、科学と社会との関わりが重視される時代に向かうと予測される。ここでは、技術と人々の織りなすハーモニーが、共同研究を通し相互の理解を深める主要なテーマとなろう。

新生JIRCASの船出に当たって、異なる文化に対する国際共同研究の役割を改めて問い、謙虚に学び合う視座に立つことを心がけたいと思う。

成果情報

花粉稔性による サイインゲンの耐暑性評価

沖縄支所 鈴木克己

塚口直史 (生研機構、現新潟大学)

竹田博之 (現農研機構・近畿中国四国農業研究センター)・江川宜伸

高温期での作物の収量の低下は熱帯・亜熱帯地域では大きな問題で、耐暑性作物の開発が望まれています。沖縄支所では高温障害回避技術の開発や耐暑性作物作出を目的に、作物の高温障害及び耐暑性に関する研究を行っています。

サイインゲンはマメ科野菜の中では莢が美味しく世界的に人気があります。支所のある沖縄県では冬期県外移出品目として1位になる馴染みが深い野菜です。しかし平均気温28度以上の高温下では花が落ちてしまい莢を収穫することができないため、夏期になると県外から移入しなくてはなりません。

高温でサイインゲンの花が落ちる原因

それではなぜ高温によりサイインゲンの花は実をつけずに落ちてしまうのでしょうか。花のままおれて落ちた莢(子房)の内部を顕微鏡で観察してみると、胚ができておらず受精していないことが分かりました。また、花が咲くときの温度とその後の莢の着き方を詳しく調べてみますと、開花前日と開花8~11日前の時期が、花が特に、高温に悪影響を受けていることが判明しました。開花8~11日前の時期に高温にあうと、葯の中の発達途中の花粉に栄養を送る組織の細胞の機能が破壊されることによって、花粉の生育が阻害され、受精能力が失われます。また、開花当日に高温にあった場合はまだ明らかではありませんが、花粉発芽や花粉管伸長が阻害され受精がうまくいかず、莢を着けることができないものと考えられます。

耐暑性品種「ハイブシ」

以上のような高温による障害を克服する品種として沖縄支所では、東南アジアを中心に世界各国から集めたサイインゲンの遺伝資源の中から耐暑性サイインゲン品種「ハイブシ」を選抜育成しました。「ハイブシ」は、石垣島の初夏までなら収穫可能な品種として注目されています。

花粉稔性の調査

「ハイブシ」を含むサイインゲンの品種や、世界各国から集めた遺伝資源の収量と花粉稔性の関係を見てみました(図1)。花粉稔性は、開花1日前の蕾を用いて中から葯を取り出し、アセトカーミンと

いう赤色の染色液で花粉が染まるかどうかにより判別します。「ハイブシ」のような夏でも高い収量を得ることができる品種では花粉稔性が高い

図1 サインゲンの花粉稔性(平成12年7月5日)と収量の関係
番号はジーンバンクの保存番号

のに対し、収量が低い品種では一般に花粉稔性は低い傾向にありました(写真1)。前述のように花の落下は受精当日の温度にも影響されますので、花粉稔性のみではサイインゲンの耐暑性をすべて判断できませんが、すくなくとも高温下でも高い花粉稔性を示すことが高収量を得る上で重要であることが明らかとなりました。花粉稔性の調査は耐暑性の検定法の一つとして利用可能であると考えています。今回の調査では、「ハイブシ」や現在育成中である「石垣2号」よりも高い花粉稔性を示すものはありませんでしたが、将来、「石垣2号」や「ハイブシ」より高い値を示すものを探し出したいと思っています。また、耐暑性品種がなぜ高い花粉稔性を示すのかその生理メカニズムを解明し、作物全般での高温耐性の付与に役立てたいと思っています。

写真1 高温条件下でのサイインゲンの栽培。高温に弱い品種「ケンタッキーワンダー」(A)に多く見られる不稔花粉(a)と耐暑性品種「ハイブシ」(B)の正常花粉(b)

国際機関

国際農業研究協議グループ (CGIAR) の戦略と組織改革 21世紀への生き残りを賭けて

生物資源部長 岩永 勝

CGIAR傘下の16の国際研究機関は年間およそ350億円の予算の活動を行い、国際農業研究に関しては圧倒的な実績と高い評価がある。しかし「緑の革命」の成功体験が変革を妨げてしまい、21世紀の世界に適応出来ず恐竜のように滅亡にむかうのだろうか？

1992年にリオで開催された国連地球サミット会合で議長役を果たした世界的に著名なモーリス・ストロング氏がリーダーとなり、1998年にCGIAR全体のレビューが行われた。国際農林水産業研究は今後もその重要性が高まるが、大きく変化している世界の中であって今後も更なる活躍をするためにはCGIARが大きく変革するべきだとの強い指摘がなされた。これを受けてCGIAR内部で変革の具体化のための議論がなされて、2000年10月の年次総会で研究戦略と組織改革の具体的な案が採決される予定であったが・・・

1. 研究戦略に関しては、技術諮問委員会 (TAC) が主体になり研究内容の絞り込み、重点化等の議論を進めて来たが、2000年の年次総会で研究戦略提案を正式に提案した。主な変化としては：

- ① 科学技術の優秀性をCGIARの信条・基盤とする
- ② 地球的公共財 (International Public Goods) の生産に力点を置く
- ③ 貧困撲滅を大きな目標に掲げ、貧困層が集中するアフリカ、南アジアへ主力を注ぐ
- ④ 地域を枠組みとする研究課題の設定・実行システムを強化する
- ⑤ 科学技術だけでなく社会的制約・条件に目を向ける
- ⑥ 民間を含めた多くのパートナーとの連携協力を図る、等がある。先のドイツでの年次総会でかなり

の議論がなされていたため、TACの提案する戦略は満場一致の承認を受けた。研究現場でもこの研究戦略に対する強い支持がある。

2. 組織改革に関しては、新しい研究戦略を推進するための組織改革が2000年の年次総会の最も重要な議題であった。CGIARセンターの所長、理事長合同委員会より組織改革の提案が9月に出されていた。CGIAR全体をFederation (連邦・連合・連盟) に改変する事が骨格となっている。これは各センターの独自性を尊重しながらも組織として整合性と統一性のある力強い連合体に生まれ変わろうとの提案である。ヨーロッパのドナーを中心にこのFederation案に対し強い支持の発言があった。しかし他のドナーからはFederationの概念そして実際の運用に関し不明な点が多く、今回の総会で決断するのではなく、今後もFederation以外の選択肢も視野にいたした議論を続け、2001年5月の年次総会で正式に決断すべきとの慎重論が出た。コンセンサスが出来なかったため、ジョンソン新議長はこの慎重論を飲み決断を先送りするしかなかった。

ストロング・レポートが出されて既に2年が経っているのに大きな変革をするための決断が出来ない優柔不断さに対し研究センターから非常に強い不満が出された。変革出来ない組織への失望、変革を待ち続けた疲労感が明瞭である。CGIARの最大の弱点と言われた「意志決定システム」のなさが一番大切な時に露呈してしまった感がある。外部変化に適応し、あるいはその変化を先取りしたり、世界的変化の潮流を自ら作るぐらいの気概と組織力がないと21世紀は生きていけないと感じるのは現場の研究スタッフと幹部職員であり、雑多な目的を持って参画しているドナー等は異夢同船となり、ベクトルをそろえた方向へ跳躍する事は出来ないのだろうか？ 21世紀に生き延びるにはそれに通用する科学力と組織力が必要であり、変革をするための明確な意志決定システムを持つことの必要性はどの組織にも当てはまるだろう。

プロジェクト 研究

総合研究プロジェクトに おける新たな技術選択手法 —メコンプロジェクトを事例として—

国際情報部 山田 隆一

1. 研究の背景

技術をいかにして開発するかということはもちろん重要なことだが、どのような技術を開発するかということもそれと同じくらい重要である。さらに重要な点は、こうした技術ニーズの把握が農家の問題意識にもとづくものでなければならないということである。そのためには医者が行う診察に相当するような診断を農家に対して行う必要がある。そして、その診断結果を技術開発に結びつけていかなければならない。そのためには一定の評価手法が求められる。

2. TN法とKJ法による診断

上記の診断に適した手法がTN法とKJ法である。TN法第1ステップは問題点などをリストアップし、当事者による得点化の後、各問題点ごとの平均得点や属性ごとの得点差などを把握するという手法である。我々は農家とのフリーディスカッションを繰り返す中で農家経営をめぐる技術的・経営的問題点をリストアップした。これに対して無作為に選ばれた約50戸の農家とその深刻度を3段階評価で得点化した。この結果、各問題点の深刻度順位が明らかとなった。それにもとづき一定以上の深刻度の問題点を抽出した上で、これについてKJ法を行い問題を集約し、その解決の基本方向を整理した。

3. AHP法による技術の事前評価と技術選択

次に、上記の方向性にもとづき技術開発課題のリストアップを行い、関係研究者にフィードバックし、メコンデルタプロジェクトチーム全体の議論の中でリストを確定した。このリストの中から最終的な技術選択を行うわけであるが、その判断材料を準備する必要がある。そのために行うのがAHP法による事前技術評価である。これは各技術をいくつかの基準によってそれぞれ一対評価を行い、総合的な評価値の大きさによってその優

先順位を決めるというものである。基準は①効果、②技術レベル、③農家の習得の容易性、④研究コストの4つである。図1はAHP法による事前技術評価結果の一部である。この例においては、最も総合評価値の高い地力維持向上対策が選択された。これは特に効果と技術レベルの面で優れていることが分かる。

図1 AHP法による技術評価結果 (一部)

4. 今後の課題

以上の例と同様のプロセスを経てプロジェクトで取り扱うすべての技術が選択された。こうしたプロセスとそこで適用された手法が今後多くの総合研究プロジェクトで活用されるようにするために、さらに事例研究を重ね一定のマニュアル化を目指したい。

これまで、多くの技術開発プロジェクトの中で技術の事前評価が軽視されがちであった。その結果、時としてプロジェクトを軌道修正せざるを得なくなることもあり得た。

本稿では、メコンデルタのファーミングシステムを対象として、TN法・KJ法などの手法を組み合わせることで診断を行い、それをもとに技術開発課題をリストアップし、それに評価を加え優先順位をつけた上で技術選択を行うといった一連のプロセスを新たな技術選択手法(事前技術評価手法)として提起したい。

また、こうしたプロセスを可能とする条件はプロジェクトチームの確立による技術研究者と経営研究者の対話と協力である。この点を含めたプロジェクトマネジメントのあり方の検討が今後さらに必要であろう。

表紙の写真説明

農業環境技術研究所 岡 三徳撮影

収穫の季節を迎えたタシケントのバザールには、多くの秋の実りが並ぶ。近郊の人たちは、多くの果物、野菜、穀物、香辛料をバザールに持ち寄って売る。テントの下には干しブドウや杏、香辛料が並び、広場はスイカとメロンで占有される。スイカとメロンの種類が多いのも、この地域の特徴である。写真には、大玉で色の濃淡が異なるスイカや日本と同じ縞模様のも、黄色の丸いメロンやラクビーボールに似た大型のハミメロンが後方に写っている。男たちは布団を持ち込み、山積みしたスイカやメロンとともに、バザール広場で実りの季節を過ごす。

冷涼で乾燥したシルクロードのバザールでは、古くから短い夏に豊かに穫った農作物を喜び、自慢げに売る人たちの生活が続いている。

もどる

図1 タイのショウガ科野菜の抗変異原作用
発ガン性物質として知られている Trp-P-1 は、強い変異原作用を示す。

この実験では、寒天プレート1枚当たり、各野菜の80%メタノール抽出物を0.15mg及び0.3mg添加し、Trp-P-1 (50ng)の変異原作用がどの程度抑えられるかを測定した。

図2 各成分に対する加熱処理の影響

国際農林水産業研究センター

JIRCASの活動方針・展望 - JIRCASのさらなる発展に期待する -

前 企画調整部長 井上隆弘
(現 東北農業試験場次長)

平成10年10月1日をもって、JIRCASは発足後まる5年になる。当時の話は定かでないが、JIRCASはその前身TARCの長い経験と研究蓄積を活かしつつ、農林水産業における国際共同研究活動を通じて、地球規模での環境の保全、食料の安定的供給に貢献し、広く人類の生活、文化の向上等の国際社会の発展に貢献することをその使命とした。その際、政府資金援助、国際協力事業団による支援事業、技術協力等諸事業の効果を高めるため、技術面からの支援とそのための研究協力が一層重要になる。これを実践することによって、国の内外との組織的に幅広い活動を通して、国際的研究機関に育っていくものと信じる。

世界食料需給と地球環境問題を解く

基本問題調査会の食料部会では、農業分野における国際貢献をとくに取り上げ、今後我が国は、食料・農業分野において、その経済力や国際的地位に応じた国際貢献を従来以上に主体的・積極的に行っていく必要性を論じ、現在8.5億人以上の飢餓・栄養不足問題の解決のため、開発途上国自体の食料生産力を持続的に高めていく観点から、食料・農業分野における技術協力・資金協力の強化・充実の必要性を強調している。

一方、世界的な気象変動の不気味な動きに見られるように、人間の活動が地球環境の変動に深く関わっている。環境変動は農林水産業活動を制約し、今や、政策や経済はもとより地球環境問題を抜きにしては考えられない時代にある。世界中の研究者と手を繋いだ国際協力、21世紀はまさに農林水産業の時代である。

Grobalで捉えLocalに解く

上記の問題の解決には、いろいろな方策があろう。政策的課題、経済的課題、国際協調的課題の解決もさることながら、自然科学、社会科学を含めた技術開発による問題解決も重要な要素である。その際、JIRCASが取り組むべき研究のスタンスは研究基本計画の中に見ることができる。まず、開発途上地域に存在する農林水産業問題の中から研究課題を抽出するこ

とから始まる。「研究問題Ⅰ：地域特性及び技術開発方向の解明」研究である。それらを受けて、研究問題Ⅱ～Ⅴ：農林水産業における生産・利用・加工技術の開発」研究がなされ、これらを総合化するために「研究問題Ⅳ：農林水産業の発展方向と総合的計画手法」の研究がある。

一人の研究者がすべてを解決することは不可能である。大切なことは、個々の立場を認識し、問題を地球規模(Grobal)で捉え、地域的・専門領域的(Local)に分析し、地球規模で解釈する心である。

総合的な研究の企画立案と実践

総合的研究への参画に躊躇の聲がたびたび聞かれる。総合研究とは何ぞやの論議は今さらでもないが敢えて発言したい。開発途上地域における農林水産業の問題の特定は、当該国の事情のみならず、全地球的問題でもあり、また、我が国の発展にとっても重要な問題であるという認識に立ち、海外情報解析研究が展開されており、こうして特定された農林水産業問題の中から優先度の高い問題が取り上げられている。

これらの中から、技術開発によって解決できる研究問題を全所的に(例えば、国際研究推進委員会において)論議し、多くの研究領域からなる研究課題にブレイクダウンする。これらのプロセスにおいて、研究に参画する相手国の状況、JIRCAS研究者の研究ステージを加味しながら、研究実施課題に組み立てられるのである。

総合研究に参画すると、焦点がぼけて何をやっていかわからない、研究論文が書けないという意見もあるがとんでもない。総合的研究だからこそ、個々の研究者の研究の位置づけが、研究目標が明確であり、たとえ、小さなパーツといえども、優れた論文として評価されるのである。

誕生後5年、ここらでもう一度JIRCASにおける研究組織のあり方を再点検し、世界をリードする国際的研究機関として、研究内容の一層の充実に結びつくようにしたいものである。今が、そのチャンスである。

所の動き

第5回JIRCAS国際シンポジウム

「アジアにおける食料の貯蔵・流通・加工技術 食料問題解決の第三の道」
初めてのポストハーベスト技術シンポジウム開催される

これまで、アジアの途上国では食料問題解決のため生産技術の向上に主たる努力が払われてきた。しかし、近年では、収穫後損失の軽減、貯蔵法の改善、安全性の向上、流通・加工による高付加価値化など収穫後における課題が重要視され始めている。また、食生活・ライフスタイルの変化に伴う食品需要形態の急速な変化に対応し、新加工食品製造のための技術開発への強いニーズが生まれており、途上国の実情に合った技術開発の取組みが求められている。

JIRCASでは現在、食料の利用・加工問題を通じて中国やインドネシア等の研究を支援しているが、今後は「ポストハーベスト技術」が途上国との共同研究において一層重要な課題になると予想される。

上記を背景に、9月9日～10日に研究交流センターで開催された本シンポジウムには、中国、インドネシア、韓国、ベトナム、台湾、フィリピン、タイ、インド、オーストラリア、日本からの計19名の招待講演者と、本省・技会事務局関係者、食糧庁、食総研、農研七、JIRCASほか国・公・民の食品関係者・団体、食品研究者、並びに留学生等、計230余名が参加し、時

宜を得た盛会なものとなった。

セッション 『アジアの抱えるポストハーベスト技術の諸問題』では、各国における背景・現状・問題点の分析・検討と将来展望を、[熱帯における収穫後穀物の貯蔵保存技術』では、食料問題緩和への技術開発の貢献、21世紀初頭に使用が禁じられる臭化メチルの代替え技術の確立と途上国への応用等を、『アジアにおける食品産業の実態と方向』では、食品製造業の技術開発実態・戦略の分析・検討、食品産業の方向と展望等を、各々議論した。

本シンポジウムが、アジアにおける「ポストハーベスト技術」開発研究の進展に役立つとともに、途上国における基本食料の確保と有効利用、農業所得の向上、ならびに食生活の改善に大きく貢献し、21世紀におけるアジアひいては世界の食料問題解決の道を拓くための一助とならんことを切に希望する。

なお、本シンポジウムでは、文字どおりの国際シンポジウムへの幕開けに向け、ビデオ・カンファレンス公開実験が同時に実施された。

(海外情報部 名和義彦)

公開シンポジウム

生研機構プロジェクトの公開国際シンポジウム開催される

「植物のシグナリング - 環境刺激・ストレス応答の分子機構」

生研機構プロジェクトの公開国際シンポジウムが8月12日にJIRCAS国際会議室で行われ、アメリカ、ヨーロッパなどの研究者を含む約200名が参加した。本シンポジウムは、生研機構予算によるプロジェクト研究「乾燥・塩ストレス耐性の分子機構の解明と分子育種への応用」の推進をはかるため、JIRCASと理化学研究所、生研機構の共催で開催された。今回のシンポジウムでは、これまでの私たちの研究成果を発表するとともに、植物における環境刺激・ストレス応答の分子機構に関する研究を世界的にリードしている研究者の方々に研究状況を紹介していただいた。

会議では前野所長による開会の挨拶および生研機構の貝沼理事による挨拶の後、以下のような講演が行われた。はじめにロックフェラー大学のChua博士により、植物の光認識・シグナル伝達に関する分子生物学・遺伝学的研究についての特別講演が行われた。続いて、「エチレンシグナリングと生物ストレス応答」と題し、植物のエチレン認識・シグナル伝達機構につ

いて3つの講演が行われた。さらに、「ABAシグナリングと水ストレス応答」と題して、ABAシグナル伝達機構、あるいはABAを介さない乾燥、塩ストレス、低温といった環境刺激のシグナル伝達について5つの講演が行われた。その中で私たちの研究グループでは、乾燥、塩、低温ストレス耐性のキーとなっている転写因子、および耐性に係わる多くの遺伝子の機能について発表した。この他にも植物のシグナル伝達機構について、6つのショート・トークが行われた。

今回の発表内容から、遺伝学的あるいは逆遺伝学的アプローチにより、植物の環境刺激・ストレスに対する応答・シグナル伝達、そしてストレス耐性において、キーとなっている遺伝子が明らかにされ始めていることが伺われた。これらの基盤的研究は、開発途上地域で問題となっている早魃、塩集積あるいは低温といった環境ストレスに対して耐性の作物を作出するために、非常に役立つことが期待される。

(生物資源部 中島一雄・篠崎和子)

総合プロジェクト

中国における環境保全型農業生産技術の評価と開発

- 中国総合プロジェクト環境保全部門の開始 -

環境資源部 八木一行・宝川靖和

研究の背景

中国は世界最大の食糧の生産・消費国であるが、市場経済移行にともなう所得向上と継続する人口増加は、中国の食糧需要を増大させ、農業を質的にも量的にも大きく変化させている。「中国農業年鑑」によれば、米、小麦、トウモロコシ等の「穀物」に、豆類とイモ類を加えた「食糧」(中国語では「糧食」)生産量は、中国全体で、1980年代初頭には3億2,000万トン程度であったものが、1990年代に入り、4億5,000万トン前後を維持できるようになり、1996年には、ついに、5億トンに達している。

図1. 中国、ヨーロッパ、およびアメリカ合衆国の窒素肥料消費量の変化

このような急速な食糧増産は、何よりも、さまざまな農業技術の革新によるものであるが、特に、化学肥料投入量の増加の寄与が大きい。

図1に示すように、中国の窒素肥料消費量の増加は、食糧生産量の増加とほぼ並行している。そして、その消費量は、米国やヨーロッパ全体の消費量をはるかに上まわり、中国は、今や、世界最大の化学肥料消費国となっている。中国全土の推定耕地面積は約1億3,000万haであるから、1990年代以降の窒素肥料消費量2,000万トンNから、中国全体の単位面積当たりの平均窒素肥料投入量は、約150kgN/haと計算される。この値は、わが国や欧米先進国の値と同程度のものであるが、中国では、所得格差と同様に、地域による化学肥料消費量に著しい差があるものと思われる。したがって、沿岸部のような比較的豊かな地域では、この平均値よりもはるかに多量の窒素肥料が投入されているのが現状であろう。

このような過剰な化学肥料の投入は、各種の環境問

題を引き起こす。地下水や河川水の水質汚染、湖沼や内湾の富栄養化、発生するガスによる地球温暖化、成層圏オゾン破壊、光化学大気汚染、および酸性雨などの問題である。このような問題は、先進国ではすでに大きな社会問題となっており、化学肥料投入量は減少傾向にある。しかし、中国では、未だ化学肥料の投入量が高く、重要な飲料水源である地下水の水質、近年重要度を増している淡水魚介類生産に対する悪影響、そして、大気汚染の深刻化に結びつく問題である。一方、農業所得に対する化学肥料購入費用もけっして小さくなく、農家の経済的側面からも適切な化学肥料の投入が望まれる。

JIRCASでは、平成9年度より7年間の計画で、総合プロジェクト「中国における主要食料資源の持続的生産及び高度利用技術の開発」を開始したが、このなかの課題、「環境保全型農業生産技術の評価と開発」で、上記の問題に対し、適切な化学肥料の投入を中心とした、高い作物生産量を維持し、環境と調和した安定持続生産を可能とする技術開発の共同研究を行っている。

研究の目的

本共同研究の目的は、現在、中国の農業が直面している以下の重要な問題(キークエスチョン)に答えることである。

1. 中国の集約的な食糧生産システムは、環境にどのようなインパクトを与えているのか?
2. 現在、どのような変化が起きているのか?
3. 将来、どうなるのか?
4. そのインパクトを軽減するには、どうしたらよいのか?

しかし、環境問題や個々のインパクトは多様で、限られたプロジェクトのなかでそのすべてを網羅することは難しい。そこで、本共同研究では、上記のキークエスチョンの「切り口」として、「農業生態系の窒素循環とその環境影響」を取り上げる。

窒素は、作物にとって、最も重要な養分であると同時に、その環境影響は顕著で、かつ、重大である。したがって、上記のキークエスチョンに対する回答として、最も重要な「指針」が得られるものと思われる。

研究推進体制と研究課題

本共同研究は、JIRCASと中国側の2つの研究機関、すなわち、中国農業科学院土壤肥料研究所(所在地:北京)と中国科学院南京土壤研究所(同:南京)の連携のもとに行われている(図2)。

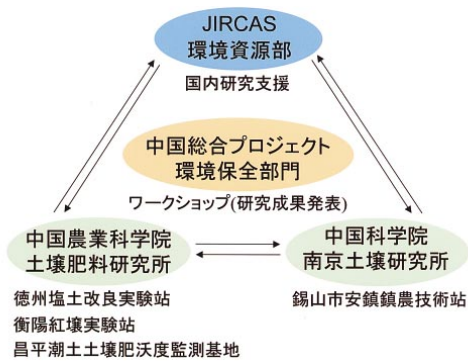

図2. 中国総合プロジェクト環境保全部門の研究推進体制

中国側の両研究所は、中国の土壌学の最高峰に位置しており、多くの優秀な研究者を有すると同時に、中国各地に独自の試験地を持ち、活発な研究活動を行っている。現在のところ、本共同研究に対しては、中国農業科学院土壌肥料研究所では、農業生態環境研究室、信息農業研究室、および紅壤試験站が、中国科学院南京土壌研究所では、土壌圈物質循環開放実験研究室および土壌環境保全研究室が参加している。

試験対象地域として、中国の典型的、かつ重要な4つの地域を選択し、圃場試験と広域の農業環境調査を計画している(図3)。

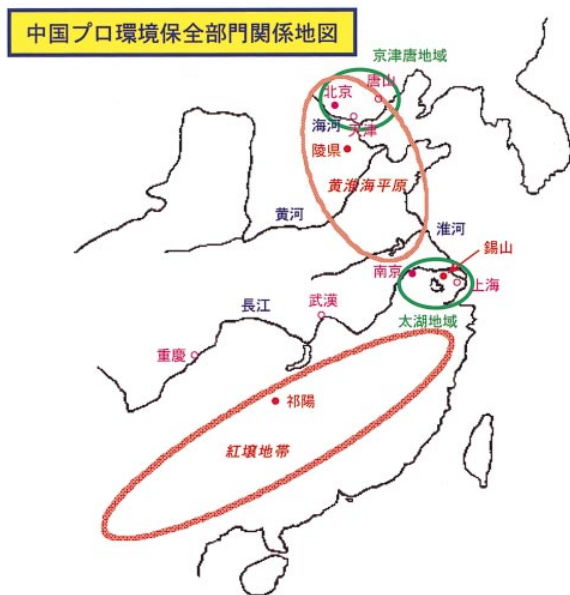

図3. 中国総合プロジェクト環境保全部門関係地図

第1に、トウモロコシ - 小麦栽培地域である黄淮海平原とその典型地である德州塩土改良実験站陵県試験区(山東省陵県)。

第2に、近年、きわめて集約的な都市近郊農業が盛んな、京津唐地域。

第3に、長江下流域の水稻 - 小麦栽培地域である太湖集水域地域とその中心部の無錫市に隣接した錫山市安鎮鎮農技站(江蘇省錫山市)。

第4に、中国南部の水稻二期作地域である紅壤地域とその典型地である衡陽紅壤実験站祁陽試験区(湖南省祁陽県)である。

これらの地域において、以下に示す課題を実施する計画である。

1. 黄淮海平原の農業生態系における主要元素の動態解明とその制御
 - 1-1 地域の有機物および窒素フローの分析
 - 1-2 集約的な農業システムからの環境負荷の定量とその抑制方策の開発
2. 京津唐地域の農業生態系における環境への窒素負荷の評価
 - 2-1 異なった施肥量と肥料タイプにおける窒素損失量の定量
 - 2-2 農業生態系における窒素施用が環境に及ぼす影響の総合的解析
3. 太湖の水質汚染に及ぼす面源負荷の影響評価
 - 3-1 集落スケールの評価
 - 3-2 集水域スケールの評価
4. 太湖地域の農業生態系における窒素循環の解明とその制御
 - 4-1 第1次実験
 - 4-2 第2次実験
5. 環境と調和した水田農業技術体系の開発
 - 5-1 物質循環を基にする環境保全型水稻栽培技術の開発
 - 5-2 水田の環境保全機能の有効利用

本共同研究の実施期間中、日中3研究機関での共同研究を円滑に推進し、その成果をよりよいものとするため、各年度の終わりに担当研究者とその他の専門家が集まり、研究成果と次年度以降の計画を検討するためのワークショップを開催することとしている。

初年度である平成9年度は、平成10年2月に、JIRCAS(つくば)にて、中国側研究者8名を招へいし、第1回のワークショップを開催した(写真1)。

写真1. 第1回ワークショップ参加者

本年度は、平成11年3月に北京で開催予定である。

現在、本共同研究は2年目に入り、山東省陵県、江蘇省錫山市、および湖南省祁陽県での圃場試験が開始され、本格的な広域調査も軌道に乗りつつある。中国の経済発展と食糧需給の問題は、世界的な注目を集めている。その、今後の発展のアキレス腱ともなりかねない農業環境問題の解決を目指した本研究の意義は、きわめて大きいものと考えている。

アグロパストラル

持続型農牧輪換システムに適した草地管理法の開発

畜産草地部 菅野 勉

ブラジルでは1970年代に*Brachiaria*属の牧草が導入された結果、熱帯サバナ（セラード）の開発が急速に進められた。しかしながら、これまでの草地管理が自然地力に依存したものであったため、現在、草地生産力の低下が顕在化してきている。このため、穀類生産と牧畜を組み合わせる地力維持とともに家畜生産力を向上させようとする農牧輪換システムの開発が期待されている。本研究では 農牧輪換システムに適した熱帯牧草を選定するとともに、農牧輪換システムに適した草地管理法を確立することを目的とする。

1 農牧輪換システムに適した熱帯牧草の選定

ブラジルでは従来から痩せ地には*Brachiaria decumbens*が、比較的肥沃な土壤には*Brachiaria brizantha*と*Panicum maximum*が適していることが経験的に知られていた。そこで、本研究では、最初に、これらの現象について生理、生態的観点から解析を加えることとした。

まず、圃場において*Brachiaria decumbens*（以下BD）と*Brachiaria brizantha*（以下BB）を供試しN、P₂O₅、K₂Oでそれぞれha当たり100kgを入れる、入れないの8通りの組み合わせ（無施肥区、Nのみ区、Pのみ区、Kのみ区、PK区、NK区、NP区、NPK完全区）を作って3要素圃場試験を実施した。その結果、セラードにおいてはPの施用効果が最も大きいことが示された（図1）。また、BD・BBともNの要求量が低いこと、BDはBBに比較しK欠乏条件下での生育が優れること等が示された。

図1 . 異なる施肥区における*Brachiaria decumbens* (BD) 及び *Brachiaria brizantha* (BB) の乾物重の相対値 (播種4か月後の乾物重。N-P-K区を100とした。)

次に、セラードにおいて最も重要な要素であることが示されたPについて、ポット試験を行い、BDとBBのP吸収特性を比較した（表1）。P吸収効率はBDがBBよりも高く、BDはBBよりもPを吸い取る力が強い

表1 . *B. decumbens*及び*B. brizantha*のP吸収・利用効率

草種	P吸収効率% (吸収Pg / 施用Pg)	吸収Pの利用効率 (乾物g / 吸収Pg)	P施用効率 (乾物g / 施用Pg)
<i>B. decumbens</i>	28	3159	889
<i>B. brizantha</i>	23	4511	1057

試験では25kg / haのPを施用。
(P施用効率) = (P吸収効率 / 100) × (吸収Pの利用効率)

草であることが示された。一方、吸収したPの利用効率（吸収したP 1g当たりの乾物生産量）をみるとBBがBDよりも高く、BBはBDよりも吸い取ったPをより効率的に利用する草であることが示された。そして、P吸収効率と吸収Pの利用効率の積であるP施用効率はBBの方が高かった。以上のように農牧輪換システムにおいて作物へ施用された肥料の残肥効果を期待する場合には、BDよりもBBの方が適していることが生理、生態的な側面から明らかとなった。

一方、農牧輪換システムのもう一つの目的である作物の連作障害回避のためには、牧草が後作の土壤へ十分な有機物を供給することが不可欠となる。そこで、有機物供給能力を評価するために*Brachiaria decumbens*、*Brachiaria brizantha*及び*Panicum maximum*の地下部バイオマスと比較した。その結果、BBは地下部バイオマスが大きく、かつより深くまで分布しており、有機物供給能力という観点からも農牧輪換システムにはBBが適していることが明らかとなった。

2 農牧輪換システムに適した草地管理法の確立

慣行無施肥栽培下の*Brachiaria*草地への施肥やマメ科牧草の導入効果を検討するとともに、それらの*Brachiaria*草地と穀類栽培後の*Panicum maximum*草地の生産力を比較する調査を開始した（写真1）。それらの調査結果をもとに、農牧輪換システムに適した草地管理法を明らかにする予定である。

写真1 : *Brachiaria decumbens* 草地における放牧試験。ケージ内外差法により乾物生産速度及び採食量を測定している。

プロジェクト研究

塩類集積の予測手法の開発

生産利用部 凌 祥之

1. 研究の背景

世界の灌漑農地の約24%において塩類集積で収量低下が起きていると報告されている。塩類集積は乾燥・半乾燥地で顕著な問題であり、不適切な水管理によって引き起こされた事例も多い。これらの地域では一般に生産性が低く貧困が深刻であり、持続的な生産性の向上が重要である。このように塩類集積地の改良は、事業投資の効率化の点からだけでなく人道的な見地からも重要な問題である。

本研究は農水省のプロジェクト研究「農林水産業及び農林水産貿易と環境・資源に関する総合研究」の一環として半乾燥地の塩類集積を予測する手法を策定する事を目的としている。

2. 研究目的

塩類集積は工学的な要因だけでなく自然科学的、営農的、組織的な要因からも引き起こされる複雑な問題である。一般に、塩類集積のメカニズムは灌漑水に含まれている塩分または本来土層に含まれている塩分が地下水位の増加に伴って毛管上昇し、土壌面蒸発によって塩類のみ地表に集積するものとされている。工学的には排水が最も効果的な改良手法と言われている。しかし、塩類集積が顕著なところ

では一般的に地表勾配が小さく、排水の勾配も充分に取れないために自然排水は難しく、また粘土質土壌で排水不良になりやすい。

また、塩類集積は地域性が高く、海水の遡上、海風による塩分輸送によっても現象が深刻化する場合もあり、これらの機構は複雑である。地域差がある塩類集積の主要因を特定する事は改良対策を特定するために重要である。

3. 研究手法

そこで塩類集積を引き起こす主要因を抽出することとした。対象とした地区はPakistan南部Chishtianである。当該地区の面積は67,000haであり、主要農産物は小麦と綿花である。当該地の平均年間降水量は260mm程度であり可能蒸発量は2,400mmを超える乾燥気候である。当該地で水文、気象、水管理などのデータ及び営農、作付け体系などのデータを収集した。これらのデータを元に統計解析手法を用いて塩類集積を引き起こす主要因を抽出し、最終的に当該地区の予測モデルを策定するものである。

これらの手法は当地のみならず塩類集積を被る他の地区に適用する事が可能であり、塩類集積地の予測が可能となる。

招へい研究

イネ病害に関する共同研究（メコンデルタプロジェクト）

生産利用部 野田孝人

カウンターパート招聘

ベトナムで共同研究を実施しているクーロンデルタ稲研究所（CLRRI）から2名のカウンターパートを招聘し、JIRCASで約2ヶ月半、イネ病害に関する共同研究を行った。来日したMr.Hoang Dinh DinhとMr.Lai Van Eの2名は、CLRRIの植物保護部に在籍しており、それぞれ現地におけるイネの主要病害であるいもち病と白葉枯病を中心に研究している。そこで、

隔離温室でのベトナム産いもち病菌の病原性検定
(左からMr.Hoang Dinh Dinh、Mr.Lai Van E、筆者)

この機会にメコンデルタの稲作とイネ病害に関する共同研究についてその一端をご紹介します。

メコンデルタの稲作

メコンデルタ農業の基幹作物は何と言っても稲であり、300万トンを超えるベトナムの米輸出量の大部分がメコンデルタで生産されたものである。米生産量がこのように増大した主な理由として、運河網の整備によって耕作面積が拡大したことに加えて、栽培品種が在来品種から国際稲研究所などから導入した新品種へ移行したことがあげられる。

メコンデルタで多発している病原不明の赤条斑病の初期病徴

しかし、一方で新品種の普及はベトナムに分布する病原菌に対する抵抗性検定が十分でなかったこと、短幹で倒伏の心配がないため肥料を多投したこと、作期の短縮で年3作の周年栽培が可能になったこと、高密度直播が普及したこと、などによって病害の発生を増大させる結果になってしまった。

イネ病害防除に関する共同研究

病害防除を行うための最善の方法は、抵抗性品種の育成・普及である。この方法は、極めて効果的、経済的、省力的、環境への影響がない等、究極の防除技術とすることができる。ただ、これには病原菌と品種との相互関係を解析して、現地に適合した抵抗性遺伝子を解明する研究が不可欠である。

紋枯病菌にコイル状に巻き付き、その成長を阻害するトリコデルマ菌の一種（メコンデルタの土壌から分離）

そこで、共同研究でメコンデルタに分布するいもち病菌と白葉枯病菌の各種イネ品種に対する病原性特性を詳細に検討した結果、それぞれに有効な抵抗性遺伝子を明らかにすることができた。今後、それらの抵抗性遺伝子を栽培品種へ導入して、普及に移すことが急務となっている。

若手研究者の招聘

今回、招聘した2名は正規のカウンターパートではなく、実際に私の研究助手として田圃を駆け回ってくれた若手研究員である。彼らの献身的な助力に対するお礼でもあり、今後のベトナムの発展を支える彼らに、設備の整ったJIRCASで新しい研究手法や考え方を学んで貰いたかったからでもある。現地の厳しい研究環境の中で、彼らが帰国してすぐに活用できる事は少なかつたかも知れないが、今回の招聘が若い彼らの貴重な経験として将来に役立つことを大いに期待している。

No. **17** 1998

農林水産省
国際農林水産業研究センター

JIRCASだからできる

生物資源部長 星野次汪

ある予測では2050年に世界人口が100億人に達するという。そのためには、今の2倍の食料を確保しなければならない。各機関のシミュレーションでは、耕地の拡大はわずかしが望めず、単収の増加や不良耕地への作付け可能な品種開発に大きな期待が寄せられている。まさに生物資源研究の成果が待たれる。

1. 遺伝資源は今

かつて遺伝資源は、先進諸国の研究者が研究目的で滅び行く種の保存と未来の有効利用を意識しながら保存してきた。スローガン「遺伝資源は人類のために」は輝いていた。いつしか、巨大種子企業によって「種子を征する者は世界を征する」に変えられ、「遺伝資源=保有国の資(金)源」になってしまった。相手国の品種開発に利用する遺伝資源利用ですら思うに任せないこともある。JIRCASでさえ遺伝資源の収集・利用が困難になりつつある。

2. 玉を探し、玉を活かす

生物資源には直接利用可能な資源が多もあるが、遺伝資源は玉石混合である。いずれの資源も、玉石の中から目的に合った玉の資源を先端技術などを駆使して効率よく探し出し、時には原石を光輝く石に磨き上げなければならない。そして、その玉や石が多収を前提とした耐病虫性、障害抵抗性、機能性などの付加価値を付けた品種開発の素材となって初めて活きた資源となる。JIRCASには遺伝資源利用による具体的成果があるが、なお一層の地道な積み重ねが必要である。そうすれば遺伝資源保有国の理解が得られ、遺伝資源鎖国が開国へと向かうのではないかと。

3. 共同研究はお互いプラスに

JIRCASでは相手国に研究者を派遣し、時には招聘し、共同研究を展開している。最近は、「バイオ研究」に対する要望が強い。なかにはJIRCASでは手に余るような規模・研究水準の共同研究を提案してくることさえある。しかし、相手国には国の基幹産業としての農業があり、研究成果を待っている広大な現場あり、一所懸命な農民がいる。これらの現実を直視すれば、JIRCASの生物資源研究の方向は自ずと明らかになる。徹底した現場ニーズの把握と研究者の興味が前提となるが、「研究テーマは現場から」を心に刻み、手法開発や品種開発などを通して相手国に貢献する。と同時に、次期プロジェクトのシーズ醸成をも意識しながら、国際的な評価に耐えるような世界的水準の研究者を目指す。相手国研究者と二人三脚で基礎と応用、実験室と現場とを両立させることは、お互いにとって大きな財産となる。

4. 人口100億人時代に備えて

JIRCASでは開発途上国を中心に、イネ、コムギ、豆類などの品種開発や手法開発研究で大きな成果を上げ、信頼も得てきた。それなりに人的ネットワークができていく。情報も集まってくる。従来の延長線上では解決が困難な単収の飛躍的増加や不良耕地への作付け可能品種の開発が急がれる今、発想や手法で常識への挑戦が必要になってくる。これまでの成果と実績に最新の情報を加え、JIRCASだからできる研究分野「遺伝資源から生物資源、そして品種開発」を成功させ、すべての人々が心から豊作を祝い、満腹感に酔える喜びに貢献したい。

所の動き

今後JIRCASが果たすべき役割と仕組みは？ 平成10年度「JIRCAS顧問会議」、開催される

科学技術の振興にとって研究評価は非常に大切であり、技術開発研究への理解を国民と共有することが重要になっています。JIRCASでは、外部評価者（顧問）に、研究を進める基本的な方針や研究所の運営に対する助言を頂くため、毎年「顧問会議」を開催しています。

研究対象が途上国との共同研究であり、扱う問題も農・林・畜・水と広範なので、広く教育・研究、行政、国際協力、マスコミ、海外など様々な分野の著名な方々に顧問をお願いし、今年は、11月18日に、「今後JIRCASが果たすべき役割と仕組み」というテーマでご意見を伺いました。

現在JIRCASは、7つの機能で活動していますが、その具体的な内容を先ず紹介しました。活動の中心は、研究者の派遣を中心とした途上国との国際共同研究の推進です。それを支える、国内研究があり、海外から研究者を招いて行う招聘共同研究があります。また、これらの研究に役立てる、情報の収集・分析

と広報活動があり、シンポジウム・ワークショップ等の開催があります。さらに最近では、途上国技術援助等への支援にも参画し、シンクタンク機能の充実に努めています。

これらの活動を踏まえ、JIRCASは、得意な分野で重点的に共同研究を行い、農業生産だけでなく、6次産業的な発想で貧困の解決へ向けて取り組むことが重要であること、総合プロジェクトは良いが、必要以上に数を多くせず質を高めること、アフリカでは、地域を広く捉えて研究環境の整った拠点で共同研究を進めること、地域別に研究の重点化を図り、情報の収集・分析を深化させること、環境、バイオテック、遺伝資源、食料需給などのグローバルな問題への対応の仕方を考えること、途上国の研究者を活用し、第3国を含めた共同研究を推進することなど、新しい仕組みや、取組みを考える上で貴重なご意見をたくさん頂きました。（企画調整部長 石谷孝佑）

JIRCAS / IPGRI共催 国際ワークショップ開催される 「熱帯植物遺伝資源の超低温保存 - 研究と応用 - 」

栄養繁殖性および難貯蔵性種子を持つ種の遺伝資源は従来圃場で保存されているが、自然災害や病害虫による消失の危険に加えて、その管理に莫大な労力と時間がかかることが問題となっている。省力的で安全な長期保存法の開発および実用化は遺伝資源活動のうちでも最優先分野とされている。植物遺伝資源の長期保存法として最も有望な超低温保存法（液体窒素中で細胞や組織を保存する）の研究は近年急速に発展し、保存できる植物種の数が増加してきたが、熱帯作物については、成功例も限られており、実用化に向けた開発研究の促進が強く望まれている。

上記の背景のもと、JIRCASでは国際招聘研究の一環として、栄養繁殖性熱帯作物の超低温保存の研究プロジェクトを進め、タロ・ヤム・バナナ等の超低温保

存法を確立した。今回のワークショップはJIRCASにおける研究成果を発表するとともに、熱帯性植物遺伝資源の長期保存研究の現状・問題点・実用化への展望を、内外の研究者が一同に会して討議することを目的に、10月20日～23日にJIRCAS国際会議室において開催された。熱帯地域の国々でも超低温保存への関心が高まり本格的な研究が始められつつあることから、国際農業研究機関（IPGRI, CIAT, CIP, IITA, INIBAP）の遺伝資源関係者をはじめ、29カ国から約100名の研究者が参加し、盛会なものとなった。会議では熱帯植物遺伝資源の超低温保存に関する研究の現状が報告され、今後研究が必要とされる分野、遺伝子銀行が超低温保存の導入に際して検討しなければならない問題点などについて活発な討議が展開された。

（海外情報部 国際情報研究官 高木洋子）

プロジェクト 西アフリカにおける共同研究が始まる

- 稲種間交雑種の活用に関する研究協力 -

海外情報部 国際研究情報官 高木洋子

アフリカにおけるJIRCASの共同研究

アフリカは人口増加、砂漠化、環境劣化、および都市への人口集中等によって引き起こされる食料不足や貧困の問題がもっとも集約的にあらわれている地域であるといわれてきた。この地域における食料・農業問題の解決は、人類が21世紀に向けて取り組んでいかなければならない最重要課題のひとつとされている。

JIRCASのアフリカでの経験は、アジアでの活動に比べると、その規模や対象としている分野がかなり限られおり、表1に示す3つのプロジェクトが個別研究協力の形で進められてきたにすぎない。年々増えるアフリカからの研究支援の要請に応えるためには、アフリカの食料・農業問題に積極的に取り組み、より広い展望を持って組織としての経験を積み上げていくことが必要であるとの認識が、近年、JIRCAS内で強まってきた。平成9年度には、外部の有識者を交えた「アフリカ研究会」が開催され、基本的食料の増産につながる共同研究としてJIRCASが取り組むべき課題の検討がなされた。アフリカという「多様性」と「可能性」に富む地域への協力のあり方には、様々な方向性が示され討議も活発に行われたが、近年、アフリカにおける米の需要が急速に伸びていること、日本において研究・技術の蓄積が顕著であることから、「イネ」に関わる研究協力がアフリカにおける総合研究の第一歩として妥当であるとの結論に達した。

このような経緯を経て、西アフリカ稲開発協会（West Africa Rice Development Association: WARDA）との共同研究プロジェクト、「西アフリカ

における米増産のための稲種間交雑種の活用に関する研究」が平成10年4月に5年間のプロジェクトとして開始された。総合プロジェクトとはいえ、長期派遣研究員の数が僅か2名と小さく、将来的に総合化を目指すというのが実体であるが、WARDAとのMOUも締結され、第一歩がふみだされたので以下にその概要を紹介する。

西アフリカにおける米の需要

アフリカにおける主な稲作適地はギニア湾沿岸の湿潤及び半湿潤地帯であり、稲収穫面積の6割以上、約412万ヘクタールが西アフリカにある。西アフリカ地域では都市部に人口が集中するにつれ、従来のモロコシ・キビ・キャッサバ・ヤムといった伝統的作物に比べて、トウモロコシ・コメといった作物の需要が増加している。

特にコメの消費量は、生産量の伸びを大きく超えてこの30年間で3倍に増加し、輸入量が急増している。1970年代はじめには年間約60万トンであった輸入量が、90年代初めにおいて約280万トンにも達し、FAOの予測によれば、2000年には400万トン、800億USドルに及ぶという。コメの生産力向上および自給の達成は、西アフリカ諸国にとって極めて重要な課題となっているのである。

WARDAの活動と種間交雑種の育成プロジェクト

WARDAはアフリカにおける米の需要が増大し始めた1970年代初頭に、稲作地帯を形成する西アフリカ諸国が相集い、FAOなどの支援を受けて、リベリアに設立された。設立当初は、栽培及び病害虫防除の技術開発や貯蔵・流通組織の改善を主たる活動としていたが、米の需要が増えるにつれ、地域のための品種育成や栽培法の研究に取り組む組織へと変化していった。1986年には、国際農業研究協議グループ（CGIAR）の傘下に入り、1988年にはその本部を象牙海岸共和国のボアケ市に移した。

WARDAは、国際研究機関であるが、西アフリカ地域の稲作を主な研究対象にしており、地域研究機関的な色彩が濃い。現在、WARDAには西アフリカ17カ国がメンバー国として加盟しており、各国の研究組織はWARDAと強い連携を保ちながら研究や技術移転を行っている。

WARDAは設立当初からアフリカの環境に適

図1 . JIRCAS西アフリカ稲作プロジェクトの概念図

研究の背景

研究の内容

期待される成果

写真1. コンチナムの低湿地における水田風景（象牙海岸共和国）

したイネの育種に精力的に取り組んでおり、とくに *Oryza glaberrima* Steud.（アフリカイネ）と *Oryza sativa* L.（アジアイネ）の雑種の利用に力をいれてきた。アフリカイネはニジェール川の内陸デルタ地域で栽培化されたと考えられており、この地域独特の生態・栽培環境に適応した系統を発達させ、いもち病、イネ黄斑ウイルス（RYMV）、タマバエ、メイ虫等の病虫害抵抗性や畑状態で問題となる雑草に対する競争力に優れた系統が多くある。また、コンチナムと呼ばれるこの地域独特な地形（丘陵から低湿地までなだらかな傾斜が繰り返し連なる）に見られる多様な土壌水分条件（畑状態 - 高地下水畑状態 - 湿润状態 - 湛水状態）（写真1）のそれぞれに適応した系統の分化も注目される。しかし一方で、アフリカイネは、易脱粒性、強い休眠性、易倒伏性などのため栽培しにくく、穂に2次枝梗がないため1穂あたりの粒数が少なく、潜在収量が低いという問題がある。

WARDAが目指したアジアイネの多収性と、アフリカイネの病虫害や不良環境に対する抵抗性を利用した品種改良の第一段階は、交雑率の低さや種間雑種F1の不稔性を克服することから始められた。胚培養・薬培養の利用や交配系統の組み合わせの検討により、効率良く雑種が作出されるようになった。種間雑種の特性については様々な観点からの調査・研究が進められているが、現在までの報告によると、アジアイネとアフリカイネの形質を併せ持った有望系統が作出され、農家圃場で試作されはじめている。（写真2）

共同研究の方向性

WARDAの研究成果は、西アフリカ地域の環境や農業体系に適応したイネ品種の開発に新しい方向と可能性を示すものである。1997年1月からは、日本国政

府および国連開発計画の資金供給、技術援助を得て、種間交雑育種の推進と利用を目的としたアフリカ・アジア共同研究事業が開始された。この事業には日本・アメリカ・フランス・中国の大学や研究所、国際イネ研究所、国際熱帯農業センターおよびWARDAの加盟国の研究組織が参画し、WARDAの企画調整のもと、種間雑種の特性評価、種間交雑法の改良、分子マーカーの開発、各種抵抗性の遺伝分析等の研究、有望系統の収量試験、農家圃場における適応性の評価に取り組んでいる。

JIRCASもWARDAの育種プログラムに研究員を派遣し、不良環境に対する抵抗性とくに耐乾性と耐酸性土壌性に関する検定法の確立及び育種素材の評価に協力する形で共同研究を始めた。また、来年度からは、農業経済の研究者も加わってこの地域の稲作技術普及における社会経済的問題の解析に着手する計画になっている。

西アフリカは日本にとって遠い存在であると言われてきたが、最近では国際研究機関への拠出、国際協力事業団プロジェクト、食料増産援助、農林水産省の総合支援対策事業〔国連世界食糧計画（WFP）にトラストファンドを出資し、象牙海岸共和国において小規模灌漑等の開発整備を行う〕等が西アフリカで推進されるようになった。これらの協力事業の多くが、東南アジアからの大量輸入米に依存せざるを得ない状況の改善に力を入れており、各事業が密接な連携を持ちながら、総合的に地域開発に貢献していくことができればその成果もあがると考えられる。図1に示したように、JIRCASの共同研究プロジェクトは新品種の育成と稲作技術普及の現状・問題点の解析を行い、その成果が“WFPによって整備された地域の稲作普及活動”に“WARDAを通して”活かされていくことを当面の目標としていきたい。

研究成果

農耕地からの一酸化窒素の放出は制御できるか？

土壌 大気間のガス交換制御法

環境資源部 宝川靖和

はじめに

環境問題は物質循環の問題であり、来世紀はこの物質循環をいかに管理していくかが大きな課題となるであろう。環境中で物質はその形態を変化させつつ同時に移動する。例えば、窒素の土壌圏内における形態変化および大気圏との交換反応を簡単に示すと図1のようになる。この中で農耕地土壌から大気への放出が顕著であり、また環境に大きな影響を及ぼすものとして一酸化窒素（NO）と亜酸化窒素（N₂O）が挙げられる。NOは光化学大気汚染や酸性雨、

図1. 土壌圏 大気圏間の窒素動態

対流圏オゾン（温室効果ガス）の原因物質として、N₂Oは地球温暖化や成層圏オゾン層破壊の原因物質として知られている。これら窒素酸化物の動態を解明しその制御法を提案することが現在のトピックのひとつである。

なぜNOとN₂Oで土壌中の濃度分布が異なるのか？

これまでに実測されてきたNOとN₂Oの土壌中での濃度分布は、面白いことに大体図2のような形を示す。この両者の違いは何を意味しているのだろうか？

シミュレーション

これは土壌中での両者の消費速度の差異によるのではないのか？ NOはN₂Oに比較して土壌中での消費速度が高いために鋭い濃度ピークを持つのではないかとすれば、土壌中のNO生成部を土壌表面から遠ざけることでその

図2. NOおよびN₂Oの土壌中濃度プロファイルの特徴

大気への放出速度を削減できるのではないかと。このような推測が定性的に正しいかどうか、次の仮定の下に作成した数値解析モデルを用いて検証した。

- (1) ガスの生成速度は、施肥域（土壌深度0-10cm）において一定であり、施肥域外で生成はない。
- (2) ガスの消費速度は、Michaelis-Menten式により表現可能であり、全土層において同一条件である。
- (3) 土壌中のガス移動は、Sallamら（1984）の提案したモデルによって表現可能である。

両ガスの生成・消費に関する未知の定数は、モデルによる計算結果が典型的な土壌中濃度分布の実測値と近似するよう設定した。この数値解析の結果、ガス生成域を土壌表

層から土壌深部へシフトすることで、NOの放出は図3のように削減可能であることが推定された。

室内実験

上記のシミュレーション結果はいくつかの仮定の下に自然現象を単純化して得られたものである。実際の土壌で同様のことが本当にいえるであろうか？ 高さ1m、内径約0.2mの土壌カラム（硫酸20gNm⁻²施肥）を用いて、NOの放出速度に及ぼす施肥深度の影響を検証した結果が図4である。NOの放出速度は、土壌環境の変化により変動するが、施肥深度の深層化に伴いNO放出速度は常時無施肥区と同程度の極めて低い値を維持した。

図3. ガス放出速度に及ぼす土壌中ガス生成部深度の影響（シミュレーションによる推定）

図4. NOの放出速度に及ぼす施肥深度の影響(室内実験の結果)

シンプルな技術・シンプルな社会

本研究は今後更なる検討が必要である。ガス生成・消費に及ぼす各土壌環境因子の影響を定量化していくことは重要であろう。また硝酸等による地下水汚染の影響も考慮する必要がある。

ただし今回の結果から少なくともいえることは、このような極めて簡単な方法によってNOの大気への放出をほぼバックグラウンドレベルにまで削減できたという事実である。

シンプルな技術はそれだけ現実性が高い。自然を上手に使ったシンプルな技術を用いて、物質循環そのものも、もっとシンプルで小さなスケールに立ち返らせる必要がある。我々の先達が限られた国土の中で実現していた効率的な物質循環のシステムは今の我々の生活からはほど遠いものとなってしまった。力でねじ伏せるようなシステムに変貌してしまった。こういった社会構造は長続きしない。現在の途上国において実用となるようなシンプルな技術こそが今後我々に必要とされるものではなからうか。環境問題を解く鍵はきっと我々の見落としてしまっている身近なものの中にあると思う。

国際共同研究

淡水魚からすり身を作る

水産部 福田 裕

【背景とねらい】

食料増産計画の中で、最も難しいのが動物タンパク質資源の拡大にあると言われている。

中国の淡水漁業資源は、1950年以前には100万トン以下であったが、市場経済制への転換後急速に増大し、1995年には1078万トンを記録した。この量は世界の総漁獲量の約10%、中国の総漁獲量の約43%に相当する。20世紀の後半に新しい動物タンパク質資源が中国の淡水域に出現したと言うのは過言であろうか。ところが、淡水漁業資源の急増にもかかわらず、流通・貯蔵・加工に関する基盤整備が追いつかず、大半が活魚のまま流通されるため、貴重な動物タンパク質資源に量的質的な損失が顕在化して来た。こうした淡水漁業資源のポストハーベスト問題を改善するため上海水産大学と共同研究を1996年から開始し、1997年からは大型総合プロジェクト「中国における主要食料資源の持続的生産及び高度利用技術の開発」に参画し続けている。最初の研究目標として、淡水漁業資源の広域流通・長期安定貯蔵・多様な製品作りの三要素を同時に可能とする冷凍すり身型の中間原料素材の開発に着手した。

【研究の進捗状況】

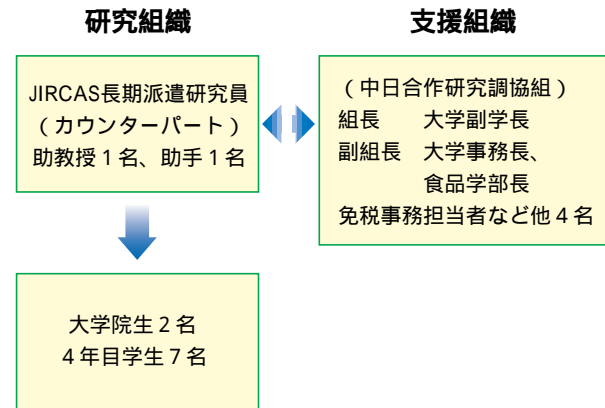

中国の主要な淡水魚類のすり身原料としての適性をスクリーニングした。ハクレンとコクレンは淡水漁獲量の40%以上を占める主要魚種であるが、味が劣るため消費者から次第に敬遠され、廉価である。しかし、そのゲル化特性は、世界のすり身原料の60%以上を占めている海産魚のスケトウダラと比較的似ており、実用性の高い中間原料素材として利用できる見通しを得た。次に、草魚はハクレン・コクレンに次ぎ約20%以上の漁獲量を占め、味もよく比較的人気の高い魚種である。そのゲル形成能力はハクレン・コクレンより劣るものの、広い加熱温度域でゲル化する特徴を有しており、加工しやすい中間原料素材として利用できる見通しを得た。

その他、タンパク質の架橋酵素、通電加熱法などを

利用したゲル形成能の向上技術の開発、および、タンパク質の利用効率を向上させるためのすり身の製造技術の改良に取り組み、成果を得ている。

【共同研究体制】

大学側と協議しながら試行錯誤を重ねて作り上げて

きた共同研究体制を図に示した。一つの重要なポイントは、研究に最も専心できる多くの学生と大学院生がこの共同研究に参加していることで、集中的に多くのテーマに挑戦できることにある。また、学生や大学院生の指導を通して大学へ貢献しており、協力を得るために大きな力となっている。もう一つは大学側の支援組織が出来たことにより、免税事務等の困難な問題に対しても組織的に対応していただいていることも重要と思われる。

【今後の研究戦略】

現在、日本型のすり身技術を中国の淡水魚肉へ応用する研究を展開しているが、この研究課題を成功させるには、魚肉の利用効率の改善、およびすり身を中国の消費者に受け入れてもらうための加工製品作りが必須である。その上に、常温流通できる中間原料素材の開発、さらに未・低利用部分の調味料、飼料等への転換によるゼロエミッションへの挑戦も課題である。

1. 先生、学生総出の魚体処理

2. 魚肉の水晒し

3. 魚肉の裏ごし

4. 冷凍変性防止剤を加えてハクレン冷凍すり身の完成

海外研究 汽水域の生命を支える森林の役割

マレーシア・マタン汽水域におけるマングローブ林の研究

林業部 落合 幸仁

1. プロジェクトについて

半島マレーシアの西海岸にあるタイピンの近くのマタン汽水域では世界で唯一、マングローブ林の持続的な経営が行われている(図1)。熱帯・亜熱帯の潮間帯に棲息する植物の総称であるマングローブの中でもこの地方に多い*Rhizophora apiculata*が、植栽後30年で炭用に皆伐され、その後

図1. マタンの位置

後に次の伐採用に苗木が植栽される。このマタン汽水域を中心として、国際農林水産業研究センター(JIRCAS)は「熱帯・亜熱帯汽水域における生物生産機能の解明と持続的利用のための基準化」と題する総合プロジェクトを実施している。これには、日本側はJIRCASの水産部と林業部が中心となり、マレーシア側は水産研究所、マラヤ大学、森林研究所が参加している。ここでは、JIRCAS林業部の行っている研究を中心に述べることにする。

2. マタン汽水域のマングローブ林

熱帯雨林地域に属するマレーシアでは、一般的に森林の種多様性が非常に高い。つまり、森林の中を歩いても同じ種類の樹に会うことが極めて難しい。ところが、これに反してマングローブ林では、水位の高低によって同じ種が均一に分布することが多い。マタン汽水域においては、水位の高い方から、a) *Avicennia*や*Sonneratia*属の樹種が出現し、少し低くなるとb) *Rhizophora*属の樹種、そしてほとんど水のつかないところではc) *Bruguiera*属が主な種となる森林が多い。特に、a)の森林は海に近いだけ地盤がゆるく、体重が重いと歩くだけでも大変である(写真1)。

3. 研究内容の紹介

JIRCASの林業部では、上記の三つのタイプの森林にそれぞれ、リタートラップを置き、それぞれの森林から落ちてくる葉などの有機物(リターと言う)を回収している。このリターがマングローブの他の多くの生物の命を支えているのである。おかげで調査中に、

エビ、カニ、カワウソやサルだけではなく、コブラやウミヘビの様にあまりお近づきになりたくないものにも間近で出会うことになる。リターの回収結果から、a) b)およびc)の1平方メートルに落ちた一年間の全部のリターは、それぞれ、1.6、1.5および0.7kgであった。b)とc)はほぼ同じで、a)はその約半分であった。b)とc)は林冠が閉鎖してa)に比べてマングローブの本数が多いせいと思われる。落ちたリターの量には違いがみられたが、三つのタイプの森林とも、全リターに占める葉の割合はほとんど同じで、約6割程度であった。このことから、どの森林においても葉が重要なリターの構成員であることがわかる。

陸上の森林では、リターのほとんどが森林内の微生物によって分解される。しかし、マングローブ林では、大潮のときに入ってくる水によって海に持ち去られる葉が多い。a)では、ほとんどの葉が常に持ち去られるし、b)では大潮のときは100%持ち去られているが小潮のときは数%にとどまっている。地盤高が一番高いc)は大潮、小潮に関わらずほとんど持ち去られることがない。このことから、森林のタイプによって持ち去られる葉の量が異なり、そのため水産物の生産に対する影響力も異なることが予想される。

マングローブの中を、足をとられながら歩いていると、そこにはごみ、買物袋、蛍光灯や電球といったありとあらゆる人間の捨てたゴミが落ちている。ゴミだけではなく、マングローブは土砂なども止める働きをしている。陸上の森林も同じような働きはしているが、特に、マングローブは他の生物の生命を支えているだけではなく、巨大なゴミ箱、優秀なダムでもある。このため、持続的な森林経営をして、マングローブを守ることが重要なのである。

写真1. *Avicennia* と *Sonneratia* 属の森林で記念撮影(真ん中が筆者)

表：マレイ人と華人農家の経営比較

	華人農家	マレイ人農家
調査農家数	21 (100%)	24 (100%)
専業農家	18 (86%)	20 (83%)
平均年齢	49.3	49.0
同居家族数	5.8	5.2
家族農業従事者数	1.3	2.0
経営耕地面積 (ha)	4.8	2.8
機械所有農家		
トラクタ	4 (19%)	2 (8%)
耕耘機	14 (67%)	12 (50%)
経営費 (RM/ha) *1	820.41	748.44
種子	10.03	63.32
肥料	62.63	3.11
農薬	193.77	85.47
雇用労賃	43.94	57.44
作業委託料金	322.49	384.77
機械修理費	57.79	13.15
減価償却費	15.57	29.76
運搬費	114.19	111.42
耕起回数		
第1作 (乾期作)	4-5	3
第2作 (雨期作)	3	3
品種	MR84+中国稻	MR84
粗収益 (RM/ha)	4043.94	2848.96

*1 経営費は現金支出分のみで、自給部分を計上していないので、投入物量の比較ではない。

植物材料の調整 ↓	①植物材料の増殖： イモから得た幼芽を滅菌し、MS培地（シヨ糖30g/l）で増殖する。
	②コンデショニング： 無菌培養した植物体（茎長2-3cm）をシヨ糖120g/lを含むMS培地に移植して1ヵ月培養する。
	③茎頂の切り出し： 葉原基1-2枚を含む成長点（0.5-0.8mm）を切り出す。
	④茎頂の前培養：0.3Mシヨ糖を含むMS培地で16時間培養する。
ガラス化 ↓	⑤ローディング： 前培養した茎頂を2Mグリセリン+0.4Mシヨ糖で20分間、25℃で処理する。
	⑥ガラス化処理： ローディングした茎頂をPVS2（30%グリセリン+15%DMSO+15%エチレングリコール+0.4Mシヨ糖）で10分間25℃で処理する。液体窒素に直接浸漬する（手法の開発試験では1時間浸漬）。
融解・再培養	⑦融解：40℃の温水中で急速融解する。
	⑧融解後の処理：1.2Mシヨ糖に10分間浸漬後、滅菌した濾紙を敷いた0.3Mシヨ糖を含むMS培地上に1日静置する。
	⑨植物体の再生： 0.1Mシヨ糖を含むMS培地に移しかえ培養する。茎葉の再生を生存の指標とする。

図1. 本研究で確立したタロの茎頂の超低温ガラス化法による保存法の手順

表1 斜面下端の植被の効果 (93~94年)

処理区	積算土壌流亡量 (kg m ⁻²)		
	4ヶ月	8ヶ月	12ヶ月
対照	0.00	1.12	7.48

情報公開制度の概要

開示請求権制度

何人も、当法人に対し、当法人の保有する法人文書の開示を請求することができます。

開示請求できる文書

役員又は職員が組織的に用いるものとして当法人が保有する文書、図画及び電磁的記録（フロッピーディスク等に記録された電子情報）が開示請求の対象となります。

ただし、書籍等の市販物等は除かれます。

開示請求

開示請求書に必要な事項を記載して、当法人等の情報公開窓口へ提出するか又は送付してください。

開示請求には開示請求手数料が必要です。

開示請求手数料及び開示実施手数料の額は行政機関の場合と同様となっています。

開示・非開示決定の通知

開示・不開示の決定は、原則として30日以内に行われ、書面で通知されます。個人に関する情報等の不開示情報が記録されている場合を除いて、法人文書を開示します。

開示の実施

開示決定の通知を受けた方は、文書又は図画の場合には閲覧又は写しの交付、電磁的記録の場合には別に定める方法により、開示の実施が受けられます。

開示の実施を受ける方は、通知のあった日から30日以内に、開示の実施方法を選択して、書面により申し出てください。

開示の実施を受けるには、開示実施手数料が必要となります。

写しの送付を希望する方は、手数料のほかに送料が必要となります。

手数料の納付の方法は、開示決定の通知において、開示実施手数料の額などの必要な事項、手続きが記載されていますので、これに沿って手続きを進めてください。

情報提供制度

法人文書の開示請求制度とは別に、当所の組織、業務、財務に関する基礎的な情報等を記録した文書等を作成し、適時に、かつ、備え付け及びインターネットのホームページにより情報の提供を行っています。

その他情報公開に関することは情報公開窓口にご相談ください。

法人文書開示請求書

平成 年 月 日

独立行政法人国際農林水産業研究センター理事長 殿

(法人その他の団体にあつてはその名称及び代表者氏名)

氏名又は名称:

(法人その他の団体にあつては主たる事務所の所在地)

住所又は居所: 〒

TEL ()

(連絡先が上記の本人以外の場合は、連絡担当者の住所・氏名・電話番号)

連絡先:

独立行政法人等の保有する情報の公開に関する法律第 4 条第 1 項の規定に基づき、下記のとおり法人文書の開示を請求します。

記

1 請求する法人文書の名称等

(請求する法人文書が特定できるよう、法人文書の名称、請求する文書の内容等をできるだけ具体的に記載してください。)

2 求める開示の実施の方法等 (本欄の記載は任意です。)

ア又はイに 印を付してください。アを選択された場合は、その具体的な方法を記載してください。

ア 事務所における開示の実施を希望する。

<実施の方法> 閲覧 写しの交付 その他 ()

<実施の希望日>

イ 写しの送付を希望する。

開示請求手数料 (1 件 3 0 0 円)	納入方法は次のいずれかに をつけて下さい	(受付印)
	1. 銀行振込 2. 郵便為替 3. 現金	

銀行振込の場合は振込を証明する用紙を同封してください。

銀行振込口座名 銀行 支店 普通口座

口座番号

別紙の注意事項をお読みください。

*この欄は記入しないでください。

担当課	
備考	

「法人文書開示請求書」(別紙)

< 記載に当たっての注意事項 >

1 「氏名又は名称」「住所又は居所」

個人で開示請求をする場合は、あなたの氏名、住所又は居所を、法人その他の団体の場合には、その名称と代表者の氏名及び所在地を記載してください。

ここに記載された住所及び氏名により、開示決定通知等を行うこととなりますので、正確に記入願います。

連絡等を行う際に必要となりますので、電話番号も記載してください。

2 「連絡先」

連絡等を行う場合に、「氏名又は名称」欄に記載された本人と異なる方に行う必要があるときは、連絡担当者の氏名、住所及び電話番号を記載してください。

3 「請求する法人文書の名称等」

開示を請求する法人文書について、その名称、お知りになりたい情報の内容等をできる限り具体的に記載してください。

4 「求める開示の実施の方法等」

請求される法人文書について開示決定がされた場合に、開示の実施の方法、事務所における開示を希望される場合の希望日についてご希望がありましたら、記載してください。

なお、開示の実施の方法等については、開示決定後に提出していただく「法人文書の開示の実施の方法等申出書」により申し出ることができます。

< 開示請求手数料の納付について >

開示請求を行う場合には、1件の法人文書について 300 円を納付していただくこととなっています。

独立行政法人国際農林水産業研究センター法人文書管理規程

14国研セ第8-65号
平成14年8月22日

第1章 総則

(目的)

第1条 この規程は、独立行政法人国際農林水産業研究センター（以下「センター」という。）における法人文書の管理について必要な事項を定めることにより、事務の適正かつ能率的な遂行に資することを目的とする。

(定義)

第2条 この規程において、次の各号に掲げる用語の意義は、それぞれ当該各号に定めるところによる。

- (1) 法 独立行政法人等の保有する情報の公開に関する法律（平成13年法律第140号）をいう。
- (2) 法人文書 法第2条第2項に規定するものをいう。
- (3) 部課 独立行政法人国際農林水産業研究センターの組織に関する規程（13国研セ第4-25号。以下「組織規程」という。）に規定する部、科、課（庶務課を除く。）及び室をいう。
- (4) 支所 組織規程第49条に規定する沖縄支所をいう。
- (5) 庶務課 組織規程第15条及び第50条に規定する庶務課をいう。
- (6) 主管部課 法人文書の内容たる事案を主管する部課をいう。

(法人文書の作成の原則)

第3条 センターとしての意思決定並びに事務及び事業の実績については、次に掲げる場合を除き、文書（図画及び電磁的記録を含む。以下この条において同じ。）を作成することを原則とする。ただし、第1号の場合においては、事後に文書を作成しなければならない。

- (1) 意思決定と同時に文書を作成することが困難である場合
- (2) 処理に係る事案が軽微なものである場合

(法人文書の処理の原則)

第4条 法人文書の処理は、确实かつ迅速に行わなければならない。

(統括文書管理者)

第5条 センターに統括文書管理者を置く。

- 2 統括文書管理者は、総務部長をもって充てる。
- 3 統括文書管理者は、センターにおける次に掲げる事務を行う。
 - (1) 法人文書管理規程その他の法人文書の管理に関する規程類の整備に関すること。
 - (2) 法人文書分類基準表及び法人文書ファイル管理簿の整備に関すること。
 - (3) 法人文書の管理に関する事務の指導監督等に関すること。

(文書管理者)

第6条 センターに文書管理者を置く。

- 2 文書管理者は、庶務課の課長（支所にあっては支所長）をもって充てる。
- 3 文書管理者は、センターにおける次に掲げる事務を行う。
 - (1) 法人文書分類基準表及び法人文書ファイル管理簿の作成に関すること。
 - (2) 法人文書の保存期間の延長、独立行政法人国立公文書館（以下「国立公文書館」という。）への移管又は廃棄の実施に関すること。
 - (3) センターが保有する法人文書の管理の徹底を図ること。

（文書管理担当者）

第7条 庶務課に文書管理担当者を置く。

- 2 文書管理担当者は、庶務課の課長補佐（支所にあっては課長）をもって充てる。
- 3 文書管理担当者は、前条第3項各号の事務について、文書管理者を補佐する。
- 4 文書管理担当者は、庶務系の職員に前項に掲げる事務の全部又は一部を行わせることができる。

（帳簿）

第8条 庶務課に、次に掲げる帳簿を備える。

- (1) 文書原簿
- (2) 文書補助簿
- 2 文書補助簿は、文書原簿の補助簿とし、同一事案に関し文書の施行又は受付が繰り返され、又は同一事案に関する回答文書若しくは報告文書が多数のため、文書原簿の記載が困難なときに用いる。
- 3 前2項に規定する帳簿の様式は、別記様式第1号による。

（電磁的記録による帳簿等の作成）

第9条 前条に規定する帳簿については、パーソナルコンピュータ（以下「パソコン」という。）を使用して、電磁的記録により作成することができる。

（文書記号及び文書番号）

第10条 文書原簿に登録を要する法人文書には、文書記号及び文書番号を付するものとする。

- 2 文書記号は「国研セ」とする。ただし、支所においては「国研セ沖」とする。
- 3 文書番号は、毎年4月1日をもって更新することとし、各月ごとの区分番号と、月別の受付順による一連番号を併記したものとする。

例 14国研セ第4〔各月ごとの区分番号〕-1〔月別の受付順による一連番号〕

- 4 外国（日本駐在の外国出先機関を含む。以下同じ。）あてに施行する文書の文書番号については、前項の規定にかかわらず原則として次のとおりとし、文書管理担当者は施行された文書について文書原簿の記事欄に当該番号を記載するものとする。

J C ' X X〔西暦の下2桁〕/ Y Y〔月〕/ Z Z〔月別の受付順による一連番号〕

例 J C ' 0 2 / 7 / 6 5

- 5 同一の事案により第1項の法人文書の接受又は施行が繰り返される場合には、当該事案に係る最初に登録した文書記号及び文書番号を用いるものとする。ただし、文書管理者が、当該事案の処理を行うに当たって新たに登録することが適当と認めたときは、この限りでない。

(法人文書の保存期間)

- 第11条 法人文書の保存期間は、法律又は法律に基づく命令において保存期間が定められているものを除き、30年、10年、5年、3年、1年又は1年未満とする。
- 2 法人文書の保存期間の基準は、別表第1のとおりとする。

(保存期間の起算)

- 第12条 保存期間の起算は、完結した年度(4月1日から翌年の3月31日までの間をいう。以下同じ。)の翌年度の4月1日とする。

(法人文書の分類)

- 第13条 保存期間が1年以上の法人文書について、系統的かつ体系的に管理するため、大分類、中分類及び小分類に区分する。
- 2 前項に規定する分類により法人文書を分類するときは、次に定めるところにより行うものとする。
- (1) 大分類 共通、調査及び研究並びに総務の単位で整理する。
 - (2) 中分類 センターの所掌する事務及び事業の種類又は内容に基づき整理する。
 - (3) 小分類 中分類を更に細分化して整理する。

(法人文書分類基準表の作成等)

- 第14条 文書管理者は、センターの所掌する事務に係る法人文書の適切な分類及び保存に資するため、法人文書分類基準表(別記様式第2号)を、パソコンを使用して電磁的記録により作成しなければならない。
- 2 文書管理者は、法人文書分類基準表について、毎年定期的に、又は時宜に応じて見直しを行うものとする。

第2章 接受及び配布

(法人文書の接受)

- 第15条 法人文書の接受は、庶務課において行う。ただし、主管部課の担当職員が直接受け取った場合は、速やかに庶務課に回付し接受の手続きを取らなければならない。

(電子文書の接受)

- 第16条 電子文書(電子メールにより送受信された電磁的記録をいう。以下同じ。)の接受は、その相手方たる職員が接受する。
- 2 電子文書を接受した職員は、速やかに当該電子文書を紙に出力する。ただし、保存期間が1年未満のものについては、紙に出力することを省略することができる。
- 3 前項の規定により電子文書の内容が出力された紙は、接受した法人文書とみなし、次条に規定するところにより、速やかに接受の手続きをとらなければならない。

(接受した法人文書の配布)

- 第17条 庶務課において接受した法人文書(担当職員が直接接受したものを除く。)は、直ちに、主管部課の担当職員に配布する。
- 2 前項に規定する法人文書の担当職員への配布は、当該法人文書を接受した日のうちに完了しなければならない。

(接受印の押印)

第18条 担当職員は、直接法人文書を接受したとき又は前条第1項の規定により法人文書の配布を受けたときは、速やかに庶務課において当該法人文書（第16条第2項ただし書の規定により紙に出力することを省略するものを除く。）に接受印（別記様式第3号）を受けるものとする。

2 電子文書の接受年月日は、電子文書が当該システムに到達した日とする。

（接受した法人文書の登録）

第19条 接受した法人文書（保存期間が1年未満のもの及び主管部課の長が決裁（供覧を含む。以下同じ。）を要しないと認めたものを除く。）については、速やかに登録を行い、起案その他の必要な処理を行わなければならない。

2 前項の登録は、文書管理担当者が文書原簿に、当該法人文書の件名、差出人、接受年月日、登録年月日その他必要な事項を記載して行う。

3 前項の文書管理担当者は、法人文書の登録を行ったときは、当該法人文書に文書番号表示印（別記様式第4号）を押す。

第3章 法人文書の作成

（書式等）

第20条 法人文書の作成は、次に掲げるものを除くほか、左横書きとする。

（1）法令等の規定により縦書きと定められているもの

（2）賞状、表彰状、祝辞その他これらに類するものであって、縦書きが適当と認められるもの

（記述の原則）

第21条 法人文書は、的確かつ簡潔に記載する。

2 文書の作成は、特別の場合を除き、漢字仮名まじりとし、句読点をつける。

3 文体は口語体とし、原則として、文字は常用漢字及び平仮名を用い、現代仮名遣いとし、数字は算用数字を用いる。

（起案）

第22条 決裁を行う法人文書については、事案ごとに起案を行う。

2 接受した2以上の法人文書で相互に関連のあるものについては、1の事案とみなして、合併処理をして起案することができる。

3 接受した1の法人文書で、その内容が異なる2以上の事案について起案する場合には、その写しを作成し、分割処理をして起案することができる。この場合には、当該法人文書の写しを必要部数だけ作成し、それぞれについて、第19条の規定による登録を行う。

（合併処理の起案）

第23条 前条第2項の規定により合併処理を行う場合には、当該文書番号のうち適宜のものを代表文書番号として起案用紙の文書番号欄に記載し、その他の文書番号は、起案用紙の記事欄に記載し、かつ合併処理の表示をする。

2 前項の場合には、代表文書番号の文書が登録された文書原簿の記事欄に代表文書番号以外の文書番号を、代表文書番号以外の文書が登録された文書原簿の記事欄に当該代表文書番号を記載し、かつ、合併処理の記載をする。

(分割処理の起案)

第24条 第22条第3項の規定により分割処理を行う場合には、原本の起案用紙の記事欄に当該写しの文書番号を、写しの起案用紙の記事欄に原本の文書番号を記載し、かつ分割処理の記載を行う。

2 前項の場合には、原本が登録された文書原簿の記事欄に当該写しの文書番号を、写しが登録された文書原簿の記事欄に原本の文書番号を記載し、かつ、分割処理の記載をする。

(起案文書の作成)

第25条 法人文書の起案は、起案用紙(別記様式第5号及び第6号)を用いるものとする。ただし、接受した法人文書に基づいて起案する場合で内容が軽微なものについては、別記様式第7号により、これを起案用紙に代えて起案することができる。

2 起案者は、起案用紙に必要な事項を記載して、起案しなければならない。ただしパソコンを使用して起案するときは、起案用紙の様式に必要な事項を入力し、紙に出力したものを原議とする。

3 法人文書を起案する場合は、次に掲げるところによるものとする。

(1) 法人文書の起案は、別記の起案文書の書式例に準拠して行い、起案用紙の接受年月日欄に、接受印に記載された年月日を、登録年月日欄に、文書原簿に登録した年月日を、起案年月日欄に、起案文書を作成した年月日を記載する。

(2) 起案用紙の分類番号欄及び保存期間欄に、法人文書分類基準表の該当欄に記載された分類番号及び保存期間を記載する。

(3) 当該起案に係る事案が第32条の規定により各委任者が処理することができるものであるときは、起案用紙の委任事項番号欄に次の記載例の形式により、当該委任事項に係る別表第3に規定する事項番号を記載する。

記載例(別表第3の事項番号第8項の場合)

3 - 8

4 起案文書には、事案が定例的又は軽微なものを除き、起案の趣旨及び事案の概要等を記載するとともに、必要に応じて、参照条文、新旧対照表その他参考資料を添付する。

5 起案文書をつづる場合は、原則として、つづりひも、ホッチキス等により容易に分離しないようにとじなければならない。

6 外国語による接受文書又は外国語により施行する文書を起案する場合は、必要に応じて日本語による訳文又は要旨文を添付しなければならない。

7 電報により発信する文書案は、電報文により作成する。

(起案の特例)

第26条 接受した法人文書に基づき起案する場合であって、当該法人文書の事案の内容又は性質により、当該法人文書に記載された名あて人以外の者が、最終決裁者及び発信名義人となるのが適当であると主管部課長が認めるときは、法令等に定めのある場合を除き、名あて人以外の者を最終決裁者及び発信名義人として起案することができる。

(文書管理担当者による点検)

第27条 法人文書を起案したときは、その起案について文書管理担当者の点検を受けなければならない。

- 2 文書管理担当者は、前項の規定により起案文書を点検したときは、当該起案用紙の文書管理担当者欄に署名又は押印をする。

(起案により作成する法人文書)

第28条 起案により法人文書を作成するときは、法令等の規定に基づき施行する場合を除き、次に掲げる者の職名・氏名を発信名義人として表示する。

- (1) 理事長
- (2) 支所長
- 2 庶務課長が認めるときは、前項の規定にかかわらず、次に掲げる者の職名・氏名を発信名義人として表示することができる。
 - (1) 理事
 - (2) 企画調整部長
 - (3) 総務部長
- 3 センターの組織の名称を表示する法人文書であって、次に掲げるものについては、起案により作成するものとする。
 - (1) 独立行政法人国際農林水産業研究センター公印取扱規程(13国研セ第4-12号。以下「公印規程」という。)に規定された公印の押印を要するもの(第45条第4項及び第5項により公印の押印を省略することができるものを含む。)
 - (2) 主管部課長又はその上司が決裁を要すると認めたもの

(起案によらないで作成する法人文書)

第29条 前条第1項に規定する発信名義人を表示する法人文書のうち、次に掲げるものを施行するときは、起案によらないで作成することができる。

- (1) 主管部課長又はその上司が起案することを要しないと認めたもの
- (2) 起案によらないで作成することが通例となっているもの
- 2 起案によらないで発信名義人を表示する法人文書を作成するときは、当該発信名義人の了解を得なければならない。
- 3 起案によらないで、前条第1項又は第2項に規定する者以外の職名等を発信名義人としてセンター外に発信する法人文書を作成するときは、上司又は責任ある者の了解を得なければならない。
- 4 起案によらないで組織名を表示して法人文書を作成するときは、上司又は責任ある者の了解を得なければならない
- 5 起案によらないで法人文書を作成するときは、当該法人文書の作成年月日、作成者の主管部課名(発信名義人を表示しない場合に限る。)等必要な事項を当該法人文書の見やすい箇所に記載する。

(発議文書の登録)

第30条 発議により起案した法人文書で、主管部課長の決裁を受けたものについては、速やかに登録を行わなければならない。

- 2 前項の登録は、文書管理担当者が文書原簿に、当該法人文書の件名、起案年月日その他必要な事項を記載して行う。

第4章 決裁

(決裁の方法)

- 第31条 起案文書の決裁は、発信名義人（施行を伴わないものにあつては名あて人。次項において同じ。）が最終の決裁者となることを原則とする。
- 2 前項の規定にかかわらず、主管部課長が必要と認めるときは、当該発信名義人の上位の者の決裁を求めることができる。
 - 3 決裁の順序は、原則として主管部課から開始し、組織規程に定める部課等の順序の逆順序とする。ただし、総務部において起案した法人文書を除き、総務部長を各部課長の最終の決裁者とする。
 - 4 理事長の決裁を受ける法人文書は、総務部長の決裁を経なければならない。
 - 5 総務部長の決裁を受ける法人文書は、庶務課長の決裁を経なければならない。
 - 6 支所長の決裁を受ける法人文書は、支所の庶務課長の決裁を経なければならない。
 - 7 決裁は、起案文書の決裁欄に署名又は押印をすることにより行うものとする。
 - 8 部課において起案文書に署名又は押印をすることができる者は、当該起案文書の内容に直接関係ある者とする。

（文書の委任処理）

- 第32条 別表第2の委任事項欄に掲げる事項に係る法人文書の起案は、事の異例に属するものを除き、この表の委任者欄に掲げる者が決裁することができる。この場合には、同表の合議者欄に掲げる者に合議しなければならない。

（他の部課への合議）

- 第33条 起案文書の事案が他の部課に関係する場合は、事前の協議等により合議することを省略することができるものを除き、当該関係する部課に合議しなければならない。

（持ち回り）

- 第34条 起案文書で緊急に処理を要するもの又は詳細な説明を要するものは、当該起案文書の起案者又はその説明を行うことができる職員が携行して決裁を受けることができる。

（代決）

- 第35条 起案文書は、次の各号に掲げる要件のすべてに適合する場合に限り、代決することができる。
- （1） 決裁者が出張、休暇その他やむを得ない事情により不在であること。
 - （2） 緊急に処理しなければならない理由があること。
 - （3） 決裁者から代決してはならないものとして、あらかじめ指定された事項に関するもの又は異例なものでないこと。
- 2 前項の規定による代決は、別表第3の決裁者欄に掲げるものについては、同表の代決者欄に掲げる者でなければならない。
 - 3 起案文書の代決をする場合には、その決裁が代決であることを示すため、決裁欄の右上に「代」と表示する。
 - 4 重要な事案に関する起案文書を代決した者は、事後速やかに代決として処理された決裁者にその旨を報告しなければならない。

（後伺い）

- 第36条 決裁者及び代決者が不在であつて、かつ、緊急やむを得ない場合には、最終

の決裁者を除き、当該決裁者の決裁を後伺いとして処理することができる。

- 2 前項の規定により後伺いとして処理するときは、起案文書の決裁欄に「後伺い」と記載し、次の決裁者に回付するとともに、事後速やかに後伺いとして処理された決裁者の決裁を受けなければならない。

（起案文書の回付に係る事案の検討）

- 第37条 決裁のため起案文書の回付を受けた者は、直ちに、当該事案を検討し、異議があるときは、その旨を速やかに起案者に連絡する。
- 2 起案文書の内容の訂正を行うときは、軽微な訂正を行う場合を除き、起案者又はその上司の了解を得るものとする。

（決裁月日の記載）

- 第38条 文書管理担当者又は起案者は、起案文書の決裁が完了したときは、当該起案文書の決裁年月日欄に、決裁が完了した年月日を記載する。
- 2 文書管理担当者は、法人文書の施行を伴わない起案文書の決裁が完了したときは、当該法人文書を登録した文書原簿の該当欄に決裁を完了した年月日を記載する。

（廃案）

- 第39条 起案文書で施行前に廃案の処理を行う場合は、新たにその旨を起案し、当該施行を取りやめた起案文書を添えて、既決裁者の決裁を受けるものとする。
- 2 前項の規定により廃案の処理のために新たに起案する文書に記載する文書番号及び文書記号は、施行を取りやめた起案文書に付した文書記号及び文書番号を用いるものとする。
- 3 第1項の規定により既決裁者の決裁を受けるときは、決裁した者全員の決裁を受ける必要はなく、部課においては部課長の決裁があればよいものとする。
- 4 廃案に係る決裁が終了したときは、当該起案文書を登録した文書原簿に、その旨及び当該処理年月日を記載する。

第5章 法人文書の施行

（浄書）

- 第40条 決裁済みの起案文書で施行を要するものは、浄書を行う。
- 2 前項の規定により浄書を行うときは、照会その他の便宜に資するため、必要に応じて当該浄書文書の末尾に、担当職員の所属、職名、氏名、電話番号等を記載することができる。
- 3 第1項の浄書文書には、法令等に定めのあるものを除き、当該起案用紙の文書記号番号欄に記載する文書記号及び文書番号を付するものとする。
- 4 決裁済みの起案文書により作成した浄書文書のうち次に掲げるものについては、前項の規定にかかわらず、文書記号及び文書番号を付すことを省略する。
 - (1) 賞状、表彰状、人事異動通知書、祝辞類
 - (2) 主管部課長が文書記号及び文書番号を付すことを要しないと認めたもの
- 5 浄書文書に記載した事項を訂正するときは、当該訂正箇所当該浄書文書の発信名義人の公印を押す。

（施行年月日）

- 第41条 法人文書の施行年月日は、当該法人文書の発送又は発信の日とする。ただし、

次の各号に掲げるものについては、それぞれ当該各号に定める日とする。

- (1) 交付 交付した日
- (2) 発令 発令した日
- (3) ホームページ等への登載 登載した日
- (4) 官報、公報等への掲載 掲載した日
- (5) 刊行物の発行 発行した日
- (6) 掲示 掲示した日
- (7) 公表 公表した日
- (8) 配布 当該法人文書を作成した日
- (9) 縦覧 縦覧に供した日

2 浄書文書に付する日は、前項に規定する施行年月日とすることを原則とする。ただし、特別な事情があると認めるときは、前項に規定する施行年月日と異なる日を浄書文書に付することができる。

(浄書文書の日付の特例)

第42条 前条第2項ただし書きの規定により浄書文書に付する日を同条第1項に規定する日と異なる日とするときは、起案文書の伺い文に当該理由を明記するとともに、記事欄に「指定日施行」と表示し、かつ、当該指定する年月日を記載する。

2 前項の場合には、次に掲げる浄書文書の区分に応じて、それぞれ当該各号に定める者の決裁を受けなければならない。

- (1) 第28条第1項に規定する発信名義人による浄書文書 総務部長（支所にあつては庶務課長）
- (2) 第28条第2項に規定する発信名義人による浄書文書 庶務課長

(契印の押印)

第43条 浄書文書に記載した発信名義人が第28条第1項及び第2項に規定するものであるときは、契印（別記様式第8号）を当該浄書文書と起案文書にわたって押す。

第44条 前条の規定にかかわらず、次に掲げる浄書文書については、契印の押印を省略する。

- (1) 賞状、表彰状、通知書、祝辞類
- (2) 掲示により施行する法人文書

(公印の押印)

第45条 浄書文書の発信名義人が公印規程の規定により公印の作成及び使用を認められている者である場合には、公印規程第7条第3項ただし書きの規定によりあらかじめ公印を押印した用紙を使用する場合を除き、当該発信名義人の公印を保管する課において当該公印を当該浄書文書に押すものとする。

2 前項の規定による浄書文書への公印の押印は、当該浄書文書の発信名義人の末字に半分かけて押す。ただし、次に掲げるものに押印する場合にあつては、発信名義人の末字にかからないように押す。

- (1) 賞状、表彰状類
- (2) 通知書

3 公印規程第7条第3項ただし書きの規定によりあらかじめ公印を押印した用紙を使用する場合は、公印にかからないように発信名義人を記載することができる。

4 第1項の規定にかかわらず、次の各号に掲げる法人文書については、公印の押印を省略することができる。この場合は、当該浄書文書の公印の押印位置に公印省略の表示をする。

(1) 農林水産省所管の試験研究独立行政法人あてに施行する文書のうち内容が軽微なもの及び総務部長が認めるもの

(2) センターの内部組織あてに施行する法人文書

5 前4項の規定にかかわらず、外国に対して施行する浄書文書については、発信名義人の自筆の署名をもって公印の押印に代えることができる。

(割印)

第46条 浄書文書の各葉に割印を押す場合には、当該法人文書の発信名義人の公印を用いるものとする。

(取扱注意文書の取扱い)

第47条 主管部課長は、取扱いについて注意を要すると認める法人文書については、当該法人文書を取扱注意文書として指定するものとする。

2 前項の規定により取扱注意文書として指定するときは、起案文書については記事欄に、その他の法人文書については、当該法人文書の見やすい箇所に別記様式第9号による表示印を押し、取扱いに注意を要する期限を記載する。

(施行の方法)

第48条 法人文書を施行するときは、次に定める方法によるものとする。

(1) 郵送 庶務課において行い、郵送する文書の内容により、文書管理担当者が必要があると認めるときは、小包郵便物とすること又は速達、書留その他の特殊扱いとすることを指定することができる。

(2) 使送 庶務課において当該法人文書を使送人に交付し、これを当該法人文書の名あて人又はその名あて人に代わって、当該法人文書を受領する権限を有する者に直接送達させるものとする。この場合において、使送人は、センターの職員又はこれに代わるべき者(センターとの契約により使送事務を行う者。)とする。

(3) 直接の交付 施行する法人文書を本人等に手渡す場合とし、この場合、必要に応じ本人等の受領の署名又は押印を受けるものとする。

(4) 発令 人事異動等の辞令を発する

(5) 電子メール 保存期間が1年未満の法人文書をパソコンから発信する。

(6) ファクシミリ 保存期間が1年未満の法人文書を当該装置を使用して施行する

(7) 電報 電報により法人文書を発信するときは、当該法人文書に発信者の氏名及び発信した日時等を記載する。

(8) ホームページ等への登載 センターのホームページへ法人文書を登載する。

(9) 官報、公報等への掲載又は刊行物の発行 法人文書を官報、公報等へ掲載し、又は刊行物を発行する。

(10) 掲示 独立行政法人国際農林水産業研究センター構内等管理規程(14国研セ第4-73号)に規定する手続に従い掲示する。

(11) 縦覧 広く国民一般に見せるため、法人文書を一定の場所に備え置く。

(12) 公表又は配布 パンフレットその他国民一般に情報提供するために作成さ

れた法人文書を公表又は配布する。

(1 3) その他総務部長が認める方法

(施行年月日の記載)

第 4 9 条 文書管理担当者は起案に基づき法人文書を施行したときは、当該起案用紙に施行した年月日(第 4 1 条第 2 項ただし書きの規定により同条第 1 項に規定する日と異なる日を浄書文書に付した場合にあっては当該異なる日)を記載する。

2 起案によらないで作成した法人文書の施行年月日は、原則として当該法人文書を作成した日とする。

第 6 章 法人文書の完結及び保存

(完結)

第 5 0 条 法人文書の完結は、当該法人文書に係る事案の処理が終了したときとする。

ただし、当該事案について、さらに継続して照会、回答その他文書の往復を要するときは、その最後の処理を終了したときとすることができる。

2 文書管理担当者は、起案文書が完結したときは、当該起案文書の完結年月日欄に完結した年月日を記載するとともに、当該法人文書を登録した文書原簿に完結の旨その他必要な事項を記載する。

3 起案によらないで作成した法人文書(保存期間が 1 年以上のものに限る。)の完結年月日が、当該法人文書を作成した日と異なるときは、完結した年月日を当該法人文書に記載する。

(法人文書の保存方法)

第 5 1 条 文書管理者は、完結した法人文書について、保存期間が満了する日まで、適正かつ確実に利用できる方法で保存しなければならない。

2 法人文書(保存期間が 1 年以上のものに限る。)を保存するときは、法人文書ファイル(能率的な事務又は事業の処理及び法人文書の適切な保存の目的を達成するためにまとめられた、相互に密接な関連を有する法人文書(当該保存期間を同じくすることが適当であるものに限る。)の集合物をいう。以下同じ。)単位又は法人文書(単独で管理することが適当なものに限る。)ごとに、管理が適切に行える場所に保存しなければならない。

3 前項に規定する管理が適正に行える場所は、次に掲げるものについては、それぞれ当該各号に定める場所とする。

(1) 文書及び図面 事務室及び書庫の書棚

(2) 電磁的記録(電子情報に限る。) 共用の保管庫(フレキシブルディスク等の場合に限る。) ホストコンピュータで管理されている磁気媒体又はサーバの共有部分

4 複数の法人文書をもって法人文書ファイルを設定した場合の保存期間は、当該法人文書のうち保存期間の満了する日がもっとも遅いものに合わせるものとする。

5 同一の法人文書が複数存在する場合又は原本のほかに写しが法人文書として存在する場合における正本または原本として管理されているもの以外の法人文書の保存期間は、正本又は原本の保存期間より短い保存期間を設定することができる。

6 法人文書は法人文書ファイル単位で編集するものとし、簿冊ごとに保存簿用紙(別記様式第 1 0 号)に完結年度、廃棄年度、法人文書ファイル名、保存期間、分類番号等必要な事項を記載し、当該法人文書と合わせてつづり込むとともに、その背表紙(別

記様式第 1 1 号)に基づき、分類番号、法人文書ファイル名等必要な事項を記載する。

(法人文書ファイルの設定)

第 5 2 条 前条第 2 項に規定する法人文書ファイルの設定方法は、次に掲げるところによるものとする。

- (1) 内容(主題)別 法人文書に書かれている内容(主題)ごとにまとめる方法
(例: 会議議事録ファイル等)
- (2) 形式別 法人文書の内容や相手方と関係なくその形式をとらえてまとめる方法
(例: 関係照会・回答ファイル等)
- (3) 様式・標題別 帳票類、伝票類等、法人文書の標題をそのままファイル名としてまとめる方法
(例: 申請書ファイル等)
- (4) 案件(一件)別 工事の計画から完了までの法人文書等、一つの案件に係る法人文書を順序立ててまとめる方法
(例: 工事一件ファイル等)
- (5) 相手方別 法人文書に係る提供者、提出先等ごとにまとめる方法
(例: 説明資料ファイル等)
- (6) 時期別 同種の内容の法人文書を一定の期間ごとにまとめる方法
(例: 年月支払い書ファイル等)

(法人文書の保存)

第 5 3 条 起案文書で保存期間が 3 0 年以上の法人文書は、主管部課において 5 年間保存し、その後庶務課において保存する。

- 2 保存期間が 3 0 年未満のもの及び起案によらない法人文書は、主管部課において保存する。

(法人文書の引継ぎ)

第 5 4 条 主管部課において前条第 1 項の規定により、庶務課において保存する法人文書があるときは、当該法人文書の目録を作成の上、引き継ぐものとする。

- 2 前項の引継目録は、第 5 1 条第 6 項の規定により必要な事項を記載した保存簿用紙を用いるものとする。

(法人文書ファイル管理簿の作成)

第 5 5 条 文書管理者は、法人文書ファイル及び法人文書(単独で管理することが適当なものであって、保存期間が 1 年以上のものに限る。)の管理を適切に行うため、法人文書ファイル管理簿(別記様式第 1 2 号)を、パソコンを使用して電磁的記録により作成しなければならない。

- 2 文書管理者は、法人文書ファイル管理簿について、毎年 1 回以上定期的に、又は時宜に応じて見直しを行うものとする。

(法人文書の利用)

第 5 6 条 職員から保存する法人文書の利用の申込みがあったときは、当該職員に法人文書を閲覧させ、又は貸し出すことができる。

- 2 公表その他の方法により国民に情報提供される法人文書については、何人に対しても閲覧させ、又は配布するものとする。ただし、1 人当たりの配布部数を制限することができる。

(職員の法人文書の利用)

第 5 7 条 主管部課以外の職員が主管部課で保存する法人文書の貸出しを受けようとするときは、法人文書貸出票（別記様式第 1 3 号）に必要な事項を記載して、当該法人文書の主管部課長（庶務課にあっては第 7 条第 1 項に規定する文書管理担当者）に提出し、承認を受けなければならない。

(職員への貸出期間)

第 5 8 条 前条の法人文書の貸出期間は、1 週間以内とする。ただし、当該法人文書の主管部課長又はその上司（第 5 4 条の規定により引継ぎを受けた法人文書であるときは、当該法人文書を保存する庶務課長又はその上司）が認めたときは、この限りでない。

(貸出文書等の取扱い)

第 5 9 条 職員は、閲覧し、又は貸出しを受けた法人文書を、切取り、つづりかえ又は転貸してはならない。

2 貸出しを受けた法人文書は、センター外に持ち出してはならない。ただし、当該法人文書の主管部課長又はその上司（第 5 4 条の規定により引継ぎを受けた法人文書であるときは、当該法人文書を保存する庶務課長又はその上司）が認めたときは、この限りでない。

(貸出文書の返還)

第 6 0 条 法人文書の貸出を受けた職員は、次の各号に掲げる事由が生じたときは、速やかに当該文書を返還しなければならない。

- (1) その必要がなくなったとき。
- (2) 貸出期間が終了したとき。
- (3) 職員でなくなったとき。
- (4) 退職を命じられたとき。
- (5) 長期にわたり出張、休暇又は欠勤するとき。
- (6) 主管部課長が返還を請求したとき。

(職員以外の者への閲覧等)

第 6 1 条 第 5 6 条第 2 項の規定により国民に情報提供される法人文書の閲覧又は配布は、原則として主管部課において行うものとする。

- 2 前項の閲覧又は配布の対象となる法人文書は、パンフレットその他国民一般に情報提供するために作成された法人文書とする。
- 3 前項の法人文書は、配布予定数に達した場合には配布を終了し、閲覧又は写しの交付のみを行う。
- 4 法人文書の情報提供を開始した日から 1 年を経過した場合は、法第 4 条第 1 項の規定に基づく開示請求手続により閲覧又は写しの交付を行うものとする。ただし、配布を継続している場合は、この限りではない。

(保存期間が満了した法人文書の取扱い)

第 6 2 条 保存期間が満了した法人文書は、保存期間を延長し、又は国立公文書館へ移管するものを除き、廃棄する。

- 2 前項に規定する処理は、法人文書ファイル単位ごとに行う。

(保存期間が1年未満の法人文書の取扱い)

第63条 保存期間が1年未満の法人文書については、当該法人文書が現用に供しなくなったときに保存期間が満了したものとする。

(保存期間の延長)

第64条 文書管理者は、保存期間が満了した法人文書について、職務遂行上必要があると認めるときは、一定の期間を定めて当該保存期間を延長することができる。当該延長に係る保存期間が満了した後に、これを更に延長しようとするときも同様とする。

2 前項により保存期間を延長する場合における一定の期間は、当該法人文書の保存期間以下の期間(保存期間が1年未満の法人文書にあっては1年間)とする。

3 次に掲げる法人文書については、保存期間が満了した後においても、その区分に応じてそれぞれ次に定める期間が経過する日までの間、保存期間を延長する。この場合において、1の区分に該当する法人文書が他の区分にも該当するときは、それぞれの期間が経過する日のいずれか遅い日までの間保存する。

(1) 現に監査、検査等の対象になっているもの 当該監査、検査等が終了するまでの間

(2) 現に係属している訴訟における手続上の行為をするために必要とされるもの 当該訴訟が終結するまでの間

(3) 現に係属している不服申立てにおける手続上の行為をするために必要とされるもの 当該不服申立てに対する裁決又は決定の日の翌日から起算して1年間

(4) 開示請求があったもの 法第9条各項の決定の日の翌日から起算して1年間

4 前3項の規定により保存期間を延長するときは、当該法人文書の目録及び延長の理由を作成し、文書管理者の承認を受けなければならない。

5 法人文書の保存期間を延長するときは、当該法人文書ファイルの背表紙等にその旨を記載するなどして、保存期間を延長していることを明らかにしておくものとする。

(国立公文書館への移管)

第65条 文書管理者は、保存期間(延長された場合にあっては、延長後の保存期間)が満了した法人文書について、国立公文書館で保存することが適当と認められる歴史資料がある場合には、国立公文書館に移管する。

2 文書管理者は、前項の規定により法人文書を国立公文書館に移管するときは、当該法人文書及び当該法人文書の目録を統括文書管理者に提出する。

3 統括文書管理者は、前項の規定により法人文書及び目録の提出を受けたときは、当該法人文書及び目録の内容を確認の上、国立公文書館に移管する。

(法人文書の廃棄)

第66条 保存期間が満了した法人文書(保存期間が1年以上のものに限る。以下第68条まで同じ。)を廃棄するときは、当該法人文書の目録を作成し、文書管理者の承認を受けなければならない。

2 文書管理者は、保存期間が満了する前に廃棄しなければならない法人文書があるときは、当該法人文書の目録及び廃棄の理由を統括文書管理者に提出し、その承認を受けなければならない。

3 文書管理者は、前項の承認を受けて法人文書を廃棄したときは、当該法人文書の目録、廃棄の理由及び廃棄年月日を記載した記録を作成するとともに、文書原簿の記事欄にその旨を記載する。

(廃棄方法)

第 6 7 条 前条の規定により法人文書を廃棄するときは、庶務課において一括して廃棄する。

2 法人文書を廃棄するときは、煮つぶし、焼却その他適当と認められる方法により行う。

(法人文書の紛失)

第 6 8 条 保存する法人文書を紛失した者は、速やかに紛失届 (別記様式第 1 4 号) を当該法人文書の主管部課長に提出しなければならない。

2 主管部課長は、前項の届出があったときは、文書管理者に報告しなければならない。

3 保存する法人文書を紛失した者又は当該法人文書の主管部課長は、当該法人文書の写し等をもって復元に努めなければならない。

4 提出された紛失届は、紛失した法人文書に替えて、当該法人文書ファイルにつづり込んで保存する。

第 7 章 雑則

(会計に関する法人文書の取扱いの特例)

第 6 9 条 会計に関する法人文書であって、この規程の規定により取り扱った場合、事務処理に支障を生ずると認められるものについては、次に掲げるところにより取り扱うものとする。

(1) 接受した法人文書の欄外余白が少なく接受印を押印した場合、当該法人文書に記載されている文字が汚損されるおそれがあるときは、接受印の押印を省略することができる。

(2) 接受した法人文書を会計に関する帳簿に登載すること等によりその処理が終了するものは、文書原簿への登録を省略することができる。

(3) 法令等の規定により起案用紙以外の用紙を用いて起案したものは、文書原簿への登録、文書管理担当者の点検及び第 3 1 条第 5 項に規定する決裁を省略することができる。

(4) 浄書文書で整理番号を付したものは、文書記号及び文書番号の表示を省略することができる。

(5) 浄書文書が伝票に類するものであるときは、契印の押印を省略することができる。

(法人文書の管理に関する細部事項)

第 7 0 条 この規程に定めるもののほか、法人文書の管理に関し、必要な事項は別に定める。

附 則

1 この規程は、平成 1 4 年 9 月 1 日から施行する。

2 独立行政法人国際農林水産業研究センター文書管理規程 (1 3 国研セ第 4 - 1 号。以下「旧文書管理規程」という。) 及び外国文書の取扱いについて (1 3 国研セ第 1 - 1 号) は、廃止する。

3 この規程の施行の日前に旧文書管理規程の規定により起案した法人文書であって、

この規程の施行の際未だ施行されていないものについては、この規程の規定により起案した法人文書として取り扱うことができる。

- 4 この規程の施行の際現に存する起案用紙は、当分の間これを使用することができる。この場合、起案用紙の文書管理責任者は文書管理担当者と読み替えて使用する。

独立行政法人国際農林水産業研究センターにおける情報公開に関する規程

14国研セ第9-120号
平成14年9月20日

第1章 総則

(趣旨)

第1条 独立行政法人国際農林水産業研究センター（以下「センター」という。）における情報公開については、独立行政法人等の保有する情報の公開に関する法律（平成13年法律第140号。以下「法」という。）に定めるもののほか、この規程に定めるところによる。

(定義)

第2条 この規程において、次の各号に掲げる用語の意義は、当該各号に定めるところによる。

- (1) 法人文書 法第2条第2項に規定する文書をいう。
- (2) 本所 茨城県つくば市に所在するセンターをいう。
- (3) 支所 独立行政法人国際農林水産業研究センターの組織に関する規程（13国研セ第4-25号。以下「組織規程」という。）第49条に規定する沖縄支所をいう。
- (4) 主管部課 独立行政法人国際農林水産業研究センター法人文書管理規程（14国研セ第8-65号。以下「法人文書管理規程」という。）第2条第6号に規定する部課をいう。
- (5) 他の独立行政法人等 センター以外の法第2条第1項に規定する独立行政法人等をいう。
- (6) 行政機関 行政機関の保有する情報の公開に関する法律（平成11年法律第42号。以下「行政機関情報公開法」という。）第2条第1項に規定する行政機関をいう。
- (7) 第三者 法第14条第1項に規定する第三者をいう。

第2章 情報公開の事務分掌

(情報公開窓口で行う事務)

第3条 本所に、センターにおける情報公開の窓口として情報公開窓口を置く。

- 2 情報公開窓口は、総務部庶務課とし、当該窓口においては次の各号に掲げる事務を行う。
 - (1) センターにおける情報公開に係る相談及び案内に関すること。
 - (2) センターにおける情報公開事務に係る総合的な連絡及び調整に関すること。
 - (3) センターにおける開示請求事案等の進行管理に関すること。
 - (4) センターにおける法の施行状況の取りまとめに関すること。
 - (5) 開示請求書の受付及び受理に関すること。
 - (6) 開示請求書の不備に係る補正の求めに関すること。
 - (7) 開示請求に係る法人文書を特定するための分掌窓口及び主管部課との連絡及び調整に関すること。
 - (8) 開示請求に係る主管部課の法人文書の検索及び特定に関すること。
 - (9) 開示請求に係る開示の実施方法等の申し出に係る書面及び更なる開示の申し出に係る書面の受付及び受理に関すること。
 - (10) 開示請求手数料又は開示実施手数料の徴収に関すること。
 - (11) 開示請求に係る文書の主管部課の法人文書に係る開示の実施に関すること。
 - (12) 法人文書の閲覧等を行う場所の提供に関すること。

(1 3) 異議申立てに係る開示請求者への指導並びに異議申立てに係る連絡及び調整に関すること。

(分掌窓口で行う事務)

第 4 条 支所に、情報公開に係る事務を行う分掌窓口を置く。

2 分掌窓口は、支所の庶務課とし、分掌窓口においては、次の各号に掲げる事務を行う。

- (1) 情報公開に係る相談及び案内に関すること。
- (2) 開示請求書の受付及び受理に関すること。
- (3) 開示請求書の不備に係る補正の求めに関すること。
- (4) 開示請求に係る所管する主管部課の法人文書の検索及び特定に関すること。
- (5) 開示請求に係る開示の実施方法等の申し出に係る書面及び更なる開示の申し出に係る書面の受付及び受理に関すること。
- (6) 開示請求手数料又は開示実施手数料の徴収に関すること。
- (7) 所管する主管部課の法人文書に係る開示の実施に関すること。
- (8) 法人文書の閲覧等を行う場所の提供に関すること。
- (9) 異議申立てに係る開示請求者への指導等に関すること。

第 3 章 開示請求の受理等

(相談及び案内)

第 5 条 情報公開窓口及び分掌窓口(以下「受付窓口」という。)は、情報公開を求める者の相談に応ずるとともに、情報公開制度の内容及び手続等について適切に説明するものとする。

2 受付窓口は、情報公開を求める者が必要としている情報の内容を確認するとともに、当該情報が次の各号に掲げるものである場合には当該各号に定めるところにより当該者に案内するものとする。

- (1) 官報、白書、新聞、雑誌、書籍その他不特定多数の者に販売することを目的として発行されているものである場合 その旨
- (2) 独立行政法人国立公文書館等(法第 2 条第 2 項に定める政令で定める公文書館その他の施設をいう。)において歴史的若しくは文化的な資料又は学術研究用資料として特別の管理がされているものである場合 その旨及びその連絡先
- (3) 法第 2 2 条第 1 項の規定に基づき提供される情報で対処できる場合 その旨及び主管部課
- (4) 法第 2 2 条第 1 項の規定に基づき提供される情報で対処できない場合 その旨及び開示請求手続

3 主管部課は、前項第 3 号に規定する提供できる情報については、極力情報の提供を行うものとする。なお、この場合においては、開示請求手数料又は開示実施手数料は徴収しないものとする。

(開示請求書の受付等)

第 6 条 受付窓口における開示請求書の受付時間は、午前 9 時から正午まで及び午後 1 時から午後 4 時 3 0 分までとする。

2 開示請求書の様式は、別紙様式 1 のとおりとする。なお、別紙様式 1 によらないもので開示請求がなされた場合であって、当該開示請求の書面に記載された内容が次条に定める確認事項が確認できるものである場合には、有効な請求として受け付けるものとする。

(開示請求書の記載事項の確認)

第7条 受付窓口は、受け付けた開示請求書について、次の各号に掲げる事項を確認するものとする。

- (1) あて先が正しく記載されていること。
- (2) 開示請求をする者の氏名又は名称及び住所又は居所並びに法人その他の団体にあつては代表者の氏名及び連絡先が記載されていること。
- (3) 請求する法人文書の名称等欄は、開示請求の対象となる法人文書を特定し、主管部課が特定できる程度に具体的な記載であること。
- (4) 求める開示の実施の方法等欄の記載がある場合にあっては、次に掲げる事項を確認する。
 - ア センターにおける開示の実施又は写しの送付のいずれかであるかの選択の有無
 - イ センターにおける開示の実施を希望する場合にあっては、実施の方法及び実施を希望する日

(開示請求書の補正等)

第8条 受付窓口は、前条に定める確認の結果、開示請求書に不備があつた場合で、当該不備が必要事項の記載漏れ、不鮮明又は不明確な記載その他形式上の不備であるときには、開示請求をする者に対して、直ちにその箇所を訂正し、又は補正するよう求めるものとする。この場合において、受付窓口は開示請求をする者に対し、訂正又は補正の参考となる情報を提供するよう努めるものとする。

- 2 受付窓口は、前条に定める確認の結果、開示請求書に不備があつた場合で、当該不備があて先の記載に係るもののみであるときには、前項の規定にかかわらず、職権をもって当該不備を補正することができる。この場合において、受付窓口は、開示請求をする者に対して、その旨を通知するものとする。

(開示請求手数料)

第9条 開示請求をする者は、開示請求手数料として、開示請求に係る法人文書1件につき300円をセンターに納めなければならない。ただし、開示請求をする者が、次の各号のいずれかに該当する複数の法人文書の開示請求を一の開示請求書によつて行う場合は、当該複数の法人文書を1件の法人文書とみなす。

- (1) 一の法人文書ファイル(法人文書管理規程第51条第2項に規定するものをいう。)にまとめられた複数の法人文書
 - (2) 前号に掲げるもののほか、相互に密接な関連を有する複数の法人文書
- 2 開示請求をする者は、前項の開示請求手数料を納付する場合には、銀行振込、郵便為替又は現金で納付するものとし、原則として、次の各号に掲げるとおり手続きを取らなければならない。
 - (1) 銀行振込で納付する場合 振込の事実を証明できる書類の写しを開示請求書とともに郵送し、又は直接受付窓口を持参する。
 - (2) 郵便為替で納付する場合 郵便為替を開示請求書とともに郵送し、又は直接受付窓口を持参する。
 - (3) 現金で納付する場合 開示請求書とともに直接受付窓口を持参する。
 - 3 受付窓口は、開示請求手数料が未納又は不足している場合には、開示請求をする者に対し、納付又は追納を求めるものとする。
 - 4 開示請求者が開示請求手数料を納付後、6か月以上経過して開示請求を行わない場合は支払に要する費用を除き、開示請求者に開示請求手数料同等額を支払うものとする。

(開示請求書の受理)

第10条 受付窓口は、第7条に定める開示請求書の確認（第8条に定める訂正又は補正後の確認を含む。）及び開示請求手数料の納付の完了の確認を行った後は、当該開示請求書に別紙様式2の受付印を押印し受理するとともに、次の各号に定める処理を行うものとする。

- (1) 受理した開示請求書の写しを、直接又は郵送により開示請求者に交付するとともに、受付窓口で保管する。
- (2) 受付窓口が分掌窓口である場合にあっては、情報公開窓口に当該受理した開示請求書の写しを送付する。
- (3) 情報公開窓口においては、センターにおける開示請求事案の進行管理のため、別紙様式3の法人文書開示請求等処理簿を備え、必要事項を記載する。

（開示請求があった日の取扱い）

第11条 法第10条第1項及び第11条に定める開示請求があった日は、前条の規定により受理した日とするものとする。

第4章 開示決定等

（法人文書の特定及び情報の審査等）

第12条 情報公開窓口は、開示請求書（第10条第2号の規定により分掌窓口から送付を受けた開示請求書の写しを含む。）を受理した後、速やかに、開示請求に係る法人文書を検索し、及び特定するものとする。この場合において、情報公開窓口は、必要に応じて、当該検索及び特定を分掌窓口に行わせることができる。

2 理事長は、法人文書の特定後、直ちに、当該法人文書に記載された情報が法第5条各号に掲げる情報（以下「不開示情報」という。）又は第7条若しくは第8条に掲げる情報に該当するかについて、審査を行うものとする。なお、理事長は、不開示情報が記載されている場合にあっては、部分開示についての検討も併せて行うものとする。

（第三者に対する意見書提出の機会の付与等）

第13条 理事長は、前条第1項の規定により特定した法人文書に、第三者に関する情報（以下「第三者情報」という。）が記録されている場合のうち、当該第三者情報が個人に関する情報又は法人その他の団体（国、独立行政法人等及び地方公共団体を除く。）に関する情報ではあるが、人の生命若しくは健康等を保護するために開示することが必要であると認める場合又は不開示情報が記録されている法人文書ではあるが、開示することに特に公益上必要があると認められる場合には、開示決定等をするに当たって、当該第三者に対し、別紙様式4の意見照会書により通知して、意見を提出する機会を与えなければならない。ただし、第三者の所在が判明しない場合には、この限りでない。

第14条 理事長は、第12条第1項の規定により特定した法人文書に、第三者情報が記録されている場合のうち、前条に掲げる場合以外の場合には、開示決定等をするに当たって、必要に応じ、当該第三者に対し、別紙様式5の意見照会書により通知して、別紙様式第6の法人文書の開示に関する意見書により意見を提出する機会を与えることができる。ただし、第三者情報が不開示情報に該当すること又は不開示情報に該当しないことが明らかであるときは、この限りでない。

（開示決定等の通知）

第15条 理事長は、法第10条第2項又は法第11条に該当する場合を除き、法第10条第1項に定める期間（以下「開示決定等期間」という。）内のできるだけ早

い時期に開示決定をするよう努めるものとし、開示決定等をした場合には、速やかに、別紙様式7の法人文書開示決定通知書又は別紙様式8の法人文書不開示決定通知書により開示請求者に通知するものとする。なお、法人文書開示決定通知書を送付する場合にあっては、別紙様式9（開示請求者の求める開示の実施の方法等欄を記載している場合）にあっては、別紙様式10）の法人文書の開示の実施方法等申出書を併せて送付するものとする。

- 2 情報公開窓口は、分掌窓口が受理した開示請求書に係る開示決定等については、前項の通知書の写しを当該分掌窓口へ送付するものとする。

（開示決定等の期間を延長する場合の手続等）

第16条 理事長は、法第10条第2項の規定により事務処理上の困難その他の正当な理由から開示決定等の期間を延長する場合には、別紙様式11の開示決定等の期の延長通知書により開示決定期間内に開示請求者に通知するものとする。

- 2 前条各項の規定は、前項の規定により延長した期間内に行う開示決定等に係る通知等について準用する。

（大量請求による期限の特例を適用する場合の手続等）

第17条 理事長は、大量請求のため事務の遂行に著しい支障が生ずるおそれがあると認める理由から法第11条に規定する開示決定等の期間の特例を適用する場合には、別紙様式12の開示決定等の期限の特例規定の適用通知書により開示決定期間内に開示請求者に通知するものとする。この場合において、理事長は、開示請求のあった日から60日以内に相当部分について開示決定等を行い、開示の実施までの処理を行うものとする。

- 2 第15条各項の規定は、前項の規定により開示請求のあった日から60日以内に行う開示決定等及び残りの法人文書の開示決定等に係る通知等について準用する。

（第三者への開示決定の通知等）

第18条 理事長は、第13条又は第14条の規定により意見書の提出の機会を与えた第三者が反対意見書を提出した場合において開示決定をしたときは、直ちに当該第三者に対し、別紙様式13の法人文書の開示決定通知書により通知するものとする。

- 2 理事長は、第13条又は第14条の規定により意見書の提出の機会を与えた第三者が反対意見書を提出した場合において開示を実施するときは、開示決定をした日と開示を実施する日との間を少なくとも2週間を置かなければならない。

第5章 開示の実施等

（申出書の受理）

第19条 受付窓口は、開示請求者から法人文書の開示の実施方法等申出書又は第23条に定める法人文書の更なる開示の申出書（以下「申出書」という。）の提出があった場合には、法人文書管理規程第18条第1項に規定する接受印を押印し受理するものとする。

- 2 受付窓口が分掌窓口である場合にあっては、情報公開窓口へ当該受理した申出書の写しを送付するものとする。

（開示実施手数料）

第20条 開示請求者は、開示実施手数料として、開示を受ける法人文書1件につき、別表の左欄に掲げる法人文書の種別ごとに、同表の中欄に掲げる開示の実施の方法に応じ、それぞれ同表の右欄に定める額（複数の実施の方法により開示を受ける場合にあっては、その合計額。以下「基本額」という。）をセンターに納めなければ

ならない。ただし、基本額（第23条第1項の規定により更に開示を受ける場合にあっては、当該開示を受ける場合の基本額に、すでに開示を求めた際の基本額を加えた額）が300円に達するまでは無料とし、300円を超えるとき（同項の規定により更に開示を受ける場合であって、既に開示の実施を求めた際の基本額が300円を超えるときを除く。）は当該基本額から300円を減じた額とする。

- 2 開示請求者が、第9条第1項各号のいずれかに該当する複数の法人文書の開示請求を一の開示請求書によって行った場合で、かつ、当該複数である法人文書の開示を受ける場合における前項ただし書の規定の適用については、当該複数である法人文書に係る基本額に、先に開示の実施を求めた当該複数の法人文書である他の法人文書に係る基本額に順次加えた額を基本額とみなす。
- 3 開示請求者は、法人文書の写しの送付により開示を受ける場合には、前項の開示実施手数料のほか、送付に要する費用をセンターに納めなければならない。
- 4 開示請求者は、第1項の開示実施手数料及び前項の送付に要する費用（以下「開示実施手数料等」という。）を納付する場合には、銀行振込、郵便為替又は現金で納付するものとし、原則として、次の各号に掲げるとおり手続きを取らなければならない。
 - (1) 銀行振込で納付する場合 振込の事実を証明できる書類の写しを法人文書の開示の実施方法書等申出書とともに郵送し、又は直接受付窓口に持参する
 - (2) 郵便為替で納付する場合 郵便為替を法人文書の開示の実施方法書等申出書とともに郵送し、又は直接受付窓口に持参する
 - (3) 現金で納付する場合 法人文書の開示の実施方法書等申出書とともに直接受付窓口に持参する
- 5 受付窓口は、開示実施手数料等が未納又は不足している場合には、開示請求者に対し、納付又は追納を求めるものとする。

（開示実施手数料の免除）

第21条 理事長は、開示請求者が別紙様式14の開示実施手数料の減額（免除）申請書に次の各号のいずれかの書面を添付して申請した場合には、2,000円を限度として、開示実施手数料を減額し、又は免除することができる。なお、この場合において、理事長は、減額し、又は免除する場合にあっては法人文書開示決定通知書を再度送付するとともに、別紙様式15の開示実施手数料の減額（免除）決定通知書を併せて送付するものとし、減額せず、又は免除しない場合にあっては別紙様式16の開示実施手数料の減額（免除）非承認通知書を送付するものとする。

- (1) 生活保護法（昭和25年法律第144号）による扶助を受けている事実を証明する書面
- (2) 同一の世帯に属する者のすべてが市町村民税が非課税である旨を明らかにできる書面
- (3) らい予防法の廃止に関する法律（平成8年法律第28号）第6条による援護を受けていることを明らかにできる書面

（開示の実施）

第22条 情報公開窓口は、開示請求者から提出された法人文書の開示の実施方法等申出書による申し出のとおり開示の実施を行うものとする。ただし、法人文書の開示の実施方法等申出書による申し出が開示請求者が法人文書開示決定通知書を受け取った日から30日以内になされなかった場合（当該期間内に当該申し出をすることができないことにつき正当な理由があるときを除く。）は、開示の実施を行う必要はないものとする。

- 2 情報公開窓口は、分掌窓口の所管する主管部課に係る法人文書の開示の実施を当

該分掌窓口に行わせる場合には、法人文書開示決定通知書及び法人文書の開示の実施方法等申出書の写しを送付するものとする。ただし、分掌窓口で開示請求書を受理している場合又は法人文書の開示の実施方法等申出書を受理している場合には、当該通知書又は申出書の写しの送付は要しないものとする。

(更なる開示の実施)

- 第23条 情報公開窓口は、開示決定に基づき法人文書の開示を受けた者から、最初に開示を受けた日(写しの送付の方法による場合には、当該写しが開示請求者に到達した日)から30日以内に別紙様式17の法人文書の更なる開示の申出書によりさらに開示を受ける旨の申し出があった場合には、開示を実施しなければならない。
- 2 前条第2項の規定は、前項の更なる開示の実施を分掌窓口に行わせる場合について準用する。この場合において、前条第2項中「法人文書の開示の実施方法等申出書」とあるのは「法人文書の更なる開示の申出書」と読み替えるものとする。

(開示の立会い等)

- 第24条 情報公開窓口(第22条第2項又は前条第2項の規定により分掌窓口に行わせる場合にあっては、分掌窓口。第26条において同じ。)は、開示請求のあった法人文書の開示を実施する場合にあっては、当該法人文書の主管部課の職員(主管部課の職員の立会いが困難である場合にあっては、これに代わる職員)に次の各号に掲げる事務を行わせるものとする。

- (1) 開示の場所に、開示に係る法人文書又は交付する法人文書の写しを持参し、開示に立ち会うこと。
- (2) 開示請求者の求めに応じて必要な説明を行うこと。

(開示の方法)

- 第25条 法人文書の開示の方法は、次の各号に掲げるとおりとし、当該各号に定めるところにより行うものとする。

- (1) 文書等の閲覧 文書、図面及び写真は、原本を閲覧に供するものとする。ただし、次に掲げる場合には、その写しを閲覧に供するものとする。
- ア 原本を閲覧に供することにより、原本の保存に支障が生ずるおそれがあるとき。
- イ 日常業務に使用している帳票等を閲覧に供することにより、業務に支障が生ずるとき。
- ウ 法人文書の一部を開示する場合で、必要と認めるとき。
- エ その他正当な理由があるとき。
- (2) 電磁的記録の閲覧 記録された情報を通常の方法により印字装置を用いて紙に出力したものを閲覧に供するものとする。
- (3) 視聴 録音テープ又は録画テープ等は、再生機器等により視聴に供するものとする。
- (4) 写しの交付 主管部課において法人文書の写しを作成し、交付するものとする。

(部分開示の方法)

- 第26条 情報公開窓口は、法人文書の部分開示をする場合においては、次の各号に定めるところにより行うものとする。

- (1) 開示する部分は、有意の情報が記録されており、かつ、当該部分を開示することにより当該法人文書の理解に誤解を生じさせない範囲で、できる限り多く開示するものとする。
- (2) 開示部分と不開示部分が別の頁に記録されているときは、当該不開示部分が記録されている頁を取り外す、袋をかけるその他の方法により区分し、開示部分を

閲覧に供するものとする。

- (3) 開示部分と不開示部分が同一の頁に記録されているときは、当該法人文書全体を複写し、その複写したものの不開示部分を黒塗りし、それを再度複写するなどにより、不開示情報の判読が不可能となったものを閲覧に供するものとする。
- (4) 録音テープ及び録画テープ等の部分開示は、不開示部分のみを除去することが困難な場合は、容易に区分して除くことができる範囲で部分開示を行うものとする。

第6章 事案の移送等

(事案の移送の単位)

第27条 法第12条第1項又は法第13条第1項の規定により事案を移送する場合の移送の単位は、原則として、法人文書を単位として行うものとする。

(事案の移送の協議)

第28条 理事長は、開示請求書(第10条第2号の規定により分掌窓口から送付を受けた開示請求書の写しを含む。次条において同じ。)が次の各号に掲げる場合には、当該各号に掲げる機関に対し、事案の移送に関する協議を行うものとする。

- (1) 開示請求に係る法人文書が他の独立行政法人等又は行政機関(以下「他の機関」という。)により作成されたものである場合 当該他の機関
- (2) 開示請求に係る法人文書が他の機関と共同で作成されたものである場合 当該他の機関
- (3) 開示請求に係る法人文書に記載されている情報を公にすることにより、国の安全が害されるおそれ、他国若しくは国際機関との信頼関係が損なわれるおそれ又は他国若しくは国際機関との交渉上不利益を被るおそれがあると認める場合 当該情報に係る行政機関の長
- (4) 開示請求に係る法人文書に記載されている情報を公にすることにより、犯罪の予防、鎮圧又は捜査その他の公共安全と秩序の維持に支障を及ぼすおそれがあると認める場合 当該情報に係る行政機関の長
- (5) 開示請求に係る法人文書に記載されている情報の重要な部分が他の機関の事務又は事業に係るもの(開示請求に係る法人文書に記載されている情報が、既に公にされ、又は公にする予定が明らかであると認めるものを除く。)である場合 当該他の機関
- (6) その他、他の機関において開示決定することにつき正当な理由がある場合 当該他の機関

2 開示請求に係る法人文書が複数であって、かつ、それぞれが複数の機関により作成されたものである場合には、記録されている情報の内容により他の機関が開示決定等の判断を行うことが適当な場合には、当該複数の法人文書のうち一部について事案の移送に関する協議を行うものとする。

(協議の期間)

第29条 事案の移送に関する協議は、開示請求書を受理した後速やかに開始し、原則として1週間以内に終了するよう努めるものとする。

(事案の移送)

第30条 理事長は、事案の移送に関する協議の結果、他の機関に対して事案を移送する場合には、別紙様式18の書面に次の各号に掲げる資料等を添付して行うものとする。なお、複数の他の機関に対して事案を移送する場合には、その旨を当該書面に記載するものとする。

(1) 開示請求書

(2) 移送前にした行為があれば、その経過を記載した書面

2 情報公開窓口は、前項の規定により事案が移送される場合には、当該開示請求書の写しを作成し、保管するものとする。

(開示請求者への通知)

第 3 1 条 理事長は、事案の移送に関する協議の結果、他の機関に対して事案を移送した場合には、別紙様式 1 9 の書面により開示請求者にその旨を直ちに通知するとともに、当該事面の写しを事案を移送した他の機関に送付するものとする。

(移送された事案に係る協力等)

第 3 2 条 情報公開窓口は、第 3 0 条第 1 項の規定により移送した事案が開示決定された場合には、次の各号に掲げる協力を行うものとする。

(1) 移送前にした行為の記録及び提供

(2) 開示請求書及び事案を移送した旨の書面の写しの提供

(3) 開示決定をした他の機関が開示請求に係る法人文書を保有していない場合には、開示請求に係る法人文書の写しの提供又は原本の貸与

(4) 原本を閲覧する方法による開示の実施のための法人文書の貸与又は開示の場所の提供

(事案の移送を受けた場合の措置結果の報告)

第 3 3 条 理事長は、他の機関から事案の移送を受けた場合で開示決定等を行った場合には、速やかに当該事案の移送を行った他の機関に対し、開示決定等の結果の報告を行うものとする。

(移送が行われた場合の開示実施手数料)

第 3 4 条 開示請求に係る法人文書が複数である場合であって、複数の他の機関に事案の移送が行われ、かつ、他の機関及び自らも開示決定をする場合には、次の各号に定めるところにより開示実施手数料に係る第 2 0 条第 1 項ただし書きの控除措置（以下「控除措置」という。）を取るものとする。この場合において、情報公開窓口は、当該複数の他の機関と協議して行うものとする。

(1) 自らの開示決定が複数の他の機関より早く行われた場合 控除措置を取るものとする。

(2) 他の機関の開示決定が自らの開示決定より早く行われた場合 次に定めるところにより控除措置を取るものとする。

ア 自らの開示決定より早く開示決定をした他の機関すべてにおいて開示実施手数料に係る控除が行われない場合 控除措置を取るものとする。

イ 自らの開示決定より早く開示決定をした他の機関において開示実施手数料の控除が行われた場合 当該控除が行われた開示決定が自らの開示決定とみなして第 2 0 条第 1 項ただし書きの規定を適用して得られる控除可能な残額を控除するものとする。

2 他の機関から移送された場合の開示実施手数料は、他の機関の開示請求に係る手数料の額に相当する額により控除措置を取るものとする。

第 7 章 異議申立て等

(異議申立書の審査及び受理等)

第 3 5 条 法人文書の開示決定等に対する行政不服審査法（昭和 3 7 年法律第 1 6 0 号）の規定に基づく異議申立ての受付及び受理は、情報公開窓口において行うものとする。

2 情報公開窓口は、開示請求者から口頭で異議申立てがあった場合には、行政不服審査法第9条第1項の規定により次の各号に掲げる事項を記載した書面（以下「異議申立書」という。）によることを要する旨を指導するものとする。

- (1) あて名
- (2) 異議申立人の氏名及び年齢又は名称並びに住所（法人その他の団体である場合にあっては、名称及び所在地）
- (3) 異議申立てに係る処分
- (4) 異議申立てに係る処分（以下「原処分」という。）のあったことを知った年月日
- (5) 異議申立ての趣旨及びその理由
- (6) 処分庁の教示の有無及びその内容
- (7) 異議申立年月日
- (8) 異議申立人が法人その他の団体であるとき、総代を互選したとき又は代理人によって異議申立てをするとき、その代表者若しくは管理人、総代又は代理人の氏名及び住所
- (9) 異議申立人（異議申立人が法人その他の団体であるときはその代表者又は管理人、総代を互選したときは総代、代理人によって異議申立てをときは代理人）の押印

3 情報公開窓口は、開示請求者から異議申立書の提出があった場合には、前項各号に掲げる記載事項の審査を行った後、記載事項に誤りがない場合又は不適法ではあるが補正することができる場合には法人文書管理規程第18条第1項に規定する接受印を押印し受理するとともに、次の各号に掲げる事務を行うものとする。なお、この場合において、異議申立書が不適法ではあるが補正できる場合においては、2週間程度の期間を定めて、その補正を命ずるものとする。

- (1) 当該異議申立書の写しを異議申立人に交付するとともに、情報公開窓口で保管する。
 - (2) 処理経過を把握できるよう、法人文書開示請求等処理簿を備え、必要事項を記載する。
- 4 分掌窓口は、開示請求者から異議申立てがあった場合は、異議申立書の提出先が情報公開窓口である旨を指導するものとする。

（異議申立ての却下の決定）

第36条 理事長は、異議申立てが次の各号のいずれかに該当する場合は、当該異議申立てを却下する決定をするとともに、決定書を異議申立人に送付するものとする。

- (1) 異議申立てが異議申立期間（原則として「処分があったことを知った日の翌日から起算して60日以内」。）の経過後にされたものであるとき。
- (2) 異議申立てをすべき処分機関を誤ったものであるとき。
- (3) 異議申立適格のない者からの異議申立てであるとき。
- (4) 存在しない開示決定等についての異議申立てであるとき。
- (5) 異議申立書記載の不備等について、補正を命じたにもかかわらず、異議申立人が補正を行わないため、形式的不備である異議申立てであるとき。

（異議申立てを容認する決定）

第37条 理事長は、原処分について再検討を行い、その結果、異議申立てを容認し、全部を開示しようとするときは、次の各号に定めるところにより処理するものとする。ただし、第三者が反対意見書を提出していない場合に限る。

- (1) 決定により原処分を変更し、全部を開示する旨の決定をする。
- (2) 法人文書開示決定通知書及び決定書を異議申立人に送付する。この場合におい

て、法人文書開示決定通知書の備考欄には、法人文書開示異議申立て容認による再決定である旨記載する。

(情報公開審査会への諮問)

第38条 理事長は、当該異議申立てを第36条の規定に基づき却下する場合及び前条の規定に基づき容認する場合を除き、遅滞なく、情報公開審査会(法第18条第2項に規定するものをいう。以下「審査会」という。)に対し、別紙様式20の諮問書に次の各号に掲げる書類を添えて諮問するものとする。

- (1) 開示請求書
- (2) 法人文書開示決定通知書等及び異議申立書の写し
- (3) 処分機関としての考え方とその理由を記載した理由説明書
- (4) その他必要と認める書類

2 理事長は、審査会に諮問したときは、遅滞なく、別紙様式21の法人文書審査諮問通知書により次の各号に掲げる者に通知するものとする。

- (1) 異議申立人及び参加人
- (2) 開示請求者(開示請求者が異議申立人又は参加人である場合を除く。)
- (3) 当該原処分についての反対意見書を提出した第三者(当該第三者が異議申立人又は参加者である場合を除く。)

(異議申立てに対する決定)

第39条 理事長は、前条第1項の規定により審査会に諮問した異議申立てについて、審査会から答申があったときには、速やかに異議申立てに対する決定を行い、前条第2項各号に掲げる者に決定書を送付するものとする。

(第三者からの異議申立てを棄却する場合等の手続)

第40条 第18条第2項の規定は、次の各号のいずれかに該当する決定をする場合において準用する。

- (1) 開示決定に対する第三者からの異議申立てを却下し、又は棄却する決定をする場合
- (2) 原処分を変更し、当該原処分に係る法人文書を開示する旨の決定(第三者である参加人が当該法人文書の開示に反対の意思を表示している場合に限る。)をする場合

(異議申立てに対する情報公開窓口の連絡及び調整)

第41条 情報公開窓口は、開示決定等に係る異議申立てに関する事務が円滑に遂行できるよう、分掌窓口又は主管部課等との連絡および調整を行うものとする。

第8章 雑則

(公開窓口における掲示等)

第42条 公開窓口は、開示請求をしようとする者の便宜を図るため、わかりやすい場所に次の各号に掲げる事項を掲示しておくよう努めるものとする。

- (1) 受付時間に関する事項
- (2) 開示請求手数料に関する事項
- (3) 開示実施手数料及び当該手数料の減額又は免除に関する事項

(その他)

第43条 この規程に定めるもののほか、センターにおける情報公開の実施に関し必要な事項は、理事長が別に定める。

附 則
この規程は、平成 1 4 年 1 0 月 1 日から施行する。

別表（第20条第1項関係）

法人文書の種類	開示の実施の方法	開示実施手数料の額
1 文書又は図面 (2の項から4の項まで又は8の項に該当するものを除く。)	ア 閲覧	100枚までごとにつき100円
	イ 撮影した写真フィルムを印画紙に印画したものの閲覧	1枚につき100円に12枚までごとに750円を加えた額
	ウ 複写機により複写したものの交付	用紙1枚につき20円(A2判については60円、A1判については110円)
	エ 撮影した写真フィルムを印画紙に印画したものの交付	1枚につき130円(縦203ミリメートル、横254ミリメートルのものについては、530円)に12枚までごとに750円を加えた額
2 マイクロフィルム	ア 用紙に印刷したものの閲覧	用紙1枚につき10円
	イ 専用機器により映写したものの閲覧	1巻につき300円
	ウ 用紙に印刷したものの交付	用紙1枚につき70円(A3判については130円、A2判については250円、A1判については510円)
3 写真フィルム	ア 印画紙に印画したものの閲覧	用紙1枚につき10円
	イ 印画紙に印画したものの交付	1枚につき30円(縦203ミリメートル、横254ミリメートルのものについては、440円)
4 スライド(9の項に該当するものを除く。)	ア 専用機器により映写したものの閲覧	1巻につき400円
	イ 印画紙に印	1枚につき120円(縦203ミリ

	画したものの 交付	メートル、横 254 ミリメートル のものについては、1,500 円)
5 録音テープ(9 の項に該当する ものを除く。)又 は録音ディスク	ア 専用機器に より再生した ものの聴取	1 巻につき 300 円
	イ 録音カセッ トテープに複 写したものの 交付	1 巻につき 600 円
6 ビデオテープ 又はビデオディ スク	ア 専用機器に より再生した ものの視聴	1 巻につき 300 円
	イ 録画カセッ トテープに複 写したものの 交付	1 巻につき 700 円
7 電磁的記録(5 の項、 6 の項又 は 8 の項に該当 するものを除 く。)	ア 用紙に出力 したものの閲 覧	用紙 100 枚までごとに 200 円
	イ 専用機器に より再生した ものの閲覧又 は視聴	0.5 メガバイトまでごとに つき 550 円
	ウ 用紙に出力 したものの交 付	用紙 1 枚につき 20 円
	エ フレキシブ ルカートリッ ジに複写した ものの交付	1 枚につき 80 円に 0.5 メガバ イトまでごとに 220 円を加えた額
	オ 光ディスク に複写したも のの交付	1 枚につき 200 円に 0.5 メガバ イトまでごとに 220 円を加えた 額
	カ 幅 12 . 7 ミリメートル のオープンリ ールテープに 複写したもの の交付	1 巻につき 4,000 円に 1 メガバ イトまでごとに 220 円を加えた 額

	キ 幅 12.7 ミリメートル の磁気テープ カートリッジ に複写したも のの交付	1巻につき 1,900 円 (日本工業規格 X 6135 に適合するものについては 2,800 円、国際規格 14833、15895 又は 15307 に適合するものについてはそれぞれ 7,200 円、9,800 円又は 16,800 円) に 1 メガバイトまでごとに 220 円を加えた額
	ク 幅 8 ミリメ ートルの磁気 テープカート リッジに複写 したものの交 付	1巻につき 1,250 円 (日本工業規格 X 6142 に適合するものについては 2,450 円、国際規格 15757 に適合するものについては 13,400 円) に 1 メガバイトまでごとに 220 円を加えた額
	ケ 幅 3.81 ミリメートル の磁気テープ カートリッジ に複写したも のの交付	1巻につき 980 円 (日本工業規格 X 6129,6130 又は 6137 に適合するものについてはそれぞれ 2,000 円、4,150 円又は 6,000 円) に 1 メガバイトまでごとに 220 円を加えた額
8 映画フィルム	ア 専用機器に より映写した ものの視聴	1巻につき 400 円
	ケ ビデオカセ ットテープに 複写したもの の交付	3,300 円 (16 ミリメートル映画フィルムについては 12,300 円、35 ミリメートル映画フィルムについては 14,000 円) に記録時間 10 分までごとに 1,550 円 (16 ミリメートル映画フィルムについては 3,650 円、35 ミリメートル映画フィルムについては 4,450 円) を加えた額
9 スライド及び 録音テープ (ス ライド及び当該 スライドの内容 に関する音声を 録音した録音テ ープを同時に開 示する場合に限 る。)	ア 専用機器に より再生した ものの視聴	1巻につき 700 円
	イ ビデオカセ ットテープに 複写したもの の交付	5,200 円 (スライド 20 枚を超える場合にあっては、5,200 円にその超える枚数 1 枚につき 110 円を加えた額)

備考 1 項のウ若しくはエ又は 7 項のウの場合において、両面印刷の用紙を用いるときは、片面を 1 枚として額を算出する。

法人文書開示請求書

平成 年 月 日

独立行政法人国際農林水産業研究センター理事長 殿

(法人その他の団体にあつてはその名称及び代表者氏名)

氏名又は名称:

(法人その他の団体にあつては主たる事務所の所在地)

法人文書の開示決定通知書（別紙）

< 説明事項 >

1 「開示の実施の方法等」の選択について

開示の実施の方法等については、この通知書を受け取った日から30日以内に、同封した「法人文書の開示の実施方法等申出書」に所要の開示実施手数料を納付して、申出を行ってください。開示の実施の方法は、3(1)「開示の実施の方法等」に記載されている方法から自由に選択できます。必要な部分のみの開示を受けること（例えば、100頁ある文書について冒頭の10頁のみ閲覧する等）や部分ごとに異なる方法を選択すること（冒頭の10頁は「写しの交付」を受け、残りは閲覧する等）もできます。一旦、閲覧をした上で、後に必要な部分の写しの交付を受けることもできます（ただし、その場合は、最初に閲覧を受けた日から30日以内に、別途「法人文書の更なる開示の申出書」を提出していただく必要があります。）。

事務所における開示の実施を選択される場合は、3(2)「事務所における開示を実施することができる日時、場所」に記載されている日時から、御希望の日時を選択してください。記載された日時に都合がよいものがない場合は、お手数ですが、「4 担当課等」に記載した担当までご連絡ください。なお、開示の実施の準備を行う必要がありますので、「法人文書の開示の実施方法等申出書」は開示を受ける希望日の3日前には、当方に届くように御提出願います。

また、写しの送付を希望される場合は、「法人文書の開示の実施方法等申出書」にその旨を記載してください。

なお、この場合は、開示実施手数料のほかに、送付に要する費用が必要になります。

2 開示実施手数料の算定について

(1) 手数料額の計算方法

開示実施手数料は、選択された開示の実施の方法に応じて、定められた算定方法に従って基本額（複数の実施の方法を選択した場合はそれぞれの合算額）を計算し、その額が300円までは無料、300円を超える場合は当該額から300円を差し引いた額となります。

（例）

150頁ある法人文書を閲覧する場合：

100枚までごとにつき100円 基本額200円 手数料は無料

150頁ある法人文書の写しの交付を受ける場合：

用紙1枚につき20円 基本額3,000円 手数料は2,700円

150頁ある法人文書のうち100頁を閲覧し、10頁について写しの交付を受ける場合（残りの40頁は開示を受けない）：

閲覧に係る基本額100円 + 写しの交付に係る基本額200円 = 計300円

手数料は無料

(2) 手数料の減免

生活保護を受けているなど経済的困難により手数料を納付する資力がないと認められる方については、開示請求1件につき2,000円を限度として、手数料の減額又は免除を受けることができます。減額又は免除を受けたい方は、「開示実施手数料の減額（免除）申請書」を御提出してください。

3 不開示部分に係る不服申立て等

開示しないこととされた部分について、不服がある場合には、行政不服審査法（昭和37年法律第160号）第5条（第6条）の規定により、この決定があったことを知った日の翌日から起算して60日以内に、独立行政法人国際農林水産業研究センターに対して審査請求（異議申立て）をすることができます。

4 開示の実施について

事務所における開示の実施を選択され、その旨「法人文書の開示の実施方法等申出書」により申し出られた場合は、開示を受ける当日、事務所に来られる際に、本通知書をご持参ください。

5 担当課等

開示の実施の方法等、開示実施手数料の算定・納付方法、不服申立ての方法等について、ご不明な点等がございましたら、本欄に記載した担当までお問い合わせください。

国際農林水産業研究センター文書開示決定等審査基準

14国研セ第9-121号

平成14年9月20日

1 第5条第1号（個人に関する情報）関係

1 個人に関する情報（事業を営む個人の当該事業に関する情報を除く。）であって、当該情報に含まれる氏名、生年月日その他の記述等により特定の個人を識別することができるもの（他の情報と照合することにより、特定の個人を識別することができることとなるものを含む。）又は特定の個人を識別することはできないが、公にすることにより、なお個人の権利利益を害するおそれがあるもの。ただし、次に掲げる情報を除く。

イ 法令の規定により又は慣行として公にされ、又は公にすることが予定されている情報
ロ 人の生命、健康、生活又は財産を保護するため、公にすることが必要であると認められる情報

ハ 当該個人が公務員等（国家公務員法（昭和22年法律第120号）第2条第1項に規定する国家公務員（独立行政法人通則法第2条第2項に規定する特定独立行政法人の役員及び職員を除く。）、独立行政法人等（独立行政法人等の保有する情報の公開に関する法律（平成13年法律第140号。以下「独立行政法人等情報公開法」という。）第2条第1項に規定する独立行政法人等をいう。以下同じ。）の役員及び職員並びに地方公務員法（昭和25年法律第261号）第2条に規定する地方公務員をいう。）である場合において、当該情報がその職務の遂行に係る情報であるときは、当該情報のうち、当該公務員等の職及び当該職務遂行の内容に係る部分

【趣旨】

本号は、個人に関する情報の不開示情報としての要件を定めるものである。

【解説】

地方公共団体の情報公開条例や諸外国の情報公開法制の中には、個人に関する情報のうち、個人のプライバシー等の権利利益を害するおそれがあるものに限って不開示情報とする方式（プライバシー保護型）を採用しているものもあるが、我が国では、いわゆるプライバシーの概念は、法的にも社会通念上も必ずしも確立したものではないことから、本法では、個人の権利利益の十分な保護を図るため、特定の個人を識別できる情報は、原則として不開示とする方式（個人識別型）を採用している。ただし、個人識別型を採用した結果、本来保護する必要性のない情報も含まれることになることから、公知の情報等個人に関する情報の不開示情報から除かれるべきものを限定列挙している。

1 特定の個人を識別することができる情報（本文）

(1) 「個人に関する情報」

「個人に関する情報」（以下「個人情報」という。）とは、個人の内心、身体、身分、地位その他個人に関する一切の事項について的事实、判断、評価等のすべての情報が含まれるものであり、個人に関連する情報全般を意味する。したがって、個人の属性、人格や私生活に関する情報に限らず、個人の知的創作物に関する情報、組織体の構成員としての個人の活動に関する情報も含まれる。

個人の権利利益を十全に保護するため、個人識別性のある情報を一般的に不開示とし、個人情報の判断に当たり、原則として、公務員に関する情報と非公務員に関する情報とを区別していない。ただし、前者については、特に不開示とすべきでない情報を八において除外している。

「個人」には、生存する個人のほか、死亡した個人も含まれる。生前に本号により不開示で

あった情報が、個人が死亡したことをもって開示されることとなるのは不適當である。

(2) 「(事業を営む個人の当該事業に関する情報を除く。)」

「事業を営む個人の当該事業に関する情報」は、個人情報の意味する範囲に含まれるが、当該事業に関する情報であるので、法人等に関する情報と同様の要件により不開示情報該当性を判断することが適當であることから、本号の個人情報からは除外している。

(3) 「当該情報に含まれる氏名、生年月日その他の記述等により特定の個人を識別することができるもの」

「特定の個人を識別することができるもの」の範囲は、当該情報に係る個人が誰であることを識別させることとなる氏名その他の記述の部分だけでなく、氏名その他の記述等により識別される特定の個人情報の全体である。

「その他の記述等」としては、例えば、住所、電話番号、役職名、個人別に付された記号、番号(振込口座番号、試験の受験番号、保険証の記号番号等)等が挙げられる。氏名以外の記述等単独では、必ずしも特定の個人を識別することができない場合もあるが、当該情報に含まれるいくつかの記述等が組み合わされることにより、特定の個人を識別することができることとなる場合が多いと考えられる。

(4) 「(他の情報と照合することにより、特定の個人を識別することができることとなるものを含む。)」

当該情報単独では特定の個人を識別することができないが、他の情報と照合することにより特定の個人を識別することができるものについても、個人識別情報として不開示情報となる趣旨である。

照合の対象となる「他の情報」としては、公知の情報や、図書館等の公共施設で一般に入手可能なものなど一般人が通常入手し得る情報が含まれる。また、何人も開示請求できることから、仮に当該個人の近親者、地域住民等であれば保有している又は入手可能であると通常考えられる情報も含まれると解する。他方、特別の調査をすれば入手し得るかも知れないような情報については、一般的には、「他の情報」に含めて考える必要はないものと考えられる。

照合の対象となる「他の情報」の範囲については、当該個人情報の性質や内容等に応じて、個別に適切に判断することが必要となる。

また、識別可能性の判断に当たっては、厳密には特定の個人を識別することができる情報ではないが、特定の集団に属する者に関する情報を開示すると、当該集団に属する個人に不利益を及ぼすおそれがある場合があり得る。このように、当該情報の性質、集団の性格、規模等により、個人の権利利益の十全な保護を図る観点から、個人識別性を認めるべき場合があり得る。

(5) 「特定の個人を識別することができないが、公にすることにより、なお、個人の権利利益を害するおそれがあるもの」

独立行政法人が保有する個人情報の大部分は、特定の個人を識別することができる情報であり、これを不開示情報とすることで、個人の権利利益の保護は基本的には十分確保されることが考えられる。

しかしながら、中には、匿名の作文や、無記名の個人の著作物のように、個人の人格と密接に関連したり、公にすれば財産権その他の個人の正当な権利利益を害するおそれがあると認められるものがあることから、特定の個人を識別できない個人情報であっても、公にすることにより、なお、個人の権利利益を害するおそれがある場合について、補充的に不開示情報として規定したものである。

2 「法令の規定により又は慣行として公にされ、又は公にすることが予定されている情報」(ただし書イ)

個人識別情報であっても、一般に公にされている情報については、あえて不開示情報として

保護する必要性に乏しいものと考えられることから、ただし書により、本号の不開示情報から除くこととしたものである。

(1) 「法令の規定により」

「法令の規定」は、何人に対しても等しく当該情報を公開することを定めている規定に限られる。公開を求める者又は公開を求める理由によっては公開を拒否する場合が定められていれば、当該情報は、「公にされている情報」には該当しない。

(2) 「慣行として」

公にすることが慣習として行われていることを意味するが、慣習法としての法規範的な根拠を要するものではなく、事実上の慣習として公にされていること又は公にすることが予定されていることで足りる。

当該情報と同種の情報が公にされた事例があったとしても、それが個別的な事例にとどまる限り、「慣行として」には当たらない。

(3) 「公にされ」

当該情報が、現に公衆が知り得る状態に置かれていれば足り、現に公知（周知）の事実である必要はない。過去に公にされたものであっても、時の経過により、開示請求の時点では公にされているとは見られない場合があり得る。

(4) 「公にすることが予定されている情報」

将来的に公にする予定（具体的に公表が予定されている場合に限らず、求めがあれば何人にも提供することを予定しているものも含む。）の下に保有されている情報をいう。ある情報と同種の情報が公にされている場合に、当該情報のみ公にしないとする合理的な理由がないなど、当該情報の性質上通例公にされるものも含む。

3 「人の生命、健康、生活又は財産を保護するため、公にすることが必要であると認められる情報」（ただし書口）

人の生命、健康その他の基本的な権利利益を保護することは、独立行政法人の基本的な責務である。

不開示情報該当性の判断に当たっては、開示することの利益と開示されないことの利益との調和を図ることが重要であり、個人情報についても、公にすることにより害されるおそれがある当該情報に係る個人の権利利益よりも、人の生命、健康等の保護の必要性が上回る場合には、当該個人情報を開示する必要性と正当性が認められることから、当該情報を開示しなければならないこととするものである。現実には、人の生命、健康等に被害が発生している場合に限らず、将来これらが侵害される蓋然性が高い場合も含まれる。

この比較衡量に当たっては、個人の権利利益にも様々なものがあり、また、人の生命、健康、生活又は財産の保護にも、保護すべき権利利益の程度に差があることから、個別の事案に応じた慎重な検討が必要である。

なお、人の生命、健康等の基本的な権利利益の保護以外の公益との調整は、公益上の理由による裁量的開示の規定（法第7条）により図られる。

4 「当該個人が公務員である場合において、当該情報とその職務の遂行に係る情報であるときは、当該情報のうち、当該公務員の職及び当該職務遂行の内容に係る部分」（ただし書八）

法人文書には、業務遂行の主体である公務員の職務活動の過程又は結果が記録されているものが多いが、政府の諸活動を説明する責務が全うされるようにするという観点からは、これらの情報を公にする意義は大きい。一方で、公務員についても、個人としての権利利益は、十分に保護する必要がある。

この両者の要請の調和を図る観点から、どのような地位、立場にある者（「職」）がどのように職務を遂行しているか（「職務遂行の内容」）については、たとえ、特定の公務員が識別される結果となるとしても、個人に関する情報としては不開示とはしないこととする趣旨であ

る。

(1) 「当該個人が公務員である場合において」

個人情報のうち、当該個人が「公務員」である場合である。

「公務員」の職務遂行に係る情報が職務遂行の相手方等公務員以外の個人情報である場合がある。このように一つの情報が複数の個人情報である場合には、各個人ごとに不開示情報該当性を判断する必要がある。すなわち、当該公務員にとっての不開示情報該当性と他の個人にとっての不開示情報該当性が別個に検討され、そのいずれかに該当すれば、当該部分是不開示とされることになる。

「公務員」とは、広く公務遂行を担任する者を含むものであり、一般職か特別職か、常勤か非常勤かを問わず、国及び地方公共団体の職員のほか、国务大臣、国会議員、裁判官等を含む。また、公務員であった者が当然に含まれるものではないが、公務員であった当時の情報については、本規定は適用される。

(2) 「当該情報がその職務の遂行に係る情報であるとき」

「職務の遂行に係る情報」とは、公務員が独立行政法人及び行政機関その他の国の機関又は地方公共団体の機関の一員として、その担任する職務を遂行する場合における当該活動についての情報を意味する。例えば、行政処分その他の公権力の行使に係る情報、職務としての会議への出席、発言その他の事実行為に関する情報がこれに含まれる。

また、本規定は、具体的な職務の遂行との直接の関連を有する情報を対象とし、例えば、公務員の情報であっても、職員の人事管理上保有する健康情報、休暇情報等は管理される職員の個人情報として保護される必要があり、本規定の対象となる情報ではない。

(3) 「当該情報のうち、当該公務員の職及び当該職務遂行の内容に係る部分」

公務員の職務の遂行に係る情報には、当該公務員の氏名、職名及び職務遂行の内容によって構成されるものが少なくない。このうち、前述のとおり、政府の諸活動を説明する責務が全うされるようにする観点から、公務員の氏名を除き、その職名と職務遂行の内容については、当該公務員の個人に関する情報としては不開示とはしないという意味である。

(4) 公務員の職務遂行に係る情報に含まれる当該公務員の氏名の取扱い

公務員の職務遂行に係る情報に含まれる当該公務員の氏名については、公にした場合、公務員の私生活等に影響を及ぼすおそれがあり得ることから、私人の場合と同様に個人情報として保護に値すると位置付けた上で、ただし書イに該当する場合には例外的に開示することとするものである。

すなわち、当該公務員の職及び氏名が、法令の規定により又は慣行として公にされ、又は公にすることが予定されている場合には、職務の遂行に係る情報について、本号の八とともに、イが重疊的に適用され、個人情報としては不開示とはならないことになる。慣行として公にされているかどうかの判断に当たっては、人事異動の官報への掲載その他独立行政法人により職名と氏名とを公表する慣行がある場合、独立行政法人により作成され、又は独立行政法人が公にする意思をもって（あるいは公にされることを前提に）提供した情報を基に作成され、現に一般に販売されている職員録に職と氏名とが掲載されている場合には、その職にある者の氏名を一般に明らかにしようとする趣旨であると考えられ、慣行として公にされ、又は公にすることが予定されていると解される。

5 本人からの開示請求

本法の開示請求権制度は、何人に対しても、請求の目的の如何を問わず請求を認めていることから、本人から、本人に関する情報の開示請求があった場合にも、開示請求者が誰であるかは考慮されない。したがって、特定の個人が識別される情報であれば、本号のイから八又は公益上の理由による裁量的開示（第7条）に該当しない限り、不開示となる。

なお、行政機関が保有する電子計算機処理に係る個人情報については、行政機関が保有する電子計算機処理に係る個人情報の保護に関する法律により、一定の個人情報ファイルに記録さ

れている自己情報の開示が認められている。

2 第5条第2号（法人等に関する情報）関係

2 法人その他の団体（国、独立行政法人等及び地方公共団体を除く。以下「法人等」という。）に関する情報又は事業を営む個人の当該事業に関する情報であって、次に掲げるもの。ただし、人の生命、健康、生活又は財産を保護するため、公にすることが必要であると認められる情報を除く。

イ 公にすることにより、当該法人等又は当該個人の権利、競争上の地位その他正当な利益を害するおそれがあるもの

ロ 独立行政法人等の要請を受けて、公にしないとの条件で任意に提供されたものであって、法人等又は個人における通例として公にしないこととされているものその他の当該条件を付することが当該情報の性質、当時の状況等に照らして合理的であると認められるもの

【趣旨】

本号は、法人等に関する情報の不開示情報又は事業を営む個人の当該事業に関する情報の不開示情報としての要件を定めるものである。

【解説】

1 「法人その他の団体（国、独立行政法人等及び地方公共団体を除く。以下「法人等」という。）」（本文）

(1) 「法人その他の団体（国、独立行政法人等及び地方公共団体を除く。）に関する情報」

株式会社等の商法上の会社、財団法人、社団法人、学校法人、宗教法人等の民間の法人のほか、特殊法人及び認可法人、政治団体、外国法人や法人ではないが権利能力なき社団等も含まれる。

一方、国、独立行政法人等及び地方公共団体については、その公的性格にかんがみ、法人等とは異なる開示・不開示の基準を適用すべきであるので、本号から除き、その事務又は事業に係る不開示情報は、第4号等において規定している。

「法人その他の団体に関する情報」は、法人等の組織や事業に関する情報のほか、法人等の権利利益に関する情報等法人等と何らかの関連性を有する情報を指す。

なお、法人等の構成員に関する情報は、法人等に関する情報であると同時に、構成員各個人に関する情報でもある。

(2) 「事業を営む個人の当該事業に関する情報」

「事業を営む個人の当該事業に関する情報」は、事業に関する情報であるので、(1)に掲げた法人等に関する情報と同様の要件により、事業を営む上での正当な利益等について不開示情報該当性を判断することが適当であることから、本号で規定しているものである。

(3) 「ただし、人の生命、健康、生活又は財産を保護するため、公にすることが必要であると認められる情報を除く。」

本号のただし書は、第1号口と同様に、当該情報を公にすることにより保護される人の生命、健康等の利益と、これを公にしないことにより保護される法人等又は事業を営む個人の権利利益とを比較衡量し、前者の利益を保護することの必要性が上回る場合には、当該情報を開示しなければならないとするものである。

現実には人の生命、健康等に被害が発生している場合に限らず、将来これらが侵害される蓋然性が高い場合も含まれる。なお、法人等又は事業を営む個人の事業活動と人の生命、健康等に対する危害等との明確な因果関係が確認されなくても、現実には人の生命、健康等に対する被害等の発生が予想される場合もあり得る。

2 「公にすることにより、当該法人等又は当該個人の権利、競争上の地位その他正当な利益を害するおそれがあるもの」(イ)

(1) 「権利」

信教の自由、集会・結社の自由、学問の自由、財産権等、法的保護に値する権利一切を指す。

(2) 「競争上の地位」

法人等又は事業を営む個人の公正な競争関係における地位を指す。

(3) 「その他正当な利益」

ノウハウ、信用等法人等又は事業を営む個人の運営上の地位を広く含むものである。

(4) 「害するおそれ」

「害するおそれ」があるかどうかの判断に当たっては、法人等又は事業を営む個人には様々な種類、性格のものがあ、その権利利益にも様々なものがあるので、法人等又は事業を営む個人の性格や権利利益の内容、性質等に応じ、当該法人等又は事業を営む個人の憲法上の権利(信教の自由、学問の自由等)の保護の必要性、当該法人等又は事業を営む個人と行政との関係等を十分考慮して適切に判断する必要がある。なお、この「おそれ」の判断に当たっては、単なる確率的な可能性ではなく、法的保護に値する蓋然性が求められる。

3 「独立行政法人等の要請を受けて、公にしないとの条件で任意に提供されたものであって、法人等又は個人における通例として公にしないこととされているものその他の当該条件を付することが当該情報の性質、当時の状況等に照らして合理的であると認められるもの」(ロ)

本号は、法人等又は事業を営む個人から公にしないとの条件の下に任意に提供された情報については、当該条件が合理的なものと認められる限り、不開示情報として保護しようとするものであり、情報提供者の信頼と期待を基本的に保護しようとするものである。なお、独立行政法人等の情報収集能力の保護は、別途、第4号等の不開示情報の規定によって判断されることとなる。

(1) 「独立行政法人等の要請を受けて、公にしないとの条件で任意に提供されたもの」

独立行政法人等の要請を受けずに、法人等又は事業を営む個人から提供された情報は含まれない。ただし、独立行政法人等の要請を受けずに法人等又は事業を営む個人から提供申出があった情報であっても、提供に先立ち、法人等又は事業を営む個人の側から非公開の条件が提示され、独立行政法人等が合理的理由があるとしてこれを受諾した上で提供を受けた場合には、含まれ得ると解する。

「要請」には、法令に基づく報告又は提出の命令は含まれないが、独立行政法人等が報告徴収権限を有する場合でも、当該権限を行使することなく、任意に提出を求めた場合は含まれる。

「公にしない」とは、本法に基づく開示請求に対して開示しないことはもちろんであるが、第三者に対して当該情報を提供しない意味である。また、特定の行政目的以外の目的には使用しないとの条件で情報の提供を受ける場合も通常含まれる。

「条件」については、独立行政法人等の側から公にしないとの条件で情報を提供してほしいと申し入れる場合も、法人等又は事業を営む個人の側から独立行政法人等の要請があったので情報は提供するが公にしないでほしいと申し出る場合も含まれるが、いずれにしても双方の合意により成立するものである。

また、条件を設ける方法については、黙示的なものを排除する趣旨ではない。

(2) 「法人等又は個人における通例として公にしないこととされているものその他の当該条件を付することが当該情報の性質、当時の状況等に照らして合理的であると認められるもの」

「法人等又は個人における通例」とは、当該法人等又は個人の個別具体的な事情ではなく、当該法人等又は個人が属する業界における通常の取扱いを意味し、当該法人等において公にしていないことだけでは足りない。

公にしないとの条件を付すことの合理性の判断に当たっては、情報の性質に応じ、当該情報の提供当時の諸般の事情を考慮して判断するが、必要に応じ、その後の変化も考慮する趣旨である。公にしないとの条件が付されていても、現に当該情報が公にされている場合には、本号には当たらない。

3 第5条第3号（審議、検討等情報）関係

3 国の機関、独立行政法人等及び地方公共団体の内部又は相互間における審議、検討又は協議に関する情報であって、公にすることにより、率直な意見の交換若しくは意思決定の中立性が不当に損なわれるおそれ、不当に国民の間に混乱を生じさせるおそれ又は特定の者に不当に利益を与え若しくは不利益を及ぼすおそれがあるもの

【趣旨】

本号は、審議、検討等情報の不開示情報としての要件を定めるものである。

【解説】

開示請求の対象となる法人文書は、判決、供覧等の手続を終了したものに限られないことから、国の機関、独立行政法人等及び地方公共団体の内部又は相互間における意思決定前の審議、検討又は協議の段階において作成又は取得された文書であっても、組織的に用いるものとして現に保有していれば、対象文書となる。

このように、開示請求の対象となる法人文書の中には、独立行政法人等としての最終的な決定前の事項に関する情報が少なからず含まれることになるため、これらの情報を開示することによってその意思決定が損なわれないようにする必要がある。しかしながら、事項的に意思決定前の情報をすべて不開示とすることは、独立行政法人等がその諸活動を説明する責務を全うするという観点からは、適当ではない。そこで、個別具体的に、開示することによって独立行政法人等の適正な意思決定に支障を及ぼすおそれの有無及び程度を考慮し、不開示とされる情報の範囲を画したものである。

1 「国の機関、独立行政法人等及び地方公共団体の内部又は相互間」

「国の機関」とは、国会、内閣、裁判所及び会計検査院（これらに属する機関を含む。）を指し、これらの機関、独立行政法人等及び地方公共団体について、それぞれの機関の内部又は他の機関との相互間の意味である。

2 「審議、検討又は協議に関する情報」

国の機関、独立行政法人等又は地方公共団体の事務及び事業について意思決定が行われる場合に、その決定に至るまでの過程においては、例えば、具体的な意思決定の前段階としての政策等の選択肢に関する自由討議のようなものから、一定の責任者の段階での意思統一を図るための協議や打合せ、判決を前提とした説明や検討、審議会等又は独立行政法人等が開催する有識者、関係法人等を交えた研究会等における審議や検討など、様々な審議、検討及び協議が行われており、これら各段階において行われる審議、検討又は協議に関連して作成され、又は取得された情報をいう。

3 「率直な意見の交換若しくは意思決定の中立性が不当に損なわれるおそれ」

公にすることにより、外部からの圧力や干渉等の影響を受けることなどにより、率直な意見の交換若しくは意思決定の中立性が不当に損なわれるおそれがある場合を想定したもので、適正な意思決定手続の確保を保護利益とするものである。

例えば、審議、検討等の場における発言内容が公になると、発言者やその家族に対して危害が及ぶおそれがある場合には、第4号等の他の不開示情報に該当する可能性もあるが、「率直な意見の交換が不当に損なわれるおそれ」が生じたり、また、独立行政法人内部の施策の検討がまだ十分でない情報が公になり、外部からの圧力により当該施策に不当な影響を受けるおそれがあり、「意思決定の中立性が不当に損なわれるおそれ」が生じたりすることのないようにする趣旨である。

4 「不当に国民の間に混乱を生じさせるおそれ」

未成熟な情報や事実関係の確認が不十分な情報などを公にすることにより、国民の誤解や憶測を招き、不当に国民の間に混乱を生じさせるおそれがある場合をいう。適正な意思決定を行うことそのものを保護するのではなく、情報が公にされることによる国民への不当な影響が生じないようにする趣旨である。

例えば、特定の物資が将来不足することが見込まれることから、政府として取引の規制が検討されている段階で、その検討情報を公にすれば、買い占め、売り惜しみ等が起こるおそれがある場合に、「国民の間に不当な混乱」を生じさせたりすることのないようにする趣旨である。

5 「特定の者に不当に利益を与え若しくは不利益を及ぼすおそれ」

尚早な時期に情報や事実関係の確認が不十分な情報などを公にすることにより、投機を助長するなどして、特定の者に不当に利益を与え又は不利益を及ぼす場合を想定したもので、4と同様に、事務及び事業の公正な遂行を図るとともに、国民への不当な影響が生じないようにする趣旨である。

例えば、施設等の建設計画の検討状況に関する情報が開示されたために、土地の買い占めが行われて土地が高騰し、開示を受けた者等が不当な利益を得たり、違法行為の事実関係についての調査中の情報が開示されたために、結果的に違法・不当な行為を行っていなかった者が不利益を被ったりしないようにする趣旨である。

6 「不当に」

上記3、4及び5のおそれの「不当に」とは、審議、検討等途中の段階の情報を公にすることの公益性を考慮してもなお、適正な意思決定の確保等への支障が看過し得ない程度のものを意味する。予想される支障が「不当」なものかどうかの判断は、当該情報の性質に照らし、公にすることによる利益と不開示にすることによる利益とを比較衡量した上で判断される。

7 意思決定後の取扱い等

審議、検討等に関する情報については、独立行政法人等としての意思決定が行われた後は、一般的には、当該意思決定そのものに影響が及ぶことはなくなることから、本号の不開示情報に該当する場合は少なくなるものと考えられるが、当該意思決定が政策決定の一部の構成要素であったり、当該意思決定を前提として次の意思決定が行われる等審議、検討等の過程が重層的、連続的な場合には、当該意思決定後であっても、政策全体の意思決定又は次の意思決定に関して本号に該当するかどうかの検討が行われるものであることに注意が必要である。また、当該審議、検討等に関する情報が公になると、審議、検討等が終了し意思決定が行われた後であっても、国民の間に混乱を生じさせたり、将来予定されている同種の審議、検討等に係る意思決定に不当な影響を与えるおそれがある場合等があれば、本号に該当し得る。

なお、審議、検討等に関する情報の中に、調査データ等で特定の事実を記録した情報があった場合、例えば、当該情報が専門的な検討を経た調査データ等の客観的、科学的事実やこれに基づく分析等を記録したものであれば、一般的に本号に該当する可能性が低いものと考えられる。

4 第5条第4号（事務又は事業に関する情報）関係

- 4 国の機関、独立行政法人等又は地方公共団体が行う事務又は事業に関する情報であって、公にすることにより、次に掲げるおそれその他当該事務又は事業の性質上、当該事務又は事業の適正な遂行に支障を及ぼすおそれがあるもの
- イ 国の安全が害されるおそれ、他国若しくは国際機関との信頼関係が損なわれるおそれ又は他国若しくは国際機関との交渉上不利益を被るおそれ
 - ロ 犯罪の予防、鎮圧又は捜査、その他の公共の安全と秩序の維持に支障を及ぼすおそれ
 - ハ 監査、検査、取締り又は試験に係る事務に関し、正確な事実の把握を困難にするおそれ又は違法若しくは不当な行為を容易にし、若しくはその発見を困難にするおそれ
 - ニ 契約、交渉又は争訟に係る事務に関し、国、独立行政法人等又は地方公共団体の財産上の利益又は当事者としての地位を不当に害するおそれ
 - ホ 調査研究に係る事務に関し、その公正かつ能率的な遂行を不当に阻害するおそれ
 - ヘ 人事管理に係る事務に関し、公正かつ円滑な人事の確保に支障を及ぼすおそれ
 - ト 国若しくは地方公共団体が経営する企業又は独立行政法人等に係る事業に関し、その企業経営上の正当な利益を害するおそれ

【趣旨】

本号は、事務又は事業に関する情報の不開示情報としての要件を定めるものである。

【解説】

国の機関、独立行政法人等又は地方公共団体が行う事務又は事業は、公共の利益のために行われるものであり、公にすることによりその適正な遂行に支障を及ぼすおそれがある情報については、不開示とする合理的な理由がある。

国の機関、独立行政法人等又は地方公共団体が行う事務又は事業は広範かつ多種多様であり、公にすることによりその適正な遂行に支障を及ぼすおそれのある事務又は事業の情報を事後的にすべて列挙することは技術的に困難であり、実益も乏しい。そのため、各機関共通的に見られる事務又は事業に関する情報であって、公にすることによりその適正な遂行に支障を及ぼすおそれがある情報を含むことが容易に想定されるものを「次に掲げるおそれ」としてイからトまで例示的に掲げた上で、これらのおそれ以外については、「その他当該事務又は事業の性質上、当該事務又は事業の適正な遂行に支障を及ぼすおそれがあるもの」として包括的に規定している。

- 1 「次に掲げるおそれその他当該事務又は事業の性質上、当該事務又は事業の適正な遂行に支障を及ぼすおそれがあるもの」（第4号本文）

(1) 「次に掲げるおそれ」

「次に掲げるおそれ」としてイからトまでに掲げたものは、各機関共通的に見られる事務又は事業に関する情報であって、その性質上、公にすることにより、その適正な遂行に支障を及ぼすおそれがあると考えられる典型的な支障を挙げたものである。これらの事務又は事業の外にも、同種のもので反復されるような性質の事務又は事業であって、ある個別の事務又は事業に関する情報を開示すると、将来の同種の事務又は事業の適正な遂行に支障を及ぼすおそれがあるもの等、「その他当該事務又は事業の性質上、当該事務又は事業の適正な遂行に支障を及ぼすおそれ」があり得る。

(2) 「当該事務又は事業の性質上」

当該事務又は事業の本質的な性格、具体的には、当該事務又は事業の目的、その目的達成のための手法等に照らして、その適正な遂行に支障を及ぼすおそれがあるかどうかを判断する趣旨である。

(3) 「適正な遂行に支障を及ぼすおそれ」

本規定は、独立行政法人等に広範な裁量権限を与える趣旨ではなく、各規定の要件の該当性を客観的に判断する必要がある、また、事務又は事業がその根拠となる規定・趣旨に照らし、公益的な開示の必要性等の種々の利益を衡量した上での「適正な遂行」と言えるものであることが求められる。

「支障」の程度は名目的なものでは足りず実質的なものが要求され、「おそれ」の程度も単なる確率的な可能性ではなく、法的保護に値する蓋然性が要求される。

2 「国の安全が害されるおそれ、他国若しくは国際機関との信頼関係が損なわれるおそれ又は他国若しくは国際機関との交渉上不利益を被るおそれ」(第4号イ)

(1) 「国の安全が害されるおそれ」

「国の安全」とは、国家の構成要素である国土、国民及び統治体制が害されることなく平和で平穏な状態に保たれていること、すなわち、国としての基本的な秩序が平穏に維持されている状態をいう。具体的には、直接侵略及び間接侵略に対し、独立と平和が守られていること、国民の生命が国外からの脅威等から保護されていること、国の存立基盤としての基本的な政治方式及び経済・社会秩序の安定が保たれていることなどが考えられる。

「国の安全が害されるおそれ」とは、これらの国の重大な利益に対する侵害のおそれ(当該重大な利益を維持するための手段の有効性を阻害され、国の安全が害されるおそれがあると考えられる場合を含む。)をいう。

(2) 「他国若しくは国際機関との信頼関係が損なわれるおそれ」

「他国若しくは国際機関」(我が国が承認していない地域、政府機関その他これに準ずるもの(各国の中央銀行等)、外国の地方政府又は国際会議その他国際協調の枠組みに係る組織(アジア太平洋経済協力、国際刑事警察機構等)の事務局等を含む。以下「他国等」という。)との間で、相互の信頼に基づき保たれている正常な関係に支障を及ぼすようなおそれをいう。例えば、公にすることにより、他国等との取決め又は国際慣行に反することとなる、他国等の意思に一方的に反することとなる、他国等に不当に不利益を与えることとなるなど、我が国との関係に悪影響を及ぼすおそれがある情報が該当すると考えられる。

(3) 「他国若しくは国際機関との交渉上不利益を被るおそれ」

他国等との現在進行中の又は将来予想される交渉において、我が国が望むような交渉成果が得られなくなる、我が国の交渉上の地位が低下するなどのおそれをいう。例えば、交渉(過去のものを含む。)に関する情報であって、公にすることにより、現在進行中の又は将来予想される交渉に関して我が国が執ろうとしている立場が明らかにされ、又は具体的に推測されることになり、交渉上の不利益を被るおそれがある情報が該当すると考えられる。

3 「犯罪の予防、鎮圧又は捜査その他の公共の安全と秩序の維持」

(第4号ロ)

(1) 「犯罪の予防、鎮圧又は捜査」は、「公共の安全と秩序の維持」の例示である。

「犯罪の予防」とは、犯罪の発生を未然に防止することをいう。なお、国民の防犯意識の啓発、防犯資機材の普及等、一般に公にしても犯罪を誘発し、又は犯罪の実行を容易にするおそれがない防犯活動に関する情報については、本号に該当しない。

「犯罪の鎮圧」とは、犯罪が正に発生しようとするのを未然に防止したり、犯罪が発生した後において、その拡大を防止し、若しくは終息させることをいう。

「犯罪の捜査」とは、捜査機関が犯罪があると思料するときに、公訴の提起などのために犯人及び証拠を発見・収集・保全することをいう。犯罪捜査の権限を有する者は、刑事訴訟法によれば、検察官、検察事務官及び司法警察職員であり、司法警察職員には、一般司法警察職員と特別司法警察職員とがある。

(2) ここでいう「公共の安全と秩序の維持」とは、犯罪の予防、鎮圧又は捜査に代表される刑事法の執行を中心としたものを意味する。

刑事訴訟法以外の特別法により、臨検・捜索・差押え、告発等が規定され、犯罪の予防・捜査とも関連し、刑事司法手続に準ずるものと考えられる犯則事件の調査、独占禁止法違反の調査等や、犯罪の予防・捜査に密接に関連する破壊的団体（無差別大量殺人行為を行った団体を含む。）の規制、暴力団員による不当な行為の防止、つきまとい等の規制、強制退去手続に関する情報であって、公にすることにより、公共の安全と秩序の維持に支障を及ぼすおそれがあるものは、本号に含まれる。

また、公にすることにより、テロ等の人の生命、身体、財産等への不法な侵害や、特定の建造物又はシステムへの不法な侵入・破壊を招くおそれがあるなど、犯罪を誘発し、又は犯罪の実行を容易にするおそれがある情報や被疑者・被告人の留置・勾留に関する施設保安に支障を生ずるおそれのある情報も、本号に含まれる。

4 「監査、検査、取締り又は試験に係る事務に関し、正確な事実の把握を困難にするおそれ又は違法若しくは不当な行為を容易にし、若しくはその発見を困難にするおそれ」（第4号八）

(1) 「監査」とは、主として監察的見地から、事務又は事業の執行又は財産の状況の正否を調べることをいう。

「検査」とは、法令の執行確保、会計経理の適正確保、物資の規格、等級の証明等のために帳簿書類その他の物件等を調べることをいう。

「取締り」とは、行政上の目的による一定の行為の禁止、又は制限について適法、適正な状態を確保することをいう。

「試験」とは、人の知識、能力等又は物の性能等を試すことをいう。

(2) 「正確な事実の把握を困難にするおそれ又は違法若しくは不当な行為を容易にし、若しくはその発見を困難にするおそれ」

上記の監査等は、いずれも事実を正確に把握し、その事実に基づいて評価、判断を加えて、一定の決定を伴うことがある事務である。

これらの事務に関する情報の中には、例えば、監査等の対象、実施時期、調査事項等の詳細な情報や、試験問題等のように、事前に公にすれば、適正かつ公正な評価や判断の前提となる事実の把握が困難となったり、行政客体における法令違反行為又は法令違反に至らないまでも妥当性を欠く行為を助長したり、巧妙に行うことにより隠蔽をするなどのおそれがあるものがあり、このような情報については、不開示とするものである。また、事後であっても、例えば、違反事例等の詳細についてこれを公にすると他の行政客体に法規制を免れる方法を示唆するようなものは該当し得ると考えられる。

5 「契約、交渉又は争訟に係る事務に関し、国、独立行政法人等又は地方公共団体の財産上の利益又は当事者としての地位を不当に害するおそれ」（第4号二）

(1) 「契約、交渉又は争訟」

「契約」とは、相手方との意思表示の合致により法律行為を成立させることをいう。

「交渉」とは、当事者が、対等の立場において相互の利害関係事項に関し一定の結論を得るために協議、調整などの折衝を行うことをいう。

「争訟」とは、訴えを起こして争うことをいう。訴訟、行政不服審査法に基づく不服申立てその他の法令に基づく不服申立てがある。

(2) 「国、独立行政法人等又は地方公共団体の財産上の利益又は当事者としての地位を不当に害するおそれ」

国、独立行政法人等又は地方公共団体が一方の当事者となる上記の契約等においては、自己の意思により又は訴訟手続上、相手方と対等な立場で遂行する必要があり、当事者としての利益を保護する必要がある。

これらの契約等に関する情報の中には、例えば、入札予定価格等を公にすることにより公正な競争により形成されるべき適正な額での契約が困難になり財産上の利益が損なわれた

り、交渉や争訟等の対処方針等を公にすることにより、当事者として認められるべき地位を不当に害するおそれがあるものがあり、このような情報については、不開示とするものである。

6 「調査研究に係る事務に関し、その公正かつ能率的な遂行を不当に阻害するおそれ」(第4号ホ)

国の機関、独立行政法人等又は地方公共団体が行う調査研究(ある事柄を調べ、真理を探究すること)の成果については、社会、国民等にあまねく還元することが原則であるが、成果を上げるためには、従事する職員が、その発想、創意工夫等を最大限に発揮できるようにすることも重要である。

調査研究に係る事務に関する情報の中には、例えば、知的所有権に関する情報、調査研究の途中段階の情報などで、一定の期日以前に公にすることにより成果を適正に広く国民に提供する目的を損ね、特定の者に不当な利益や不利益を及ぼすおそれがあるもの、試行錯誤の段階のものについて、公にすることにより、自由な発想、創意工夫や研究意欲が不当に妨げられ、減退するなど、能率的な遂行を不当に阻害するおそれがある場合があり、このような情報を不開示とするものである。

7 「人事管理に係る事務に関し、公正かつ円滑な人事の確保に支障を及ぼすおそれ」(第4号ヘ)

国の機関、独立行政法人等又は地方公共団体が行う人事管理(職員の任免、懲戒、給与、研修その他職員の身分や能力等の管理に関すること)に係る事務については、当該機関の組織としての維持の観点から行われる一定の範囲で当該組織の独自性を有するものである。

人事管理に係る事務に関する情報の中には、例えば、勤務評価や、人事異動、昇格等の人事構想等を公にすることにより、公正かつ円滑な人事の確保が困難になるおそれがあるものがあり、このような情報を不開示とするものである。

8 「国若しくは地方公共団体が経営する企業又は独立行政法人等に係る事業に関し、その企業経営上の正当な利益を害するおそれ」(第4号ト)

国若しくは地方公共団体が経営する企業(国営企業及び特定独立行政法人の労働関係に関する法律第2条第1号の国営企業及び地方公営企業法第2条の適用を受ける企業をいう。)又は独立行政法人等に係る事業については、企業経営という事業の性質上、第2号の法人等に関する情報と同様な考え方で、その正当な利益を保護する必要がある、これを害するおそれがあるものを不開示とするものである。ただし、正当な利益の内容については、経営主体、事業の性格、内容等に応じて判断する必要がある、その開示の範囲は第2号の法人等とは当然異なり、国又は地方公共団体が経営する企業又は独立行政法人等に係る事業に関する情報の不開示の範囲は、より狭いものとなる場合があり得る。

5 第6条（部分開示）関係

第6条 独立行政法人等は、開示請求に係る法人文書の一部に不開示情報が記録されている場合において、不開示情報が記録されている部分を容易に区分して除くことができるときは、開示請求者に対し、当該部分を除いた部分につき開示しなければならない。ただし、当該部分を除いた部分に有意の情報が記録されていないと認められるときは、この限りでない。

2 開示請求に係る法人文書に前条第1号の情報（特定の個人を識別することができるものに限る。）が記録されている場合において、当該情報のうち、氏名、生年月日その他の特定の個人を識別することができることとなる記述等の部分を除くことにより、公にしても個人の権利利益が害されるおそれがないと認められるときは、当該部分を除いた部分は、同号の情報に含まれないものとみなして、前項の規定を適用する。

【趣旨】

本条第1項は、法人文書の一部に不開示情報が記録されている場合における独立行政法人等の部分開示の義務の内容及びその要件を明らかにするものである。

第2項は、開示請求に係る法人文書に個人識別情報（不開示情報）が記録されている場合に、個人識別性のある部分を除くことによる部分開示について定めるものである。

【解説】

1 不開示情報が記録されている場合の部分開示（第1項）

(1) 「開示請求に係る法人文書の一部に不開示情報が記録されている場合」

一件の法人文書に複数の情報が記録されている場合に、各情報ごとに、第5条各号に規定する不開示情報に該当するかどうかを審査した結果、不開示情報に該当する情報がある場合を意味する。

開示請求は、法人文書単位に行われるものであるため、第5条では法人文書に全く不開示情報が記録されていない場合の開示義務を定めているが、本項の規定により、独立行政法人等は、開示請求に係る法人文書に不開示情報が記録されている場合に、部分的に開示できるか否かの判断を行わなければならないことになる。

(2) 「容易に区分して除くことができるとき」

ア 当該法人文書のどの部分に不開示情報が記載されているかという記載部分の区分けが困難な場合だけでなく、区分けは容易であるがその部分の分離が技術的に困難な場合も部分開示の義務がないことを明らかにしたものである。

「区分」とは、不開示情報が記録されている部分とそれ以外の部分とを概念上区分けすることを意味し、「除く」とは、不開示情報が記録されている部分を、当該部分の内容が分からないように墨塗り、被覆等を行い、法人文書から物理的に除去することを意味する。

例えば、文章として記録されている内容そのものには不開示情報は含まれないが、特徴のある筆跡により特定の個人を識別することができる場合には、識別性のある部分を区分して除くことは困難である。また、録音されている発言内容自体には不開示情報が含まれていないとしても声により特定の個人を識別できる場合も同様である。

イ 文書の記載の一部を除くことは、コピー機で作成したその複写物に墨を塗り再複写するなどして行うことができ、一般的には容易であると考えられる。なお、部分開示の作業に多くの時間・労力を要することは、直ちに、区分し、分離することが困難であるということにはならない。

一方、録音、録画、磁気ディスクに記録されたデータベース等の電磁的記録については、区分して除くことの容易性が問題となる。例えば、複数の人の発言が同時に録音されているがそのうち一部の発言内容のみに不開示情報が含まれている場合や、録画されている映

像中に不開示情報が含まれている場合などでは、不開示情報部分のみを除去することが容易ではないことがあり得る。このような場合には、容易に区分して除くことができる範囲で、開示すべき部分を決定することになる。

なお、電磁的記録について、不開示部分と開示部分の分離が既存のプログラムでは行えない場合は、「容易に区分して除くことができない場合」に該当する。

(3) 「当該部分を除いた部分につき開示しなければならない。」

ア 部分的に削除すべき範囲は、文書であれば、一般的には、文、段落等、表であれば個々の欄等を単位として判断することをもって足りる。

イ 本項は、義務的に開示すべき範囲を定めているものであり、部分開示の実施に当たり、具体的な記述をどのように削除するかについては、独立行政法人等の本法の目的に沿った合目的な裁量に委ねられている。すなわち、不開示情報の記録部分の全体を完全に黒く塗るか、文字が判読できない程度に被覆するか、当該記録中の主要な部分だけ塗りつぶすかなどの方法の選択は、不開示情報を開示した結果とならない範囲内において、当該方法を講ずることの容易さ等を考慮して判断することとなる。その結果、観念的にはひとまとまりの不開示情報を構成する一部が開示されることになるとしても、実質的に不開示情報が開示されたと認められないのであれば、独立行政法人等の不開示義務に反するものではない。

(4) 「有意の情報が記録されていないと認められるときは、この限りではない。」

ア 「有意の情報が記録されていないと認められるとき」とは、説明責任が全うされるようにするとの観点から、不開示情報が記録されている部分を除いた残りの部分に記載されている情報の内容が、開示をしても意味がないと認められる場合を意味する。例えば、残りの部分に記載されている内容が、無意味な文字、数字等の羅列となる場合等である。

この「有意」性の判断に当たっては、同時に開示される他の情報があればこれも併せて判断されるべきである。

イ また、「有意」性の判断は、請求の趣旨を損なうか否か、すなわち、開示請求者が知りたいと考える事柄との関連によって判断すべきものではなく、本条では、個々の請求者の意図によらず、客観的に決めるべきものとしている。

2 個人識別情報が記録されている場合の部分開示（第2項）

(1) 「開示請求に係る法人文書に前条第1号の情報（特定の個人を識別することができるものに限る。）が記録されている場合」

ア 第1項の規定は、法人文書に記録されている情報のうち、不開示情報ではない情報の記載部分の開示義務を規定しているが、ひとまとまりの不開示情報のうちの一部を削除した残りの部分を開示することの根拠条項とはならない。

個人識別情報は、通常、個人を識別させる部分（例えば、氏名）とその他の部分（例えば、当該個人の行動記録）とから成り立っており、その全体が一つの不開示情報を構成するものである。他の不開示情報の類型は各号に定められた「おそれ」を生じさせる範囲で不開示情報の大きさをとらえることができるのとは、その範囲のとらえ方を異にするものである。

このため、第1項の規定だけでは、個人識別情報については全体として不開示となることから、氏名等の部分だけを削除して残りの部分を開示しても個人の権利利益保護の観点から支障が生じないときには、部分開示とするよう、個人識別情報についての特例規定を設けたものである。

イ 「特定の個人を識別することができるものに限る。」こととしているのは、「特定の個人を識別することはできないが、公にすることにより、なお個人の権利利益を害するおそれがあるもの」（第5条第1号本文の後半部分）については、特定の個人を識別することとなる記述等の部分を除くことにはならないので、他の不開示情報の類型と同様に不開示情報が記録されている部分を除いた部分につき開示することとなるためである。

- (2) 「当該情報のうち、氏名、生年月日その他の特定の個人を識別することができることとなる記述等の部分を除くことにより、公にしても、個人の権利利益が害されるおそれがないと認められるとき」

個人を識別させる要素を除去することにより誰の情報であるかが分からなくなれば、残りの部分については、通常、個人情報としての保護の必要性は乏しくなるが、個人識別性のある部分を除いても、開示することが不相当であると認められるものもある。例えば、カルテ、作文などの個人の人格と密接に関連する情報や、個人の未公表の研究論文等開示すると個人の権利利益を害するおそれがあるものである。

このため、個人を識別させる部分を除いた部分について、公にしても、個人の権利利益を害するおそれがないものに限り、部分開示の規定を適用することとしている。

- (3) 「当該部分を除いた部分は、同号の情報に含まれないものとみなして、前項の規定を適用する。」

第1項の規定により、部分開示の範囲を決定するに当たっては、個人識別情報のうち、特定の個人を識別することができることとなる記述等以外の部分は、個人の権利利益を害するおそれがない限り、第5条第1号に規定する不開示情報ではないものとして取り扱うことになる。したがって、他の不開示情報の規定に該当しない限り、当該部分は開示されることになる。

また、第1項の規定を適用するに当たっては、容易に区分して除くことができるかどうか要件となるので、個人を識別させる要素とそれ以外の部分とを容易に区分して除くことができない場合には、当該個人に関する情報は全体として不開示となることになる。

なお、個人を識別することができる要素は、第5条第1号イ～ハのいずれかに該当しない限り、部分開示の対象とならない。

6 第7条（公益上の理由による裁量的開示）関係

第7条 独立行政法人等は、開示請求に係る法人文書に不開示情報が記録されている場合であっても、公益上特に必要があると認めるときは、開示請求者に対し、当該法人文書を開示することができる。

【趣旨】

本条は、開示請求に係る法人文書に不開示情報が記録されていても、開示請求者に対し、当該法人文書を開示することができる場合について規定するものである。

【解説】

1 「公益上特に必要があると認めるとき」

第5条各号の不開示情報の規定に該当する情報であるが、独立行政法人等の高度の行政的な判断により、公にすることに、当該保護すべき利益を上回る公益上の必要性があると認められる場合を意味する。

第5条各号の不開示情報該当性の判断に当たっては、個人に関する情報（同条第1号）及び法人等に関する情報（同条第2号）のように、個人を識別できる情報や法人の正当な利益を害するおそれがあっても、人の生命、健康、生活又は財産を保護するため、公にすることが必要である場合には、開示をしなければならない（個人に関する情報については第1号ただし書き口、法人等に関する情報については第2号ただし書き参照）。このほか、審議検討等情報（同条第3号）においては、「不当に損なうおそれ」とし、例えば、率直な意見交換を損なうおそれがあるとしても、不当に損なうものでなければ、開示することとなり、事務・事業情報（同条第4号）についても、その遂行に支障を及ぼすおそれがあっても「適正な遂行」でなければ、開示することとなる。

以上のように、第5条各号においても、当該規定により保護する利益と当該情報を公にすることの公益上の必要性との比較衡量が行われる場合があるが、本条では、第5条の規定を適用した場合に不開示となる場合であっても、なお公にすることに公益上の必要性があると認められる場合には、開示することができるとするものである。

2 「当該法人文書を開示することができる。」

本条の適用に関しては、公益上特に必要と認めたとにかかわらず法人文書を開示しないことは想定できないが、その規定振り（「公益上特に必要があると認めるとき」）からも、処分の性質（不開示情報を開示すること）からも明らかとなっており、公益上の必要性の認定についての独立行政法人等の要件裁量を認める規定である。なお、この趣旨を明確化するため、見出しは「公益上の理由による裁量的開示」としている。

7 第8条（法人文書の存否に関する情報）関係

第8条 開示請求に対し、当該開示請求に係る法人文書が存在しているか否かを答えるだけで、不開示情報を開示することとなるときは、独立行政法人等は、当該法人文書の存否を明らかにしないで、当該開示請求を拒否することができる。

【趣旨】

本条は、開示請求の拒否処分の一態様として、一定の場合に、独立行政法人等は、法人文書の存否自体を明らかにしないで、拒否することができることを定めるものである。

【解説】

独立行政法人等は、開示請求に係る法人文書が存在していれば、開示決定又は不開示決定を行い、存在していなければ不開示決定を行うことになる。したがって、法人文書の不存在を理由とする不開示決定の場合以外の決定では、原則として法人文書の存在が前提となっている。

しかしながら、開示請求に係る法人文書の存否を明らかにするだけで、第5条各号の不開示情報を開示することとなる場合があり、この場合には、法人文書の存否を明らかにしないで開示請求を拒否できることとするものである。

1 「開示請求に係る法人文書が存在しているか否かを答えるだけで、不開示情報を開示することとなるとき」

開示請求に係る法人文書が具体的にあるかないかにかかわらず、開示請求された法人文書の存否について回答すれば、不開示情報を開示することとなる場合をいう。開示請求に含まれる情報と不開示情報該当性が結合することにより、当該法人文書の存否を回答できない場合もある。例えば、特定の個人の名を挙げて、その病歴情報が記録された文書の開示請求があった場合、当該法人文書に記録されている情報は不開示情報に該当するので、不開示であると答えるだけで、当該個人の病歴の存在が明らかになってしまう。このような特定の者又は特定の事項を名指しした探索的請求は、第5条各号の不開示情報の類型すべてについて生じ得ると考えられる。

具体的には、次のような例が考えられる。

特定の個人の病歴に関する情報（第1号）

先端技術に関する特定企業の設備投資計画に関する情報（第2号）

買い占めを招くなど国民生活に重大な影響を及ぼすおそれのある特定の物質に関する政策決定の検討状況の情報（第3号）

情報交換の存在を明らかにしない約束で他国等との間で交換された情報（第4号イ）

犯罪の内偵捜査に関する情報（第4号ロ）

特定分野に限定しての試験問題の出題予定に関する情報（第4号ハ）

2 「当該法人文書の存否を明らかにしないで、当該開示請求を拒否することができる」

法人文書の存否を明らかにしないで、開示請求を拒否する決定も、申請に対する処分であることから、行政手続法第8条に基づき、処分の理由を示す必要がある。提示すべき理由の程度としては、開示請求者が拒否の理由を明確に認識し得るものであることが必要であると考えられる。また、個別具体的な理由提示の程度については、当該情報の性質、内容、開示請求書の記載内容等を踏まえ、請求のあった法人文書の存否を答えることにより、どのような不開示情報を開示することになるかをできる限り具体的に提示することになる。

また、存否を明らかにしないで拒否することが必要な類型の情報については、常に存否を明らかにしないで拒否することが必要であり、例えば、法人文書が存在しない場合に不存在と答

えて、法人文書が存在する場合にのみ存否を明らかにしないで拒否したのでは、開示請求者に当該法人文書の存在を類推させることになる。

行政手続法(抄)

(理由の提示)

第8条 行政庁は、申請により求められた許認可等を拒否する処分をする場合は、申請者に対し、同時に、当該処分の理由を示さなければならない。ただし、法令に定められた許認可等の要件又は公にされた審査基準が数量的指標その他の客観的指標により明確に定められている場合であって、当該申請がこれらに適合しないことが申請書の記載又は添付書類から明らかであるときは、申請者の求めがあったときにこれを示せば足りる。

2 前項本文に規定する処分を書面でするときは、同項の理由は、書面により示さなければならない。

独立行政法人通則法

平成11年法律第103号

平成11年7月16日

目次

第1章 総則

第1節 通則（第1条～第11条）

第2節 独立行政法人評価委員会（第12条）

第3節 設立（第13条～第17条）

第2章 役員及び職員（第18条～第26条）

第3章 業務運営

第1節 業務（第27条・第28条）

第2節 中期目標等（第29条～第35条）

第4章 財務及び会計（第36条～第50条）

第5章 人事管理

第1節 特定独立行政法人（第51条～第60条）

第2節 特定独立行政法人以外の独立行政法人（第61条～第63条）

第6章 雑則（第64条～第68条）

第7章 罰則（第69条～第72条）

附則

第1章 総則

第1節 通則

（目的等）

第1条 この法律は、独立行政法人の運営の基本その他の制度の基本となる共通の事項を定め、各独立行政法人の名称、目的、業務の範囲等に関する事項を定める法律（以下「個別法」という。）と相まって、独立行政法人制度の確立並びに独立行政法人が公共上の見地から行う事務及び事業の確実な実施を図り、もって国民生活の安定及び社会経済の健全な発展に資することを目的とする。

2 各独立行政法人の組織、運営及び管理については、個別法に定めるもののほか、この法律の定めるところによる。

（定義）

第2条 この法律において「独立行政法人」とは、国民生活及び社会経済の安定等の公共上の見地から確実に実施されることが必要な事務及び事業であって、国が自ら主体となって直接に実施する必要のないもののうち、民間の主体にゆだねた場合には必ずしも実施されないおそれがあるもの又は一の主体に独占して行わせることが必要であるものを効率的かつ効果的に行わせることを目的として、この法律及び個別法の定めるところにより設立される法人をいう。

2 この法律において「特定独立行政法人」とは、独立行政法人のうち、その業務の停滞が国民生活又は社会経済の安定に直接かつ著しい支障を及ぼすと認められるものその他当該独立行政法人の目的、業務の性質等を総合的に勘案して、その役員及び職員

に国家公務員の身分を与えることが必要と認められるものとして個別法で定めるものをいう。

(業務の公共性、透明性及び自主性)

第3条 独立行政法人は、その行う事務及び事業が国民生活及び社会経済の安定等の公共上の見地から確実に実施されることが必要なものであることにかんがみ、適正かつ効率的にその業務を運営するよう努めなければならない。

2 独立行政法人は、この法律の定めるところによりその業務の内容を公表すること等を通じて、その組織及び運営の状況を国民に明らかにするよう努めなければならない。

3 この法律及び個別法の運用に当たっては、独立行政法人の業務運営における自主性は、十分配慮されなければならない。

(名称)

第4条 各独立行政法人の名称は、個別法で定める。

(目的)

第5条 各独立行政法人の目的は、第2条第1項の目的の範囲内で、個別法で定める。

(法人格)

第6条 独立行政法人は、法人とする。

(事務所)

第7条 各独立行政法人は、主たる事務所を個別法で定める地に置く。

2 独立行政法人は、必要な地に従たる事務所を置くことができる。

(財産的基礎)

第8条 独立行政法人は、その業務を確実に実施するために必要な資本金その他の財産的基礎を有しなければならない。

2 政府は、その業務を確実に実施させるために必要があると認めるときは、個別法で定めるところにより、各独立行政法人に出資することができる。

(登記)

第9条 独立行政法人は、政令で定めるところにより、登記しなければならない。

2 前項の規定により登記しなければならない事項は、登記の後でなければ、これをもって第三者に対抗することができない。

(名称の使用制限)

第10条 独立行政法人でない者は、その名称中に、独立行政法人という文字を用いてはならない。

(民法の準用)

第11条 民法(明治29年法律第89号)第44条及び第50条の規定は、独立行政法人について準用する。

第2節 独立行政法人評価委員会

(独立行政法人評価委員会)

第12条 独立行政法人の主務省(当該独立行政法人を所管する内閣府又は各省をいう。以下同じ。)に、その所管に係る独立行政法人に関する事務を処理させるため、独立行政法人評価委員会(以下「評価委員会」という。)を置く。

2 評価委員会は、次に掲げる事務をつかさどる。

(1) 独立行政法人の業務の実績に関する評価に関すること。

(2) その他この法律又は個別法によりその権限に属させられた事項を処理すること。

3 前項に定めるもののほか、評価委員会の組織、所掌事務及び委員その他の職員その他評価委員会に関し必要な事項については、政令で定める。

第3節 設立

(設立の手續)

第13条 各独立行政法人の設立に関する手續については、個別法に特別の定めがある場合を除くほか、この節の定めるところによる。

(法人の長及び監事となるべき者)

第14条 主務大臣は、独立行政法人の長(以下「法人の長」という。)となるべき者及び監事となるべき者を指名する。

2 前項の規定により指名された法人の長又は監事となるべき者は、独立行政法人の成立の時において、この法律の規定により、それぞれ法人の長又は監事に任命されたものとする。

3 第20条第1項の規定は、第1項の法人の長となるべき者の指名について準用する。

(設立委員)

第15条 主務大臣は、設立委員を命じて、独立行政法人の設立に関する事務を処理させる。

2 設立委員は、独立行政法人の設立の準備を完了したときは、遅滞なく、その旨を主務大臣に届け出るとともに、その事務を前条第1項の規定により指名された法人の長となるべき者に引き継がなければならない。

(設立の登記)

第16条 第14条第1項の規定により指名された法人の長となるべき者は、前条第2項の規定による事務の引継ぎを受けたときは、遅滞なく、政令で定めるところにより、設立の登記をしなければならない。

第17条 独立行政法人は、設立の登記をすることによって成立する。

第2章 役員及び職員

(役員)

第18条 各独立行政法人に、個別法で定めるところにより、役員として、法人の長1人及び監事を置く。

2 各独立行政法人には、前項に規定する役員のほか、個別法で定めるところにより、他の役員を置くことができる。

3 各独立行政法人の法人の長の名称、前項に規定する役員の名称及び定数並びに監事

の定数は、個別法で定める。

(役員の職務及び権限)

第 19 条 法人の長は、独立行政法人を代表し、その業務を総理する。

- 2 個別法で定める役員（法人の長を除く。）は、法人の長の定めるところにより、法人の長に事故があるときはその職務を代理し、法人の長が欠員のときはその職務を行う。
- 3 前条第 2 項の規定により置かれる役員の職務及び権限は、個別法で定める。
- 4 監事は、独立行政法人の業務を監査する。
- 5 監事は、監査の結果に基づき、必要があると認めるときは、法人の長又は主務大臣に意見を提出することができる。

(役員の任命)

第 20 条 法人の長は、次に掲げる者のうちから、主務大臣が任命する。

- (1) 当該独立行政法人が行う事務及び事業に関して高度な知識及び経験を有する者
- (2) 前号に掲げる者のほか、当該独立行政法人が行う事務及び事業を適正かつ効率的に運営することができる者
- 2 監事は、主務大臣が任命する。
- 3 第 18 条第 2 項の規定により置かれる役員は、第 1 項各号に掲げる者のうちから、法人の長が任命する。
- 4 法人の長は、前項の規定により役員を任命したときは、遅滞なく、主務大臣に届け出るとともに、これを公表しなければならない。

(役員の任期)

第 21 条 役員の任期は、個別法で定める。ただし、補欠の役員の任期は、前任者の残任期間とする。

- 2 役員は、再任されることができる。

(役員の欠格条項)

第 22 条 政府又は地方公共団体の職員（非常勤の者を除く。）は、役員となることができない。

(役員の解任)

第 23 条 主務大臣又は法人の長は、それぞれその任命に係る役員が前条の規定により役員となることができない者に該当するに至ったときは、その役員を解任しなければならない。

- 2 主務大臣又は法人の長は、それぞれその任命に係る役員が次の各号の一に該当するとき、その他役員たるに適しないと認めるときは、その役員を解任することができる。
 - (1) 心身の故障のため職務の遂行に堪えないと認められるとき。
 - (2) 職務上の義務違反があるとき。
- 3 前項に規定するもののほか、主務大臣又は法人の長は、それぞれその任命に係る役員（監事を除く。）の職務の執行が適当でないため当該独立行政法人の業務の実績が悪化した場合であって、その役員に引き続き当該職務を行わせることが適切でないとき、その役員を解任することができる。
- 4 法人の長は、前二項の規定によりその任命に係る役員を解任したときは、遅滞なく、

主務大臣に届け出るとともに、これを公表しなければならない。

(代表権の制限)

第24条 独立行政法人と法人の長その他の代表権を有する役員との利益が相反する事項については、これらの者は、代表権を有しない。この場合には、監事が当該独立行政法人を代表する。

(代理人の選任)

第25条 法人の長その他の代表権を有する役員は、当該独立行政法人の代表権を有しない役員又は職員のうちから、当該独立行政法人の業務の一部に関し一切の裁判上又は裁判外の行為をする権限を有する代理人を選任することができる。

(職員の任命)

第26条 独立行政法人の職員は、法人の長が任命する。

第3章 業務運営

第1節 業務

(業務の範囲)

第27条 各独立行政法人の業務の範囲は、個別法で定める。

(業務方法書)

第28条 独立行政法人は、業務開始の際、業務方法書を作成し、主務大臣の認可を受けなければならない。これを変更しようとするときも、同様とする。

- 2 前項の業務方法書に記載すべき事項は、主務省令(当該独立行政法人を所管する内閣府又は各省の内閣府令又は省令をいう。以下同じ。)で定める。
- 3 主務大臣は、第1項の認可をしようとするときは、あらかじめ、評価委員会の意見を聴かななければならない。
- 4 独立行政法人は、第1項の認可を受けたときは、遅滞なく、その業務方法書を公表しなければならない。

第2節 中期目標等

(中期目標)

第29条 主務大臣は、3年以上5年以下の期間において独立行政法人が達成すべき業務運営に関する目標(以下「中期目標」という。)を定め、これを当該独立行政法人に指示するとともに、公表しなければならない。これを変更したときも、同様とする。

- 2 中期目標においては、次に掲げる事項について定めるものとする。
 - (1) 中期目標の期間(前項の期間の範囲内で主務大臣が定める期間をいう。以下同じ。)
 - (2) 業務運営の効率化に関する事項
 - (3) 国民に対して提供するサービスその他の業務の質の向上に関する事項
 - (4) 財務内容の改善に関する事項
 - (5) その他業務運営に関する重要事項
- 3 主務大臣は、中期目標を定め、又はこれを変更しようとするときは、あらかじめ、評価委員会の意見を聴かななければならない。

(中期計画)

第 30 条 独立行政法人は、前条第 1 項の指示を受けたときは、中期目標に基づき、主務省令で定めるところにより、当該中期目標を達成するための計画(以下「中期計画」という。)を作成し、主務大臣の認可を受けなければならない。これを変更しようとするときも、同様とする。

2 中期計画においては、次に掲げる事項を定めるものとする。

(1) 業務運営の効率化に関する目標を達成するためとるべき措置

(2) 国民に対して提供するサービスその他の業務の質の向上に関する目標を達成するためとるべき措置

(3) 予算(人件費の見積りを含む。) 収支計画及び資金計画

(4) 短期借入金の限度額

(5) 重要な財産を譲渡し、又は担保に供しようとするときは、その計画

(6) 剰余金の使途

(7) その他主務省令で定める業務運営に関する事項

3 主務大臣は、第 1 項の認可をしようとするときは、あらかじめ、評価委員会の意見を聴かなければならない。

4 主務大臣は、第 1 項の認可をした中期計画が前条第 2 項第 2 号から第 5 号までに掲げる事項の適正かつ確実な実施上不適当となったと認めるときは、その中期計画を変更すべきことを命ずることができる。

5 独立行政法人は、第 1 項の認可を受けたときは、遅滞なく、その中期計画を公表しなければならない。

(年度計画)

第 31 条 独立行政法人は、毎事業年度の開始前に、前条第 1 項の認可を受けた中期計画に基づき、主務省令で定めるところにより、その事業年度の業務運営に関する計画(次項において「年度計画」という。)を定め、これを主務大臣に届け出るとともに、公表しなければならない。これを変更したときも、同様とする。

2 独立行政法人の最初の事業年度の年度計画については、前項中「毎事業年度の開始前に、前条第 1 項の認可を受けた」とあるのは、「その成立後最初の中期計画について前条第 1 項の認可を受けた後遅滞なく、その」とする。

(各事業年度に係る業務の実績に関する評価)

第 32 条 独立行政法人は、主務省令で定めるところにより、各事業年度における業務の実績について、評価委員会の評価を受けなければならない。

2 前項の評価は、当該事業年度における中期計画の実施状況の調査をし、及び分析をし、並びにこれらの調査及び分析の結果を考慮して当該事業年度における業務の実績の全体について総合的な評定をして、行わなければならない。

3 評価委員会は、第一項の評価を行ったときは、遅滞なく、当該独立行政法人及び政令で定める審議会(以下「審議会」という。)に対して、その評価の結果を通知しなければならない。この場合において、評価委員会は、必要があると認めるときは、当該独立行政法人に対し、業務運営の改善その他の勧告をすることができる。

4 評価委員会は、前項の規定による通知を行ったときは、遅滞なく、その通知に係る事項(同項後段の規定による勧告をした場合にあっては、その通知に係る事項及びその勧告の内容)を公表しなければならない。

5 審議会は、第 3 項の規定により通知された評価の結果について、必要があると認め

るときは、当該評価委員会に対し、意見を述べることができる。

(中期目標に係る事業報告書)

第33条 独立行政法人は、中期目標の期間の終了後3月以内に、主務省令で定めるところにより、当該中期目標に係る事業報告書を主務大臣に提出するとともに、これを公表しなければならない。

(中期目標に係る業務の実績に関する評価)

第34条 独立行政法人は、主務省令で定めるところにより、中期目標の期間における業務の実績について、評価委員会の評価を受けなければならない。

- 2 前項の評価は、当該中期目標の期間における中期目標の達成状況の調査をし、及び分析をし、並びにこれらの調査及び分析の結果を考慮して当該中期目標の期間における業務の実績の全体について総合的な評定をして、行わなければならない。
- 3 第32条第3項から第5項までの規定は、第1項の評価について準用する。

(中期目標の期間の終了時の検討)

第35条 主務大臣は、独立行政法人の中期目標の期間の終了時において、当該独立行政法人の業務を継続させる必要性、組織の在り方その他その組織及び業務の全般にわたる検討を行い、その結果に基づき、所要の措置を講ずるものとする。

- 2 主務大臣は、前項の規定による検討を行うに当たっては、評価委員会の意見を聴かななければならない。
- 3 審議会は、独立行政法人の中期目標の期間の終了時において、当該独立行政法人の主要な事務及び事業の改廃に関し、主務大臣に勧告することができる。

第4章 財務及び会計

(事業年度)

第36条 独立行政法人の事業年度は、毎年4月1日に始まり、翌年3月31日に終わる。

- 2 独立行政法人の最初の事業年度は、前項の規定にかかわらず、その成立の日に始まり、翌年の3月31日(1月1日から3月31日までの間に成立した独立行政法人にあっては、その年の3月31日)に終わるものとする。

(企業会計原則)

第37条 独立行政法人の会計は、主務省令で定めるところにより、原則として企業会計原則によるものとする。

(財務諸表等)

第38条 独立行政法人は、毎事業年度、貸借対照表、損益計算書、利益の処分又は損失の処理に関する書類その他主務省令で定める書類及びこれらの附属明細書(以下「財務諸表」という。)を作成し、当該事業年度の終了後3月以内に主務大臣に提出し、その承認を受けなければならない。

- 2 独立行政法人は、前項の規定により財務諸表を主務大臣に提出するときは、これに当該事業年度の事業報告書及び予算の区分に従い作成した決算報告書を添え、並びに財務諸表及び決算報告書に関する監事の意見(次条の規定により会計監査人の監査を

受けなければならない独立行政法人にあっては、監事及び会計監査人の意見。以下同じ。)を付けなければならない。

- 3 主務大臣は、第1項の規定により財務諸表を承認しようとするときは、あらかじめ、評価委員会の意見を聴かなければならない。
- 4 独立行政法人は、第1項の規定による主務大臣の承認を受けたときは、遅滞なく、財務諸表を官報に公告し、かつ、財務諸表並びに第2項の事業報告書、決算報告書及び監事の意見を記載した書面を、各事務所に備えて置き、主務省令で定める期間、一般の閲覧に供しなければならない。

(会計監査人の監査)

第39条 独立行政法人(その資本の額その他の経営の規模が政令で定める基準に達しない独立行政法人を除く。)は、財務諸表、事業報告書(会計に関する部分に限る。)及び決算報告書について、監事の監査のほか、会計監査人の監査を受けなければならない。

(会計監査人の選任)

第40条 会計監査人は、主務大臣が選任する。

(会計監査人の資格)

第41条 株式会社の監査等に関する商法の特例に関する法律(昭和49年法律第22号)第4条(第2項第2号を除く。)の規定は、第39条の会計監査人について準用する。この場合において、同法第4条第2項第1号中「第2条」とあるのは、「独立行政法人通則法第39条」と読み替えるものとする。

(会計監査人の任期)

第42条 会計監査人の任期は、その選任の日以後最初に終了する事業年度の財務諸表についての主務大臣の第38条第1項の承認の時までとする。

(会計監査人の解任)

第43条 主務大臣は、会計監査人が次の各号の一に該当するときは、その会計監査人を解任することができる。

- (1) 職務上の義務に違反し、又は職務を怠ったとき。
- (2) 会計監査人たるにふさわしくない非行があったとき。
- (3) 心身の故障のため、職務の遂行に支障があり、又はこれに堪えないとき。

(利益及び損失の処理)

第44条 独立行政法人は、毎事業年度、損益計算において利益を生じたときは、前事業年度から繰り越した損失をうめ、なお残余があるときは、その残余の額は、積立金として整理しなければならない。ただし、第3項の規定により同項の用途に充てる場合は、この限りでない。

- 2 独立行政法人は、毎事業年度、損益計算において損失を生じたときは、前項の規定による積立金を減額して整理し、なお不足があるときは、その不足額は、繰越欠損金として整理しなければならない。
- 3 独立行政法人は、第1項に規定する残余があるときは、主務大臣の承認を受けて、その残余の額の全部又は一部を第30条第1項の認可を受けた中期計画(同項後段の規

定による変更の認可を受けたときは、その変更後のもの。以下単に「中期計画」という。)の同条第2項第6号の剰余金の使途に充てることができる。

- 4 主務大臣は、前項の規定による承認をしようとするときは、あらかじめ、評価委員会の意見を聴かなければならない。
- 5 第1項の規定による積立金の処分については、個別法で定める。

(借入金等)

第45条 独立行政法人は、中期計画の第30条第2項第4号の短期借入金の限度額の範囲内で、短期借入金を行うことができる。ただし、やむを得ない事由があるものとして主務大臣の認可を受けた場合は、当該限度額を超えて短期借入金を行うことができる。

- 2 前項の規定による短期借入金は、当該事業年度内に償還しなければならない。ただし、資金の不足のため償還することができないときは、その償還することができない金額に限り、主務大臣の認可を受けて、これを借り換えることができる。
- 3 前項ただし書の規定により借り換えた短期借入金は、1年以内に償還しなければならない。
- 4 主務大臣は、第1項ただし書又は第2項ただし書の規定による認可をしようとするときは、あらかじめ、評価委員会の意見を聴かなければならない。
- 5 独立行政法人は、個別法に別段の定めがある場合を除くほか、長期借入金及び債券発行を行うことができない。

(財源措置)

第46条 政府は、予算の範囲内において、独立行政法人に対し、その業務の財源に充てるために必要な金額の全部又は一部に相当する金額を交付することができる。

(余裕金の運用)

第47条 独立行政法人は、次の方法による場合を除くほか、業務上の余裕金を運用してはならない。

- (1) 国債、地方債、政府保証債(その元本の償還及び利息の支払について政府が保証する債券をいう。)その他主務大臣の指定する有価証券の取得
- (2) 銀行その他主務大臣の指定する金融機関への預金又は郵便貯金
- (3) 信託業務を営む銀行又は信託会社への金銭信託

(財産の処分等の制限)

第48条 独立行政法人は、主務省令で定める重要な財産を譲渡し、又は担保に供しようとするときは、主務大臣の認可を受けなければならない。ただし、中期計画において第30条第2項第5号の計画を定めた場合であって、その計画に従って当該重要な財産を譲渡し、又は担保に供するときは、この限りでない。

- 2 主務大臣は、前項の規定による認可をしようとするときは、あらかじめ、評価委員会の意見を聴かなければならない。

(会計規程)

第49条 独立行政法人は、業務開始の際、会計に関する事項について規程を定め、これを主務大臣に届け出なければならない。これを変更したときも、同様とする。

(主務省令への委任)

第50条 この法律及びこれに基づく政令に規定するもののほか、独立行政法人の財務及び会計に関し必要な事項は、主務省令で定める。

第5章 人事管理

第1節 特定独立行政法人

(役員及び職員の身分)

第51条 特定独立行政法人の役員及び職員は、国家公務員とする。

(役員の報酬等)

第52条 特定独立行政法人の役員に対する報酬及び退職手当(以下「報酬等」という。)は、その役員の業績が考慮されるものでなければならない。

- 2 特定独立行政法人は、その役員に対する報酬等の支給の基準を定め、これを主務大臣に届け出るとともに、公表しなければならない。これを変更したときも、同様とする。
- 3 前項の報酬等の支給の基準は、国家公務員の給与、民間企業の役員の報酬等、当該特定独立行政法人の業務の実績及び中期計画の第30条第2項第3号の人件費の見積りその他の事情を考慮して定められなければならない。

(評価委員会の意見の申出)

第53条 主務大臣は、前条第2項の規定による届出があったときは、その届出に係る報酬等の支給の基準を評価委員会に通知するものとする。

- 2 評価委員会は、前項の規定による通知を受けたときは、その通知に係る報酬等の支給の基準が社会一般の情勢に適合したものであるかどうかについて、主務大臣に対し、意見を申し出ることができる。

(役員の服務)

第54条 特定独立行政法人の役員(以下この条から第56条までにおいて単に「役員」という。)は、職務上知ることのできた秘密を漏らしてはならない。その職を退いた後も、同様とする。

- 2 役員は、在任中、政党その他の政治的団体の役員となり、又は積極的に政治運動をしてはならない。
- 3 役員(非常勤の者を除く。次項において同じ。)は、在任中、任命権者の承認のある場合を除くほか、報酬を得て他の職務に従事し、又は営利事業を営み、その他金銭上の利益を目的とする業務を行ってはならない。
- 4 役員は、離職後2年間は、商業、工業又は金融業その他営利を目的とする私企業(以下「営利企業」という。)の地位で、その離職前5年間に在職していた特定独立行政法人又は人事院規則で定める国の機関と密接な関係にあるものに就くことを承諾し、又は就いてはならない。ただし、人事院規則の定めるところにより、任命権者の申出により人事院の承認を得た場合は、この限りでない。

(役員の災害補償)

第55条 役員の公務上の災害又は通勤による災害に対する補償及び公務上の災害又は

通勤による災害を受けた役員に対する福祉事業については、特定独立行政法人の職員の例による。

(役員に係る労働者災害補償保険法の適用除外)

第56条 労働者災害補償保険法(昭和22年法律第50号)の規定は、役員には適用しない。

(職員の給与)

第57条 特定独立行政法人の職員の給与は、その職務の内容と責任に応ずるものであり、かつ、職員が発揮した能率が考慮されるものでなければならない。

2 特定独立行政法人は、その職員の給与の支給の基準を定め、これを主務大臣に届け出るとともに、公表しなければならない。これを変更したときも、同様とする。

3 前項の給与の支給の基準は、一般職の職員の給与に関する法律(昭和25年法律第95号)の適用を受ける国家公務員の給与、民間企業の従業員の給与、当該特定独立行政法人の業務の実績及び中期計画の第30条第2項第3号の人件費の見積りその他の事情を考慮して定められなければならない。

(職員の勤務時間等)

第58条 特定独立行政法人は、その職員の勤務時間、休憩、休日及び休暇について規程を定め、これを主務大臣に届け出るとともに、公表しなければならない。これを変更したときも、同様とする。

2 前項の規程は、一般職の職員の勤務時間、休暇等に関する法律(平成6年法律第33号)の適用を受ける国家公務員の勤務条件その他の事情を考慮したものでなければならない。

(職員に係る他の法律の適用除外等)

第59条 次に掲げる法律の規定は、特定独立行政法人の職員(以下この条において単に「職員」という。)には適用しない。

(1) 労働者災害補償保険法

(2) 国家公務員法(昭和22年法律第120号)第18条、第28条(第1項前段を除く。)、第29条から第32条まで、第62条から第70条まで、第72条第2項及び第3項、第75条第2項並びに第106条の規定

(3) 国家公務員の寒冷地手当に関する法律(昭和24年法律第200号)の規定

(4) 一般職の職員の給与に関する法律の規定

(5) 国家公務員の職階制に関する法律(昭和25年法律第180号)の規定

(6) 国家公務員の育児休業等に関する法律(平成3年法律第109号)第5条第2項、第8条及び第11条の規定

(7) 一般職の職員の勤務時間、休暇等に関する法律の規定

2 職員に関する国家公務員法の適用については、同法第2条第6項中「政府」とあるのは「独立行政法人通則法第2条第2項に規定する特定独立行政法人(以下「特定独立行政法人」という。)」と、同条第7項中「政府又はその機関」とあるのは「特定独立行政法人」と、同法第60条第1項中「場合には、人事院の承認を得て」とあるのは「場合には」と、「により人事院の承認を得て」とあるのは「により」と、同法第72条第1項中「その所轄庁の長」とあるのは「当該職員の勤務する特定独立行政法人の長」と、同法第78条第4号中「官制」とあるのは「組織」と、同法第80条第

4 項中「給与準則」とあるのは「独立行政法人通則法第 57 条第 2 項に規定する給与の支給の基準」と、同法第 81 条の 2 第 2 項各号中「人事院規則で」とあるのは「特定独立行政法人の長が」と、同法第 81 条の 3 第 2 項中「ときは、人事院の承認を得て」とあるのは「ときは」と、同法第 100 条第 2 項中「、所轄庁の長」とあるのは「、当該職員の勤務する特定独立行政法人の長」と、「の所轄庁の長」とあるのは「の属する特定独立行政法人の長」と、同法第 101 条第 1 項中「政府」とあるのは「当該職員の勤務する特定独立行政法人」と、同条第 2 項中「官庁」とあるのは「特定独立行政法人」と、同法第 103 条第 3 項中「所轄庁の長」とあるのは「当該職員の勤務し、又は勤務していた特定独立行政法人の長」と、同法第 104 条中「内閣総理大臣及びその職員の所轄庁の長」とあるのは「当該職員の勤務する特定独立行政法人の長」とする。

- 3 職員に関する国際機関等に派遣される一般職の国家公務員の処遇等に関する法律（昭和 45 年法律第 117 号）第 5 条及び第 6 条第 3 項の規定の適用については、同法第 5 条第 1 項中「俸給、扶養手当、調整手当、研究員調整手当、住居手当、期末手当及び期末特別手当のそれぞれ 100 分の 100 以内」とあるのは「給与」と、同条第 2 項中「人事院規則（派遣職員が検察官の俸給等に関する法律（昭和 23 年法律第 76 号）の適用を受ける職員である場合にあつては、同法第 3 条第 1 項に規定する準則）」とあるのは「独立行政法人通則法第 57 条第 2 項に規定する給与の支給の基準」と、同法第 6 条第 3 項中「国は」とあるのは「独立行政法人通則法第 2 条第 2 項に規定する特定独立行政法人は」とする。
- 4 職員に関する労働基準法（昭和 22 年法律第 49 号）第 12 条第 3 項第 4 号及び第 39 条第 7 項の規定の適用については、同法第 12 条第 3 項第 4 号中「育児休業、介護休業等育児又は家族介護を行う労働者の福祉に関する法律（平成 3 年法律第 76 号）第 2 条第 1 号」とあるのは「国家公務員の育児休業等に関する法律（平成 3 年法律第 109 号）第 3 条第 1 項」と、「同条第 2 号」とあるのは「育児休業、介護休業等育児又は家族介護を行う労働者の福祉に関する法律（平成 3 年法律第 76 号）第 2 条第 2 号」と、同法第 39 条第 7 項中「育児休業、介護休業等育児又は家族介護を行う労働者の福祉に関する法律第 2 条第 1 号」とあるのは「国家公務員の育児休業等に関する法律第 3 条第 1 項」と、「同条第 2 号」とあるのは「育児休業、介護休業等育児又は家族介護を行う労働者の福祉に関する法律第 2 条第 2 号」とする。
- 5 職員に関する船員法（昭和 22 年法律第 100 号）第 74 条第 4 項の規定の適用については、同項中「育児休業、介護休業等育児又は家族介護を行う労働者の福祉に関する法律（平成 3 年法律第 76 号）第 2 条第 1 号」とあるのは「国家公務員の育児休業等に関する法律（平成 3 年法律第 109 号）第 3 条第 1 項」と、「同条第 2 号」とあるのは「育児休業、介護休業等育児又は家族介護を行う労働者の福祉に関する法律（平成 3 年法律第 76 号）第 2 条第 2 号」とする。

（国会への報告等）

- 第 60 条 特定独立行政法人は、政令で定めるところにより、毎事業年度、常時勤務に服することを要するその職員（国家公務員法第 79 条又は第 82 条の規定による休職又は停職の処分を受けた者、法令の規定により職務に専念する義務を免除された者その他の常時勤務に服することを要しない職員で政令で定めるものを含む。次項において「常勤職員」という。）の数を主務大臣に報告しなければならない。
- 2 政府は、毎年、国会に対し、特定独立行政法人の常勤職員の数を報告しなければならない。

第2節 特定独立行政法人以外の独立行政法人

(役員の兼職禁止)

第61条 特定独立行政法人以外の独立行政法人の役員（非常勤の者を除く。）は、在任中、任命権者の承認のある場合を除くほか、営利を目的とする団体の役員となり、又は自ら営利事業に従事してはならない。

(準用)

第62条 第52条及び第53条の規定は、特定独立行政法人以外の独立行政法人の役員の報酬等について準用する。この場合において、第52条第3項中「実績及び中期計画の第30条第2項第3号の人件費の見積り」とあるのは、「実績」と読み替えるものとする。

(職員の給与等)

第63条 特定独立行政法人以外の独立行政法人の職員の給与は、その職員の勤務成績が考慮されるものでなければならない。

- 2 特定独立行政法人以外の独立行政法人は、その職員の給与及び退職手当の支給の基準を定め、これを主務大臣に届け出るとともに、公表しなければならない。これを変更したときも、同様とする。
- 3 前項の給与及び退職手当の支給の基準は、当該独立行政法人の業務の実績を考慮し、かつ、社会一般の情勢に適合したものとなるように定められなければならない。

第6章 雑則

(報告及び検査)

第64条 主務大臣は、この法律を施行するため必要があると認めるときは、独立行政法人に対し、その業務並びに資産及び債務の状況に関し報告をさせ、又はその職員に、独立行政法人の事務所に立ち入り、業務の状況若しくは帳簿、書類その他の必要な物件を検査させることができる。

- 2 前項の規定により職員が立入検査をする場合には、その身分を示す証明書を携帯し、関係人にこれを提示しなければならない。
- 3 第1項の規定による立入検査の権限は、犯罪捜査のために認められたものと解してはならない。

(違法行為等の是正)

第65条 主務大臣は、独立行政法人又はその役員若しくは職員の行為がこの法律、個別法若しくは他の法令に違反し、又は違反するおそれがあると認めるときは、当該独立行政法人に対し、当該行為の是正のため必要な措置を講ずることを求めることができる。

- 2 独立行政法人は、前項の規定による主務大臣の求めがあったときは、速やかに当該行為の是正その他の必要と認める措置を講ずるとともに、当該措置の内容を主務大臣に報告しなければならない。

(解散)

第66条 独立行政法人の解散については、別に法律で定める。

(財務大臣との協議)

第67条 主務大臣は、次の場合には、財務大臣に協議しなければならない。

- (1) 第29条第1項の規定により中期目標を定め、又は変更しようとするとき。
- (2) 第30条第1項、第45条第1項ただし書若しくは第2項ただし書又は第48条第1項の規定による認可をしようとするとき。
- (3) 第44条第3項の規定による承認をしようとするとき。
- (4) 第47条第1号又は第2号の規定による指定をしようとするとき。

(主務大臣等)

第68条 この法律における主務大臣、主務省及び主務省令は、個別法で定める。

第7章 罰則

第69条 次の各号の一に該当する者は、1年以下の懲役又は50万円以下の罰金に処する。

- (1) 第54条第1項の規定に違反して秘密を漏らした者
- (2) 第54条第4項の規定に違反して営利企業の地位に就いた者

第70条 第64条第1項の規定による報告をせず、若しくは虚偽の報告をし、又は同項の規定による検査を拒み、妨げ、若しくは忌避した場合には、その違反行為をした独立行政法人の役員又は職員は、20万円以下の罰金に処する。

第71条 次の各号の一に該当する場合には、その違反行為をした独立行政法人の役員は、20万円以下の過料に処する。

- (1) この法律の規定により主務大臣の認可又は承認を受けなければならない場合において、その認可又は承認を受けなかったとき。
- (2) この法律の規定により主務大臣に届出をしなければならない場合において、その届出をせず、又は虚偽の届出をしたとき。
- (3) この法律の規定により公表をしなければならない場合において、その公表をせず、又は虚偽の公表をしたとき。
- (4) 第9条第1項の規定による政令に違反して登記することを怠ったとき。
- (5) 第30条第4項の規定による主務大臣の命令に違反したとき。
- (6) 第33条の規定による事業報告書の提出をせず、又は事業報告書に記載すべき事項を記載せず、若しくは虚偽の記載をして事業報告書を提出したとき。
- (7) 第38条第4項の規定に違反して財務諸表、事業報告書、決算報告書若しくは監事の意見を記載した書面を備え置かず、又は閲覧に供しなかったとき。
- (8) 第47条の規定に違反して業務上の余裕金を運用したとき。
- (9) 第60条第1項又は第65条第2項の規定による報告をせず、又は虚偽の報告をしたとき。

第72条 第10条の規定に違反した者は、10万円以下の過料に処する。

附 則

(施行期日)

第1条 この法律は、内閣法の一部を改正する法律(平成11年法律第88号)の施行

の日から施行する。

（名称の使用制限に関する経過措置）

第2条 この法律の施行の際現にその名称中に独立行政法人という文字を用いている者については、第10条の規定は、この法律の施行後6月間は、適用しない。

（政令への委任）

第3条 前条に定めるもののほか、この法律の施行に関し必要な経過措置は、政令で定める。

独立行政法人国際農林水産業研究センター業務方法書

目次

- 第1章 総則（第1条 - 第2条）
- 第2章 業務に関する事項（第3条 - 第12条）
- 第3章 業務委託の基準（第13条 - 第14条）
- 第4章 競争入札その他契約に関する基本的事項（第15条 - 第17条）
- 第5章 雑則（第18条 - 第19条）
- 附則

第1章 総則

（目的）

第1条 この業務方法書は、独立行政法人通則法（平成11年法律第103号）第28条第1項及び独立行政法人国際農林水産業研究センターの業務運営並びに財務及び会計に関する省令（平成13年農林水産省令第47号）第1条の規定に基づき、独立行政法人国際農林水産業研究センター法（平成11年法律第197号。以下「法」という。）第10条に規定する独立行政法人国際農林水産業研究センター（以下「センター」という。）の行う業務の方法について基本的な事項を定め、もってその業務の適正な運営に資することを目的とする。

（業務運営の基本的方針）

第2条 センターは、法に定められたその設置の目的及び業務内容の重要性にかんがみ、関係機関と緊密な連携を図り、もってその業務の適正かつ効率的な運営を期するものとする。

第2章 業務に関する事項

（中期計画）

第3条 センターは、法第10条各号に掲げる業務を農林水産大臣の認可を受けた中期計画に従って実施するものとする。

（試験及び研究並びに調査）

第4条 センターは、法第10条第1号に掲げる試験及び研究並びに調査の実施に当たっては、研究所が有する各種の研究資源の効率的な活用を図るとともに、他の独立行政法人、都道府県、大学や民間の試験研究機関その他関

係機関との連携の確保に留意するものとする。

(分析、鑑定)

第5条 センターは、法第10条第1号に掲げる分析及び鑑定については、依頼に応じて、センターが有する高度な専門知識を必要とするものについて実施する。

2 センターは、前項の業務を実施するときは、別に定めるところより、所要の対価を徴収することができるものとする。

(資料の収集、整理及び提供)

第6条 センターは法第10条第2号に掲げる資料の収集、整理及び提供については、開発途上国等における農林水産業研究の中核機関としての機能を活用し、関係機関の協力も得つつ、業務の充実を図るものとする。

(受託による業務の実施)

第7条 センターは、法第10条第1号に掲げる試験及び研究並びに調査の業務の実施に支障のない範囲内で、依頼に応じて、受託による業務を実施することができる。

(受託契約)

第8条 センターは、前条の規定による受託をしようとするときは、委託しようとする者と受託に関する契約を締結するものとする。

2 前項の契約においては、次の事項を定める。

- (1) 受託により実施する業務(以下「受託業務」という。)の課題
- (2) 受託業務の内容に関する事項
- (3) 受託業務を実施する場所及び方法に関する事項
- (4) 受託契約の期間及びその解除に関する事項
- (5) 受託業務の結果の報告に関する事項
- (6) 受託費の額並びに支払いの時期及び方法に関する事項
- (7) 受託業務の実施の結果の取扱方法及びその結果が知的所有権の対象となったときのその帰属に関する事項
- (8) その他必要な事項

(共同研究)

第9条 センターは、試験及び研究並びに調査を効率的に実施するために必要な場合には、他の者と試験及び研究並びに調査を分担し、技術及び知識を交換し、並びにその費用を分担して行う試験及び研究並びに調査(次条におい

て「共同研究」という。)を行うことができる。

(共同研究等契約)

第10条 センターは、共同研究を実施しようとするときは、共同研究を行おうとする者と共同研究契約を締結するものとする。

2 前項の契約においては、次に掲げる事項を定める。

- (1) 共同研究の課題
- (2) 共同研究の内容に関する事項
- (3) 共同研究に係る業務を実施する場所及び方法に関する事項
- (4) 共同研究の期間及びその解除に関する事項
- (5) 共同研究に要する費用の分担に関する事項
- (6) 共同研究の結果の取扱の方法に関する事項
- (7) 共同研究の結果が知的所有権の対象となったときのその帰属に関する事項
- (8) その他必要な事項

(成果の普及)

第11条 センターは、次の各号に掲げる方法により、成果の公表、普及を図るものとする。

- (1) 成果に関する発表会を開催すること
- (2) 成果に関する報告書等を作成し、これを頒布すること
- (3) 成果を研究所のホームページに掲載して、提供すること
- (4) その他事例に応じて最も適当と認められる方法

(知的所有権)

第12条 センターは、重要な研究成果については、積極的に国内外において知的所有権を取得するとともに、民間等に対し、その実施を許諾する等により、研究成果の普及を推進するものとする。

2 センターは、知的所有権の実施の許諾等については、我が国の農林水産業等の振興に支障を来すことのないよう考慮の上、決定するものとする。

第3章 業務委託の基準

(業務の委託)

第13条 センターは、その業務の効率的かつ効果的な運営に資すると認めるときは、法第10条に掲げる業務について、センター以外の者に委託することができる。

(委託契約)

第14条 センターは、前条の規定により業務を委託しようとするときは、当該委託業務に関し、受託者と契約を締結するものとする。

2 前項の契約においては、次の事項を定める。

- (1) 委託業務の課題
- (2) 委託業務の内容に関する事項
- (3) 委託に係る業務を実施する場所及び方法に関する事項
- (4) 委託契約の期間及びその解除に関する事項
- (5) 委託に係る業務の結果の報告に関する事項
- (6) 委託費の額並びに支払いの時期及び方法に関する事項
- (7) 委託業務の実施の結果の取扱方法及びその結果が知的所有権の対象となったときのその帰属に関する事項
- (8) その他必要な事項

第4章 競争入札その他契約に関する基本的事項

(契約の方法)

第15条 センターにおける売買、賃貸、請負その他の契約は、すべて一般競争契約の方法によるものとし、当該契約の目的に従い、最高又は最低の価格による入札者と締結するものとする。ただし、次の各号に掲げる場合には、指名競争契約又は随意契約に付することができるものとする。

- (1) 契約の性質又は目的から一般競争に付することが適当でないとき又は一般競争に付し得ないとき。
- (2) 災害その他緊急を要するために一般競争に付し得ないとき。
- (3) 予定価格が少額であるとき。
- (4) その他一般競争に付することが不利と認められるとき。

(政府調達に関する協定に係る物品等の契約手続き)

第16条 政府調達に関する協定(平成7年条約第23号)に係る物品等の調達手続きについては、同協定の規定に則してこれを行うものとする。

(会計規程への委任)

第17条 この章に定めるもののほか、センターが行う契約に関して必要な事項は、通則法第49条の会計規程で定める。

第5章 雑 則

(施設等の貸与)

第18条 センターは、センターの業務運営に支障のない範囲において、センターの施設・設備の一部を他の者に貸与することができるものとする。

2 センターは、前項により貸与を実施するときは、別に定めるところより、所要の対価を徴収することができるものとする。

(その他の業務の方法)

第19条 この業務方法書に定めるもののほか、業務に関し必要な事項については、理事長が別に定める。

附 則

この業務方法書は、農林水産大臣の認可のあった日から施行する。

独立行政法人国際農林水産業研究センター法

平成11年法律第197号

平成11年12月22日

目次

- 第1章 総則（第1条～第6条）
- 第2章 役員（第7条～第9条）
- 第3章 業務等（第10条・第11条）
- 第4章 雑則（第12条）
- 第5章 罰則（第13条）
- 附則

第1章 総則

（目的）

第1条 この法律は、独立行政法人国際農林水産業研究センターの名称、目的、業務の範囲等に関する事項を定めることを目的とする。

（名称）

第2条 この法律及び独立行政法人通則法（平成11年法律第103号。以下「通則法」という。）の定めるところにより設立される通則法第2条第1項に規定する独立行政法人の名称は、独立行政法人国際農林水産業研究センターとする。

（センターの目的）

第3条 独立行政法人国際農林水産業研究センター（以下「センター」という。）は、熱帯又は亜熱帯に属する地域その他開発途上にある海外の地域における農林水産業に関する技術上の試験及び研究等を行うことにより、これらの地域における農林水産業に関する技術の向上に寄与することを目的とする。

（特定独立行政法人）

第4条 センターは、通則法第2条第2項に規定する特定独立行政法人とする。

（事務所）

第5条 センターは、主たる事務所を茨城県に置く。

（資本金）

第6条 センターの資本金は、附則第5条第2項の規定により政府から出資があつたものとされた金額とする。

- 2 政府は、必要があると認めるときは、予算で定める金額の範囲内において、センターに追加して出資することができる。
- 3 センターは、前項の規定による政府の出資があつたときは、その出資額により資本金を増加するものとする。

第2章 役員

(役員)

第7条 センターに、役員として、その長である理事長及び監事2人を置く。

2 センターに、役員として、理事1人を置くことができる。

(理事の職務及び権限等)

第8条 理事は、理事長の定めるところにより、理事長を補佐してセンターの業務を掌理する。

2 通則法第19条第2項の個別法で定める役員は、理事とする。ただし、理事が置かれていないときは、監事とする。

3 前項ただし書の場合において、通則法第19条第2項の規定により理事長の職務を代理し又はその職務を行う監事は、その間、監事の職務を行ってはならない。

(役員任期)

第9条 理事長の任期は4年とし、理事及び監事の任期は2年とする。

第3章 業務等

(業務の範囲)

第10条 センターは、第3条の目的を達成するため、次の業務を行う。

(1) 熱帯又は亜熱帯に属する地域その他開発途上にある海外の地域における農林水産業に関する技術上の試験及び研究、調査、分析、鑑定並びに講習を行うこと。

(2) 前号の地域における農林水産業に関する内外の資料の収集、整理及び提供を行うこと。

(3) 前二号の業務に附帯する業務を行うこと。

(積立金の処分)

第11条 センターは、通則法第29条第2項第1号に規定する中期目標の期間(以下この項において「中期目標の期間」という。)の最後の事業年度に係る通則法第44条第1項又は第2項の規定による整理を行った後、同条第1項の規定による積立金があるときは、その額に相当する金額のうち農林水産大臣の承認を受けた金額を、当該中期目標の期間の次の中期目標の期間に係る通則法第30条第1項の認可を受けた中期計画(同項後段の規定による変更の認可を受けたときは、その変更後のもの)の定めるところにより、当該次の中期目標の期間における前条に規定する業務の財源に充てることができる。

2 農林水産大臣は、前項の規定による承認をしようとするときは、あらかじめ、農林水産省の独立行政法人評価委員会の意見を聴くとともに、財務大臣に協議しなければならない。

3 センターは、第1項に規定する積立金の額に相当する金額から同項の規定による承認を受けた金額を控除してなお残余があるときは、その残余の額を国庫に納付しなければならない。

4 前三項に定めるもののほか、納付金の納付の手續その他積立金の処分に関し必要な事項は、政令で定める。

第4章 雑則

(主務大臣等)

第12条 センターに係る通則法における主務大臣、主務省及び主務省令は、それぞれ農林水産大臣、農林水産省及び農林水産省令とする。

第5章 罰則

第13条 次の各号のいずれかに該当する場合には、その違反行為をしたセンターの役員は、20万円以下の過料に処する。

(1) 第10条に規定する業務以外の業務を行ったとき。

(2) 第11条第1項の規定により農林水産大臣の承認を受けなければならない場合において、その承認を受けなかつたとき。

附 則

(施行期日)

第1条 この法律は、平成13年1月6日から施行する。ただし、附則第7条の規定は、同日から起算して6月を超えない範囲内において政令で定める日から施行する。

(職員の引継ぎ等)

第2条 センターの成立の際現に農林水産省の部局又は機関で政令で定めるものの職員である者は、別に辞令を発せられない限り、センターの成立の日において、センターの相当の職員となるものとする。

第3条 センターの成立の際現に前条に規定する政令で定める部局又は機関の職員である者のうち、センターの成立の日において引き続きセンターの職員となつたもの(次条において「引継職員」という。)であつて、センターの成立の日の前日において農林水産大臣又はその委任を受けた者から児童手当法(昭和46年法律第73号)第7条第1項(同法附則第6条第2項において準用する場合を含む。以下この条において同じ。)の規定による認定を受けているものが、センターの成立の日において児童手当又は同法附則第6条第1項の給付(以下この条において「特例給付」という。)の支給要件に該当するときは、その者に対する児童手当又は特例給付の支給に関しては、センターの成立の日において同法第7条第1項の規定による市町村長(特別区の区長を含む。)の認定があつたものとみなす。この場合において、その認定があつたものとみなされた児童手当又は特例給付の支給は、同法第8条第2項(同法附則第6条第2項において準用する場合を含む。)の規定にかかわらず、センターの成立の日の前日の属する月の翌月から始める。

(センターの職員となる者の職員団体についての経過措置)

第4条 センターの成立の際現に存する国家公務員法(昭和22年法律第120号)第108条の2第1項に規定する職員団体であつて、その構成員の過半数が引継職員であるものは、センターの成立の際国営企業及び特定独立行政法人の労働関係に関する法律(昭和23年法律第257号)の適用を受ける労働組合となるものとする。この場合において、当該職員団体が法人であるときは、法人である労働組合となるものとする。

2 前項の規定により法人である労働組合となつたものは、センターの成立の日から起算して60日を経過する日までに、労働組合法(昭和24年法律第174号)第2条及び第5条第2項の規定に適合する旨の労働委員会の証明を受け、かつ、その主たる事務所の所在地において登記しなければ、その日の経過により解散するものとする。

3 第1項の規定により労働組合となつたものについては、センターの成立の日から起算して60日を経過する日までは、労働組合法第2条ただし書（第1号に係る部分に限る。）の規定は、適用しない。

（権利義務の承継等）

第5条 センターの成立の際、第10条に規定する業務に関し、現に国が有する権利及び義務のうち政令で定めるものは、センターの成立の時に於いてセンターが承継する。

2 前項の規定によりセンターが国の有する権利及び義務を承継したときは、その承継の際、承継される権利に係る土地、建物その他の財産で政令で定めるものの価額の合計額に相当する金額は、政府からセンターに対し出資されたものとする。

3 前項の規定により政府から出資があつたものとされる同項の財産の価額は、センターの成立の日現在における時価を基準として評価委員が評価した価額とする。

4 前項の評価委員その他評価に関し必要な事項は、政令で定める。

（政令への委任）

第6条 附則第2条から前条までに定めるもののほか、センターの設立に伴い必要な経過措置その他この法律の施行に関し必要な経過措置は、政令で定める。

（農林水産省設置法の一部改正）

第7条 農林水産省設置法（平成11年法律第98号）の一部を次のように改正する。

第13条第5号の2に次のように加える。

へ 独立行政法人国際農林水産業研究センター

第13条第9号を削る。

13国研セ第4 - 25号

独立行政法人国際農林水産業研究センターの組織に関する規程を次のように定める。

平成13年4月2日

独立行政法人国際農林水産業研究センター理事長

独立行政法人国際農林水産業研究センターの組織に関する規程

目次

- 第1章 総則(第1条・第2条)
- 第2章 企画調整部(第3条～第13条)
- 第3章 総務部(第14条～第39条)
- 第4章 国際情報部(第40条～第42条)
- 第5章 生物資源部(第43条)
- 第6章 生産環境部(第44条)
- 第7章 畜産草地部(第45条)
- 第8章 食料利用部(第46条)
- 第9章 林業部(第47条)
- 第10章 水産部(第48条)
- 第11章 支所(第49条～第59条)
- 第12章 主任研究官及び専門職(第60条・第60条の2)
- 第13章 特例(第61条・第62条)
- 附則

第1章 総則

(目的)

第1条 この規程は、独立行政法人国際農林水産業研究センター（以下「センター」という。）の円滑な運営を図るため組織及び所掌事務を定めることを目的とする。

(センターに置く部及び支所)

第2条 センターに、次の9部及び支所を置く。

企画調整部
総務部
国際情報部
生物資源部
生産環境部
畜産草地部
食料利用部
林業部
水産部

第2章 企画調整部

(企画調整部の所掌事務)

第3条 企画調整部は、次に掲げる事務をつかさどる。

- (1) 試験及び研究並びに調査の総合的な企画及び立案並びに調整に関すること。
- (2) 試験及び研究並びに調査に関する連絡調整に関すること。
- (3) 試験及び研究並びに調査に関する情報の収集、整理、分析及び広報を行うこと（国際情報部の所掌に属するものを除く。）。
- (4) 試験及び研究に供するほ場及び植物の管理に関すること。

(企画調整部の内部組織)

第4条 企画調整部に、国際研究調整官及び国際研究広報官のほか、次の3科及び1課を置く。

研究企画科
連絡調整科
研究交流科
情報資料課

(研究企画科の所掌事務)

第5条 研究企画科においては、次の事務をつかさどる。

- (1) 試験及び研究並びに調査の総合的な企画及び立案並びに調整に関すること。
- (2) 試験及び研究並びに調査の成果の取りまとめに関すること。
- (3) 試験及び研究に供するほ場及び植物の管理に関すること。

(連絡調整科の所掌事務)

第6条 連絡調整科においては、試験及び研究並びに調査に関し海外及び国内の関係

機関及び海外滞在職員との連絡調整に関する事務をつかさどる。

(研究交流科の所掌事務)

第 7 条 研究交流科においては、海外及び国内における研究交流の推進に係る会議の運営及び海外の管理者、研究者等の受入れに関する事務をつかさどる。

(国際研究調整官の所掌事務)

第 8 条 国際研究調整官は、命を受けて、国際共同研究の推進に係る重要事項に関する総合調整を行い、関係事務を総括する。

(国際研究広報官の所掌事務)

第 9 条 国際研究広報官は、試験及び研究並びに調査の広報に関する専門的事項についての企画及び連絡調整に関する事務をつかさどる。

(情報資料課の所掌事務)

第 10 条 情報資料課においては、次の事務をつかさどる。

- (1) 試験及び研究並びに調査に関する情報の収集、整理及び提供を行うこと (国際情報部の所掌に属することを除く。)。
- (2) 試験及び研究並びに調査に関する図書資料の刊行及び配布を行うこと。

(情報資料課の内部組織)

第 11 条 情報資料課に管理係及び広報係を置く。

(管理係の所掌事務)

第 12 条 管理係においては、試験及び研究並びに調査に関する図書資料その他情報の収集、整理及び管理を行う事務をつかさどる (国際情報部の所掌に属することを除く。)。

(広報係の所掌事務)

第 13 条 広報係においては、試験研究及び調査に関する図書資料の刊行及び配布その他情報の提供を行う事務をつかさどる。

第 3 章 総務部

(総務部の所掌事務)

第 14 条 総務部は、次に掲げる事務をつかさどる。

- (1) 理事長の印及びセンター印の保管に関すること。
- (2) 労務及び職員の人事に関すること。
- (3) 公文書類の接受、発送、編集及び保存に関すること。
- (4) 予算、決算及び会計に関すること。
- (5) 土地、建物、工作物及び物品の管理に関すること。
- (6) 構内の管理に関すること。
- (7) 前各号に掲げるもののほか、センターの所掌事務で他の所掌に属しないものに関すること。

(総務部の内部組織)

第 1 5 条 総務部に、次の 3 課を置く。

庶務課

会計課

海外業務管理課

(庶務課の所掌事務)

第 1 6 条 庶務課は、次に掲げる事務をつかさどる。

(1) 理事長の印及びセンター印の保管に関する事。

(2) 労務及び職員の人事に関する事。

(3) 公文書類の接受、発送、編集及び保存に関する事。

(4) 前各号に掲げるもののほか、センターの所掌事務で他の所掌に属しないものに関する事。

(庶務課の内部組織)

第 1 7 条 庶務課に、課長補佐のほか、次の 3 係を置く。

庶務係

人事係

厚生係

(課長補佐の所掌事務)

第 1 8 条 課長補佐は、命を受けて、庶務課の所掌事務の一部を総括整理する。

第 1 9 条 削除

(庶務係の所掌事務)

第 2 0 条 庶務係においては、次の事務をつかさどる。

(1) 公文書類の接受、発送、編集及び保存に関する事。

(2) 理事長の印及びセンター印を管守する事。

(3) 職員の勤務時間及び休暇に関する事。

(4) 各種証明書の発行に関する事。

(5) 前各号に掲げるもののほか、他の所掌に属しない事務に関する事。

(人事係の所掌事務)

第 2 1 条 人事係においては、次の事務をつかさどる。

(1) 職員の任免、分限及び懲戒に関する事。

(2) 職員の服務に関する事 (勤務時間及び休暇に関する事及び海外業務管理課の所掌に属することを除く。) 。

(3) 職員の勤務成績の評定に関する事。

(4) 職員の人事記録に関する事。

(5) 職員の初任給、昇格及び昇給に関する事。

(6) 退職手当に関する事。

(7) 職員の研修及び資質の向上に関する事。

(8) 表彰に関する事。

(9) 前各号に掲げるもののほか、人事に関する事で他の所掌に属しない事務に関する事。

(厚生係の所掌事務)

第 2 2 条 厚生係においては、次の事務をつかさどる。

- (1) 共済組合に関する事。
- (2) 職員の災害補償に関する事 (海外業務管理課の所掌に属することを除く。)。
- (3) 宿舍の運営に関する事。
- (4) 職員の健康の管理に関する事 (海外業務管理課の所掌に属することを除く。)。
- (5) 前各号に掲げるもののほか、職員の福利厚生に関する事 (海外業務管理課の所掌に属することを除く。)。

(会計課の所掌事務)

第 2 3 条 会計課は、次に掲げる事務をつかさどる。

- (1) 独立行政法人の適正な会計処理の確保に関する事。
- (2) 予算、決算及び会計に関する事 (海外業務管理課の所掌に属するものを除く。)。
- (3) 土地、建物、工作物及び物品の管理に関する事 (海外業務管理課の所掌に属するものを除く。)。
- (4) 構内の管理に関する事。

(会計課の内部組織)

第 2 4 条 会計課に、課長補佐のほか、次の 5 係を置く。

主計係
会計係
監査係
用度係
施設管理係

(課長補佐の所掌事務)

第 2 5 条 課長補佐は、命を受けて、会計課の所掌事務の一部を総括整理する。

第 2 6 条 削除

(主計係の所掌事務)

第 2 7 条 主計係においては、次の事務をつかさどる。

- (1) 予算の要求、交付申請及び配分に関する事。
- (2) 支出及び収入の決算に関する事。
- (3) 資金の運用計画に関する事。

(会計係の所掌事務)

第 2 8 条 会計係においては、次の事務をつかさどる。

- (1) 収入及び支出に関する事。

- (2) 給与、賃金及び旅費の支払いに関する事。
- (3) 債権の管理に関する事。
- (4) 計算証明に関する事(海外業務管理課の所掌に属することを除く。)。
- (5) 前各号に掲げるもののほか、会計課の所掌事務で他の所掌に属しない事務に関する事。

(監査係の所掌事務)

第 2 9 条 監査係においては、次の事務をつかさどる。

- (1) 契約決議書及び振替伝票の審査に関する事。
- (2) 経費の執行管理に関する事(海外業務管理課の所掌に属することを除く。)。
- (3) 受託及び委託の契約に関する事。
- (4) 製造委託及び買入れに係る物件の検収に関する事。

(用度係の所掌事務)

第 3 0 条 用度係においては、次の事務をつかさどる。

- (1) 物品の製造委託及び買入れ並びに役務の調達に関する事。
- (2) 物品の管理に関する事(海外業務管理課の所掌に属することを除く。)。
- (3) 構内取締りに関する事。
- (4) 職員の安全保持に関する事。
- (5) 官公需についての中小企業者の受注の機会の確保に関する事に関する事。

(施設管理係の所掌事務)

第 3 1 条 施設管理係においては、次の事務をつかさどる。

- (1) 固定資産の管理に関する事。(物品の管理に関する事を除く。)
- (2) 建物及び工作物の営繕に関する事。
- (3) 特許権等の出願及び実施許諾に関する事。

(海外業務管理課の所掌事務)

第 3 2 条 海外業務管理課は、次に掲げる事務をつかさどる。

- (1) 決算及び会計に関する事(海外における経費の会計に関するものに限る。)。
- (2) 外国出張旅費並びに海外からの招へい者の旅費及び滞在費の支払いに関する事。
- (3) 海外における物品の管理に関する事。
- (4) 前 3 号に掲げるもののほか、センターの所掌事務のうち海外における事務に関するもので他の所掌に属しないものに関する事。

(海外業務管理課の内部組織)

第 3 3 条 海外業務管理課に、次の 4 係を置く。

- 海外業務調整係
- 海外前渡資金係
- 海外派遣係
- 海外物品係

第 3 4 条 削除

第35条 削除

(海外業務調整係の所掌事務)

第36条 海外業務調整係においては、次の事務をつかさどる。

- (1) 海外における事務の調整及び指導に関すること。
- (2) 海外滞在職員への海外における事務情報の提供に関すること。
- (3) 海外における経費の執行管理に関すること。
- (4) 前各号に掲げるもののほか、海外業務管理課の所掌事務で他の所掌に属しない事務に関すること。

(海外前渡資金係の所掌事務)

第37条 海外前渡資金係においては、次の事務をつかさどる。

- (1) 海外経費に係る契約及び支出を担当する者の任免に関すること。
- (2) 海外における経費の送金に関すること。
- (3) 海外における経費の計算証明に関すること。

(海外派遣係の所掌事務)

第38条 海外派遣係においては、次の事務をつかさどる。

- (1) 外国出張旅費の支払い及びその他外国出張者の手続きに関すること。
- (2) 海外からの招へい者の旅費及び滞在費の支払いに関すること。

(海外物品係の所掌事務)

第39条 海外物品係においては、次の事務をつかさどる。

- (1) 海外物品の管理に関すること。
- (2) 海外物品の発送に関すること。

第4章 国際情報部

(国際情報部の所掌事務)

第40条 国際情報部は、次に掲げる事務をつかさどる。

- (1) 試験及び研究並びに調査に関する海外の情報の収集、整理、分析及び提供を行うこと。
- (2) 熱帯又は亜熱帯に属する地域その他開発途上にある海外の地域(以下「熱帯地域等」という。)における農林水産業に関する調査を行うこと。

(国際情報部の内部組織)

第41条 国際情報部に、国際研究情報官を置く。

(国際研究情報官の所掌事務)

第42条 国際研究情報官は、命を受けて、熱帯地域等における農林水産業に関する調査研究並びに情報の収集、整理、分析及び提供を行う事務をつかさどる。

第5章 生物資源部

(生物資源部の所掌事務)

第43条 生物資源部は、熱帯地域等における生物資源の農業上の開発及び利用に関する試験及び研究を行う事務をつかさどる。

第6章 生産環境部

(生産環境部の所掌事務)

第44条 生産環境部は、熱帯地域等における農産物の生産技術及び生産の対象となる生物の生育環境に関する試験及び研究を行う事務をつかさどる。

第7章 畜産草地部

(畜産草地部の所掌事務)

第45条 畜産草地部は、熱帯地域等における畜産、草地及び飼料作物並びに家畜衛生に関する試験及び研究を行う事務をつかさどる。

第8章 食料利用部

(食料利用部の所掌事務)

第46条 食料利用部は、熱帯地域等における農産物の品質の評価及び保全並びに加工利用に関する試験及び研究を行う事務をつかさどる。

第9章 林業部

(林業部の所掌事務)

第47条 林業部は、熱帯地域等における林業に関する試験及び研究を行う事務をつかさどる。

第10章 水産部

(水産部の所掌事務)

第48条 水産部は、熱帯地域等における水産業に関する試験及び研究を行う事務をつかさどる。

第11章 支所

(支所の名称及び位置)

第49条 センターの支所の名称及び位置は、次のとおりとする。

国際農林水産業研究センター沖縄支所 石垣市

(沖縄支所の内部組織)

第50条 沖縄支所に、上席研究官のほか、次の1課、2科及び5研究室を置く。

国際共同研究科

庶務課

島嶼環境管理研究室

環境ストレス耐性研究室

育種素材開発研究室
熱帯果樹栽培利用研究室
総合防除研究室
業務科

(上席研究官の所掌事務)

第 5 1 条 上席研究官は、命を受けて、第 5 4 条から第 5 8 条までに規定する事務に参画し、及び総括する。

(国際共同研究科の所掌事務)

第 5 2 条 国際共同研究科においては、農林水産業技術に関する国際招へい共同研究を行う事務をつかさどる。

(庶務課の内部組織及び所掌事務)

第 5 3 条 庶務課に、次表の左欄に掲げる 2 係を置き、その所掌事務の範囲は、それぞれ、相当右欄に掲げる事務をつかさどる。

名 称	所 掌 事 務
庶 務 係	第 2 0 条、第 2 1 条及び第 2 2 条に掲げる事務(ただし、第 2 0 条第 2 号中「理事長の印及びセンター印」とあるのは「支所長の印及び支所印」とする。)
会 計 係	第 2 8 条(第 3 号に掲げる事務を除く。)、第 2 9 条(第 3 号に掲げる事務を除く。)、第 3 0 条及び第 3 1 条(第 1 号及び第 3 号に掲げる事務を除く。)に掲げる事務

(島嶼環境管理研究室の所掌事務)

第 5 4 条 島嶼環境管理研究室においては、熱帯地域等の島嶼における水利用及び環境保全に関する試験研究を行う事務をつかさどる。

(環境ストレス耐性研究室の所掌事務)

第 5 5 条 環境ストレス耐性研究室においては、熱帯地域等における作物の環境ストレス耐性機構の解明とその利用に関する試験研究を行う事務をつかさどる。

(育種素材開発研究室の所掌事務)

第 5 6 条 育種素材開発研究室においては、熱帯地域等の作物の育種及び亜熱帯条件を利用した作物の世代促進に関する試験研究を行う事務をつかさどる。

(熱帯果樹栽培利用研究室の所掌事務)

第 5 7 条 熱帯果樹栽培利用研究室においては、熱帯地域等の果樹の導入じゅん化及び亜熱帯における果樹の栽培及び利用に関する試験研究を行う事務をつかさどる。

(総合防除研究室の所掌事務)

第 5 8 条 総合防除研究室においては、熱帯地域等における作物の病害虫の生態及び防除その他作物保護に関する試験研究を行う事務をつかさどる。

(業務科の所掌事務)

第59条 業務科においては、試験及び研究に供するほ場及び植物の管理に関する業務並びにこれに必要な試験及び調査を行う事務をつかさどる。

第12章 主任研究官及び専門職

(主任研究官)

第60条 センターに主任研究官を置く。

2 主任研究官は、命を受けて、特定の研究課題について研究の指導及び管理を行う事務をつかさどる。

(専門職)

第60条の2 センターに専門職を置く。

2 専門職は、命を受けて、課又は係における特定の事務をつかさどる。

第13章 特例

(特例)

第61条 前各条の規定にかかわらず、科(研究企画科及び業務科を除き、情報資料課を含む。以下同じ。)、係又は研究室においては、当該科、係又は研究室の属する部(総務部を除き、支所(庶務課及び業務科を除く。))を含む。)又は課(情報資料課を除き、研究企画科及び業務科を含む。)の長が特に必要があると認めて命じた業務又は事務を行う。

第62条 理事長は、試験研究を効率的に推進するため、特に相互の密接な連けいを確保する必要があると認めた場合は、複数の研究部等を指定して、試験研究を共同して行わせることができるものとする。

附 則

この規程は、平成13年4月1日から施行する。

独立行政法人国際農林水産業研究センター役員給与規程

13国研セ第4-23号
平成13年4月2日

(目的)

第1条 この規程は、独立行政法人国際農林水産業研究センター（以下「センター」という。）の役員給与に関する事項を定めることを目的とする。

(給与の種類)

第2条 役員給与は、常勤役員については俸給、調整手当、通勤手当及び期末特別手当とし、非常勤役員については非常勤役員手当とする。

(給与の支給)

第3条 常勤役員給与（期末特別手当を除く。）は、その月の16日（その日が独立行政法人国際農林水産業研究センター職員の勤務時間、休憩、休日、休暇等に関する規程（13国研セ第4-28号）第11条に規定する休日にあたる時は、その月の15日以降の日のうち、その日に最も近い休日でない日）に、法令及び理事長が別に定めるところにより、給与から控除すべきものの金額を控除し、その残額を現金で直接常勤役員に支給する。

(俸給)

第4条 常勤役員俸給の月額、次のとおりとする。

- (1) 理事長 937,000円
- (2) 理事 810,000円
- (3) 監事 658,000円

2 前項の常勤役員俸給の月額は、その役員の業績を考慮して定めるものとする。

3 新たに常勤役員となった者には、その日から俸給を支給する。

4 常勤役員が離職したときは、その日まで俸給を支給する。

5 常勤役員が死亡したときは、その死亡の日の属する月の俸給の全額を支給する。

6 第3項及び第4項の規定により俸給を支給する場合であって、月の初日から支給するとき以外のとき、又はその月の末日まで支給するとき以外のときは、その俸給の額は、その月の現日数から日曜日及び土曜日の日数を差し引いた日数を基礎として、日割りによって計算する。

(調整手当)

第5条 調整手当は、物価及び生計費等が特に高い茨城県つくば市に所在するセンター本所に在勤する常勤役員に支給する。

2 調整手当の月額は、俸給の月額に100分の3を乗じて得た額とする。

3 調整手当の支給方法は、前条第3項から第6項までの規定を準用する。この場合において、同条第3項から第6項までの規定中「俸給」とあるのは「調整手当」と読み替えるものとする。

(通勤手当)

第6条 通勤手当は、次に掲げる常勤役員に支給する。

- (1) 通勤のため交通機関又は有料の道路(以下「交通機関等」という。)を利用してその運賃又は料金(以下「運賃等」という。)を負担することを常例とする常勤役員(交通機関等を利用しなければ通勤することが著しく困難である常勤役員以外の常勤役員であって交通機関等を利用しないで徒歩により通勤するものとした場合の通勤距離が片道2キロメートル未満であるもの及び第3号に掲げる常勤役員を除く。)
- (2) 通勤のため自動車、自転車その他の交通の用具(以下「自動車等」という。)を使用することを常例とする常勤役員(自動車等を使用しなければ通勤することが著しく困難である常勤役員以外の常勤役員であって自動車等を使用しないで徒歩により通勤するものとした場合の通勤距離が片道2キロメートル未満であるもの及び次号に掲げる常勤役員を除く。)
- (3) 通勤のため交通機関等を利用してその運賃等を負担し、かつ、自動車等を使用することを常例とする常勤役員(交通機関等を利用し、又は自動車等を使用しなければ通勤することが著しく困難である常勤役員以外の常勤役員であって、交通機関等を利用せず、かつ、自動車等を使用しないで徒歩により通勤するものとした場合の通勤距離が2キロメートル未満であるものを除く。)
- 2 通勤手当の月額、次の各号に掲げる常勤役員の区分に応じて、当該各号に掲げる額とする。
- (1) 前項第1号に掲げる常勤役員 その者の1箇月の通勤に要する運賃等の額に相当する額(その額が45,000円を超えるときは、その額と45,000円との差額の2分の1(その差額の2分の1が5,000円を超えるときは、5,000円)を45,000円に加算した額。(以下「運賃等相当額」という。))
- (2) 前項第2号に掲げる常勤役員 次に掲げる常勤役員の区分に応じて、それぞれ次に掲げる額
- イ 自動車等の使用距離(以下この号において「使用距離」という。)が片道5キロメートル未満である者 2,000円
 - ロ 使用距離が片道5キロメートル以上10キロメートル未満である者 4,100円
 - ハ 使用距離が片道10キロメートル以上15キロメートル未満である者 6,500円
 - ニ 使用距離が片道15キロメートル以上20キロメートル未満である者 8,900円
 - ホ 使用距離が片道20キロメートル以上25キロメートル未満である者 11,300円
 - ヘ 使用距離が片道25キロメートル以上30キロメートル未満である者 13,700円
 - ト 使用距離が片道30キロメートル以上35キロメートル未満である者 16,100円
 - チ 使用距離が片道35キロメートル以上40キロメートル未満である者 18,500円
 - リ 使用距離が片道40キロメートル以上である者 20,900円
- (3) 前項第3号に掲げる常勤役員 交通機関等を利用せず、かつ、自動車等を使用しないで徒歩により通勤するものとした場合の通勤距離、交通機関等の利用距離、自動車等の使用距離等の事情を考慮して、運賃等相当額及び前号に掲げる額の合計額(その額が45,000円を超えるときは、その額と45,000円との差額の2

分の1（その差額の2分の1が5,000円を超えるときは、5,000円）を45,000円に加算した額）第1号に掲げる額又は前号に掲げる額

- 3 前2項に規定するもののほか、通勤の実情の変更に伴う支給額の改定その他通勤手当の支給に関し必要な事項は、理事長が別に定める。

（期末特別手当）

第7条 期末特別手当は、3月1日、6月1日及び12月1日（以下この条から第9条までにおいて、これらの日を「基準日」という。）にそれぞれ在職する常勤役員に対して、それぞれ3月15日、6月30日及び12月10日（これらの日が休日に当たるときは、その直前の休日でない日。以下「支給日」という。）に支給する。これら基準日前1箇月以内に退職し、又は死亡した常勤役員についても同様とする。

- 2 期末特別手当の額は、それぞれその基準日現在（退職し、又は死亡した常勤役員にあっては、退職し、又は死亡した日現在）において常勤役員が受けるべき俸給及び調整手当の月額、俸給の月額に100分の25を乗じて得た額並びに俸給及び調整手当の月額に100分の20を乗じて得た額の合計額に、3月に支給する場合においては100分の55、6月に支給する場合においては100分の145、12月に支給する場合においては100分の155を乗じて得た額を基礎として、基準日以前3箇月以内（基準日が12月1日であるときは6箇月以内）の期間におけるその者の在職期間の区分に応じて、理事長が別に定める割合を乗じて得た額とする。ただし、理事長はその者の業績を考慮し、これを増額し、又は減額することができる。

第8条 次の各号のいずれかに該当する者には、前条第1項の規定にかかわらず、当該各号の基準日に係る期末特別手当（第2号に掲げる者にあつては、その支給を一時差し止めた期末特別手当）は、支給しない。

- (1) 基準日から当該基準日に対応する支給日の前日までの間に独立行政法人通則法（平成11年法律第103号）第23条の規定により解任された常勤役員（同条第1項及び第2項第1号に該当し解任された場合を除く。）
- (2) 基準日前1箇月以内又は基準日から当該基準日に対応する支給日の前日までの間に離職した常勤役員（前号に掲げる者を除く。）で、その離職した日から当該支給日の前日までの間に禁錮以上の刑に処せられたもの
- (3) 次条第1項の規定により期末特別手当の支給を一時差し止める処分を受けた常勤役員（当該処分を取り消された者を除く。）で、その者の在職期間中の行為に係る刑事事件に関し禁錮以上の刑に処せられたもの

第9条 理事長は、支給日に期末特別手当を支給することとされていた常勤役員で当該支給日の前日までに離職したものが次の各号のいずれかに該当する場合は、当該期末特別手当の支給を一時差し止めることができる。

- (1) 離職した日から当該支給日の前日までの間に、その者の在職期間中の行為に係る刑事事件に関して、その者が起訴（当該起訴に係る犯罪について禁錮以上の刑が定められているものに限り、刑事訴訟法（昭和23年法律第131号）第6編に規定する略式手続によるものを除く。次項において同じ。）をされ、その判決が確定していない場合
- (2) 離職した日から当該支給日の前日までの間に、その者の在職期間中の行為に係る刑事事件に関して、その者が逮捕された場合又はその者から聴取した事項若しくは調査により判明した事実に基づきその者に犯罪があると思料するに至った場合であ

って、その者に対し期末特別手当を支給することが、センターの公共上の見地から行う事務及び事業に対する国民の信頼を確保し、期末特別手当の支給に関し、その適正かつ円滑な実施を維持する上で重大な支障を生ずると認めるとき。

- 2 理事長は、前項の規定による期末特別手当の支給を一時差し止める処分（以下「一時差止処分」という。）について、次の各号のいずれかに該当するに至った場合には、速やかに一時差止処分を取り消さなければならない。ただし、第3号に該当する場合において、一時差止処分を受けた者がその者の在職期間中の行為に係る刑事事件に関し現に逮捕されているときその他これを取り消すことが一時差止処分の目的に明らかに反すると認めるときは、この限りでない。
 - (1) 一時差止処分を受けた者が当該一時差止処分の理由となった行為に係る刑事事件に関し禁錮以上の刑に処せられなかった場合
 - (2) 一時差止処分を受けた者について、当該一時差止処分の理由となった行為に係る刑事事件につき公訴を提起しない処分があった場合
 - (3) 一時差止処分を受けた者がその者の在職期間中の行為に係る刑事事件に関し起訴されることなく当該一時差止処分に係る期末特別手当の基準日から起算して1年を経過した場合
- 3 前項の規定は、理事長が、一時差止処分後に判明した事実又は生じた事情に基づき、期末特別手当の支給を差し止める必要がなくなったとして当該一時差止処分を取り消すことを妨げるものではない。
- 4 理事長は、一時差止処分を行う場合は、当該一時差止処分を受けるべき者に対し、当該一時差止処分の際、一時差止処分の事由を記載した説明書を交付しなければならない。
- 5 前各項に規定するもののほか、一時差止処分に関し必要な事項は、理事長が別に定める。

（非常勤役員手当）

第10条 非常勤役員手当は、日額27,200円とする。

- 2 非常勤役員手当の支給については、理事長が別に定める。

（実施細則）

第11条 役員の給与の支給手続きその他この規程の実施に関し必要な事項については、理事長が別に定める。

附 則

この規程は、平成13年4月1日から施行する。

附 則

- 1 この規程は、平成13年11月30日から施行し、平成13年4月1日から適用する。

独立行政法人国際農林水産業研究センター役員退職手当規程

13国研セ第4 - 24号

平成13年4月2日

(趣旨)

第1条 独立行政法人国際農林水産業研究センター(以下「センター」という。)の常勤の役員(以下「役員」という。)の退職手当の支給に関する事項は、この規程に定めるところによる。

(退職手当の支給)

第2条 退職手当は、役員が退職した場合に、その者(死亡による退職の場合には、その遺族)に支給する。ただし、役員が独立行政法人通則法(平成11年法律第103号)第23条の規定により解任された場合(同条第1項及び第2項第1号に該当し解任された場合を除く。)は、当該役員には退職手当は支給しない。

(支給額)

第3条 退職手当の額は、その者の退職した日における俸給月額に、在職期間1月につき100分の28の割合(以下「支給割合」という。)を乗じて得た額とする。ただし、役員が任期満了の日以前又はその翌日に役職を異にする役員に任命され、引き続き在職した後退職した場合の退職手当の額は、それぞれ退職した日における当該異なる役職ごとの俸給月額に、当該異なる役職ごとの在職期間(以下「役職別期間」という。)1月につき支給割合を乗じて得たそれぞれの額の合計額とする。

2 前項の規定による退職手当の額は、その者の職務実績に応じ、これを増額し、又は減額することができる。

(在職期間の計算)

第4条 在職期間及び役職別期間の月数の計算については、任命された日から起算して、暦に従って計算するものとする。この場合において、1月に満たない端数(以下「端数」という。)を生じたときは、これを1月とするものとする。

2 前条第1項ただし書に規定する場合において、各役職別期間の月数の合計が、同一の役職に在職したものとみなした場合に前項の規定により得られる在職期間の月数を超えるときは、同項の規定により1月とした端数の少ない役職別期間の月数から当該超える月数に達するまで順次1月を減ずるものとし、この場合において端数が等しいときは、後の役職別期間の月数から同様に1月を減ずるものとする。

(退職手当の支給制限)

第5条 役員が任期満了となり退職する場合において、その者がその日の翌日に再び同一の役職の役員に任命されたときは、その退職については、退職手当を支給しない。役員が任期満了の日以前又はその翌日に役職を異にする役員に任命されたときも、同様とする。

(遺族の範囲及び順位)

第6条 第2条に規定する遺族の範囲及びこれらの者が退職手当を受ける順位については、国家公務員退職手当法(昭和28年法律第182号)第11条の規定を準用する。この場合において、同条第1項中「職員」とあるのは「役員」と読み替えるものとする。

(遺族からの排除)

第7条 遺族からの排除については、国家公務員退職手当法第11条の2の規定を準用する。この場合において、同条中「職員」とあるのは「役員」と読み替えるものとする。

(起訴中に退職した場合等の退職手当の取扱い)

第8条 役員が刑事事件に関し起訴(当該起訴に係る犯罪について禁錮以上の刑が定められているものに限り、刑事訴訟法(昭和23年法律第131号)第6編に規定する略式手続きによるものを除く。次項及び次条第2項において同じ。)をされた場合において、その判決の確定前に退職したときは、退職手当は支給しない。ただし、禁錮以上の刑に処せられなかったときは、この限りでない。

2 前項の規定は、退職した者に対しまだ退職手当が支払われていない場合において、その者が在職期間(その退職手当の支給の基礎となる期間をいう。次条及び第10条において同じ。)中の行為に係る刑事事件に関し起訴をされたときについて準用する。

(退職手当の支給の一時差止め)

第9条 理事長は、退職した役員に対しまだ退職手当が支払われていない場合において、その者の在職期間中の行為に係る刑事事件に関して、その者が逮捕されたとき又はその者から聴取した事項若しくは調査により判明した事実に基づきその者に犯罪があると思料するに至ったときであって、その者に対し退職手当を支給することが、公共上の見地から行うセンターの事務及び事業に対する国民の信頼を確保し、退職手当の支給に関し、その適正かつ円滑な実施を維持する上で重大な支障を生ずると認めるときは、退職手当の支給を一時差し止めることができる。

2 理事長は、前項の規定による退職手当の支給を一時差し止める処分(以下「一時差止め処分」という。)について、次の各号のいずれかに該当するに至った場合には、速

やかに当該一時差止処分を取り消さなければならない。ただし、第2号に該当する場合において、一時差止処分を受けた者がその者の在職期間中の行為に係る刑事事件に関し現に逮捕されているときその他これを取り消すことが、一時差止処分の目的に明らかに反すると認められるときは、この限りでない。

- (1) 一時差止処分を受けた者について、当該一時差止処分の理由となった行為に係る刑事事件につき公訴を提起しない処分があった場合
- (2) 一時差止処分を受けた者がその者の在職期間中の行為に係る刑事事件に関し起訴されることなくその者の退職の日から起算して1年を経過した場合
- 3 前項の規定は、理事長が一時差止処分後に判明した事実又は生じた事情に基づき、退職手当の支給を差し止める必要がなくなったとして当該一時差止処分を取り消すことを妨げるものではない。
- 4 理事長は、一時差止処分を行う場合は、当該一時差止処分を受けるべき者に対し、当該一時差止処分の際、一時差止処分の事由を記載した説明書を交付しなければならない。
- 5 前各項に規定するもののほか、一時差止処分に関し必要な事項は、理事長が別に定める。

(退職手当の返納)

第10条 理事長は、退職した役員に対し退職手当を支給した後において、その者が在職期間中に係る刑事事件に関し禁錮以上の刑に処せられたときは、その支給した退職手当の全部又は一部を返納させることができる。

(実施細則)

第11条 退職手当の支給手続きその他この規程の実施に関し必要な事項については、理事長が別に定める。

附 則

- 1 この規程は、平成13年4月1日から施行する。

附 則(平成14.3.29 13国研セ第3-145号)

- 1 この規程は、平成14年4月1日から施行する。
- 2 平成14年4月1日(以下「基準日」という。)の前日に現に在職する役員が引き続き在職した後基準日以降に退職した場合における退職手当の額は、第3条の規定にかかわらず、基準日の前日における俸給月額に任命された日から基準日の前日までの在職期間1月につき100分の36を乗じて得た額と当該退職の日における俸給月額

に基準日から退職した日までの在職期間 1 月につき 1 0 0 分の 2 8 を乗じて得た額の合計額とする。

- 3 前項の場合において、各在職期間の月数の計算については、暦に従って計算するものとし、端数を生じたときは、これを 1 月とするものとする。ただし、各在職期間の月数の合計が、第 4 条第 1 項の規定により得られる在職期間の月数を超えるときは、1 月とした端数の少ない在職期間の月数から 1 月を減ずるものとし、この場合において端数が等しいときには後の在職期間の月数から 1 月を減ずるものとする。
- 4 基準日の前日に現に在職する役員が任期満了の日以前又はその翌日に役職を異にする役員に任命された場合における前 2 項の規定の適用については、附則第 2 項中「基準日の前日における」とあるのは「それぞれ退職した日（基準日以降も同一の役職に引き続いて在職している場合にあっては、基準日の前日）における」と、「任命された日から基準日の前日までの在職期間」とあるのは「各役職別期間（基準日以降も同一の役職に引き続いて在職している場合にあっては、基準日の前日までの役職別期間）」と、「当該退職の日」とあるのは「それぞれ退職した日」と、「基準日から退職した日までの在職期間」とあるのは「各役職別期間（基準日の前日から引き続き同一の役職に在職している場合にあっては、基準日からの役職別期間）」と、附則第 3 項中「在職期間」とあるのは「役職別期間」と、「第 4 条第 1 項の規定により得られる在職期間」とあるのは「同一の役職に在職したものとみなした場合に第 4 条第 1 項の規定により得られる在職期間」と読み替えるものとする。

平成13年度に係る業務実績報告書概要版

平成14年6月

独立行政法人 国際農林水産業研究センター

第 章 国際農林水産業研究センターの概要

1 業務内容

1) 目的

熱帯又は亜熱帯に属する地域その他開発途上にある海外の地域における農林水産業に関する技術上の試験及び研究等を行うことにより、これらの地域における農林水産業に関する技術の向上に寄与することを目的とする。

(独立行政法人国際農林水産業研究センター法第3条)

2) 業務の範囲

(1) 熱帯又は亜熱帯に属する地域その他開発途上にある海外の地域における農林水産業に関する技術上の試験及び研究、調査、分析、鑑定並びに講習を行うこと。

(2) 前号の地域における農林水産業に関する内外の資料の収集、整理及び提供を行うこと。

(3) 前二号の業務に付帯する業務を行うこと。

(独立行政法人国際農林水産業研究センター法第10条)

2 事務所の所在地

(本所) 〒 305-8686 茨城県つくば市大わし 1-1

電話 0298-38-6313 (代表)

ファックス 0298-38-6316

ホームページ <http://www.jircas.affrc.go.jp/index.sjis.html>

(支所) 〒 907-0002 沖縄県石垣市字真栄里川良原 1091-1

電話 09808-2-2306 (代表)

ファックス 09808-2-0614

3 資本金の状況

平成 13 年 4 月 1 日に、独立行政法人国際農林水産業研究センター法附則第 5 条に基づき、国から資本金として 8,470,154,319 円相当の土地・建物等の現物出資を受けた。平成 13 年度末の資本金の額は同じく 8,470,154,319 円で、増減はない。

4 役員の状況

独立行政法人国際農林水産業研究センター法第 7 条に基づき、理事長、理事 1 名、監事 2 名 (内 1 名は非常勤) の 4 名の役員を置いている。

理事長 井上 隆弘 (昭和 17 年 9 月 28 日生)

任期：平成 13 年 4 月 1 日～平成 17 年 3 月 31 日

理事 諸岡 慶昇 (昭和 19 年 10 月 1 日生)

任期：平成 13 年 4 月 1 日～平成 15 年 3 月 31 日

監事 加藤 邦彦 (昭和 18 年 11 月 10 日生)

任期：平成 13 年 4 月 1 日～平成 15 年 3 月 31 日

監 事 藤本 彰三（昭和 25 年 1 月 27 日生）

（非常勤）

任期：平成 13 年 4 月 1 日～平成 15 年 3 月 31 日

5 職員の状況

平成 14 年 1 月 1 日現在の常勤職員の現在員数は 162 名、この内一般職員 34 名、技術専門職員 10 名、研究職員 118 名である。

6 設立の根拠となる法律名

独立行政法人国際農林水産業研究センター法（平成 11 年法律第 197 号）

7 主務大臣

農林水産大臣

8 沿革

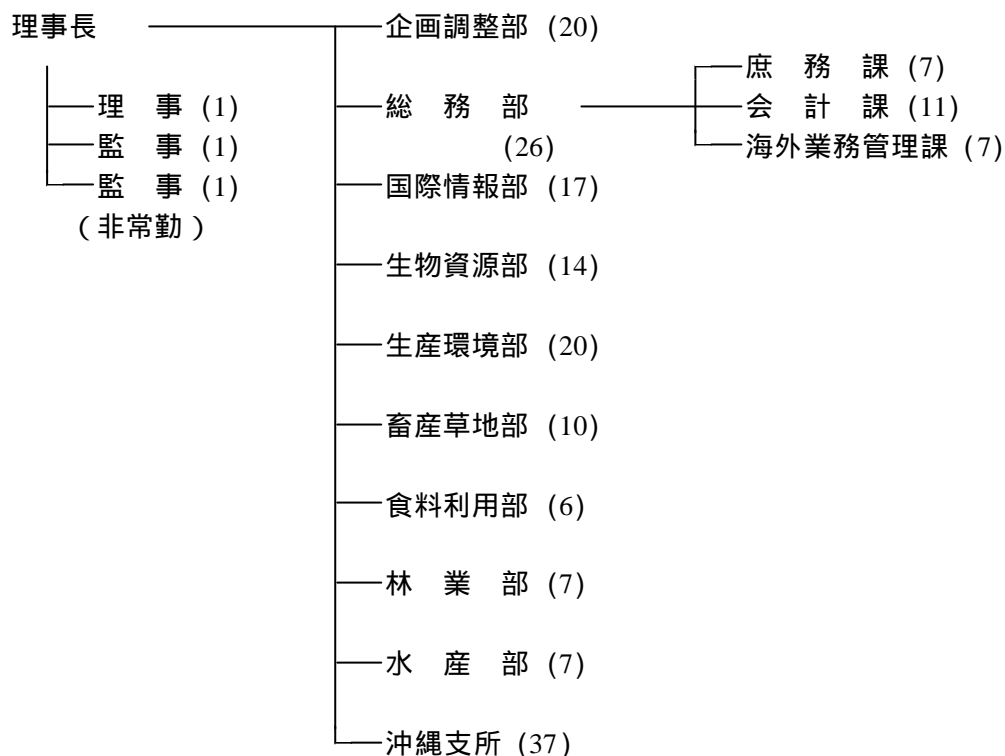

昭和 45 年 6 月、農林省熱帯農業研究センターとして発足した。その目的は、a) 開発途上国（その大部分が熱帯または亜熱帯に位置する）の食糧増産等の農業振興に必要な技術を開発する、b) 我が国の試験研究領域の拡大と研究水準の向上に資する（国内農業技術の開発のために必要な研究を熱帯現地で行う）であった。このため、主たる研究の場を海外におき、研究者を長期派遣して研究に従事させた。

昭和 52 年 6 月の農林省設置法の一部改正により熱帯農業研究センターは茨城県に置かれ、昭和 53 年 7 月の国家行政組織の一部改正に伴って、農林水産省熱帯農業研究センターとなった。昭和 58 年 12 月に、研究技術情報官（現在の国際研究情報官）が設置され、昭和 60 年 4 月に調査情報部（現在の国際情報部）が新設された。これは我が国の ODA の伸び、研究対象や対象国の拡大など、国際環境の中での我が国の役割が変化し、研究の深化と拡大がもたらされてきたことが背景にある。昭和 62 年 5 月には基盤技術研究部、昭和 63 年 10 月には環境資源部が創設された。

農林水産業をとりまく世界情勢の変化や旧ソ連や東欧、モンゴルなどの熱帯・亜熱帯以外の開発途上地域からの研究協力要請の増大等の背景をふまえ、平成 5 年 10 月に、新たに水産業研究を包摂し、熱帯又は亜熱帯に属する地域及びその他開発途上にある海外の地域における食料・資源・環境問題等に総合的に対応することを目的とし、熱帯農業研究センターは農林水産省国際農林水産業研究センターに改組されることとなった。

そして、平成 11 年 4 月中央省庁等改革推進本部で決定された「中央省庁等改革の推進に関する方針」のうち閣議決定された「国の行政組織等の減量、効率化等に関する基本計画」により、平成 13 年 4 月に独立行政法人国際農林水産業研究センターに移行した。

9 組織図

独立行政法人化に伴い、開発途上国・地域の情報を重点的に収集・解析し、研究戦略の構築を行うため、海外情報部を改組して国際情報部として強化した。また、開発途上地域において農産物の流通・利用・消費までを視野に入れた一貫した研究体制を強化するため、また、農作物の生産に関わる研究を総合的に推進するため、生産利用部と環境資源部を改組して食料利用部と生産環境部として整備した。さらに、沖縄支所を亜熱帯・島嶼農業の研究拠点として整備した。各部署の所掌は組織規程に定めた。

第 章 平成 13 年度に係わる業務の実績

業務運営の効率化に関する目標を達成するためにとるべき措置

1 評価・点検の実施

「運営評価会議」の開催

平成 13 年度業務実績の自己評価を実施するため、平成 14 年 3 月 26 日～27 日に運営評価会議を開催した。センターが内部評価資料に基づいて年度計画の各事項を説明し、評価委員に評価をお願いした。9 名の評価委員の総合評価所見を代表委員がとりまとめて理事長に提出し、センターの自己評価とした。

「研究計画・成果検討会」の開催

平成 13 年度の研究計画や成果等の検討及び評価を行うため、研究計画・成果検討会を実施した。部・支所検討会では実施課題、新規課題、研究成果情報について検討し、平成 14 年 2 月 1 日の全所検討会では、それらに加えて、年度計画各事項の具体的達成状況について内部評価を行った。内部評価結果は運営評価会議の資料とした。

「国際農林水産業試験研究推進会議」の開催

センターが行う事業の適切かつ円滑な推進を図るため、平成 14 年 2 月 19 日に、農林水産業関係試験研究機関等の協力及び行政部局との連携のもとに国際農林水産業試験研究推進会議を開催した。国際農林水産業における国際共同研究の戦略、国内農業研究との共栄及び研究成果情報の審査を行った。

「顧問会議」の開催要領

センターの試験研究の基本方向や運営に関して長期的な観点から検討するため顧問会議を設置した。理事長が 3 名の顧問を委嘱したが、平成 13 年度は開催には至らず、次年度早々開催することとした。

「国際プロジェクト研究推進評価」の実施

センターは、中期計画の効率的な達成のためプロジェクト態勢で研究を遂行している。国際プロジェクト研究毎に外部評価委員を委嘱し、評価を行うこととした。平成 13 年度は、「海外養殖エビ類ウイルス病の診断・防除技法の開発（9～13 年度）」と「タイ東北部における持続的農業技術の確立のための開発研究（7～13 年度）」について事後評価を、「インドシナ天水農業地帯における水資源の効率的利用と収益性の向上（14～20 年度）」について事前評価を、また、「東南アジアにおける穀類のポストハーベストロス低減技術の開発（12～16 年度）」について中間評価を実施した。他の 7 プロジェクト研究については毎年度評価を実施する。

「研究職員業績評価委員会」の開催

研究職員の研究業績並びに前年度の研究成果及び業務内容等をもとに、研究職員業績評価委員会で評価・審査した。農業への貢献度、科学上の貢献度及び研究推進に対する貢献度等の視点から客観的評価を行うとともに、総合判断をも加え理事長に答申した。理事長、人件費予算の状況等をも総合的に勘案しつつ精査を行い、昇格者及び研究業績に基づく特別昇給者を選考し発令した。

なお、新たな業績評価システムは、平成 14 年度からの導入を目指し現在策定中である。

2 研究資源の効率的利用

競争的資金への応募

運営費交付金に加えて研究費をさらに充実させるため、平成 13 年度は文部科学省、環境省、農林水産省、生物系特定産業技術研究推進機構、民間財団などの競争的資金に 16 件応募し、5 件（合計 41,640 千円）及び第 2 次補正予算（958,480 千円）を獲得した。

研究費の重点的な配分

独法化に伴う研究体制整備の一環として、専門研究領域を 27 グループに絞り込み、個々の専門研究グループを研究推進の重要な単位として位置づけた。そして、運営費交付金による研究費を重点的に配分するため、専門研究グループとして応募することができる所内プロジェクト「法人プロ」を開始し、採択された 17 課題に 83,000 千円配分した。

高額機器の効率的な利用

「高分解能 X 線光電子分光分析装置 (ESCA)」及び「エネルギー分散形走査型分析電子顕微鏡 (SEM-EDS)」（本所）と「作物環境評価検定施設」（沖縄支所）を共同利用機器等として選定し、「共同利用機器等管理要領」を作成した。当面、共同利用の範囲を原則として所内、独法間及び国の研究機関とした。

圃場の効率的な利用

国際農林水産業研究センターのほ場は本所（つくば市）と沖縄支所（石垣市）の 2 カ所にあることから、ほ場の管理運営事項の一元的な把握・調整を図るためほ場委員会を設けた。また各所在地において迅速かつ効率的な業務運営や調整等を行うため、各所在地に小委員会を設け、それぞれの所在地で運営する態勢を整えた。

3 研究支援の効率化及び充実・高度化

特許、品種登録等の知的所有権の取得・移転のための事務的な支援態勢等の強化

事務的な支援を行う担当を決めて態勢を強化し、ホームページで公表した。先行特許の検索方法の紹介や農林水産技術情報協会が提供する公開特許情報等を利用して、関連研究分野の特許出願等に関する情報を提供した。また、当所ホームページへ保有特許等の一覧及び担当窓口等を掲載し、実施許諾を行った特許権（作物栽培装置）の実施状況及び実施料を把握した。職務発明審査会を 4 回開催し、特許出願のための所内審査を行った。

計算情報センター 2000 年システムの活用

平成 13 年 11 月に開催した国際農林水産業研究センターでの講習会で、計算情報センター 2000 年システムに関するセミナーの開催予定を紹介し、当所ホームページからリンクできるようにした。

（計算情報センターのホームページ <http://www.affrc.go.jp/ja/info/tebiki/index.html>）

アジア太平洋高度ネットワーク (APAN) 関連セミナー

国際農林水産業研究センターで平成 13 年 9 月 7 日にセミナーを開催し、APAN に関わる日本人研究者の活動の周知を図るとともに今後の方向について議論し、当面は研究者レベルで進めていくこととした。

JIRCAS/STAT（国際農林水産業統計情報システム）の拡充

開発途上地域を中心とする世界の食料需給に関する計量分析研究を推進するため、13年度は、中国の農業、畜産業、林業、水産業関連時系列データと、31省の農業、畜産業、農業資源の変化等クロスセクションデータを含むデータベースを作成し、JIRCAS/STATの更新拡充を図った。

図書資料管理システムや文献情報検索システムの活用に向けた説明会

新図書資料管理システムや文献情報検索システムの内容及び活用方法の理解を図るため、平成13年11月に講習会を開催し、所員への周知を図った。

庁舎、研究棟、熱帯温室の保守管理の外部委託

本所では庁舎、海外実験棟、バイテク棟、隔離温室のセキュリティー及び庁舎の保守管理（空調・清掃等）の外部委託を実施し、また沖縄支所では特殊設備、空調設備について外注により保守管理を行っている。

技術専門職員等による海外現地における研究職員の研究業務等の支援

平成13年11月に作物栽培管理における省力・機械化技術の開発のため（タイ、21日間、1名）、14年1月に節水節肥栽培技術導入及び実験ほ場の整備のため（タイ、19日間、1名）それぞれ技術職員を派遣した。11月派遣では、相手国の関係機関の研究者や研究管理者及び多数の農民の参加のもとに農業機械によるほ場作業や機械メンテナンスのデモンストレーションを行い、高い評価を得た。

4 連携、協力の促進

（1）他の独立行政法人との連携、協力

国際農林水産業研究に関する中核的研究センターとしての機能の整備

国際プロジェクト研究は海外長期滞在研究員による研究と短期滞在研究を組み合わせ実施している。年間約200件の短期派遣を実施しており、農林水産省所管の試験研究に係わる独立行政法人の協力が必須である。そのため、これらの独立行政法人との間で「独立行政法人国際農林水産業研究センターが海外において行う国際共同研究の実施についての協約書」を平成13年9月に締結して連携・協力システムを構築し、国際農林水産業研究に関する中核的研究センターとしての機能を整備した。

（2）開発途上地域の試験研究機関等との連携、協力

新規国際プロジェクト研究の開始

東南アジア漁業開発センター（SEAFDEC）（フィリピン）、マレーシア中央水産研究所及びカセサート大学（タイ）に長期滞在研究員を各1名、短期滞在研究員を8名派遣して、「マングローブ汽水域における魚介類の持続的生産システムの開発（13～17年度）」のプロジェクト研究を開始した。

国際共同研究の相手機関等との覚書の見直し

ブラジル農牧研究公社（EMBRAPA）と2つの国際共同研究を実施している。平成13年度に覚書の見直しを行い、知的所有権を共有する場合の手続き、共有しない場合の補償、秘密保持、係争解決方法（第三者の調停）等を新たに規定した。マレーシア・サバ州林業局森林研究センターとの間で、複数回の覚書案の見直しを行い、知的所有権に係わる両機関の同等の権利を保障する覚書を平成13年12月に締結した。平成14年1月にベトナムのクーロンデルタ稲研究

所及び南部果樹研究所と新たに覚書を締結した。

国際農林水産業研究センター、農業技術研究機構、農業生物資源研究所及び農業環境技術研究所を代表して、国際稲研究所（IRRI）（フィリピン）と国際共同研究に係わる覚書を平成 14 年 3 月に締結した。

開発途上地域の研究者、研究管理者等の招聘による国際共同研究の推進

「国際招へい共同研究事業実施要綱」及び関連規程など独立行政法人化後の招へい事業の実施体制を整備した。平成 13 年度は JIRCAS 国際シンポジウム 8 名、研究管理者 45 名、共同研究員 28 名、招へい共同研究者（フェロー、継続含む）37 名、アジアバイテク招へい者 3 名、計 121 名を招へいし、国際共同研究を推進した。

（3）産学官の連携、協力

国内外の研究機関等との連携・協力の推進

「共同研究規程」を作成し、それに基づいて、生物系特定産業技術研究推進機構との間で、「環境ストレス耐性遺伝子組換え作物の開発」に関する共同研究を実施している。法人間の研究協力が研究部長（相当職を含む。）間の文書の交換によって実施できるように、平成 14 年 1 月に、8 法人間で協約書を締結した。また、平成 13 年 4 月に、東京大学大学院農学生命科学研究科との間で教育研究指導等への協力に関する協定書を締結し、研究員 2 名を併任教授及び助教授として、学生の指導に当たった。

共同利用可能な施設・機器等のホームページ等での公表

「高分解能 X 線光電子分光分析装置（ESCA）」及び「エネルギー分散形走査型分析電子顕微鏡（SEM-EDS）」（本所）と「作物環境評価検定施設」（沖縄支所）を共同利用機器等として選定し、そのデータベース化を図り、ホームページで公表した。

国内外の研究機関等との産学官の共同研究の推進

「客員研究員受入れ規程」を作成し、受入基準、成果の取り扱い等を明確化した。また、平成 14 年 2 月 19 日に国際農林水産業試験研究推進会議を開催した（既述）。

5 管理事務業務の効率化

会計事務の効率化

支払い業務のためにファームバンキングを導入して、会計事務の効率化を図った。

総務担当職員による海外長期滞在研究員の事務処理の支援

海外長期滞在研究員は共同研究の他に事務的な仕事の責任も負い、負担が大きい。負担をできるだけ軽くするため、現在、タイ国に海外業務専門官 1 名を派遣しタイ、マレーシアの海外滞在研究員に係わる事務処理の支援を行っている。

6 職員の資質向上

各種研修等の開催通知の迅速化

所外からの研修案内等は所内 LAN を活用して直ちに職員に周知している。平成 13 年度は、97 件の募集を行い、希望又は必要な研修 14 件については全て受講させた。また、所内においては本・支所合同で「会計システム決算等説明会」を開催した。なお、業務遂行に必要な資格取得は、第一種衛生管理者が 1 名である。

各種制度による海外での研究実施の支援

センターは若手研究者の育成と競争的資金の活用の観点から各種制度による海外での研究実施を支援している。平成 13 年度は、科学技術振興事業団の「若手研究者海外派遣」制度に応募した（補欠合格）。また、環境省及び文部科学省の予算による下記の海外研究を実施した。

環境省

- ・アジア地域における環境安全保障の評価手法の開発と適用に関する研究（中国、タイ）(11～13年度)
- ・環境インパクトの少ない木材搬出手法に関する調査研究（マレーシア）(11～13年度)

文部科学省

- ・西アフリカの気象変動予測の高度化による穀物生産リスク軽減技術の開発（マリ）(12～14年度)
- ・バイオ肥料へのアイソトープ技術応用に関する調査（タイ）(13年度)

研究員の博士号取得の奨励と指導

主に海外での共同研究を実施しているセンターにとって、研究者の育成、学位取得は研究実施上も重要な意味を有する。平成 13 年度の博士号の取得状況は、在職者 120 名中 73 名（全体の 60%強）であり、年度内には、研究部長等の適切な指導もあり、5 名の増加（現任者：3 名、新規採用者：2 名）があった。

7 海外滞在職員等の安全と健康の確保

「安全衛生委員会」を設置と職員等の安全と健康の確保

本・支所毎に安全衛生委員会を設置し、規程類、健康診断等の実施方法及びその他の安全・衛生に関する事項について、衛生管理者及び産業医の巡視結果等も踏まえて調査審議した。

海外滞在職員等の安全確保と海外情報や危険・医療情報等の海外出張中職員への連絡体制の確保

海外滞在職員及びその家族の安全と健康の確保は非常に重要であるため、緊急時に速やかに対応できる態勢を整えた。また、外務省や国際協力事業団との連携を図り、最新海外情報や危険・医療情報等を収集し、必要に応じ職員に周知し注意を喚起した。さらに、「緊急時の情報伝達フロー」、「海外滞在派遣職員名簿」を作成し配付した。また、緊急脱出のため「コーポレート・セキュリティ・アクセスプログラム契約」を締結した。他に、E メールリストの作成（随時）、国内外の携帯電話の利用により連絡体制を確保した。

海外に出張する者への「出張の手引き」の整備

海外に出張する者への安全と健康並びに事務手続きの円滑化等を図るため「外国出張の手引き」を整備した。また、短期出張者向けの安全対策マニュアルを作成し、さらに、出発前に安全情報、研究内容等の連絡が遺漏のないよう個票を作成するなどガイダンス実施方法を改善した。

国民に対して提供するサービスその他の業務の質の向上に関する目標を達成するためとるべき措置

1 試験及び研究並びに調査

A 開発途上地域の食料需給改善のための農林水産業の動向解析、国内外の研究開発動向の把握及び技術開発方向の解明

1) 世界の食料需給の動向解析と共同研究に係わる総合戦略の策定

(1) 主要な開発途上国の研究動向の解明及び中期的国際共同研究戦略の策定

先進諸国の主要な研究成果の中から、米国などの有する木材需給モデルの内容・特徴を分析し、世界林産物需給に関する独自のプロトタイプモデルを開発した。

また、FAO等の土壌関係データなどを含む情報データベースへのアクセスを容易にするためのシステム開発を進めるとともに、気象データの内挿補間処理システムを開発した。

さらに、東北タイのため池や天水田の現地測量結果をGISデータ化したほか、大規模水害の状況把握のため衛星データの解析手法を検討した。

(2) 中国主要省等の食料需給動向の解析等による世界の食料需給モデルの改良

中国山東省及び貴州省について、食糧生産や農業収益と肥料投入との関係を明らかにした。また、農業生産の機械化と兼業化の進展における中国の主要地域間の格差、穀物の生産・流通のインテグレーションの動向などを明らかにした。

一方、将来の食料需給動向分析に不可欠な中長期の予測モデルについては、世界の主要国際研究機関のモデルのパラメータ自体の変化のメカニズムを明らかにした。

また、中国山東省を対象に計量モデルによる要因分析を行い、今後干ばつ被害がさらに大きくなる可能性が高いことを明らかにした。

2) 開発途上地域における食料・環境に係わる地域特性及び発展方向の解明

(1) インドネシア、西アフリカ等における農林水産業の発展阻害要因と技術的・経済的発展方向の解明

(論文数：3)

インドネシアに関しては、温帯野菜の流通構造と生産農家の出荷体制や取り組み方とともに、野菜や熱帯果樹の在来種の栽培の背景やその技術の実態などを把握・分析した。また、タイの水稲直播技術や酪農経営の動向のほか、中国、東南アジア各国の農業生産・流通の現状と問題点を把握した。

一方、西アフリカにおいては、穀物生産などの土地利用状況や気象パターン、農家の具体的作付け体系と作目選択基準などを明らかにした。特に、低湿地の稲作灌漑施設の所有権・利用権とこれらの施設への追加投資の動向、作物選択の考え方、さらに経営改善に向けての対応方向などについて分析した。

B 開発途上地域の農林水産業の持続的発展のための研究開発

1) 開発途上地域における農林水産物の環境に調和した持続的生産技術の改良・開発

(1) 多様な耕地生態系における窒素等の物質循環の評価と土壌改良技術の改善

(論文数：3)

中国山東省陵県、東北タイコンケン県、メコンデルタカントー県という3つの異なる農業生態系に代表される行政単位内の農耕地を中心とした窒素循環の定性的並びに定量的評価を終了し、持続的発展へ向けての窒素循環の適正化方向を提示した。

中国においては、肥効調節型窒素肥料の環境負荷軽減効果が確認された。モデル系内での塩類集積制御に効果を持つ物質が確認された。

(2) タイ、ベトナム等における稲・畑作物の省力・省資源的生産技術の開発

(論文数：2、成果情報：8)

水稻栽培においては、メコンデルタの集約栽培地域における直播体系内での適正播種量と施肥法に関して、また東北タイの天水田地域で機械化と雑草管理に関して、それぞれ農家圃場を使った現地実証試験により新技術の有効性を確かめた。

畑栽培においては、東北タイの砂質土壌地帯でサブソイラーを利用した硬盤管理体系を提案し、施肥・植付機を結合した部分深耕同時施肥・植付機を開発した。窒素の効率的な利用に関して作物の硝酸化成抑制作用と有機態窒素利用の作物間差に関する知見が得られた。

大規模灌漑水田地帯の農業用水消費を削減するために、雨量観測、用水量の推定、灌漑時期について問題点を明らかにし、対応策を導き出すモデルを構築した。

(3) 東南アジア、南米等における稲・大豆等の主要病害虫の発生実態の解明

中国のハイブリッド水稻栽培ではウンカ多発が問題となっているが、その多発化現象は、不稔系統珍汕 97A の核遺伝子に支配された著しい感受性に原因し、F1 ハイブリッド汕優 63 の乾物生産に発現されるヘテロシスがウンカの多産を支持する形質として作用する結果と考察できた。

また、中国粳稻(ジャポニカ)品種“春江 06”のセジロウンカ抵抗性の由来を家系分析し、セジロウンカ抵抗性のうち、殺卵抵抗性は家系内の品種間で連続的変異を示すので特定品種に由来する形質ではないが、吸汁抑制抵抗性は特定の品種群に帰属していることが分かった。半数体倍加系統群を用いて殺卵抵抗性および吸汁抵抗性を QTL 解析し、前者に関わる QTL を第 6 染色体と第 11 染色体に、後者を第 11 染色体に検出した。

(4) 農牧輪換システム等に適したイネ科牧草及びトウモロコシ茎葉等の地域低利用飼料資源の特性の解明

(論文数：8、成果情報：2)

農牧輪換システムでは、作付体系の選択が重要で、中でも *Panicum maximum* が高い牧草生産性を得る作付体系であるが、その生産性低下要因となる土壌窒素の損耗防止策を講じる必要があること、また、*Brachiaria humidicola* は低窒素環境下での養分吸収が優れているなどの興味深い知見が得られた。ほかに、ブラジルサバンナの低湿地に適した牧草種を明らかにした。

中国で調製されたトウモロコシ茎葉サイレージの飼料特性を有機酸分析等により明らかにし、タイで調製されたサイレージの微生物相を明らかにした。

(5) タイ、ベトナム等における牛・豚等の生理学的特性の解明と主要家畜疾病の実態の解明

(論文数：4、成果情報：1)

熱帯地域ではこれまでほとんど知見がなかったので、タイ東北部において、泌乳牛の維持エネルギー要求量を解明し、産乳に対する利用効率を推定した。

トリパノソーマ感染した腫瘍壊死因子(TNF)- α 欠損マウスや C57 マウスでは、感染後血清中のフェリチン濃度が低下し、鉄欠乏性貧血を起こすが、その病態にはマウス間で相違があり、感染動物体内では TNF α の間接的な作用により原虫増殖が抑制されることなどが示唆された。

(6) 熱帯低質林におけるフタバガキ等有用樹種の天然更新補助技術の開発

熱帯森林における集材路の作設に伴う土砂流出や表土劣化等の因果関係を調査し、集材路の

作設方法により森林環境、特に集材道路面の表面侵食が大きく影響を受けることを明らかにした。

標高の異なる試験地に植栽した在来樹種 6 種、果樹 5 種の初期成長量及び生残率等の調査・解析を行い、植栽地の標高及び樹種により成長特性が明確に異なること、3 樹種は乾燥の激しい山地造林樹種としての特性を備えていること等を明らかにするなど、熱帯樹種についての生理生態的基礎データを集積した。

(7) 水産生物の環境と調和した養殖方法の開発

(論文数：6、成果情報：1)

閉鎖領域内に人工的なマングローブモデル林を作り、窒素成分等の消長に及ぼす各種要因の解明を進めた。

汽水域での養殖業を阻害している疾病発生の実態を明らかにし、養殖魚の大量斃死の原因となっている一部原因ウイルスの特定を行った。新規有用養殖対象魚として、ゴマフエダイ等の産卵と孵化の特性解明が進捗し、栄養改善効果の研究を開始した。

オニテナガエビの卵黄タンパク質の研究では、判定が難しかったエビ類の成熟判定法の開発に成功した。

2) 開発途上地域における農林水産物の品質評価・流通・加工技術の改良・開発

(1) 東南アジアにおける米等の食料資源の形状・香り等の品質特性の解明

(論文数：6)

香り米における 2-アセチル-1-ピロリンには 2 種類の形態があり、開花後の水分ストレスが 2-アセチル-1-ピロリン含量を増加させることを明らかにした。また、オオバンガジュツを主要ポリフェノール成分の含量比率によりパターン化し、さらに、いくつかのタイ産植物に含まれる抗変異原物質、抗酸化物質、抗菌活性物質等を単離、精製、同定した。

タイ産野菜中の有用物質については、特許出願している。

(2) 温湿度等の環境条件と連動した香り米等の品質劣化の簡易防止技術の開発と加工技術の改良・開発

(論文数：9、成果情報：2)

切り妻型乾燥機を改良し、ベトナムの農民の求める性能を超える乾燥能力を有する機械を開発した。また、タイの乾燥施設の問題点を明らかにするとともに、籾の簡易乾燥法としてのブロードダクトの有効性を明らかにした。

米の損耗要因として害虫、鳥、鼠のいずれも重要であり、主要害虫はバクガ(もみ)、コクゾウムシ類(もみ、精米)、ガイマイツヅリガ(精米)の3種であることを明らかにし、貯穀害虫の天敵を多数採集した。ポメロの果皮中の d-リモネンが米貯蔵庫における害虫防除に利用できる可能性を示した。

加熱絞り豆乳に二段階加熱を適用した豆腐製造技術を確立し、発酵米がビーフン製造に適していること、及び、酸性水または混合電解水が豆腐用大豆の殺菌に有効なことを明らかにし、白色孢子変異株を用いたケチャップ用種麹の調製に成功した。

(3) オイルパーム廃材等の低利用木質資源の利用技術の開発

未利用資源であるオイルパーム空果房(EFB)の有効利用を図るため、環境への影響を抑えた酸を用いない高品質溶解パルプの調整を可能にした。EFB 含有のポリマーコンポジット調整法については、マレーシア理科大学(USM)と協力して、パームオイル主成分に反応が起こりやすい置換基を導入する反応経路を検討し、その実証に向け、反応条件等を決定するための

生成物の検出法（定性テスト）や定量方法等の予備試験を行った。

（４）中国における淡水魚等低利用水産資源のすり身等への利用技術の開発

（論文数：７、成果情報：１）

淡水漁業資源の完全利用技術の確立を目標に、すり身加工残滓等の養殖魚用飼料化技術の開発のため、飼料製造行程中の問題点の把握及び製造された飼料の有用性評価等を行い、全魚体を利用した場合に比べて、加工残滓を原料とした場合には、タンパク質含量が著しく減少するなどの問題点を抽出した。

３）開発途上地域における遺伝資源及び生物機能の解明と利用技術の開発

（１）乾燥等の環境ストレスに対する耐性機構の解明と組換え体作出技術の開発

（論文数：８、成果情報：１）

モデル植物であるシロイヌナズナを使って解明された環境ストレス耐性に関与する遺伝子や知見を使い、双子葉植物であるタバコでもシロイヌナズナと同じようなストレス応答の遺伝子発現がみられる事を解明した。さらに単子葉植物であるイネにおいても DREB 類似遺伝子を単離し、その発現様式が似ている事を証明した。これにより環境ストレス耐性作物の開発のための基礎的知見が植物種を越えて広く応用できることが示された。

環境ストレス応答に関与する遺伝子発現様式を一層解明していくため、浸透圧センサーの解明、マイクロアレイ手法の確立、ABA シグナル伝達異常変異体の作出等の研究を実施した。

（２）稲、小麦等における病虫害抵抗性等の評価技術の開発と育種素材の育成

（論文数：３、成果情報：１）

中国原産およびブラジルの大豆遺伝資源の中から高脂肪含有率等の有用な形質を持つ品種を選抜した。また、大豆製品の豆臭や青臭み発生の原因となるダイズリポキシゲナーゼの簡易迅速選抜法を改良した。

稲いもち病の判別系統、小麦の赤さび、赤かび病抵抗性育種のための有用な育種素材が開発された。小麦の赤さび病、赤かび病では分子マーカーを使い起源が異なる抵抗性遺伝子を効率的に選抜集積が出来ることを示した。中国水稻研と共同でイネ紋枯病の検定法として注射器接種法を開発した。

熱帯・亜熱帯地域の高温・多湿時期においても生育が旺盛な土着野菜（葉菜）である、ヒユナ、ツルムラサキ、モロヘイヤ、ヨウサイにおいて抗酸化活性やビタミン含量等で多くの変異がみつきり、有望な系統が選抜された。

（３）熱帯・亜熱帯等の野菜・果樹等の遺伝資源収集、評価並びに保存

外国から導入した稲 200 系統を亜熱帯条件下で栽培し、植物遺伝資源調査マニュアルに従って、一次及び二次特性（葉いもち病抵抗性、耐倒伏性）を調査し、また種子の増殖を行った。

国内外から導入したサトウキビ及び近縁属植物の育種素材化を進めるため一次特性から必須 11 項目と選択項目の出穂早晩性を調査しデータベース化した。さらにインドネシアより 5 品種・系統を導入した。

微生物では、イネ科植物から分離したキチナーゼ生産細菌 3 菌株と窒素固定細菌 7 菌株の合計 10 菌株、及びマメ科植物から分離した根粒菌 1 2 菌株をベースコレクションとして登録した。また、大豆発酵食品の改良・開発を目的として、糸状菌スターター及び乳酸菌の特性を調べるためにそれぞれワーキングコレクションを収集した。

４）開発途上地域における環境資源の特性評価と生物多様性の解明

(1) 農業生産に関する環境資源の特性評価と土地利用の変動機構の解明

(成果情報：1)

東北タイの衛星データの解析等を通じて、土壌条件及び水利用可能性の点から作物別栽培適地と実際の土地利用との関係进行分析し、特に水利用可能性の評価手法を改良した。

インドネシアにおいては、USLE 式を用いて土壌浸食量を推定するとともに、土地利用変動など動的要因も考慮した改良手法を適用し、土壌浸食危険度を明らかにした。

中国においては土地利用区分と衛星データ値の季節変化と特性进行分析し、動的要因の評価において適用すべき手法の概要を明らかにした。

ブラジルにおいては植生調査を通じた現況観察図の作成、多時期の衛星データ解析による草地の季節変化を把握した。さらに、草地植生の不均一性の定量的把握や耕地面積変化の長期モニタリングに有効な解析手法を示した。

(2) マレーシア等における熱帯林の再生技術及び持続的利用技術の導入条件の解明

サバ州政府との間で知的所有権の帰属が問題となり、MOU 締結が 12 月まで延びたため、予定していた長・短期出張者の派遣及び研究の開始が大幅に遅れた。

試験地の現況調査から 13 年生マンギウム林の下層には唐辛子や観葉植物等、86 種もの多様な植物が確認された。アグロフォレストリー生産環境に適した樹種として生育特性等が異なる 8 樹種を、栽培作物として果樹 8 種、作物 5 種、薬草 5 種類をそれぞれ有用性、耐陰性、市場性等を考慮して選定し、林内での栽培野菜としてスーパセルリ、ヒユナ等の葉茎菜類を選定した。

現地林分調査により人工林地下部での強い溶脱環境の存在や、植栽樹種からのリター供給量と分解速度、土壌化学性との密接な関連性等についての知見が得られた。

(3) 東南アジアにおける沿岸、マングローブ汽水域生態系の水産重要魚種資源の変動過程の解明

マングローブ汽水域の開発に伴う水産資源減少の対策として、環境保全に配慮した資源管理型漁業の確立が急務となっている。そのための基礎調査として資源動向、漁具漁法、養殖実態等に関する情報が集積された。フエダイ、ハタ類等重要魚種の生活環の解明が進められおり、フエダイ類の消化管内容物調査の結果から食性を明らかにした。

5) 沖縄における研究

(1) サヤインゲン、稲等の耐暑性・耐塩性の特性評価と利用

(論文数：3、成果情報：2)

サヤインゲンでは、高温による花粉の活力低下が原因で、花粉管の発芽や伸長過程が影響を受けるため結莢不良となることを明らかにした。また、耐暑性品種では蒸散能が高く、葉温が低く維持されることが判明した。

耐暑性作物作出のための候補遺伝子としてトマトのミトコンドリア型スモールヒートショックプロテイン遺伝子を単離し、E. coli 発現系を用いた組換え MT-sHSP の特性を明らかにした。有用育種素材としてサヤインゲン「黒種衣笠」を用いて、耐暑性サヤインゲン標準品種の雄性不稔系統シリーズの作出した。

耐塩性バクテリア *Bacillus coagulans* の持つ耐塩性遺伝子の探索とクローニングを行い、また、藻類の持つナトリウムイオン輸送遺伝子のイーストへの導入に成功した。

(2) サトウキビ、イモ類等の特性評価及び利用技術の開発 (論文数：1, 成果情報：1)

サツマイモのアントシアニン転写活性化遺伝子の特異的 DNA 断片として 200bp 断片、230bp

断片、380bp断片及び500bpを単離したが、塩基配列を決定した380bp断片と230bp断片の相同性は低かった。アントシアニン合成酵素遺伝子を完全に含む2.3kbpDNA断片を単離し塩基配列を決定した。

サトウキビの初期生長には比葉面積の影響が大きいことを明らかにし、サトウキビ品種NiF8（農林8号）の茎から3.5kbpのスクロースリン酸シンターゼ(SPS)遺伝子と考えられる遺伝子を単離した。

サトウキビで、アグロバクテリウム、バイナリーベクターを用いて形質転換体と推測されるカルスおよびシュートを多数得ることに成功した。これらのシュートからはPCR-サザン法によりハイグロマイシン耐性遺伝子の存在を示唆するバンドが検出された。

(3)マンゴー、パパイア等熱帯果樹の樹形制御・食味等の特性評価及び大量増殖技術等の基盤技術の開発

(論文数：6)

石垣島内の自生パパイアを調査収集し、実生のうち雄株を除いた559個体について1次調査を行い、矮性と考えられるパパイア約30個体を選抜した。12月以降は果実の収穫期となるので、年度内に食味調査を行う。

3地域で栽培されたマンゴー(品種アーウィン)のカロチノイド含有量には地域間で大きな差があり、また冬期の加温によりカロチノイド含有量に差が認められる地域もあるなど、環境条件により品質特性が異なることが示唆された。

パインアップルの果実品質の劣化要因となる果実の倒伏に関して品種群ごとの特徴を調査し、樹体が傾斜する要因を究明した。また、数種のパパイア品種を用い、アグロバクテリウム法によるウイルス外被タンパク導入手法を開発し、形質転換した不定胚と不定芽を得ることに成功した。

(4)熱帯・亜熱帯に発生するカンキツグリーニング病等の重要病害虫の発生生態の解明

(論文数：3, 成果情報：2)

石垣島内では、ミカンキジラミに寄生する2種の寄生蜂が発見されたが、寄生率自体は低かった。ミカンキジラミの分布はゲッキツの分布と一致し、奄美大島以南の南西諸島の総ての島で分布が確認され、1種もしくは2種の寄生蜂の発生が確認された。また、これら寄生蜂の飼育系も確立した。

ミカンキジラミ成虫を用いたカンキツグリーニング病の伝搬試験は一部成功したものの、安定的な伝搬条件を見出すには至らなかった。同病検出には新たに作出したモノクローナル抗体は不完全だったが、ポリクローナル抗体は有望だった。Nested-PCRの利用は感染樹からの病原検出精度向上に有用であった。

アオイ科作物の重要害虫であるアカホシカメムシを捕食するベニホシカメムシは狭食性で、短日による休眠反応は認められず高い増殖力を持つことが判明した。

(5)熱帯・亜熱帯島嶼における気象・土壌等に関わる生産不安定化要因の解明と節水・省肥栽培等対策技術の開発

(論文数：2, 成果情報：1)

地中点滴灌水により慣行の60%窒素量を液肥で施用した場合のサトウキビの生育量は、慣行の無灌水に比べ良好となり、窒素4割の節肥効果があった。また、耕盤はサトウキビ根の伸長阻害、土壌中の蓄積水の利用抑制、地表面流亡の助長、土壌通気性抑制、茎数減少等による収量低下等を招いた。

養液栽培の灌水位置は浅根性のキャベツなどでは地表灌水が窒素経済面でも適しており、サ

トウキビ春植え栽培では、側枝ポット苗培地へ肥効調節型肥料を用いると慣行施肥量の4割減が可能であった。

夏期における高温強日射が作物の生育に及ぼす影響が大きいと、野菜生産における効率的な遮光を検討し、一日の時刻別にその効果を解明した。

河川での実態調査に基づく年負荷総量や養分収支及び宮良川のゲート開閉に伴う流量変化を解明するとともに、手持ちの濁度計の値を浮遊物質濃度に変換する回帰式を完成し、純農業地域の河川の窒素汚濁の進行を明らかにした。

(6) 稲等の世代促進における出穂特性等の変異固定技術の開発

(論文数：1)

稲では、2期作型は北海道農研センター等226集団、3期作型は北海道農研センター等35集団延べ261集団の世代促進栽培を行った。また、本年の本圃場における穂いもち病の発病程度を明らかにした。

小麦では、育成地の計40集団について1または2世代の世代促進を計画どおり実施した。農林59号×TD(F)(春化反応性の遺伝分析系統)のF2分析では春化反応性遺伝子Vrn4と硬軟質性遺伝子の間に2.5%水準で有意な連鎖が認められたが、その組換え価は大きかった。ゼンコウジコムギ×農林67号の組合せにおいて、種子休眠性について成熟月の差異による有意差は認められないことから、世代促進において硬軟質性と種子休眠性に関して成熟期選抜に大きな効果はないと考えられる。

2 専門研究分野を活かした社会貢献

(1) 分析、鑑定

依頼分析・鑑定の体制整備

当面の分析・鑑定の対象として「高分解能 X 線光電子分光分析装置 (ESCA)」及び「エネルギー分散形走査型分析電子顕微鏡 (SEM-EDS)」を選定し、「依頼分析・鑑定規程」を作成して態勢を整えた。

(2) 講習、研修等の開催

タイにおけるバイオテクノロジーに関する研修会の開催

アジアにおけるバイオテクノロジー技術の研修及び普及を図るため、平成13年9月に、アジア太平洋経済協力会議 (APEC) との共催による「農業バイオテクノロジー国際シンポジウム」をバンコクにて、引き続き、JIRCAS ワークショップ「バイオテク利用による環境ストレス耐性作物」を同所にて開催した。

国際シンポジウム・ワークショップ・セミナー等の開催

国内外の大学、国際農業研究機関、国際協力事業団等の協力を得て、毎年 JIRCAS 国際シンポジウムを開催している。平成13年度は、11月に開催し、持続的農業との係わりにおける水問題に関する最近の成果と問題点及び今後の展開方向について情報交換を行った。また、平成14年3月に、参加型手法によるファームシステム研究に関するトレーニングコースをつくばにおいて開催した。このほか、国際プロジェクト研究の相手国機関からの招へい管理者25回、来訪研究者5回のセミナーを開催した。

研修生の受入れ

「独立行政法人国際農林水産業研究センター講習規程」を整備し、規程に基づいて、JICA 研修で来日した2名の研究員を受入れ、バイオテク研究の指導を行った。

国等の委託による国際共同研究に従事する研究者等の研修・育成

国際共同研究や農業技術協力への従事予定研究者等の研修もセンターの重要な社会貢献の一つであるとの認識から、平成 13 年度は、国際農林業協力協会 (AICAF) の依頼を受けて、受託契約を締結し、4 名の国際協力専門要員を受入れ、沖縄支所で 40 日間の技術補完研修を実施した。

(3) 行政、国際機関、学会等への協力

行政、国際機関、学会等の委員会、会議等への職員の派遣

新規事業として、国際共同研究従事希望者の人材データベースを作成し、国際機関における共同研究実施状況に関して派遣調査を実施した。また、タイにおいてバイオテクノロジーに関する研修会を主催し、6 名の講演者等を派遣した。このほかの平成 13 年度における派遣状況は、行政・国際機関等の委員会：56 件、学会等の委員会：40 件、講師・講演依頼等への対応：38 件、以上国内合計 134 件で、所外からの依頼等による国際会合への派遣者数は 10 件で延べ 12 人である。

国際協力事業団等の委託による技術協力のための職員の派遣、研修員の受入れ

国際協力事業団(JICA)、国際農林業協力協会 (AICAF) 等の委託を受けて、研修員の受入れ並びに研修会等に職員を講師として派遣するとともに、海外からの来訪者を積極的に受入れ、海外との技術協力の推進を支援した。〔JICA 委託：17 件、AICAF 委託：9 件、その他の委託：34 件〕〔JICA、AICAF 等の外国人研修員受入れ：246 人〕

行政、生産者、消費者等からの技術相談

行政、生産者、消費者等からの技術相談窓口 (国際研究広報官) を当所のホームページに公表し、対応の態勢を整えた。その結果、当所の研究成果、JIRCAS ニュース記事の詳細などについての問い合わせが増加し、また、マスコミ (テレビ局) からの取材の相談などがあつた。

3 成果の公表、普及の促進

(1) 成果の利活用の促進

研究成果情報(15 件以上)の公表

研究成果情報のホームページでの公表は平成 5 年度から行っており、平成 13 年度の 26 件の情報名と要約はすでに公表した。

"JIRCAS Newsletter"及び"JIRCAS ニュース"への研究成果情報の掲載

平成 12 年度の研究成果情報の中からより重要な情報と考えられるものを 4 回に分けて JIRCAS Newsletter(No.27 ~ 30)及び JIRCAS ニュース(No.26 ~ 29)で公表し、利活用の促進に努めた。

不定期刊行物(JIRCAS Working Report Series 等)を通じての研究成果の公表

種々の不定期刊行物を通じて研究成果を随時公表しており、平成 13 年度は、Annual Report 2000 (April 2000 ~ March 2001) を平成 13 年 10 月に発行した。(JIRCAS Working Report Series は - 3 - (2) - の項に記載)

研究成果情報のデータベースを作成し、ホームページへ公開する。

上記 参照。

(2) 成果の公表と広報

[成果の公表]

学術雑誌、機関誌等への論文(108 報以上)の発表

「情報発信届」によって研究職員の成果の公表を把握している。平成 13 年度は、研究成果情報：16、特許・品種登録：12、機関誌：72(審査有 20、審査無 52)、原著論文：86(学会誌登録団体雑誌及び国際誌 74、その他 12)、国内学会発表：164、国際学会発表：111、公刊図書(単行本)：19、調査報告資料：22、総説：15、雑誌等：49、その他：3、合計 569 報である。なお、平成 13 年度に、日本土壌肥料学会賞、文部科学省研究功績者表彰、日本水産学会奨励賞をそれぞれ受賞し、また、日本女性科学者の会奨励賞(日本水産学会奨励賞受賞者と同一人)を受賞した。

JIRCAS Journal の発行

平成 13 年 7 月に JIRCAS Journal No.9 を発行した。なお、No.1 ~ No.8 までの論文題目リストは当所のホームページで公表済みである。

JIRCAS 国際シンポジウムの開催

平成 13 年 11 月に開催した第 8 回 JIRCAS 国際シンポジウムにおいて、当所から、バイオテクノロジーによる乾燥ストレス耐性作物の開発、天水農業地帯における水資源の効率的利用及び国際農林水産業研究センターにおける水利用に係わる最近の研究成果について紹介し、今後の研究方向についての議論を深めた。

研究成果公表のための JIRCAS ワークショップ(5 回以上)の開催

国際プロジェクト研究では、研究成果の公表と検討を行うため、共同研究相手国やつくば本所において随時ワークショップを開催している。平成 13 年度は中国で 3 回、ブラジルとベトナムで各 1 回、つくばで 5 回(うち 1 回 FFTC と共催)開催した。

JIRCAS International Symposium Series の発行

平成 12 年度に開催した第 7 回 JIRCAS 国際シンポジウムのプロシーディングを JIRCAS International Symposium Series No.9 「TARC-JIRCAS 30th Anniversary, The 7th JIRCAS International Symposium: Agricultural Technology Research for Sustainable Development in Developing Regions」として平成 13 年 8 月に発行し、国内外の関係機関に配布した。

JIRCAS Working Report Series(5 冊以上)、国際農業研究叢書(2 冊)、JARQ(4 回)の発行

JIRCAS Working Report Series として 3 冊発行し、国際農業研究叢書として、現在、1 冊印刷原稿作成中である。JARQ は、わが国における農業研究の現状を開発途上地域の研究機関に広く紹介する役割を担っており、独法化後も、農林水産省所管の試験研究に係わる独立行政法人、大学の協力を得て刊行を継続することとした。平成 13 年度は 4 回(Vol.35(3) ~ Vol.36(2))発行した。

[成果の広報]

研究の成果に関する情報のデータベースの作成とホームページへの公開

農林水産研究情報センターの「研究課題情報データベース」とリンクできるようにして、研究成果の概要をホームページで公開した。(<http://kiss.aris.affrc.go.jp/>)

各種の定期・不定期刊行物を通じての研究計画、業務報告、成果情報等の公開とホームページへの公開

独立行政法人国際農林水産業研究センター中期目標（JIRCAS ニュース No.26（平成 13 年 9 月発行））及び平成 12 年度国際農業研究成果情報（JIRCAS ニュース No.27（平成 13 年 12 月発行））を掲載した。また、シンポジウム、ワークショップ等の報告はその都度掲載し、データベースを作成してホームページへ公開した。

JIRCAS ギャラリーの拡充と一般公開や来客に対する情報公開

これまで別棟にあった JIRCAS ギャラリーを研究本館ロビーに拡充整備し、新たにパネル・写真が設置出来るようにして、研究成果等の既存及び新規パネルや写真・世界地図等を展示して、来客が自由に観覧できるようにした。

成果情報の記者クラブ（2 回）への提供

平成 12 年度国際農業研究成果情報及びエビウイルス・プロジェクトの成果である WSSV（ホワイトスポットシンドロームウイルス）感染診断用抗体作成について提供した。

（3）知的所有権等の取得と利活用の促進

国内外への特許等（4 件以上）の出願

独法化後、知的所有権の取得・移転に関する事務的な支援態勢を強化し、特許等の取得について研究職員の積極的な取り組みを喚起した。平成 13 年度は新たに 5 件の国内特許出願を行い、この内 2 件については延べ 8 カ国にも外国特許を出願した。

研究者の知的所有権への理解を促す説明会、会議等の開催

「研究成果の管理に関する規程」の作成の経緯と概要について、平成 14 年 3 月に所内説明を行い、周知徹底を図った。また、弁理士相談会に職員（職務発明申請希望職員及び支援職員）が 2 回参加した。

知的所有権のデータベース作成とホームページへの公開

センターが所有する特許権及び育成者権等の名称及び概要を記載したデータベースを作成し、ホームページで公開した。また、平成 13 年 9 月にブルネイで開催されたアセアン科学技術週間において、センターの特許である作物栽培装置を展示し、利活用の促進に努めた。

予算（人件費の見積りを含む。）、収支計画及び資金計画（別紙 1）

- 1 予算 平成13年度予算
- 2 収支計画 平成13年度収支計画
- 3 資金計画 平成13年度資金計画

短期借入金の限度額

実績なし。

重要な財産を譲渡し、又は担保に供しようとするときは、その計画計画なし。

剰余金の使途

平成 13 年度の剰余金は積立金とする。

その他農林水産省令で定める業務運営に関する事項

1 施設及び設備に関する計画（別紙 2）

病害ガラス室の改修（沖縄支所）が平成 14 年 1 月に竣工し、輸入植物病原体の維持・増殖が可能となったので、研究の加速が期待できる状況となった。

2 人事に関する計画（人員及び人件費の効率化に関する目標を含む。）

1）人員計画

（1）方針

本支所間の支払い等の会計事務の合理化

つくば本所と沖縄支所の 2 カ所に事業所を所有しているため、支払い等の会計事務の一元化のため平成 15 年 4 月の実現に向けて検討を開始したが、平成 14 年度も引き続き具体的な移行方法及び措置の検討が必要である。

国際総合プロジェクト研究の推進における重点化

農業生産技術が未熟な地域であるタイ東北部及びラオスの天水農業地帯における農業生産の安定と向上及び収益向上のための技術開発が重要であるため、平成 14 年度から新規国際プロジェクトを開始する。また、当面する環境及び食料問題の緊急性と重要性に鑑みてアフリカが重要であるため、西アフリカの半乾燥熱帯地域における土壌肥沃度の維持管理手法の開発に関するプロジェクトの平成 15 年度実施開始に向けて、重点的に検討を行った。人材については、国及び他法人との人事交流を行いつつ要員の確保と調整を図っているが、人材が僅少な研究分野については独自に選考採用を行うことなどにより、将来の国際農林水産業研究を担う人材の確保と養成を行う。

（2）人員に係る指標

常勤職員の現在員数は、平成 14 年 1 月 1 日現在 162 名であった。

2）人材の確保

選考採用による研究者（2 名）の確保

平成 13 年 10 月 1 日付採用及び平成 14 年 2 月 1 日付採用として選考採用を 2 回行った。前者では、「アフリカ（西アフリカ）における地域動向の分析と効率的な研究戦略の企画・立案」を行おうとする人材 1 名を公募して応募者 4 名を得たが、審査の結果、該当者無しとして採用を見送った。後者では、「開発途上地域（特にアフリカ）における地域開発、食料・環境問題についての研究」を行おうとする人材 1 名及び「作物（特に大豆）の分子マーカーを利用した遺伝資源及び遺伝育種の研究」を行おうとする人材 1 名を公募し、それぞれ 7 名、6 名の応募者から書類・

面接審査を経て、能力・経験・人格等が十分と判断し得る人材各 1 名を選出・採用した。

科学技術特別研究員の受入れによる研究業務の加速化

平成 14 年 1 月から新たに 2 名（国際情報部、生産環境部）を科学技術特別研究員として受入れ、現在の受入れ総数は 8 名である。JIRCAS の研究業務の活性化に大きく貢献しているので、次年度も受入れたい。

独立行政法人国際農林水産業研究センター中期目標

第1 中期目標の期間

独立行政法人国際農林水産業研究センター（以下「センター」という。）の中期目標の期間は、平成13年4月1日から平成18年3月31日までの5年間とする。

第2 業務運営の効率化に関する事項

運営費交付金で行う事業については、中期目標の期間中、毎年度平均で、少なくとも前年度比1%の経費節減を行う。

1 評価・点検の実施

独立行政法人評価委員会（評価委員会）の評価結果は、資源配分、業務運営等に適切に反映させる。評価委員会の評価の効率的かつ効果的な実施に資するため、センター自らにおいても、運営状況、研究成果について外部専門家・有識者等を活用しつつ、業務の点検を行う。また、研究職員については、公正さと透明性を確保した業績評価を行い、評価結果は研究資源配分等に反映させる。

2 研究資源の効率的利用

外部資金の獲得、研究資源の充実・効率的利用、施設機械の有効利用等を図る。

3 研究支援の効率化及び充実・高度化

研究業務の高度化に対応した高度な専門技術・知識を有する者を配置する等、研究支援業務の効率化、充実・強化を図る。また、必要に応じ、外部委託等の活用を図る。

4 連携、協力の促進

他の独立行政法人との役割分担に留意しつつ、研究目標の共有、共同研究、人的交流の促進を行い、独立行政法人全体としての農林水産業等に関する研究水準の向上を図る。また、研究の効率的な実施のため、国公立機関、大学、民間、海外機関、国際機関等との共同研究等の連携・協力及び研究者の交流を行う。

5 管理事務業務の効率化

事務処理の迅速化、簡素化、文書資料の電子媒体化等による管理事務業務の効率化を行う。

6 職員の資質向上

職員への研修、資格取得等の促進を通じた資質向上に努める。

- 7 海外滞在職員等の安全と健康の確保
海外滞在職員等の安全及び健康の確保に努める。

第3 国民に対して提供するサービスその他の業務の質の向上に関する事項

1 試験及び研究並びに調査

(1) 重点研究領域

平成11年7月に制定された「食料・農業・農村基本法」及びその理念や施策の基本方向を具体化した「食料・農業・農村基本計画」並びに平成11年11月に策定された「農林水産研究基本目標」に示された研究開発を推進するため、センターにおいては、「開発途上地域における農林水産物の環境に調和した持続的生産技術」、「開発途上地域における農林水産物の品質評価・流通・加工技術」、「開発途上地域における遺伝資源及び生物機能の解明と利用技術」、「開発途上地域における環境資源の特性評価と生物多様性の保全技術」等に関する研究を重点的に推進する。その際、経済活動や社会活動のグローバル化の進展を受けて、我が国の農林水産業への波及と影響についても考慮しつつ、国際的な連携・協力による国際共同研究を実施する。また、緊急に解決すべき問題については、研究開発を積極的に推進する。

(2) 研究の推進方向

研究に係る目標の作成に当たって、次のように定義した用語を主に使用して段階的な達成目標を示す。また、研究対象等を明示することにより、達成すべき目標を具体的に示す。

取り組む：新たな研究課題に着手して、試験及び研究を推進すること。

解明する：原理、現象を科学的に明らかにすること。

開発する：利用可能な技術を作り上げること。

確立する：技術を組み合わせて技術体系を作り上げること。

ア 開発途上地域の食料需給改善のための農林水産業の動向解析、国内外の研究開発動向の把握及び技術開発方向の解明

(ア) 世界の食料需給の動向解析と共同研究に係わる総合戦略の策定

- a 内外の資料の収集、整理、分析等を迅速に行うため、主要な開発途上国、国際機関等との間で情報ネットワークの構築を図るとともに、国際共同研究の中期的な総合戦略を策定する。
- b 中国主要省等について需給動向解析用モデルを開発し、世界の需給動向解析用モデルの精度を高める。

(イ) 開発途上地域における食料・環境に係わる地域特性及び発展方向の解明

インドネシア、ベトナム、西アフリカ等の総合プロジェクト実施地域を中心に、

- a 農林水産業の発展阻害要因と技術的・経済的発展方向を解明する。
- b 持続的なファームリングシステムの確立のための社会的・経済的・技術的視点を明確化し、問題点と展開方向を解明する。

イ 開発途上地域の農林水産業の持続的発展のための研究開発

(ア) 開発途上地域における農林水産物の環境に調和した持続的生産技術の改良・開発

タイ、マレーシア、ブラジル等の総合プロジェクト実施地域を中心に、

- a 持続的生産を可能にするための窒素等の物質循環の解明と評価手法を開発する。
- b 稲・畑作物の現地に適した省力・省資源的栽培技術を開発する。
- c 稲・大豆等の現地における主要病害虫の発生生態を解明する。
- d 農牧輪換システムに適したイネ科牧草の生理・生態学的特性を解明し、低利用飼料資源の栄養特性評価を行う。
- e 現地における牛・豚等の生理学的特性と主要疾病の実態を解明する。
- f 熱帯低質林への有用樹種の植込み等天然更新補助技術を開発する。
- g 環境と調和した地域固有水産生物の増養殖技術を開発する。

(イ) 開発途上地域における農林水産物の品質評価・流通・加工技術の改良・開発

タイ、マレーシア、中国等の総合プロジェクト実施地域を中心に、

- a 現地で生産されている米等の基本的な品質特性を解明する。
- b 温湿度等の環境条件と連動した米・大豆等の品質劣化の簡易防止技術を開発する。
- c 熱帯地域のオイルパーム廃材等低利用木質資源の高度利用技術を開発する。
- d 淡水魚等低利用水産物のすり身等への有効利用技術を開発する。

(ウ) 開発途上地域における遺伝資源及び生物機能の解明と利用技術の開発

西アフリカ、中国等の総合プロジェクト実施地域を中心に、

- a 乾燥耐性等の有用形質について、関連するプロモーターの単離等を行い、遺伝的特性を解明する。
- b 稲等の病虫害抵抗性等の有用育種素材を開発する。
- c 独立行政法人農業生物資源研究所が実施するジーンバンク事業のサブバンクとしてセンターバンク（独立行政法人農業生物資源研究所）と連携しつつ、遺伝資源の収集、評価及び保存を行う。

(エ) 開発途上地域における環境資源の特性評価と生物多様性の解明

タイ、インドネシア、マレーシア等の総合プロジェクト実施地域を中心に、

- a リモートセンシング技術を用いた環境資源の特性評価と土地利用の変動を解明する。
- b 熱帯林の持続性と再生のためのアグロフォレストリー技術の導入条件を解明する。

- c マングローブ汽水域の養殖を中心とした農林水産業の振興・活性化を図るための生物生産過程を解明する。

(オ) 沖縄における研究

- a インゲンマメ、稲等を用いて耐暑性及び耐塩性のメカニズムを解明する。
- b アグロバクテリウム等を用いて、サトウキビ等の優れた特性を有する育種素材を開発する。
- c マンゴー、パパイア等の熱帯・亜熱帯果樹の特性を評価し、大量増殖に資する基盤技術を開発する。
- d 熱帯・亜熱帯に発生するカンキツグリーンング病等の重要病害虫の発生生態を解明する。
- e 熱帯・亜熱帯島嶼の生産不安定要因を解明し、節水・省肥栽培等の対策技術を開発する。
- f 稲等の世代促進における出穂特性等の変異固定技術を開発する。

2 専門研究分野を活かした社会貢献

(1) 分析、鑑定

行政、各種団体、大学等の依頼に応じ、センターの有する高い専門知識が必要とされる分析、鑑定を実施する。

(2) 講習、研修等の開催

講習会の開催、国公立機関、民間、大学、海外機関等外部機関からの研修生の受入れ等を行う。

(3) 行政、国際機関、学会等への協力

行政、国際機関、学会等への専門家の派遣、行政等への技術情報の提供等を行う。

3 成果の公表、普及の促進

(1) 成果の利活用の促進

研究成果はデータベース化やマニュアルの作成、共同研究等により積極的に開発途上地域等での利活用の促進を図る。

(2) 成果の公表と広報

研究成果は、積極的に学術雑誌等への論文、学会での発表等により公表するとともに、主要な成果については各種手段を活用し、積極的に広報を行う。

(3) 知的所有権等の取得と利活用の促進

重要な研究成果については、わが国の農林水産業等の振興に配慮しつつ、特許等の取得により権利の確保に努めるとともに、民間等における利用の促進を図る。また、育種研究成果については、国の命名登録制度を活用しつつ、優良品種の育成・普及に努める。

第4 財務内容の改善に関する事項

1 収支の均衡

適切な業務運営を行うことにより、収支の均衡を図る。

2 業務の効率化を反映した予算計画の策定と遵守

経費節減目標を踏まえた運営費交付金の交付を受けることを前提に中期計画の予算を作成し、当該予算による運営を行う。

第5 その他業務運営に関する重要事項

人事に関する計画

(1) 人員計画

期間中の人事に関する計画（人員及び人件費の効率化に関する目標を含む。）を定め、業務に支障を来すことなく、その実現に努める。

(2) 人材の確保

研究職員について、任期付任用制度の活用、職の公募等により、内外の優れた人材を確保する。

独立行政法人国際農林水産業研究センター中期計画

業務運営の効率化に関する目標を達成するためとるべき措置

運営費交付金で行う事業については、中期目標の期間中、毎年度平均で、少なくとも前年度比1%の経費節減を行う。

1 評価・点検の実施

外部専門家・有識者等を活用し、毎年度の報告に先立ち、自ら点検を行う。

主要な研究については、研究の推進方策・計画及び進捗状況の点検を行うとともに、外部専門家・有識者等の意見を聞いて成果の評価を行い、その結果は研究資源の配分に反映させるとともに公表する。

評価項目、評価基準を定める等公正さを確保しつつ、研究職員の業績評価を行い、その結果は処遇、研究資源の配分に反映させる。

2 研究資源の効率的利用

中期目標達成に有効な競争的資金には積極的に応募し、研究資源の充実を図る。

研究資源の効率的・重点的な配分を行う。

施設・機械の有効利用を図るため、共同利用に努めるとともに、共用等が可能な機械については、その情報をインターネットを介して広く公開する等、有効かつ効率的利用に努める。

3 研究支援の効率化及び充実・高度化

特許、品種登録等の知的所有権の取得・移転に係る支援態勢を強化する。

農林水産省研究ネットワーク等を活用して、研究情報収集・提供業務の効率化、充実・強化を図る。

施設、機械等の保守管理については、業務の性格に応じて外部委託に努める。

海外長期滞在研究員の所在地に、長期・短期に事務職員を出張させ、現地における会計事務等を支援する。

4 連携、協力の促進

(1) 他の独立行政法人との連携、協力

他の独立行政法人との役割分担に留意しつつ、研究目標の共有、共同研究、人事交流を含めた連携、協力を積極的に行う。また、独立行政法人農業技術研究機構が行う多様な専門知識を融合した総合研究に必要なに応じて協力する。

(2) 開発途上地域の試験研究機関等との連携、協力

開発途上地域における研究問題解決のため、海外の農林水産業研究機関等との共同研究を実施する。

開発途上地域の農林水産業研究機関等から研究管理者等を招へいし、共同研究の推進方向について協議して、連携と協力を強化する。

開発途上地域における研究機関等の研究員を招へいし、共同研究を実施する。

(3) 産学官の連携、協力

国公立機関、大学、民間、海外機関、国際機関、国際協力事業団等との共同研究及び研究者の交流等を積極的に推進する。

研究を効率的に推進するため、行政との連携を図る。

科学技術協力に関する政府間協定等を活用し、先進国等との共同研究を推進する。

国の助成により公立機関等が実施する研究等への協力を行う。

毎年定期的に、関係独立行政法人、行政部局、都道府県等の参加を求めて、研究推進のための会議を開催し、相互の連携・協力のあり方等につき意見交換等を行う。

5 管理事務業務の効率化

事務の簡素化と迅速化を図るため、LAN等を有効に利用するとともに、会計処理、発注業務の電子化を進め、事務処理に係わる新たなソフトウェア等の導入を行う。

光熱水の節約等により、管理経費の節減を図る。

6 職員の資質向上

業務上必要な各種の研修に職員を積極的に参加させるほか、必要な研修を実施し、職員の資質向上に努める。また、業務上必要な資格取得を支援する。

各種制度を積極的に活用し、職員の在外研究の機会の増加に努める。

博士号の取得を奨励し、適切な指導を行う。

7 海外滞在職員等の安全と健康の確保

海外滞在職員等の安全を確保するため、外務省や国際協力事業団との連携を密にし、常時、海外情報や危険・医療情報等の収集及び海外派遣中の職員への連絡態勢を確保する。また、緊急時には速やかな危機管理対策をとる態勢を確保する。

国民に対して提供するサービスその他の業務の質の向上に関する目標を達成するためとるべき措置

1 試験及び研究並びに調査

A 開発途上地域の食料需給改善のための農林水産業の動向解析、国内外の研究開発動向の把握及び技術開発方向の解明

1) 世界の食料需給の動向解析と共同研究に係わる総合戦略の策定

(1) 主要な開発途上国の研究動向の解明及び中期的国際共同研究戦略の策定

主要な開発途上国及び国際研究機関等の研究問題設定の背景・目的、研究動向等を解析するとともに、情報収集に必要な情報ネットワークの構築を進める。また、それらの解析結果や国内外のニーズを踏まえ、我が国としての中期的国際共同研究戦略を策定する。

(2) 中国主要省等の食料需給動向の解析等による世界の食料需給モデルの改良

中長期の世界の食料需給動向を明らかにするため、中国主要省等の食料需給動向を解析するとともに、農林水産業関連の政策や経済環境、土地・水等の自然環境の変動を解明し、世界食料需給モデルを改良する。

2) 開発途上地域における食料・環境に係わる地域特性及び発展方向の解明

(1) インドネシア、西アフリカ等における農林水産業の発展阻害要因と技術的・経済的発展方向の解明

農林水産業の研究協力では、各地域・国の自然条件、歴史、習慣等の社会条件や技術水準等に対応した多様な内容が求められていることからその効率的実施のため、地域の特性を的確に把握する。インドネシアや西アフリカ地域等について、農林水産業の特徴とその歴史的背景をふまえ、これまでの発展を阻害してきた要因と今後の技術的・経済的発展方向を解明する。

(2) インドネシア、ベトナム等における持続的ファーミングシステムの展開方向の解明

開発された農林水産業関連の技術が普及・定着するためには、持続的ファーミングシステムを構築することが必要であることから、地域の条件に応じたファーミングシステムの展開方向を明確化する。インドネシアやベトナム等についてのファーミングシステムの現状と問題点をふまえ、その展開方向を解明する。

B 開発途上地域の農林水産業の持続的発展のための研究開発

1) 開発途上地域における農林水産物の環境に調和した持続的生産技術の改良・開発

(1) 多様な耕地生態系における窒素等の物質循環の評価と土壌改良技術の改善

持続的な生産を可能にし、環境負荷を軽減する耕地生態系管理技術及び土壌管理技術を開発するため、窒素、リン、有機物等の物質循環を評価する手法を開発し、研究対象地域におけるこれらの物質循環を評価する。

(2) タイ、ベトナム等における稲・畑作物の省力・省資源的生産技術の開発

限られた天然資源の有効利用と環境保全を考慮し、稲（香り米等の現地品種）及び畑作物の生産力を向上させるため、有機物投入による土壌管理・栽培法を改善するとともに、高品質・多収技術及び水管理技術を開発する。

(3) 東南アジア、南米等における稲・大豆等の主要病害虫の発生実態の解明

持続的な農業生産に寄与する総合防除を中心とした病害虫防除技術の開発を目指して、主要病原菌、害虫等の発生実態を解明する。

(4) 農牧輪換システム等に適したイネ科牧草及びトウモロコシ茎葉等の地域低利用飼料資源の特性の解明

農牧輪換システム等の持続型家畜生産に適したイネ科牧草の生理生態学的特性を明らかにするとともに、トウモロコシ茎葉等の農業副産物等の調製法及び飼料栄養特性を解明する。

(5) タイ、ベトナム等における牛・豚等の生理学的特性の解明と主要家畜疾病の実態の解明

牛・豚等の栄養代謝等の生理学的特性を解明し、環境と調和した飼養技術の開発に資するとともに、家畜の生産性を低下させるトリパノソーマ症等の主要な家畜疾病の実態を解明する。

(6) 熱帯低質林におけるフタバガキ等有用樹種の天然更新補助技術の開発

東南アジアにおける持続可能な森林経営を達成するための伐採・育林技術を開発する。特に、択伐後の林内におけるフタバガキ科樹種の天然更新補助技術を開発する。また、荒廃草地からの森林回復に効果的なギンネム等による造林技術を開発する。

(7) 水産生物の環境と調和した養殖方法の開発

水産上の重要な地域固有の魚種の成熟・産卵過程の解明、稚仔魚の摂餌生態、餌料生物の選定・培養、人工配合飼料の検討・実用化等の研究を行うとともに、養殖排水の浄化及びマングローブ林等に多量に生息する天然餌料の利用等の自然循環機能の利用による低投餌、低投薬（疾病防除型）養殖方法を開発する。

2) 開発途上地域における農林水産物の品質評価・流通・加工技術の改良・開発

(1) 東南アジアにおける米等の食料資源の形状・香り等の品質特性の解明

簡易で廉価な機器又は資材の組合せによる現地適合型評価手法を開発し、収穫前後及び流通加工過程における食料資源の基本特性（形状、香り、加工性等）を評価するとともに、変動要因を解明する。

(2) 温湿度等の環境条件と連動した香り米等の品質劣化の簡易防止技術の開発と加工技術の改良・開発

高温・高湿度の環境条件と劣悪な保全設備による収穫後の急速な品質劣化、及び害虫による量的・質的損耗の低減を図るため、低資材投入型の簡易な乾燥・保全技術を開発する。付加価値向上を図るため、現地加工技術を改良・開発する。

(3) オイルパーム廃材等の低利用木質資源の利用技術の開発

熱帯地域に豊富な未・低利用の低質木質資源の有効利用を図るため、オイルパーム廃材等の原料特性を解明し、木質製品への加工技術を開発する。

(4) 中国における淡水魚等低利用水産資源のすり身等への利用技術の開発

中国の生産、流通、消費の実状に合致したすり身等の水産物利用技術を開発するとともに、不明の点が多い淡水魚介類の特性に関する基礎的知見を蓄積する。また、未低利用部位の完全利用を目標に、資源の有効利用及び自然環境に配慮した利用技術を開発する。

3) 開発途上地域における遺伝資源及び生物機能の解明と利用技術の開発

(1) 乾燥等の環境ストレスに対する耐性機構の解明と組換え体作出技術の開発

モデル植物を用いて乾燥等の環境ストレス耐性機構を分子レベルで解明し、環境ストレス耐性に関する有用遺伝子やプロモーター等を作物へ導入して、環境ストレス耐性を持つ遺伝子組換え体を作成する。

(2) 稲、小麦等における病虫害抵抗性等の評価技術の開発と育種素材の育成

稲、小麦、大豆等の作物遺伝資源について特性評価を行う。これにより、環境ストレス耐性、病虫害抵抗性、収量性、品質成分等の有用形質に係る特性を明らかにし、これらの遺伝資源を利用して有用な育種素材を開発する。さらに、開発途上地域での育種事業の効率化を図るため、複合形質の効率的選抜のための育種法を開発・発展させる。

(3) 熱帯・亜熱帯等の野菜・果樹等の遺伝資源収集、評価及び保存

独立行政法人農業生物資源研究所が実施するジーンバンク事業のサブバンクとしてセンターバンク（独立行政法人農業生物資源研究所）と連携しつつ、熱帯・亜熱帯等の作物及び微生物遺伝資源について、収集・評価及び保存を行う。また、適当であると認められた遺伝資源については、随時、センターバンクに移管する。

4) 開発途上地域における環境資源の特性評価と生物多様性の解明

(1) 農業生産に関する環境資源の特性評価と土地利用の変動機構の解明

環境資源を有効に活用した農業生産システムを確立するため、リモートセンシング等による環境資源の特性評価技術を開発するとともに、土地利用変動と環境資源との関係を解明する。

(2) マレーシア等における熱帯林の再生技術及び持続的利用技術の導入条件の解明

熱帯早成樹人工林等を適切に管理・活用しながら多様性・持続性のある熱帯林へ再生させる方策を解明する。特に、環境保全を考慮したアグロフォレストリー生産環境の造成条件、及び間伐後に生じた空間において栽培が可能な果樹・野菜等の弱光利用型作物を組み合わせたアグロフォレストリー技術の導入条件を解明する。

(3) 東南アジアにおける沿岸、マングローブ汽水域生態系の水産重要魚種資源の変動過程の解明

熱帯・亜熱帯地域におけるマングローブ汽水域は、生産の場としての経済的価値が高いばかりでなく、環境及び生物多様性の保全に果たす役割も大きい。本地域における環境の保全に配慮した水産業の持続的な活性化を図るため、沿岸域開発下における水産重要魚種資源の変動過程を解明する。

5) 沖縄における研究

(1) サヤインゲン、稲等の耐暑性・耐塩性の特性評価と利用

サヤインゲン等野菜類の高温ストレス耐性に関する特性評価を行い、有用な育種素材を探索し、育種利用を図る。また、耐塩性を向上させた稲を開発するため、耐塩性の主要因であるナトリウムイオンの制御に関する遺伝子の機能を解明する。

(2) サトウキビ、イモ類等の特性評価及び利用技術の開発

サトウキビ、イモ類等、熱帯・亜熱帯の栄養繁殖性作物がもつ有用形質について特性評価を行うとともに、生物工学的手法等を活用して優れた特性を持つ育種素材を開発する。

(3) マンゴー、パパイア等熱帯果樹の樹形制御・食味等の特性評価及び大量増殖技術等の基盤技術の開発

マンゴー等の熱帯・亜熱帯果樹の樹形・着果制御等に必要物質生産・開花特性を解明する。また、パパイア等の食味等に関する品質特性を評価し、高品質果樹の大量増殖技術等の基盤技術を開発する。

(4) 熱帯・亜熱帯に発生するカンキツグリーンング病等の重要病害虫の発生生態の解明

カンキツに壊滅的被害を及ぼすカンキツグリーンング病等の熱帯・亜熱帯地方の作物に発生する重要な病害及び害虫、天敵生物等の生理生態的特性を解明する。

(5) 熱帯・亜熱帯島嶼における気象・土壌等に関わる生産不安定化要因の解明と節水・省肥栽培等対策技術の開発

気象、土壌等の環境が作物等の反応、土壌・肥料等の動態に及ぼす影響を解明し、節水・省肥栽培等対策技術を開発する。

(6) 稲等の世代促進における出穂特性等の変異固定技術の開発

亜熱帯気候という地理的環境を活用して実施する稲及び麦類の世代促進において、出穂特性等の効率的な変異固定技術を開発する。

2 専門研究分野を活かした社会貢献

(1) 分析、鑑定

行政、各種団体、大学等の依頼に応じ、高度な専門的知識が必要とされ、他の機関では実施が困難な分析、鑑定を実施する。

(2) 講習、研修等の開催

講習会、講演会等を積極的に開催するとともに、国や団体等が主催する講習会等に積極的に協力する。

他の独立行政法人、大学、国公立機関、民間等の研修生を積極的に受け入れ、人材育成、技術水準の向上、技術情報の移転を図る。また、海外からの研修生を積極的に受け入れる。

国等の委託を受け、国際研究機関や技術協力に通ずる国際農林水産業研究に従事する研究者の確保・育成を推進する。

外部に対する技術相談窓口を設置し対応する。

(3) 行政、国際機関、学会等への協力

わが国を代表する国際農林水産業に関わる研究機関として、行政、国際機関、学会等の委員会・会議等に職員を派遣するとともに、政府の行う科学技術に関する国際協力・交流に協力する。また、行政等の要請に応じて、国内外の技術情報を適切に提供する。

3 成果の公表、普及の促進

(1) 成果の利活用の促進

行政、生産者、開発途上地域等が利用可能な各種のマニュアル、データベース等を作成するとともに、農林水産省研究ネットワーク、国際共同研究等を活用して、成果の開発途上地域等での普及、利活用の促進に努める。

(2) 成果の公表と広報

研究成果は国内外の学会、シンポジウム等で発表するとともに、中期目標の期間内に540報以上の論文を学術雑誌、機関誌等に公表する。

研究成果については、その内容をインターネットや「つくばリサーチギャラリー」の展示等を通じて公開に努めるとともに、重要な成果に関しては、適宜マスコミに情報を提供する。また、パブリックアクセプタンスの確保に努める。

(3) 知的所有権等の取得と利活用の促進

知的所有権の取得に努め、中期目標の期間内に20件以上の国内特許等を出願する。また、海外で利用される可能性、我が国の農林水産業等への影響を配慮して、特許等の外国出願を行う。

育種研究成果については、積極的に種苗法に基づく品種登録を行うとともに、海外で利用される可能性、我が国の農林水産業等への影響を配慮して、外国出願を行う。また、育種研究成果の普及及び利用促進を図るため、農林水産省の命名登録制度を活用する。

補償金の充実等により、知的所有権取得のインセンティブを与える。

取得した知的所有権に係る情報提供はインターネットを通じて行うとともに研究成果移転促進事業等を活用し、知的所有権の利活用を促進する。この場合、知的所有権の実施の許諾等については、我が国の農林水産業等の振興に支障を来すことのないよう考慮の上、決定する。

予算（人件費の見積りを含む。） 収支計画及び資金計画

1 予算

平成13年度～平成17年度予算

（単位：百万円）

区 分	金 額
収入	
運営費交付金	17,118
施設整備費補助金	943
無利子借入金	958
受託収入	1,162
諸収入	2
試験場製品等売払代	2
その他の収入	0
計	20,183
支出	
業務経費	6,408
施設整備費	1,262
受託経費	1,162
試験研究費	1,051
管理諸費	111
借入償還金	639
一般管理費	1,817
試験研究費	153
管理諸費	1,664
人件費	8,895
計	20,183

[人件費の見積り]

期間中総額 7,483 百万円を支出する。

但し、上記の額は、役員報酬並びに職員基本給、職員諸手当、超過勤務手当、休職者給与及び国際機関派遣職員給与に相当する範囲の費用である。

[運営費交付金算定のルール]

1. 平成 13 年度については、積み上げ方式とする。
2. 平成 14 年度以降については、次の算定ルールを用いる。

$$\begin{aligned} \text{運営費交付金} &= (\text{業務経費} + \text{一般管理費}) \times \times + \text{人件費} \\ &\quad - \text{諸収入} \pm \\ &\quad : \text{消費者物価指数} \\ &\quad : \text{効率化係数} \\ &\quad : \text{各年度の業務の状況に応じて増減する経費} \end{aligned}$$

$$\begin{aligned} \text{人件費} &= \text{基本給等} + \text{退職手当} + \text{休職者・派遣者給与} + \text{公務災害補償費} \\ &\quad + \text{児童手当拠出金} + \text{共済組合負担金} \end{aligned}$$

$$\text{基本給等} = \text{前年度の} (\text{基本給} + \text{諸手当} + \text{超過勤務手当}) \times (1 + \text{給与改定率})$$

(注) 1. 運営費交付金額には、中期目標の期間中の常勤職員数の効率化減員分を反映させる。

2. 消費者物価指数及び給与改定率については、運営状況等を勘案した伸び率とする。ただし、運営状況等によっては、措置を行わないことも排除されない。

[注記] 前提条件

1. 期間中の効率化係数を年 99% と推定
2. 給与改定率及び消費者物価指数についての伸び率を、ともに 0% と推定

2 収支計画

平成13年度～平成17年度収支計画

(単位：百万円)

区 分	金 額
費用の部	17,973
經常費用	17,973
人件費	8,895
業務経費	5,263
受託経費	1,162
一般管理費	1,817
減価償却費	836
財務費用	0
臨時損失	0
収益の部	17,973
運営費交付金収益	15,973
諸収入	2
受託収入	1,162
資産見返運営費交付金戻入	499
資産見返物品受贈額戻入	337
臨時利益	0
純利益	0
目的積立金取崩額	0
総利益	0

[注記]

1. 収支計画は予算ベースで作成した。
2. 当法人における退職手当については、役員退職手当支給基準及び国家公務員退職手当法に基づいて支給することとなるが、その全額について、運営費交付金を財源とするものと想定している。
3. 「受託収入」は、農林水産省及び他省庁の委託プロジェクト費を計上した。

3 資金計画

平成13年度～平成17年度資金計画

(単位：百万円)

区 分	金 額
資金支出	20,183
業務活動による支出	17,137
投資活動による支出	2,407
財務活動による支出	639
次期中期目標の期間への繰越金	0
資金収入	20,183
業務活動による収入	18,282
運営費交付金による収入	17,118
受託収入	1,162
その他の収入	2
投資活動による収入	943
施設整備費補助金による収入	943
その他の収入	0
財務活動による収入	958
無利子借入金による収入	958
その他の収入	0

[注記]

1. 資金計画は予算ベースで作成した。
2. 「受託収入」は、農林水産省及び他省庁の委託プロジェクト費を計上した。
3. 「業務活動による収入」の「その他の収入」は、諸収入額を記載した。

短期借入金の限度額

中期目標の期間中の各年度の短期借入金は3億円を限度とする。

想定される理由：運営費交付金の受け入れの遅延

重要な財産を譲渡し、又は担保に供しようとするときは、その計画計画なし。

剰余金の使途

開発途上地域の農林水産業を対象とする研究戦略策定のための調査、情報技術利用高度化のための機器の整備、広報の充実、研究用機器の更新・購入に使用する。

その他農林水産省令で定める業務運営に関する事項

1 施設及び設備に関する計画

業務の適切かつ効率的な実施の確保のため、業務実施上の必要性及び既存の施設、設備の老朽化等に伴う施設及び設備の整備改修等計画的に行う。

平成13年度～平成17年度施設、設備に関する計画

(単位：百万円)

施設・設備の内容	予定額	財源
病害ガラス室改修		施設整備費補助金
遺伝子組換え体発現制御実験棟改修		〃
網室改修		〃
海外食品素材調整実験室改修		〃
小計	304 ±	
島嶼環境技術開発棟新築		無利子借入金
小計	958	
合計	1,262 ±	

(注) : 各年度増減する施設、設備の整備等に要する経費

2 人事に関する計画(人員及び人件費の効率化に関する目標を含む。)

1) 人員計画

(1) 方針

管理業務の効率化に伴う適切な職員の配置に努める。また、重点研究領域への職員の重点配置等を行うことにより、研究業務の効率的、効果的な推進を行う。

(2) 人員に係る指標

期末の常勤職員数は期初を上回らないものとする。

(参考：移行職員相当数164名、期末の常勤職員数161名)

(参考：中期目標の期間中の人件費総額見込み7,483百万円

但し、上記の額は、役員報酬並びに職員基本給、職員諸手当、超過勤務手当、休職者給与及び国際機関派遣職員給与に相当する範囲の費用である。)

2) 人材の確保

職員の新規採用については、国家公務員採用試験の活用及び選考採用により行う。研究職員については任期付任用の拡大を図る。また、中期目標達成に必要な人材を確保するため、ポストドクター等の派遣制度を活用する。

広く人材を求めるため、研究を行う職については公募の導入を図る。

独立行政法人国際農林水産業研究センター平成14年度年度計画

業務運営の効率化に関する目標を達成するためにとるべき措置

1 評価・点検の実施

独立行政法人評価委員会農業技術分科会への報告に先立ち、自己点検評価の一環として、理事長が委嘱した評価委員による評価を行う。

主要な研究について、研究の推進方策、進捗状況の点検及び成果の評価のため、「研究計画・成果検討会」、「国際農林水産業試験研究推進会議」及び「運営評価会議」を開催する。

試験研究の基本方向や運営に関して長期的な観点から検討するため「顧問会議」を開催する。

新たな業績評価システムを策定し、それに基づき研究職員の業績評価を実施する。

2 研究資源の効率的利用

中期計画達成に有効な競争的資金に積極的に応募する。

研究費の重点的な配分方法に関する新たな仕組みを作成し、これに基づき研究費を配分する。

「高分解能X線光電子分光分析装置(ESCA)」及び「エネルギー分散形走査型分析電子顕微鏡(SEM-EDS)」（本所）と「作物環境評価検定施設」（沖縄支所）については、引き続きその効率的利用を図る。また、平成14年度末に完成予定の「島嶼環境技術開発棟」（沖縄支所）の効率的利用を図るために産官学共同利用の方策を検討する。

ほ場委員会の本・支所小委員会はそれぞれ年間利用計画の作成、利用の調整を行い、ほ場の効率的な利用を図る。また、ほ場の管理運営事項の一元的な把握・調整を図るためほ場委員会を開催する。

3 研究支援の効率化及び充実・高度化

特許、品種登録等の知的所有権の取得・移転に関し、事務的な支援態勢を継続して実施する。

計算情報センター 2000 年システムの活用を進めるため、セミナーに職員を参加させる。

アジア太平洋高度ネットワーク（APAN）に関連するワークショップ等に協力する。新図書資料管理システムや文献情報検索システムの内容及び活用方法の理解を図るため、講習会を開催する。

庁舎、研究棟、熱帯温室等の保守管理の外部委託を継続して実施すると共に、効率化のために、部分委託の活用を努める。

海外滞在研究員の所在地に、高度な専門技能を有する技術専門職員及び総務職員を出張させ、現地の研究職員の研究業務及び会計業務等を効率的に支援する。

4 連携、協力の促進

(1) 他の独立行政法人との連携、協力

「独立行政法人国際農林水産業研究センターが海外において行う国際共同研究の実施についての協約書」に基づき、海外における共同研究の実施課題の分担等について他の独立行政法人との積極的な連携・協力を図る。また、国際協力事業団等との連携・協力を積極的に行う。

(2) 開発途上地域の試験研究機関等との連携、協力

これまでの国際共同研究を継続するとともに、新たにタイ農業局・畜産振興局・土地開発局及びコンケン大学並びにラオス農林業研究所と共同して、「インドシナ天水農業地帯における水資源の効率的利用と収益性の向上」のプロジェクト研究を開始する。国際共同研究の相手機関等と必要に応じて覚書の締結または見直しを行う。開発途上地域等の研究者、研究管理者等を招聘し、積極的に共同研究を推進する。

(3) 産学官の連携、協力

国内外の研究機関等との連携・協力を積極的に推進する。国際農業研究機関へ管理職として人材を派遣する。また、国際共同研究課題の円滑な実施を図るため、大学、民間等の研究者を海外派遣するなど外部人材の活用を図る。

平成13年度の公表に加えて、新たに共同利用可能な施設・機器等が整備された場合には、ホームページ等で公表する。

文部科学省の内地研究員及び日本学術振興会の外国人特別研究員等を積極的に受入れ、産学官の共同研究を推進する。また、科学技術特別研究員を客員研究員として受け入れる。

農林水産省農林水産技術会議が平成13年4月に定めた国際研究・技術開発戦略の実施状況に関する調査等、農林水産省が行う政策評価に協力する。

独立行政法人農業技術研究機構九州沖縄農業研究センターとの連携を介して沖縄県及び鹿児島県の公立研究機関が実施する研究に協力する。

国際農林水産業試験研究推進会議を開催し、関係独立行政法人、行政部局、大学、民間、NGO等の参加を求めて、相互の連携・協力のあり方等について意見交換等を行う。

5 管理事務業務の効率化

ペーパーレス化の更なる促進及び事務の簡素化・効率化を図るため、データの共有が可能で入力しやすいグループウェアソフトを導入する。

独立行政法人会計システムの本支所間連結を図り、円滑なシステムの運用を図る。

6 職員の資質向上

各種研修等の開催を迅速に通知し、職員の積極的な参加を促す。また、平成14年2月1日付けで採用した研究職員2名について3ヶ月間の業務研修を行う。なお、業務遂行に必要な資格については、積極的に研修及び講習等を受講させ、取得促進に努める。

国際共同研究との連携を図りつつ各種制度による海外での研究実施を支援する。また、国際学会等への参加を積極的に支援する。

研究員の博士号取得を奨励し、適切に指導する。

7 海外滞在職員等の安全と健康の確保

「安全衛生委員会」を毎月開催し、職員の安全と健康の確保に努める。

緊急時対策委員会の開催等により、海外滞在職員の安全確保のための速やかな対応をとるとともに、外務省や国際協力事業団との連携を密にし、海外情報や危険・医療情報等の収集及び海外出張中の職員への連絡態勢の確保を図る。また、「海外安全対策マニュアル」を整備し、出張者の安全の確保に資する。さらに、海外滞在職員等が居住する住居の安全を確保するため、必要な防犯機器を配布する。

海外に出張する者へ「外国出張の手引き」の利用等により事前ガイダンスを実施するとともに、健康診断等を確実に実施し、出張者の安全と健康の確保に努める。

国民に対して提供するサービスその他の業務の質の向上に関する目標を達成するためとるべき措置

1 試験及び研究並びに調査

A 開発途上地域の食料需給改善のための農林水産業の動向解析、国内外の研究開発動向の把握及び技術開発方向の解明

1) 世界の食料需給の動向解析と共同研究に係わる総合戦略の策定

(1) 主要な開発途上国の研究動向の解明及び中期的国際共同研究戦略の策定

開発途上国や国際研究機関との国際共同研究戦略の策定

担当：国際情報部

研究計画：中国、アジア、アフリカ等及び国際農林水産業研究機関の研究体制・戦略等を調査・分析する。

アジア太平洋地域等の情報収集・解析・戦略策定のための情報ネットワーク及び地理情報システム等の利用技術の開発

担当：国際情報部

研究計画：衛星データの洪水等による農地被害推定への利活用法等についての検討を行う。

(2) 中国主要省等の食料需給動向の解析等による世界の食料需給モデルの改良

中国主要省等における食料需給動向解析

担当：国際情報部

研究計画：中国の沿海部の主要消費省等での食料需給及び農村経済の動向等を調査・解析する。

中長期的世界食料需給モデルの改良

担当：国際情報部

研究計画：地球環境変化や経済変動等に対応した中長期動向の分析のため、世界食料需給モデルの需要セクターを検討・改良する。

2) 開発途上地域における食料・環境に係わる地域特性及び発展方向の解明

(1) インドネシア、西アフリカ等における農林水産業の発展阻害要因と技術的・経済的発展方向の解明

インドネシア、タイ等における生産・流通技術の評価と発展制約要因の解明

担当：国際情報部、食料利用部、生産環境部

研究計画：インドネシア、タイ等における農産物の生産流通システムを社会経済的視点から評価する。また、アジア等における効率的な水利用への対応方向等について調査・分析を行う。

西アフリカ、ベトナム等における稲作を中心とする栽培管理及び経営技術の問題点の解明

担当：国際情報部

研究計画：西アフリカ等の稲作普及の地域的な差異及び各作目の導入・作付要因等を検討する。

(2) インドネシア、ベトナム等における持続的ファーミングシステムの展開方向の解明
インドネシア、ベトナム等における新技術の導入条件と持続的ファーミングシステムの展開方向の解明

担当：国際情報部、生産環境部、畜産草地部、林業部、水産部

研究計画：インドネシア、ベトナム等における農家レベルの新技術の導入可能性や中高標高地の作物等のファーミングシステムの改善方向等の検討を行う。

B 開発途上地域の農林水産業の持続的発展のための研究開発

1) 開発途上地域における農林水産物の環境に調和した持続的生産技術の改良・開発

(1) 多様な耕地生態系における窒素等の物質循環の評価と土壌改良技術の改善

中国、東北タイ等における窒素等の物質循環の解明

担当：生産環境部

研究計画：研究対象サイトにおいて、環境負荷が高い集約的農業体系が窒素等の循環に及ぼす影響の実態を解明する。

乾燥地における塩類土壌等の特性解明と天然資源を活用した土壌改良技術の開発

担当：生産環境部

研究計画：塩類析出過程における鉛直方向の濃度変化を調べるとともに、土壌改良資材を挟在させた場合の効果を実験系において明らかにする。

(2) タイ、ベトナム等における稲・畑作物の省力・省資源的生産技術の開発

省力化を目指した乾田直播・生育診断等に基づく稲栽培技術の開発

担当：生産環境部

研究計画：試験圃場並びに研究対象サイトにおいて、播種法、施肥法、作付け時期等に関する改良点を現行法と比較評価する。

東北タイ等における持続的畑作体系構築のための土壌管理等による栽培技術の開発

担当：生産環境部

研究計画：集約栽培における病害虫抑制に適した短期作付体系を検討する。

南米、アフリカ等の不良土壌における作物の適応機能の解明と栽培技術の開発

担当：生産環境部

研究計画：不良環境適応機能の品種間差異を調査し、各作物の生理的評価基準にしたがって、耐性・感受性品種を同定する。

効率的な水資源利用のための配水管理技術の開発及び小規模灌漑システムの評価

担当：生産環境部

研究計画：天水依存小流域における水循環解明のための調査技術を検討する。

(3) 東南アジア、南米等における稲・大豆等の主要病害虫の発生実態の解明

中国・東南アジア等におけるウンカ等の稲病害虫の発生実態の解明

担当：生産環境部

研究計画：抵抗性品種の耕種的活用を中心としたウンカの防除技術を開発する。

中国・南米等における大豆作等の主要病害虫等の発生実態の解明

担当：生産環境部

研究計画：アフリカにおける移動性バッタ類の、低コスト・均一実験個体を供給するための人工飼料による飼育の可能性を探る。

(4) 農牧輪換システム等に適したイネ科牧草及びトウモロコシ茎葉等の地域低利用飼料資源の特性の解明

農牧輪換システム等に適したイネ科牧草等の生理生態学的特性の解明・評価

担当：畜産草地部、生産環境部

研究計画：農牧輪換システムに適したイネ科牧草種の窒素等の吸収特性や生育反応を解明するとともに、草地生産性を評価する。

タイ、中国等における低利用飼料資源等の栄養特性評価と調製法の開発

担当：畜産草地部

研究計画：タイのサイレージ等から分離される有用細菌の特性を評価するとともに、中国で調製した茎葉サイレージなどの飼料成分の分析や肥育効果を明らかにする。

(5) タイ、ベトナム等における牛・豚等の生理学的特性の解明と主要家畜疾病の実態の解明

タイ、ベトナム等における牛・豚等の栄養生理学的特性の解明

担当：畜産草地部

研究計画：タイの乾期にも生育旺盛な地域飼料作物等の牛での消化特性やベトナムにおいて豚に対する米ぬかの飼料摂取特性などを明らかにする。

牛のトリパノソーマ症等の感染・発病機構の解明

担当：畜産草地部

研究計画：トリパノソーマ感染マウスの炎症性応答や主要臓器における遺伝子発現状況をDNAチップ等を用いて明らかにする。

(6) 熱帯低質林におけるフタバガキ等有用樹種の天然更新補助技術の開発

伐採インパクトの低減と森林の更新機構の解明

担当：林業部

研究計画：集材作業技術の改善のための作業体系の検討及び技術改善による環境インパクト変動を把握する。

在来有用樹種の成長を促すカバーフォレスト造成技術の開発

担当：林業部

研究計画：有用樹植栽稚樹の耐乾燥性や草本に対する競争耐性、施肥効果等を生理的側面から明らかにする。

(7) 水産生物の環境と調和した養殖方法の開発

フィリピン、タイ等における環境向上機能を利用した増養殖技術の開発

担当：水産部

研究計画：栄養素が養殖親魚の卵質及び孵化仔魚の活性等に及ぼす影響を検討し、また、マングローブ植林閉鎖系内の栄養成分や養殖排水投入時の窒素とリンの収支を明らかにする。

ベトナム等におけるオニテナガエビ成熟過程で産生される卵黄タンパク質の動態解明

担当：水産部

研究計画：オニテナガエビの生殖に關与する卵黄タンパク質の全アミノ酸配列の解析を行う。

フィリピン等における養殖魚介類の新規疾病診断技術の開発

担当：水産部

研究計画：組織培養系を用いてフィリピン等における養殖ハタ、シーバス類稚仔魚の病原ウイルスの分離同定を行う。

2) 開発途上地域における農林水産物の品質評価・流通・加工技術の改良・開発

(1) 東南アジアにおける米等の食料資源の形状・香り等の品質特性の解明

米等の嗜好特性の評価とその変動要因の解明

担当：食料利用部

研究計画：香り米における香り成分含量と貯蔵条件の関係を解明するとともに、香り成分の生成部位を特定する。

根茎菜類等の機能成分の検索と作用機作の解明

担当：食料利用部

研究計画：新たに見出された有望根茎菜類からの生理的機能成分の単離・同定を行う。

(2) 温湿度等の環境条件と連動した香り米等の品質劣化の簡易防止技術の開発と加工技術の改良・開発

太陽熱等を利用した米等の資材低投入型簡易乾燥技術の開発

担当：食料利用部

研究計画：簡易籾乾燥機器の構造改良を検討し、試作機の製作に取り組む。

天敵・天然物質による米等の保全技術の開発

担当：食料利用部

研究計画：米貯穀害虫の天然物による防除効果を明らかにするとともに、主要天敵の飼育法の確立と寄主の解明を行う。

中国等における豆腐等の食品素材化技術の改良・開発

担当：食料利用部

研究計画：中国等における大豆・米の中国豆腐・ビーフン（米線及び河粉）等への加工特性を解明するとともに、伝統的加工技術の改良を行う。

(3) オイルパーム廃材等の低利用木質資源の利用技術の開発

未低利用木質資源の高度利用のための技術開発

担当：林業部

研究計画：パーム類等の熱帯産植物由来のリグノセルロース資源の特性解明と既存技術への応用性を検討する。

(4) 中国における淡水魚等低利用水産資源のすり身等への利用技術の開発

中国淡水魚体及び加工残滓からの魚粉作製と栄養成分の解析

担当：水産部

研究計画：淡水魚を原料とする魚粉の遊離アミノ酸組成を定量し、淡水魚によるその消化性と摂取性を評価する。

3) 開発途上地域における遺伝資源及び生物機能の解明と利用技術の開発

(1) 乾燥等の環境ストレスに対する耐性機構の解明と組換え体作出技術の開発

シロイヌナズナ等における乾燥等の環境ストレス応答及び耐性の分子機構の解明

担当：生物資源部

研究計画：酵母での浸透圧受容分子であるヒスチジンキナーゼの高等植物における機能の有無を形質転換植物を用いて解明し、高等植物での環境ストレスのシグナル伝達機構を明らかにする。

稲等における乾燥等の環境ストレス耐性遺伝子組換え体の作出法の開発

担当：生物資源部

研究計画：稲細胞内での転写因子タンパク質の発現活性化機構を解析し、調節を受ける有用遺伝子群をマイクロアレイ法等を用いて特定する。

(2) 稲、小麦等における病虫害抵抗性等の評価技術の開発と育種素材の育成

中国等の稲の遺伝資源のイモチ病抵抗性及び多収性等の評価と育種素材の育成

担当：生物資源部、生産環境部

研究計画：稲紋枯れ病抵抗性の簡易検定法を開発し、中国在来遺伝資源の評価を開始する。

中国等の小麦の遺伝資源の赤さび病抵抗性等の評価と育種素材の育成

担当：生物資源部

研究計画：赤かび病、さび病抵抗性に関与する遺伝子について分子マーカーを用いてゲノム上の位置を特定する。

南米等の大豆の遺伝資源の線虫、茎疫病抵抗性及び子実成分等の評価と育種素材の育成

担当：生産環境部、生物資源部

研究計画：核酸増殖法(PCR法)による大豆急性枯死症(SDS)の病原性検定法を開発する。

東南アジア在来葉菜類等の遺伝資源の栄養・機能特性等の有用形質の評価及び育種素材の育成

担当：生物資源部

研究計画：500点以上の収集遺伝資源の栄養性、生理的機能特性等を評価する。

(3) 熱帯・亜熱帯等の野菜・果樹等の遺伝資源収集、評価並びに保存

熱帯、亜熱帯等の作物及び微生物遺伝資源のサブバンク業務

担当：生物資源部、沖縄支所、畜産草地部、生産環境部、食料利用部

研究計画：生物研により導入された熱帯・亜熱帯稲の特性評価並びに種子増殖を行うとともに、未評価のサトウキビ遺伝資源の一次特性及び他の有用形質について特性を評価する。

4) 開発途上地域における環境資源の特性評価と生物多様性の解明

(1) 農業生産に関する環境資源の特性評価と土地利用の変動機構の解明

タイ、インドネシア等における時系列・空間解析技術を用いた環境資源及び社会経済要因の特性評価

担当：国際情報部

研究計画：土地利用変動、植生変動、土地劣化等において特徴的な地域を対象とする衛星データ等を用いた解析技術の高度化を行う。

(2) マレーシア等における熱帯林の再生技術及び持続的利用技術の導入条件の解明

マレーシア等におけるアグロフォレストリー生産環境造成技術の開発

担当：林業部

研究計画：各種間伐に伴う早成樹林、荒廃二次林等の林内環境特性、生産力、養分循環の動態等を解明する。

マレーシア等におけるカバーフォレストを活用した農林複合技術の開発

担当：林業部、沖縄支所

研究計画：林内の伐開地に植栽する果菜類の適正品目を選定し、条件別生育特性を解明する。併せて、オイル パーム空果房等各種農林産廃物を培地に使用した熱帯産キノコ栽培試験及び食用キノコ種菌の収集を行う。

(3) 東南アジアにおける沿岸、マングローブ汽水域生態系の水産重要魚種資源の変動過程の解明

東南アジアの沿岸、マングローブ汽水域生態系における水産重要魚種資源の変動過程の解明

担当：水産部、林業部

研究計画：ミナミフエダイ等のマングローブ汽水域における滞留様式と食性の関係を調べ、生活環を解明する。

5) 沖縄における研究

(1) サヤインゲン、稲等の耐暑性・耐塩性の特性評価と利用

サヤインゲン等の高温ストレス耐性に関する生理生化学的的特性評価

担当：沖縄支所

研究計画：サヤインゲンについて、開花当日の高温に対する耐暑性の品種間差異を調べるとともに、雄性不稔細胞質に対する稔性回復システムを探索する。また、アズキ近縁野生種を

利用した耐暑性の雑種後代にアズキの戻し交配と選抜を行う。さらに、小胞体型スモールヒートショックプロテイン遺伝子の機能をタバコ細胞を用いて invitro で解析する。

ナトリウム塩排除機能等の耐塩性関連遺伝子の稲への導入と評価

担当：沖縄支所

研究計画：藻類からクローニングしたナトリウムイオン輸送遺伝子産物をイーストで発現させるための新たな導入法を試みる。また、バクテリアの耐塩性機構を解析する。

(2) サトウキビ、イモ類等の特性評価及び利用技術の開発

サトウキビ、イモ類等遺伝資源の有用特性評価及び利用技術の開発

担当：沖縄支所

研究計画：サツマイモの cDNA ライブラリーを作成し、アントシアニン合成制御遺伝子断片を単離して塩基配列を決定する。また、サトウキビのアグロバクテリウム法による効率的な遺伝子導入条件を検討する。

(3) マンゴー、パパイア等熱帯果樹の樹形制御・食味等の特性評価及び大量増殖技術等の基盤技術の開発

マンゴー、パパイア等熱帯果樹の物質生産・開花・食味等の特性評価及び高品質系統の大量増殖等に関する基盤技術の開発

担当：沖縄支所

研究計画：熱帯果樹について、遮光・水分状態等が物質生産や生育に及ぼす影響の解析、栽培特性や食味・機能性成分特性に基づく高品質系統の評価及びアグロバクテリウム法によるパパイア形質転換系の確立のための手法開発を行う。

(4) 熱帯・亜熱帯に発生するカンキツグリーニング病等の重要病害虫の発生生態の解明
ミカンキジラミ等及びそれらの天敵生物の生理生態的特性の解明

担当：沖縄支所

研究計画：石垣島に自生・植栽のゲッキツを対象に、ミカンキジラミとその天敵の発生動態を解析するとともに、ミカンキジラミの移動能力を予測するための調査法を検討する。また、アカホシカメムシの餌となる各種寄主植物の好適性を比較する。

カンキツグリーニング病等の生理生態的特性の解明

担当：沖縄支所

研究計画：高力価の抗血清作製のため、カンキツグリーニング病病原体の効率的純化法を検討するとともに、核酸増殖法 (PCR 法) による媒介虫からの病原検出法の改良を図る。

(5) 熱帯・亜熱帯島嶼における気象・土壌等に関わる生産不安定化要因の解明と節水・省肥栽培等対策技術の開発

熱帯・亜熱帯島嶼の気象・土壌等に関わる生産不安定化要因の解明と節水栽培等対策技術の開発

担当：沖縄支所

研究計画：地表面の形状等が地温、土壌水分、作物反応等に及ぼす影響を解明するとともに、耕盤の破砕等が根の伸長と吸水に及ぼす影響を解明する。また、サトウキビ栽培における資材の地中埋設方法について検討する。

サトウキビ等栽培環境における施肥窒素等の有効利用技術の開発と土砂・養分の動態解明

担当：沖縄支所

研究計画：河川流域での懸濁土量，窒素，リンの年間負荷量の算定や既存資料，農家調査による資材等投入量の推定を行うとともに、灌水位置の違いが下層土からの水供給に及ぼす影響を解析する。また、農家圃場においてサトウキビの窒素節減の実証栽培試験を行う。

(6) 稲等の世代促進における出穂特性等の変異固定技術の開発

地理的環境を利用した稲及び麦類の世代促進における出穂特性等の変異固定技術の開発
担当：沖縄支所

研究計画：石垣島の亜熱帯気候環境で稲の世代促進における穂いもち病選抜が可能な栽培条件を検討する。また、小麦品種の出穂早晚性の変動要因を解明するため出穂特性に係る遺伝的特性を調査する。

2 専門研究分野を活かした社会貢献

(1) 分析、鑑定

依頼分析を引き受ける場合の手数料を決め、依頼分析・鑑定の円滑な運営を図る。

(2) 講習、研修等の開催

国際シンポジウム・ワークショップ・セミナー等を積極的に開催する。

国内外の研修生を積極的に受け入れる。

国等の委託を受け、国際共同研究に従事する研究者等の研修・育成を推進する。

広報等を担当する専門官を通じて行政、生産者、消費者等からの技術相談に対応する。

(3) 行政、国際機関、学会等への協力

行政、国際機関、学会等の要請に応じて、委員会、会議等に職員を派遣する。また、農林水産省委託事業である「国際共同研究人材育成推進事業」及び「バイオテクノロジーに関する途上国研究者の能力構築事業」を実施する。

国際協力事業団等の委託を受け、技術協力のために職員の派遣、研修員の受入れを行う。

3 成果の公表、普及の促進

(1) 成果の利活用の促進

研究成果情報を15件以上ホームページで公表する。

平成13年度の研究成果情報を"JIRCAS Newsletter"(No.31 ~ No.34)及び"JIRCAS ニュース"(No.30 ~ No.33)に掲載し、普及、利活用の促進に努める。

研究成果を不定期刊行物(JIRCAS Working Report Series 等)を通じて公表する。

平成13年度の研究成果情報(26報)をすでに作成済みの研究成果情報データベース(144報)に加えてホームページで公開し、検索の便宜を図る。

(2) 成果の公表と広報

[成果の公表]

学術雑誌、機関誌等に108報以上の論文を発表する。

平成14年度からJIRCAS JournalとJapan Agricultural Research Quarterly (JARQ)を合併し、JARQとして刊行する。

JIRCAS 国際シンポジウム「農林水産物および農林水産加工品の付加価値向上(仮題)」を開催する。

研究成果の公表を目的としたJIRCAS ワークショップを5回以上開催する。

平成13年度開催の第8回 JIRCAS 国際シンポジウムのプロシーディングを JIRCAS International Symposium Series No.10 "Water for Sustainable Agriculture in Developing Regions - More crop for every scarce drop" として発行する。

JIRCAS Working Report Series を5冊以上、国際農業研究叢書2冊、JARQを4回発行する。

[成果の広報]

研究の成果に関する情報を農林水産研究情報センターの「研究課題情報データベース (<http://kiss.aris.affrc.go.jp/>) とリンクして公開する。

JIRCAS ニュース等各種の定期・不定期刊行物を通じて、研究計画、業務報告、成果情報等を公開し、またデータベースを作成してホームページへ公開する。

本館ロビーの JIRCAS ギャラリーにおいて、研究成果等の既存及び新規パネル等を活用して、一般公開や来客に情報公開を行う。

成果情報を記者クラブへ2回以上提供する。

(3) 知的所有権等の取得と利活用の促進

国内外へ特許等を4件以上出願する。

研究者の知的所有権への理解を促す説明会、会議等を2回以上開催する。

新たに取得した知的所有権がある場合には、迅速に情報を追加し、データベースを充実させて利活用の促進を図る。

予算、収支計画及び資金計画

(別紙1)

- 1 予算
- 2 収支計画
- 3 資金計画

その他農林水産省令で定める業務運営に関する事項

- 1 施設及び設備に関する計画
島嶼環境技術開発棟を新築する(沖縄支所)(平成13年度第2次補正予算)

(別紙2)

- 2 人事に関する計画(人員及び人件費の効率化に関する目標を含む。)

1) 人員計画

(1) 方針

独立行政法人会計システムの本支所間の連結を図ると共に、支払い関係事務の統合を行うことによって、平成15年度以降の要員配置の適切化・効率化を目指す。
国際総合プロジェクト研究の推進において重点化を図る。

(2) 人員に係る指標

常勤職員数は、年度当初164名、年度末164名とする。

2) 人材の確保

任期付任用制及び公募制による研究職員の採用の計画を策定し、2名の研究者の確保を図る。

科学技術特別研究員を積極的に受け入れ、受け入れた特別研究員は客員研究員として扱う。

(別紙1)

予算、収支計画及び資金計画

1 予算

平成14年度予算

(単位：百万円)

区 分	金 額
収入	
運営費交付金	3,530
施設整備費補助金	0
無利子借入金	958
受託収入	233
諸収入	0
試験場製品等売払代	0
その他の収入	0
計	4,721
支出	
業務経費	1,507
施設整備費	958
受託経費	233
試験研究費	210

独立行政法人国際農林水産業研究センター組織図

独立行政法人国際農林水産業研究センター職員給与規程

13国研セ第4-31号

平成13年4月2日

(目的)

第1条 この規程は、独立行政法人国際農林水産業研究センター（以下「センター」という。）職員（国家公務員法（昭和22年法律第120号。以下「国公法」という。）第2条に規定する一般職に属する職員のうち、一般職の任期付研究員の採用、給与及び勤務時間の特例に関する法律（平成9年法律第65号）第3条及び一般職の任期付職員の採用及び給与の特例に関する法律（平成12年法律第125号）第3条第1項の規定により任期を定めて採用された職員及び独立行政法人国際農林水産業研究センター非常勤職員就業規則（13国研セ第4-27号）の適用を受ける職員を除く。以下同じ。）の給与に関する事項を定めることを目的とする。

(給与の支給)

第2条 職員の給与は、法令及び労使協定に定めるところにより、職員の給与から控除すべきものの金額を控除し、その残額を現金で直接職員に支給する。

2 前項に規定するもののほか、給与の支給に関し必要な事項は、理事長が別に定める。

(俸給)

第3条 各職員の受ける俸給は、その職務の複雑、困難及び責任の度に基づき、かつ、勤労の強度、勤務時間、勤労環境その他の勤務条件を考慮したものでなければならない。

第4条 俸給は、独立行政法人国際農林水産業研究センター職員の勤務時間、休憩、休日、休暇等に関する規程（13国研セ第4-28号。以下「勤務時間規程」という。）第3条、第4条第2項、第5条及び第6条の規定する正規の勤務時間（以下「正規の勤務時間」という。）による勤務に対する報酬であって、この規程に定める俸給の特別調整額、扶養手当、調整手当、研究員調整手当、住居手当、通勤手当、単身赴任手当、特勤勤務手当、超過勤務手当、休日給、管理職員特別勤務手当、期末手当及び勤勉手当を除いた全額とする。

第5条 俸給表の種類は、次に掲げるとおりとし、各俸給表の適用範囲は、それぞれ当該俸給表に定めるところによる。

- (1) 一般職員俸給表（別表第1）
- (2) 技術専門職員俸給表（別表第2）
- (3) 研究職員俸給表（別表第3）

2 職員の職務は、その複雑、困難及び責任の度に基づきこれを俸給表に定める職務の級に分類するものとし、その分類の基準となるべき標準的な職務の内容は、理事長が別に定める。

第6条 理事長は、第5条第2項の規定に基づく分類の基準に適合するように、かつ、予算の範囲内で、職務の級の定数を設定し、又は改定することができる。

2 職員の職務の級は、前項の職員の職務の級ごとの定数の範囲内で、かつ、理事長が別に定める基準に従い決定する。

3 新たに俸給表の適用を受ける職員となった者の号俸は、理事長が別に定める初任給の基準に従い決定する。

4 職員が一の職務の級から他の職務の級に移った場合又は一の官職から同じ職務の級の初任給の基準を異にする他の官職に移った場合における号俸は、理事長が別に定めるところにより決定する。

5 前2項の規定により号俸を決定する場合において、他の職員との権衡上必要と認めるときは、理事長が別に定めるところにより、その者の属する職務の級における最高の号俸を超えて俸給月額を決定することができる。

6 職員が現に受けている号俸を受けるに至った時から、12月を下らない期間を良好な成績で勤務したときは、1号俸上位の号俸に昇給させることができる。ただし、第3項又は第4項の規定により号俸が決定された場合において、他の職員との権衡上必要と認めるときは、理事長が別に定めるところにより、当該期間を短縮することができる。

7 職員の勤務成績が特に良好である場合においては、前項の規定にかかわらず、同項に規定する期間を短縮し、若しくはその現に受ける号俸より2号俸以上上位の号俸まで昇給させ、又はそのいずれをも併せ行うことができる。

8 職員の俸給月額がその属する職務の級における俸給の幅の最高額である場合又は最高額を超えている場合には、その者が同一の職務の級にある間は、昇給しない。ただし、それらの俸給月額を受けている職員で、その俸給月額を受けるに至った時から24月（その俸給月額が職務の級における俸給の幅の最高額である場合にあっては、18月）を下らない期間を良好な成績で勤務したものの、勤務成績が特に良好であるもの等については、その職員の属する職務の級における俸給の幅の最高額を超えて、理事長が別に定めるところにより、昇給させることができる。

9 55歳（ただし、技術専門職員俸給表の適用を受ける職員にあっては、57歳）を超える職員は、第6項、第7項及び前項ただし書の規定にかかわらず、昇給しない。ただし、当該職員で勤務成績が特に良好であるものについては、理事長が別に定めるところにより、昇給させることができる。

10 第6項から前項までに規定する昇給は、予算の範囲内で行わなければならない。

11 国公法第81条の4第1項又は第81条の5第1項の規定により採用された職員（以下「再任用職員」という。）の俸給月額は、その者に適用される俸給

表の再任用職員の欄に掲げる俸給月額のうち、その者の属する職務の級に応じた額とする。

第7条 国公法第81条の5第1項に規定する短時間勤務の官職を占める職員（以下「再任用短時間勤務職員」という。）の俸給月額は、第5条第2項及び前条第11項の規定にかかわらず、これらの規定による俸給月額に、理事長が別に定めた勤務時間で除して得た数を乗じて得た額とする。

（俸給の支給）

第8条 俸給は、毎月16日（その日が土曜日、日曜日及び勤務時間規程第11条に規定する休日（以下「休日」という。）にあたる時は、その月の15日以降の日のうち、その日に最も近い土曜日、日曜日及び休日でない日）にその月の全額を支給する。ただし、理事長が別に定めるところにより、特に必要と認められる場合には、月の初日から15日まで及び月の16日から末日までの各期間内の日に、その月の月額の半額ずつを支給することができる。

第9条 新たに職員となった者には、その日から俸給を支給し、昇給、降給等により俸給額に異動を生じた者には、その日から新たに定められた俸給を支給する。ただし、離職した職員が即日職員になったときは、その日の翌日から俸給を支給する。

2 職員が離職したときは、その日まで俸給を支給する。

3 職員が死亡したときは、その月まで俸給を支給する。

4 第1項又は第2項の規定により俸給を支給する場合であって、月若しくは前条ただし書に規定する各期間（以下この項において「期間」という。）の初日から支給するとき以外のとき、又はその期間の末日まで支給するとき以外のときは、その俸給額は、その期間の現日数から勤務時間規程第4条第1項及び第6条に規定する週休日（以下「週休日」という。）の日数を差し引いた日数を基礎として日割りによって計算する。

（俸給の特別調整額）

第10条 理事長は、別に定める官職を占める職員に対して、その職務の特殊性に基づき、俸給月額につき適正な俸給の特別調整額を支給する。

2 前項に規定するもののほか、俸給の特別調整額の支給に関し必要な事項は、理事長が別に定める。

（扶養手当）

第11条 扶養手当は、扶養親族のある職員に対して支給する。

2 扶養手当の支給については、次に掲げる者で他に生計の途がなく主としてその職員の扶養を受けているものを扶養親族とする。

（1）配偶者（届出をしないが事実上婚姻関係と同様の事情にある者を含む。以

下同じ。)

- (2) 満22歳に達する日以後の最初の3月31日までの間にある子及び孫
 - (3) 満60歳以上の父母及び祖父母
 - (4) 満22歳に達する日以後の最初の3月31日までの間にある弟妹
 - (5) 重度心身障害者
- 3 扶養手当の月額は、前項第1号に該当する扶養親族については16,000円、同項第2号から第5号までの扶養親族(次項において「扶養親族たる子、父母等」という。)のうち二人までについてはそれぞれ6,000円(職員に扶養親族でない配偶者がある場合にあってはそのうち一人については6,500円、職員に配偶者がいない場合にあってはそのうち一人については11,000円)、その他の扶養親族については一人につき3,000円とする。
- 4 扶養親族たる子のうちに満15歳に達する日後の最初の4月1日から満22歳に達する日以後の最初の3月31日までの間(以下「特定期間」という。)にある子がいる場合における扶養手当の月額は、前項の規定にかかわらず、5,000円に特定期間にある当該扶養親族たる子の数を乗じて得た額を同項の規定による額に加算した額とする。
- 5 新たに職員となった者に扶養親族がある場合又は職員に次の各号の一に該当する事実が生じた場合においては、その職員は、理事長が定める様式の扶養親族届により、直ちにその旨(新たに職員となった者に扶養親族がある場合又は職員に第1号に該当する事実が生じた場合において、その職員に配偶者がいないときは、その旨を含む。)を理事長又はその委任を受けた者に届け出なければならない。
- (1) 新たに扶養親族たる要件を具備するに至った者がある場合
 - (2) 扶養親族たる要件を欠くに至った者がある場合(第2項第2号又は第4号に該当する扶養親族が、満22歳に達した日以後の最初の3月31日の経過により、扶養親族たる要件を欠くに至った場合を除く。)
 - (3) 扶養親族たる子、父母等がある職員が配偶者のない職員となった場合(前号に該当する場合を除く。)
 - (4) 扶養親族たる子、父母等がある職員が配偶者を有するに至った場合(第1号に該当する場合を除く。)
- 6 扶養手当の支給は、新たに職員となった者に扶養親族がある場合においてはその者が職員となった日、扶養親族がない職員に前項第1号に掲げる事実が生じた場合においてはその事実が生じた日の属する月の翌月(これらの日が月の初日であるときは、その日の属する月)から開始し、扶養手当を受けている職員が離職し、又は死亡した場合においてはそれぞれその者が離職し、又は死亡した日、扶養手当を受けている職員の扶養親族で同項の規定による届出に係るもののすべてが扶養親族たる要件を欠くに至った場合においてはその事実が生じた日の属する月(これらの日が月の初日であるときは、その日の属する月の前月)をもって終わる。ただし、扶養手当の支給の開始については、同項の規定による届出が、これに係る事実の生じた日から15日を経過した後に行われた

ときは、その届出を受理した日の属する月の翌月（その日が月の初日であるときは、その日の属する月）から行うものとする。

- 7 扶養手当は、これを受けている職員に更に第5項第1号に掲げる事実が生じた場合、扶養手当を受けている職員の扶養親族で同項の規定による届出に係るものの一部が扶養親族たる要件を欠くに至った場合、扶養手当を受けている職員について同項第3号若しくは第4号に掲げる事実が生じた場合又は職員の扶養親族たる子で同項の規定による届出に係るもののうち特定期間にある子でなかった者が特定期間にある子となった場合においては、これらの事実が生じた日の属する月の翌月（これらの日が月の初日であるときは、その日の属する月）からその支給額を改定する。前項ただし書の規定は、扶養手当を受けている職員に更に第5項第1号に掲げる事実が生じた場合における扶養手当の支給額の改定（扶養親族たる子、父母等で同項の規定による届出に係るものがある職員で扶養親族たる配偶者のないものが扶養親族たる配偶者を有するに至った場合における当該扶養親族たる子、父母等に係る扶養手当の支給額の改定を除く。）及び扶養手当を受けている職員のうち扶養親族たる子、父母等で同項の規定による届出に係るものがある職員について当該職員の配偶者が扶養親族たる要件を欠くに至った場合又は同項第3号に掲げる事実が生じた場合における当該扶養親族たる子、父母等に係る扶養手当の支給額の改定について準用する。
- 8 前7項に規定するもののほか、扶養手当の支給に関し必要な事項は、理事長が別に定める。

（調整手当）

- 第12条 調整手当は、物価及び生計費等が特に高い茨城県つくば市に所在するセンター本所（以下「本所」という。）に在勤する職員に調整手当を支給する。
- 2 調整手当の月額、俸給、俸給の特別調整額及び扶養手当の月額の合計額に、100分の3を乗じて得た額とする。
- 3 本所に在勤する職員が調整手当を支給されない沖縄県石垣市に所在するセンター沖縄支所（以下「支所」という。）に異動したときは、第1項の規定にかかわらず、当該異動の日から3年を経過するまでの間、前2項の規定により支給されることとなる調整手当を支給する。
- 4 国公法第2条に規定する一般職及び特別職の国家公務員、国の経営する企業に勤務する職員の給与等に関する特例法（昭和29年法律第141号）の適用を受ける職員、独立行政法人通則法第2条第2項に規定する特定独立行政法人、地方公共団体及び理事長が別に定める法人から引き続き人事交流等により職員となった者のうち、異動又は採用の日の前日に人事院規則9-49（調整手当）に規定する地域に所在する官署若しくは機関又は同規則に規定する官署（以下「支給官署等」という。）に在勤していた者で異動後の本所に係る調整手当の支給割合がこれらの支給官署等に在勤するものとした場合に一般職の職員の給与に関する法律（昭和25年法律第95号。以下「給与法」という。）及び同規則の規定を適用して得られる支給割合（以下「給与法による支給割合」とい

う。)に達しないときは、第2項の規定にかかわらず、当該異動の日又は採用の日から3年を経過するまでの間、給与法による支給割合をもって調整手当を支給する。

- 5 前4項に規定するもののほか、調整手当の支給に関し必要な事項は、理事長が別に定める。

(研究員調整手当)

第13条 研究活動の状況、研究員(研究職員俸給表の適用を受ける職員(1級の職員を除く。))をいう。以下同じ)の採用状況等からみて人材の確保等を図るため、本所に勤務する研究員に研究員調整手当を支給する。

- 2 研究員調整手当の月額、俸給、俸給の特別調整額及び扶養手当の月額の合計額に100分の10(調整手当が支給される職員にあっては、その割合から前条第2項に掲げる支給割合を減じた割合)を乗じて得た額とする。

- 3 第1項の規定により研究員調整手当が支給される職員のうち、前条第3項及び第4項の規定により調整手当が支給されることとなる者の当該調整手当の支給割合は、これらの規定により支給されることとなる調整手当の支給割合の区分に応じ、それぞれ当該各号に定める支給割合に調整する。この場合において、当該割合が0となる職員には、当該調整手当は支給しない。

(1) 100分の10を超える支給割合 当該支給割合から研究員調整手当の支給割合を減じた割合

(2) 100分の10以下の支給割合 100分の10から研究員調整手当の支給割合を減じた割合

- 4 前3項に規定するもののほか、研究員調整手当の支給に関し必要な事項は、理事長が別に定める。

(住居手当)

第14条 住居手当は、次の各号のいずれかに該当する職員に支給する。

(1) 自ら居住するため住宅(貸間を含む。第3号において同じ。)を借り受け、月額12,000円を超える家賃(使用料を含む。以下同じ。)を支払っている職員

(2) その所有する住宅又は理事長が定めるこれに準ずる住宅に居住している世帯主である職員

(3) 第16条第1項又は第3項の規定により単身赴任手当を支給される職員で、配偶者が居住するための住宅(理事長が別に定める住宅を除く。)を借り受け、月額12,000円を超える家賃を支払っているもの又はこれらのものとの権衡上必要があると認められるものとして理事長が別に定めるもの

- 2 住居手当の月額は、次の各号に掲げる職員の区分に応じて、当該各号に掲げる額(第1号又は第2号に掲げる職員のうち第3号に掲げる職員でもあるものについては、第1号又は第2号に掲げる額及び第3号に掲げる額の合計額)とする。

- (1) 第 1 項第 1 号に掲げる職員 次に掲げる職員の区分に応じて、それぞれ次に掲げる額（その額に 1 0 0 円未満の端数を生じたときは、これを切り捨てた額）に相当する額
- イ 月額 2 3 , 0 0 0 円以下の家賃を支払っている職員 家賃の月額から 1 2 , 0 0 0 円を控除した額
 - ロ 月額 2 3 , 0 0 0 円を超える家賃を支払っている職員 家賃の月額から 2 3 , 0 0 0 円を控除した額の 2 分の 1（その控除した額の 2 分の 1 が 1 6 , 0 0 0 円を超えるときは、1 6 , 0 0 0 円）を 1 1 , 0 0 0 円に加算した額
- (2) 第 1 項第 2 号に掲げる職員 1 , 0 0 0 円（当該住宅が当該職員その他理事長が定める者によって新築され、又は購入されたものである場合にあっては、当該新築又は購入がなされた日から起算して 5 年を経過するまでの間は 2 , 5 0 0 円）
- (3) 第 1 項第 3 号に掲げる職員 第 1 号の規定の例により算出した額の 2 分の 1 に相当する額（その額に 1 0 0 円未満の端数を生じたときは、これを切り捨てた額）
- 3 職員は、新たに第 1 項の職員たる要件を具備するに至った場合には、当該要件を具備していることを証明する書類を添付して、理事長が定める様式の住居届により、その居住の実情、住宅の所有関係等を速やかに理事長又はその委任を受けた者に届け出なければならない。住居手当を受けている職員の居住する住宅、家賃の額、住宅の所有関係等に変更があった場合についても、同様とする。
- 4 住居手当の支給は、職員が新たに第 1 項の職員たる要件を具備するに至った日の属する月の翌月（その日が月の初日であるときは、その日の属する月）から開始し、職員が同項に規定する要件を欠くに至った日の属する月（その日が月の初日であるときは、その日の属する月の前月）をもって終わる。ただし、住居手当の支給の開始については、前項の規定による届出がこれに係る事実の生じた日から 1 5 日を経過した後にはされたときは、その届出を受理した日の属する月の翌月（その日が月の初日であるときは、その日の属する月）から行うものとする。
- 5 住居手当を受けている職員にその月額を変更すべき事実が生じたとき、又は職員が第 3 項第 2 号に規定する場合に係る住居手当を受けている場合において同号に規定する当該新築又は購入がなされた日から起算して 5 年を経過したときは、それぞれの事実の生じた日又は 5 年を経過した日の属する月の翌月（それらの日が月の初日であるときは、その日の属する月）から支給額を改定する。前項ただし書の規定は、住居手当の月額を増額して改定する場合について準用する。
- 6 前 5 項に規定するもののほか、住居手当の支給に関し必要な事項は、理事長が別に定める。

(通勤手当)

第15条 通勤手当は、次に掲げる職員に対して支給する。

- (1) 通勤のため交通機関又は有料の道路(以下「交通機関等」という。)を利用してその運賃又は料金(以下「運賃等」という。)を負担することを常例とする職員(交通機関等を利用しなければ通勤することが著しく困難である職員以外の職員であって交通機関等を利用しないで徒歩により通勤するものとした場合の通勤距離が片道2キロメートル未満であるもの及び第3号に掲げる職員を除く。)
- (2) 通勤のため自動車その他の交通の用具で理事長が別に定めるもの(以下「自動車等」という。)を使用することを常例とする職員(自動車等を使用しなければ通勤することが著しく困難である職員以外の職員であって自動車等を使用しないで徒歩により通勤するものとした場合の通勤距離が片道2キロメートル未満であるもの及び次号に掲げる職員を除く。)
- (3) 通勤のため交通機関等を利用してその運賃等を負担し、かつ、自動車等を使用することを常例とする職員(交通機関等を利用し、又は自動車等を使用しなければ通勤することが著しく困難である職員以外の職員であって、交通機関等を利用せず、かつ、自動車等を使用しないで徒歩により通勤するものとした場合の通勤距離が片道2キロメートル未満であるものを除く。)

2 通勤手当の月額は、次の各号に掲げる職員の区分に応じて、当該各号に掲げる額とする。

- (1) 前項第1号に掲げる職員 理事長が別に定めるところにより算出したその者の1箇月の通勤に要する運賃等の額に相当する額(以下「運賃等相当額」という。)(その額が45,000円を超えるときは、その額と45,000円との差額の2分の1(その差額の2分の1が5,000円を超えるときは、5,000円)を45,000円に加算した額)
- (2) 前項第2号に掲げる職員 次に掲げる職員の区分に応じて、それぞれ次に掲げる額(再任用短時間勤務職員のうち、1箇月当たり通勤回数が10回に満たない職員にあっては、その額から、その額に100分の50を乗じて得た額を減じた額)
 - イ 自動車等の使用距離(以下この号において「使用距離」という。)が片道5キロメートル未満である職員 2,000円
 - ロ 使用距離が片道5キロメートル以上10キロメートル未満である職員 4,100円
 - ハ 使用距離が片道10キロメートル以上15キロメートル未満である職員 6,500円
 - ニ 使用距離が片道15キロメートル以上20キロメートル未満である職員 8,900円
 - ホ 使用距離が片道20キロメートル以上25キロメートル未満である職員 11,300円
 - ヘ 使用距離が片道25キロメートル以上30キロメートル未満である職員

13,700円

ト 使用距離が片道30キロメートル以上35キロメートル未満である職員
16,100円

チ 使用距離が片道35キロメートル以上40キロメートル未満である職員
18,500円

リ 使用距離が片道40キロメートル以上である職員 20,900円

(3) 前項第3号に掲げる職員 交通機関等を利用せず、かつ、自動車等を使用しないで徒歩により通勤するものとした場合の通勤距離、交通機関等の利用距離、自動車等の使用距離等の事情を考慮して理事長が別に定める区分に応じ、運賃等相当額及び前号に掲げる額の合計額(その額が45,000円を超えるときは、その額と45,000円との差額の2分の1(その差額の2分の1が5,000円を超えるときは、5,000円)を45,000円に加算した額)、第1号に掲げる額又は前号に掲げる額

3 国公法第2条に規定する一般職及び特別職の国家公務員、国の経営する企業に勤務する職員の給与等に関する特例法(昭和29年法律第141号)の適用を受ける職員、独立行政法人通則法第2条第2項に規定する特定独立行政法人、地方公共団体及び理事長が別に定める法人から引き続き人事交流等により職員となった者のうち、第1項第1号又は第3号に掲げる職員で、当該人事交流等により職員となった直前の住居(当該住居に相当するものとして理事長が別に定める住居を含む。)からの通勤のため、新幹線鉄道等の特別急行列車、高速自動車国道その他の交通機関等(以下「新幹線鉄道等」という。)でその利用が理事長が別に定める基準に照らして通勤事情の改善に相当程度資するものであると認められるものを利用し、その利用に係る特別料金等(その理由に係る運賃等の額から運賃等相当額の算出の基礎となる運賃等に相当する額を減じた額をいう。)を負担することを常例とするもの(任用の事情等を考慮して理事長が別に定める職員に限る。)の通勤手当の月額は、前項の規定にかかわらず、理事長が別に定めるところにより算出したその者の1箇月の通勤に要する特別料金等の額の2分の1に相当する額(その額が20,000円を超えるときは、20,000円)及び同項の規定による額の合計額とする。その他前段の通勤手当を支給される職員との権衡上必要があると認められるものとして理事長が別に定める職員の通勤手当の月額について準用する。

4 職員は、新たに第1項の職員たる要件を具備するに至った場合には、理事長が定める様式の通勤届により、その通勤の実情を速やかに理事長又はその委任を受けた者に届け出なければならない。同項の職員が次の各号の一に該当する場合についても、同様とする。

(1) 本所、支所間で異動した場合

(2) 住居、通勤経路若しくは通勤方法を変更し、又は通勤のため負担する運賃等の額に変更があった場合

5 通勤手当の支給は、職員が新たに第1項の要件を具備するに至った場合においてはその日の属する月の翌月(その日が月の初日であるときは、その日の属

する月)から開始し、通勤手当を支給されている職員が離職し、又は死亡した場合においてはそれぞれの者が離職し、又は死亡した日、通勤手当を支給されている職員が同項の職員たる要件を欠くに至った場合においてはその事実の生じた日の属する月(これらの日が月の初日であるときは、その日の属する月の前月)をもって終わる。ただし、通勤手当の支給の開始については、前項の規定による届出がこれに係る事実の生じた日から15日を経過した後にされたときは、その届出を受理した日の属する月の翌月(その日が月の初日であるときは、その日の属する月)から行うものとする。

- 6 通勤手当を受けている職員にその月額を変更すべき事実が生じたときは、その事実の生じた日の属する月の翌月(その日が月の初日であるときは、その日の属する月)から支給額を改定する。前項ただし書の規定は、通勤手当の月額を増額して改定する場合について準用する。
- 7 第1項の職員が、出張、休暇、欠勤、その他の事由により、月の初日から末日までの期間の全日数にわたって通勤しないこととなるときは、その月の通勤手当は支給しない。
- 8 前7項に規定するもののほか、通勤の実情の変更に伴う支給額の改定その他通勤手当の支給に関し必要な事項は、理事長が別に定める。

(単身赴任手当)

- 第16条 本所、支所間の異動に伴い、住居を移転し、父母の疾病その他の理事長が別に定めるやむを得ない事情により、同居していた配偶者と別居することとなった職員で、当該異動の直前の住居から当該異動の直後に在勤する本所又は支所に通勤することが通勤距離等を考慮して理事長が別に定める基準に照らして困難であると認められるもののうち単身で生活することを常況とする職員には、単身赴任手当を支給する。ただし、配偶者の住居から在勤する本所又は支所に通勤することが、通勤距離等を考慮して理事長が別に定める基準に照らして困難であると認められない場合は、この限りでない。
- 2 単身赴任手当の月額は、23,000円(理事長が別に定めるところにより算定した職員の住居と配偶者の住居との間の交通距離(以下単に「交通距離」という。)が理事長が別に定める距離以上である職員にあっては、その額に、45,000円を超えない範囲内で交通距離の区分に応じて理事長が別に定める額を加算した額)とする。
 - 3 国公法第2条に規定する一般職及び特別職の国家公務員、国の経営する企業に勤務する職員の給与等に関する特例法(昭和29年法律第141号)の適用を受ける職員、独立行政法人通則法第2条第2項に規定する特定独立行政法人、地方公共団体及び理事長が別に定める法人から人事交流等により引き続き職員となり、これに伴い、住居を移転し、父母の疾病その他の理事長が別に定めるやむを得ない事情により、同居していた配偶者と別居することとなった職員で、当該人事交流等により職員となった直前の住居から通勤することが通勤距離等を考慮して理事長が別に定める基準に照らして困難であると認められるものの

うち、単身で生活することを常況とする職員（任用の事情等を考慮して理事長が別に定める職員に限る。）その他第1項の規定による単身赴任手当を支給される職員との権衡上必要があると認められるものとして理事長が別に定める職員には、前2項の規定に準じて、単身赴任手当を支給する。

- 4 職員は、新たに第1項又は前項の職員たる要件を具備するに至った場合には、当該要件を具備していることを証明する書類を添付して、理事長が定める様式の単身赴任届により、配偶者等との別居の状況等を速やかに理事長又はその委任を受けた者に届け出なければならない。単身赴任手当を受けている職員の住居、同居者、配偶者等の住居等に変更があった場合についても、同様とする。
- 5 単身赴任手当の支給の始期及び終期については、第15条第5項及び第6項の規定を準用する。この場合において、同条第5項及び第6項中、「通勤手当」とあるのは「単身赴任手当」と、「第1項」とあるのは「第16条第1項及び第3項」と、「前項」とあるのは「第16条第4項」と読み替えるものとする。
- 6 前5項に規定するもののほか、単身赴任手当の支給の調整に関する事項その他単身赴任手当の支給に関し必要な事項は、理事長が別に定める。

（特地勤務手当）

- 第17条 離島その他の生活の著しく不便な地である支所に在勤する職員には、特地勤務手当を支給する。
- 2 国公法第2条に規定する一般職及び特別職の国家公務員、国の経営する企業に勤務する職員の給与等に関する特例法（昭和29年法律第141号）の適用を受ける職員、独立行政法人通則法第2条第2項に規定する特定独立行政法人、地方公共団体及び理事長が別に定める法人から引き続き人事交流等によりセンターの職員となって特地事務所又は理事長が指定するこれらに準ずる事務所（以下「準特地事務所」という。）に在勤することとなったことに伴って住居を移転した職員（任用の事情等を考慮して理事長が別に定める職員に限る。）、新たに特地事務所又は準特地事務所に該当することとなった事務所に在勤する職員でその特地事務所又は準特地事務所に該当することとなった日前3年以内に当該事務所に異動し、当該異動に伴って住居を移転したもののその他権衡上必要があるものとして理事長が別に定める職員には、特地勤務手当に準ずる手当を支給する。
 - 3 特地勤務手当の月額、職員が支所に勤務することとなった日の俸給及び扶養手当の月額の合計額の2分の1の額に現に受ける職員俸給及び扶養手当の2分の1の額を加えた額に100分の12を乗じて得た額とする。
 - 4 支所に勤務する職員のうち、支所に異動となり当該異動に伴って住居を移転した職員には、異動となった日から6年に達するまでの間、異動となった日に受けていた俸給及び扶養手当の月額の合計額に、次に掲げる異動の日からの期間の区分に応じ、それぞれに掲げる割合を乗じて得た額を月額として加算する。ただし、その期間内において職員が支所以外に異動した場合には、その異動の日の前日まで支給する。

- (1) 異動となった日から起算して4年に達するまでの期間 100分の6
 - (2) 異動となった日から起算して4年に達した後から5年に達するまでの期間 100分の4
 - (3) 異動となった日から起算して5年に達した後から6年に達するまでの期間 100分の2
- 5 前4項に規定するもののほか、特地勤務手当の支給に関し必要な事項は、理事長が別に定める。

(給与の減額)

第18条 職員が勤務しないときは、勤務時間規程第11条第1号に規定する祝日法による休日(勤務時間規程第12条第1項の規定により代休日を指定されて、当該休日に割り振られた勤務時間の全部を勤務した職員にあっては、当該休日に代わる代休日。以下「祝日法による休日等」という。)又は勤務時間規程第11条第2号に規定する年末年始の休日(勤務時間規程第12条第1項の規定により代休日を指定されて、当該休日に割り振られた勤務時間の全部を勤務した職員にあっては、当該休日に代わる代休日。以下「年末年始の休日等」という。)である場合、休暇による場合その他その勤務しないことにつき特に承認のあった場合を除き、その勤務しない1時間につき、第23条に規定する勤務1時間当たりの給与額を減額して給与を支給する。

(給与の半減)

- 第19条 職員が負傷(公務上の負傷及び通勤(国家公務員災害補償法(昭和26年法律第191号)第1条の2に規定する通勤をいう。以下同じ。)による負傷を除く。)若しくは疾病(公務上の疾病及び通勤による疾病を除く。以下この項及び第29条において同じ。)に係る療養のため、又は疾病に係る就業禁止の措置により、当該療養のため病気休暇又は当該措置の開始の日から起算して90日(結核性疾患の場合にあっては1年)を超えて引き続き勤務しないときは、その期間の経過後の当該病気休暇又は当該措置に係る日につき俸給の半額を減ずる。
- 2 前項に規定するもののほか、同項の勤務しない期間の範囲、俸給の計算その他俸給の半減に関し必要な事項は、理事長が別に定める。

(超過勤務手当)

第20条 正規の勤務時間を超えて勤務することを命ぜられた職員には、正規の勤務時間を超えて勤務した全時間に対して、勤務1時間につき、第23条に規定する勤務1時間当たりの給与額に正規の勤務時間を超えてした次に掲げる勤務の区分に応じてそれぞれ100分の125から100分の150までの範囲内で理事長が別に定める割合(その勤務が午後10時から翌日の午前5時までの間である場合は、その割合に100分の25を加算した割合、勤務時間規程第6条第2項の規定により週休日の再振替又は再割振り変更(当該再振替又は

再割振り変更により週休日に勤務しなかった場合に限る。)を行った勤務(勤務時間規程第6条第1項に規定する勤務を命ずる必要がある日の属する週内の正規の勤務時間(勤務時間規程第11条に定める勤務することを要しない勤務時間を除く。)が40時間以内となるように週休日の再振替又は再割振り変更を行った勤務を除く。)については、100分の35)を乗じて得た額を超過勤務手当として支給する。

(1) 正規の勤務時間が割り振られた日(次条の規定により正規の勤務時間中に勤務した職員に休日給が支給されることとなる日を除く。次項において同じ。)における勤務

(2) 前号に掲げる勤務以外の勤務

2 再任用短時間勤務職員が、正規の勤務時間が割り振られた日において、正規の勤務時間を超えてした勤務のうち、その勤務の時間とその勤務をした日における正規の勤務時間との合計が8時間に達するまでの間の勤務に対する前項の規定の適用については、同項中「正規の勤務時間を超えてした次に掲げる勤務の区分に応じてそれぞれ100分の125から100分の150までの範囲内で理事長が別に定める割合」とあるのは「100分の100」とする。

(休日給)

第21条 祝日法による休日等及び年末年始の休日等において、正規の勤務時間中に勤務することを命ぜられた職員には、正規の勤務時間中に勤務した全時間に対して、勤務1時間につき、第23条に規定する勤務1時間当たりの給与額に100分の125から100分の150までの範囲内で、理事長が別に定める割合を乗じて得た額を休日給として支給する。これらの日に準ずるものとして理事長が別に定める日において勤務した職員についても、同様とする。

(端数計算)

第22条 第18条に規定する勤務1時間当たりの給与額及び前2条の規定により勤務1時間につき支給する超過勤務手当及び休日給の額を算定する場合において、当該額に、50銭未満の端数を生じたときはこれを切り捨て、50銭以上1円未満の端数を生じたときはこれを1円に切り上げるものとする。

(勤務1時間当たりの給与額の算出)

第23条 第18条、第20条及び第21条に規定する勤務1時間当たりの給与額は、俸給月額並びにこれに対する調整手当及び研究員調整手当の月額の合計額に12を乗じ、その額を1週間当たりの勤務時間に52を乗じたもので除して得た額とする。

(管理職員特別勤務手当)

第24条 第10条第1項の規定に基づく理事長が別に定める職員のうち管理又は監督の複雑、困難及び責任の度が高い職員として理事長が別に定める職員(以

下「特定管理職員」という。)が、臨時又は緊急の必要その他の業務の運営の必要により週休日又は祝日法による休日等若しくは年末年始の休日等に勤務した場合は、当該職員には、管理職員特別勤務手当を支給する。

- 2 管理職員特別勤務手当の額は、前項の規定による勤務1回につき、特定管理職員にあっては12,000円を超えない範囲内において理事長が別に定める額とする。ただし、同項の規定による勤務に従事する時間等を考慮して理事長が別に定める勤務にあっては、それぞれその額に100分の150を乗じて得た額とする。
- 3 前2項に定めるもののほか、管理職員特別勤務手当の支給に関し必要な事項は、理事長が別に定める。

(期末手当)

第25条 期末手当は、3月1日、6月1日及び12月1日(以下この条から第27条までにおいてこれらの日を「基準日」という。)にそれぞれ在職する職員に対して、それぞれ3月15日、6月30日及び12月10日(これらの日が週休日に当たるときは、その直前の週休日でない日。以下この条から第27条までにおいて「支給日」という。)に支給する。これらの基準日前1箇月以内に退職し、若しくは国公法第38条第1号に該当して同法第76条の規定により失職し、又は死亡した職員(同法第39条第6項の規定の適用を受ける職員及び理事長が別に定める職員を除く。)についても、同様とする。

- 2 期末手当の額は、期末手当基礎額に、3月に支給する場合には100分の55、6月に支給する場合には100分の145、12月に支給する場合には100分の155を乗じて得た額(理事長が別に定める特定幹部職員(第28条において「特定幹部職員」という。)にあっては、3月に支給する場合には100分の55、6月に支給する場合には100分の125、12月に支給する場合には100分の135を乗じて得た額)に、基準日以前3箇月以内(基準日が12月1日であるときは、6箇月以内)の期間におけるその者の在職期間の区分に応じて、次の表に定める割合を乗じて得た額とする。

在 職 期 間		割 合
基準日が3月1日又は6月1日である場合	基準日が12月1日である場合	
3箇月	6箇月	100分の100
2箇月15日以上3箇月未満	5箇月以上6箇月未満	100分の80
1箇月15日以上2箇月15日未満	3箇月以上5箇月未満	100分の60
1箇月15日未満	3箇月未満	100分の30

- 3 再任用職員に対する前項の規定の適用については、前項中「100分の55」とあるのは「100分の30」と、「100分の145」とあるのは「100分の70」と、「100分の155」とあるのは「100分の90」と、「100分の125」とあるのは「100分の60」と、「100分の135」とあるのは「100分の80」とする。
- 4 第2項の期末手当基礎額は、それぞれその基準日現在（退職し、若しくは失職し、又は死亡した職員にあっては、退職し、若しくは失職し、又は死亡した日現在）において職員が受けるべき俸給及び扶養手当の月額並びにこれらに対する調整手当及び研究員調整手当の月額の合計額とする。
- 5 一般職員俸給表の適用を受ける職員で、その職務の級が4級以上であるもの並びに同表以外の各俸給表の適用を受ける職員で職務の複雑、困難及び責任の度等を考慮してこれに相当する職員として理事長が別に定める職員については、前項の規定にかかわらず、同項に規定する合計額に、俸給の月額並びにこれに対する調整手当及び研究員調整手当の月額の合計額に、理事長が別に定める職員の区分に応じて100分の20を超えない範囲内で理事長が別に定める割合を乗じて得た額（別に定める管理又は監督の地位にある職員にあっては、その額に俸給月額の100分の25を超えない範囲内で理事長が別に定める割合を乗じて得た額を加算した額）を加算した額を第2項の期末手当基礎額とする。
- 6 国公法第2条に規定する一般職及び特別職の国家公務員、国の経営する企業に勤務する職員の給与等に関する特例法（昭和29年法律第141号）の適用を受ける職員、独立行政法人通則法第2条第2項に規定する特定独立行政法人、地方公共団体及び理事長が別に定める法人から人事交流等により異動又は採用となった職員の第2項に掲げる在職期間の区分は、当該異動又は採用前の機関に在職していた期間を職員として在職していた期間とみなした場合に得られる区分とする。
- 7 前6項及び次条に規定するもののほか、期末手当の支給に関し必要な事項は、理事長が別に定める。

第26条 次の各号のいずれかに該当する者には、前条第1項の規定にかかわらず、当該各号の基準日に係る期末手当（第4号に掲げる者にあつては、その支給を一時差し止めた期末手当）は、支給しない。

- (1) 基準日から当該基準日に対応する支給日の前日までの間に国公法第82条の規定による懲戒免職の処分を受けた職員
- (2) 基準日から当該基準日に対応する支給日の前日までの間に国公法第76条の規定により失職した職員（同法第38条第1号に該当して失職した職員を除く。）
- (3) 基準日前1箇月以内又は基準日から当該基準日に対応する支給日の前日までの間に離職した職員（前2号に掲げる者を除く。）で、その離職した日から当該支給日の前日までの間に禁錮以上の刑に処せられたもの

- (4) 次条第1項の規定により期末手当の支給を一時差し止める処分を受けた者（当該処分を取り消された者を除く。）で、その者の在職期間中の行為に係る刑事事件に関し禁錮以上の刑に処せられたもの

第27条 理事長又はその委任を受けた者は、支給日に期末手当を支給することとされていた職員で当該支給日の前日までに離職したものが次の各号のいずれかに該当する場合は、当該期末手当の支給を一時差し止めることができる。

- (1) 離職した日から当該支給日の前日までの間に、その者の在職期間中の行為に係る刑事事件に関して、その者が起訴（当該起訴に係る犯罪について禁錮以上の刑が定められているものに限り、刑事訴訟法（昭和23年法律第131号）第6編に規定する略式手続によるものを除く。第3項において同じ。）をされ、その判決が確定していない場合
- (2) 離職した日から当該支給日の前日までの間に、その者の在職期間中の行為に係る刑事事件に関して、その者が逮捕された場合又はその者から聴取した事項若しくは調査により判明した事実に基づきその者に犯罪があると思料するに至った場合であって、その者に対し期末手当を支給することが、公務に対する国民の信頼を確保し、期末手当に関する制度の適正かつ円滑な実施を維持する上で重大な支障を生ずると認めるとき。

2 前項の規定による期末手当の支給を一時差し止める処分（以下「一時差止処分」という。）を受けた者は、国公法第90条の2に規定する処分説明書を受領した日から起算すべき期間が経過した後においては、当該一時差止処分後の事情の変化を理由に、理事長に対し、その取消しを申し立てることができる。

3 理事長又はその委任を受けた者は、一時差止処分について、次の各号のいずれかに該当するに至った場合には、速やかに当該一時差止処分を取り消さなければならない。ただし、第3号に該当する場合において、一時差止処分を受けた者がその者の在職期間中の行為に係る刑事事件に関し現に逮捕されているときその他これを取り消すことが一時差止処分の目的に明らかに反すると認めるときは、この限りでない。

- (1) 一時差止処分を受けた者が当該一時差止処分の理由となった行為に係る刑事事件に関し禁錮以上の刑に処せられなかった場合
- (2) 一時差止処分を受けた者について、当該一時差止処分の理由となった行為に係る刑事事件につき公訴を提起しない処分があった場合
- (3) 一時差止処分を受けた者がその者の在職期間中の行為に係る刑事事件に関し起訴をされることなく当該一時差止処分に係る期末手当の基準日から起算して1年を経過した場合

4 前項の規定は、理事長又はその委任を受けた者が一時差止処分後に判明した事実又は生じた事情に基づき、期末手当の支給を差し止める必要がなくなったとして当該一時差止処分を取り消すことを妨げるものではない。

5 理事長又はその委任を受けた者は、一時差止処分を行う場合は、当該一時差止処分を受けるべき者に対し、当該一時差止処分の際、一時差止処分の事由を

記載した説明書を交付しなければならない。

- 6 一時差止処分に対する行政不服審査法（昭和37年法律第160号）による不服申立てについては、一時差止処分は国公法第89条第1項に規定する処分と、一時差止処分を受けた者は同法第90条第1項に規定する職員と、前項の説明書は同法第90条の2の処分説明書とそれぞれみなして、同法第90条から第92条の2までの規定を適用する。
- 7 前6項に規定するもののほか、一時差止処分に関し必要な事項は、理事長が別に定める。

（勤勉手当）

第28条 勤勉手当は、6月1日及び12月1日（以下この条においてこれらの日を「基準日」という。）にそれぞれ在職する職員に対し、基準日以前6箇月以内の期間におけるその者の勤務成績に応じて、それぞれ6月30日及び12月10日（これらの日が週休日に当たるときは、その直前の週休日でない日。以下この条において「支給日」という。）に支給する。これらの基準日前1箇月以内に退職し、若しくは国公法第38条第1号に該当して同法第76条の規定により失職し、又は死亡した職員（理事長が別に定める職員を除く。）についても同様とする。

2 勤勉手当の額は、勤勉手当基礎額に、理事長が別に定める基準に従って得られる割合を乗じて得た額に、基準日以前6箇月以内の期間におけるその者の勤務期間の区分に応じて、理事長が別に定める割合を乗じて得た額とする。この場合において、センターにおいて支給する勤勉手当の額の、その者の属する次の各号に掲げる職員の区分ごとの総額は、それぞれの当該各号に掲げる額を超えないものとする。

（1）前項の職員のうち再任用職員以外の職員

当該職員の勤勉手当基礎額に当該職員がそれぞれの基準日現在（退職し、若しくは失職し、又は死亡した職員にあっては、退職し、若しくは失職し、又は死亡した日現在。次項において同じ。）において受けるべき扶養手当の月額並びにこれに対する調整手当及び研究員調整手当の月額の合計額を加算した額に、6月に支給する場合においては100分の60（特定幹部職員にあっては、100分の80）、12月に支給する場合においては100分の55（特定幹部職員にあっては、100分の75）を乗じて得た額の総額

（2）前項の職員のうち再任用職員

当該再任用職員の勤勉手当基礎額に100分の30（特定幹部職員にあっては、100分の40）を乗じて得た額の総額

3 前項の勤勉手当基礎額は、それぞれその基準日現在において職員が受けるべき俸給の月額並びにこれに対する調整手当及び研究員調整手当の月額の合計額とする。

4 第25条第5項の規定は、第2項の勤勉手当基礎額について準用する。この場合において、同条第5項中「前項」とあるのは、「第28条第3項」と読み

替えるものとする。

- 5 国公法第2条に規定する一般職及び特別職の国家公務員、国の経営する企業に勤務する職員の給与等に関する特例法（昭和29年法律第141号）の適用を受ける職員、独立行政法人通則法第2条第2項に規定する特定独立行政法人、地方公共団体及び理事長が別に定める法人から人事交流等により異動又は採用となった職員の第2項に掲げる勤務期間の区分は、当該異動又は採用前の機関に勤務していた期間を職員として勤務していた期間とみなした場合に得られる区分とする。
- 6 前2条の規定は、第1項の規定による勤勉手当の支給について準用する。この場合において、第26条中「前条第1項」とあるのは「第28条1項」と、同条第1号中「基準日から」とあるのは「基準日（第28条第1項に規定する基準日をいう。以下この条及び次条において同じ。）から」と「支給日」とあるのは「支給日（同項に規定する支給日をいう。以下この条及び次条において同じ。）」と読み替えるものとする。
- 7 前6項に規定するもののほか、勤勉手当の支給に関し必要な事項は、理事長が別に定める。

（特定の職員についての適用除外）

第29条 第20条及び21条の規定は、特定管理職員には適用しない。

- 2 第11条、第12条第3項から同条第4項まで、第13条、第14条、第16条及び第17条の規定は、再任用職員には適用しない。

（非常勤職員の給与）

第30条 委員、顧問若しくは参与の職にある者又は理事長の指定するこれらに準ずる職にある者で、常勤を要しない職員（再任用短時間勤務職員を除く。次項において同じ。）については、勤務1日につき、理事長が別に定める額を超えない範囲内において、手当を支給することができる。

- 2 前項に定める職員以外の常勤を要しない職員については、理事長は、常勤の職員の給与との権衡を考慮し、予算の範囲内で、給与を支給する。
- 3 前2項の常勤を要しない職員には、別段の定めがない限り、これらの項に定める給与を除く外、他のいかなる給与も支給しない。

（休職者の給与）

第31条 職員が公務上負傷し、若しくは疾病にかかり、又は通勤により負傷し、若しくは疾病にかかり、国公法第79条第1号に掲げる事由に該当して休職にされたときは、その休職の期間中、これに給与の全額を支給する。

- 2 職員が結核性疾患にかかり国公法第79条第1号に掲げる事由に該当して休職にされたときは、その休職の期間が満2年に達するまでは、これに俸給、扶養手当、調整手当、研究員調整手当、住居手当及び期末手当のそれぞれ100分の80を支給することができる。

- 3 職員が前2項以外の心身の故障により国公法第79条第1号に掲げる事由に該当して休職にされたときは、その休職の期間が満1年に達するまではこれに俸給、扶養手当、調整手当、研究員調整手当、住居手当及び期末手当のそれぞれ100分の80を支給することができる。
- 4 職員が国公法第79条第2号に掲げる事由に該当して休職にされたときは、その休職の期間中、これに俸給、扶養手当、調整手当、研究員調整手当及び住居手当のそれぞれ100分の60以内を支給することができる。
- 5 職員が国公法第79条に基づく人事院規則で定める場合のいずれかに該当して休職にされたときは、その休職の期間中、理事長が別に定めるところにより、これに俸給、扶養手当、調整手当、研究員調整手当、住居手当及び期末手当のそれぞれ100分の100以内を支給することができる。
- 6 第2項、第3項又は第5項に規定する職員が、当該各項に規定する期間内で第25条第1項に規定する基準日前1箇月以内に退職し、若しくは国公法第38条第1号に該当して同法第76条の規定により失職し、又は死亡したときは、同項の規定により理事長が別に定める日に、当該各項の例による額の期末手当を支給することができる。ただし、理事長が別に定める職員については、この限りでない。
- 7 前項の規定の適用を受ける職員の期末手当の支給については、第26条及び第27条の規定を準用する。この場合において、第26条中「前条第1項」とあるのは、「第31条第6項」と読み替えるものとする。

(育児休業等職員の給与)

- 第32条 職員が、理事長から国家公務員の育児休業等に関する法律(平成3年法律第109号)第3条の規定に基づき育児休業の承認を受けている期間は給与を支給しない。
- 2 職員が勤務時間規程第20条第1項に基づく育児部分休業をしている場合の給与は、第18条の規定にかかわらず、その勤務しない1時間につき、第23条に規定する勤務1時間当たりの給与額を減額して給与を支給する。
 - 3 第25条第1項に規定するそれぞれの基準日に育児休業をしている職員のうち、基準日以前3箇月以内(基準日が12月1日であるときは6箇月以内)の期間において勤務した期間がある職員には第1項の規定にかかわらず、当該基準日に係る期末手当を支給する。
 - 4 第28条第1項に規定するそれぞれの基準日に育児休業をしている職員のうち、基準日以前6箇月以内の期間において勤務した期間がある職員には、第1項の規定にかかわらず、当該基準日に係る勤勉手当を支給する。
 - 5 前4項に定めるほか、必要な事項は理事長が別に定める。

(介護休暇職員の給与)

- 第33条 職員が、理事長から介護休暇の承認を受けて勤務しない場合は、第18条の規定にかかわらず、その勤務しない1時間につき、第23条に規定する

勤務 1 時間当たりの給与額を減額して給与を支給する。

2 前項に定めるほか、必要な事項は理事長が別に定める。

(派遣職員の給与)

第 3 4 条 国際機関等に派遣される一般職の国家公務員の処遇等に関する法律 (昭和 4 5 年法律第 1 1 7 号) 第 3 条に規定する派遣職員には、その派遣の期間中、俸給、扶養手当、研究員調整手当、住居手当及び期末手当のそれぞれの 1 0 0 分の 1 0 0 以内を支給することができる。

2 前項に定めるほか、給与の支給に関し必要な事項は、理事長が別に定める。

(交流派遣職員の給与)

第 3 5 条 職員が交流派遣されたときは、その交流派遣の期間中給与を支給しない。

(給与の非常時支給)

第 3 6 条 職員が、職員又はその収入によって生計を維持する者の出産、疾病、災害、婚礼、葬儀その他これに準ずる非常の費用に充てるために給与を請求した場合には、俸給の支給日前であっても、請求の日までの給与を日割り計算により支給する。

(雑則)

第 3 7 条 この規程に定めるもののほか、職員の給与に関し必要な事項は、理事長が別に定める。

附 則

この規程は、平成 1 3 年 4 月 1 日から施行する。

附 則

1 この規程は、平成 1 3 年 1 1 月 3 0 日から施行し、平成 1 3 年 4 月 1 日から適用する。

2 当分の間、国及び民間における賃金との均衡を考慮して講ずる措置として、各年度 (4 月 1 日から翌年 3 月 3 1 日までをいう。以下この項及び次項第 1 号において同じ。) において、当該各年度の 3 月 1 日 (以下この項から附則第 4 項までにおいて「基準日という。) に在職する職員 (独立行政法人国際農林水産業研究センター任期付研究員及び特定任期付職員給与規程 (1 3 国研セ第 4 - 3 3 号) の適用を受ける職員を除く。以下同じ。) に対し、基準日の属する月の理事長が別に定める日において、特例一時金を支給する。

- 3 特例一時金の額は、3,756円とする。ただし、次の各号に掲げる職員については、当該各号に定める額とする。
- (1) 基準日の属する年度の4月1日から基準日までの期間（次号及び次項において「基準期間」という。）において俸給を支給しないこととされていた期間（在職しなかった期間を含む。以下この項及び次項において「無給期間」という。）がある職員（次号に掲げる者を除く。） 3,756円を超えない範囲内で無給期間を考慮して理事長が別に定める額
 - (2) 基準日において第7条又は第19条の規定の適用を受ける職員である者 3,756円（基準期間において無給期間がある者については、前号の規定の例により得られる額）を超えない範囲内で理事長が別に定める額
- 4 基準日に国家公務員の育児休業等に関する法律第3条第1項の規定により育児休業をしている職員については、第32条第1項の規定にかかわらず、特例一時金を支給する。ただし、当該職員で基準期間の全期間が無給期間であるものについては、この限りでない。
- 5 職員に特例一時金が支給される間、第4条中「及び勤勉手当」とあるのは「、勤勉手当及び特例一時金」と、第31条第2項、第3項及び第5項並びに第34条第1項中「及び期末手当」とあるのは「、期末手当及び特例一時金」と、第31条第4項中「及び住居手当」とあるのは「、住居手当及び特例一時金」とする。

独立行政法人国際農林水産業研究センター職員の勤務時間、休憩、休日、
休暇等に関する規程

13国研セ第4 - 28号
平成13年4月2日

第1章 総則

(趣旨)

第1条 この規程は、別に法令で定めるもののほか、独立行政法人国際農林水産業研究センター（以下「センター」という。）に勤務する国家公務員法（昭和22年法律第120号。以下「国公法」という。）第2条第2項に規定する一般職の職員（常時勤務に服することを要しない職員（国公法第81条の5第1項に規定する短時間勤務の官職を占める職員（以下「再任用短時間勤務職員」という。）を除く。）を除く。以下「職員」という。）の勤務時間、休憩、休日、休暇、育児部分休業等に関する事項について定めるものとする。

(理事長の責務等)

第2条 理事長は、勤務時間、休憩、休日、休暇、育児部分休業等に関する事務の実施に当たっては、業務の円滑な運営に配慮するとともに、職員の健康及び福祉を考慮することにより、職員の適正な勤務条件の確保に努めるものとする。

2 理事長は、この規程による権限の一部をセンター内の別に定める職員（以下「勤務管理者」という。）に委任することができる。

第2章 正規の勤務時間等

(1週間の勤務時間)

第3条 職員の勤務時間は、1週間当たり40時間とする。

2 国公法第81条の5第1項に規定する短時間勤務の官職を占める職員（以下「再任用短時間勤務職員」という。）の勤務時間は、前項の規定にかかわらず、1週間当たり16時間から32時間までの範囲内で理事長が別に定める。

(週休日及び勤務時間の割振り)

第4条 職員の週休日（勤務時間を割り振らない日をいう。以下同じ。）は、土曜日及び日曜日とする。ただし、再任用短時間勤務職員にあっては、理事長は、これらの日に加えて、月曜日から金曜日までの5日間において、週休日を設けることができる。

2 理事長は、月曜日から金曜日までの5日間において、1日につき8時間の勤務時間を割り振るものとする。ただし、再任用短時間勤務職員にあっては、1週間ごとの期間について、1日につき8時間を超えない範囲内で勤務時間を割り振るものとする。

(フレックスタイム制による勤務時間の割振り)

第5条 理事長は、始業及び終業の時刻について、試験研究に関する業務に従事する職員（理事長が別に定める職員に限る。）の申告を考慮して当該職員の勤務時間を割り振ることがセンターの業務の能率の向上に資すると認める場合には、前条第2項の規定にかかわらず、理事長が別に定めるところにより、職員の申告を経て、清算期間（毎月の初

日から末日までの期間をいう。)につき第3条に規定する勤務時間となるように当該職員の勤務時間を割り振ることができる。

- 2 前項の規定により勤務時間の割振りを定める場合には、月曜日から金曜日までの5日間において、午前10時から午後0時までの共通する勤務時間を設けるものとする。
- 3 第1項の規定により勤務時間の割振りを定める場合には、始業の時刻は午前7時以後に、終業の時刻は午後10時以前に設定するものとする。

(週休日の振替等)

- 第6条 勤務管理者は、職員に第4条第1項の規定により週休日とされた日において特に勤務することを命ずる必要がある場合には、第4条第2項、又は前条の規定により勤務時間が割り振られた日(以下この条において「勤務日」という。)のうち当該勤務を命ずる必要がある日の属する週(週の起算日は土曜日とする。以下この条において同じ。)内にある勤務日を週休日に変更して、当該勤務日に割り振られた勤務時間を当該勤務することを命ずる必要がある日に割り振り、又は当該勤務を命ずる必要がある日の属する週内にある勤務日(4時間の勤務時間のみが割り振られている日を除く。以下この条において同じ。)の勤務時間のうち4時間を当該勤務日に割り振ることをやめて当該4時間の勤務時間を当該勤務することを命ずる必要がある日に割り振ること(以下この条において「半日勤務時間の割振り変更」という。)ができる。
- 2 前項の週休日の振替及び半日勤務時間の割振り変更については、勤務管理者が業務上必要があると認める場合には、別に定める期間内に再振替又は再割振り変更を行うことができる。
 - 3 週休日の振替等の手続きに関し必要な事項は、理事長が別に定める。

(休憩時間)

- 第7条 職員の休憩時間は、1日の勤務時間が8時間以下の場合には45分、8時間を超える場合には1時間とする。
- 2 理事長は、業務のため必要と認めるときは、前項の規定にかかわらず休憩時間の時刻を変更することができる。ただし、休憩時間は勤務時間の途中に置くものとする。
 - 3 職員は、休憩時間を自由に利用することができる。

(休息时间)

- 第8条 職員の休息時間は、勤務時間のおおむね4時間につき15分をその勤務時間中に置くものとする。ただし、業務の必要によりやむを得ない場合には、この限りでない。
- 2 休息時間は、前項ただし書きの場合においても、繰り越さないものとする。
 - 3 休息時間が休憩時間にかかる場合には、職員は、その時間を自由に利用することができる。

(通常の勤務場所を離れて勤務する職員の勤務)

- 第9条 第4条第2項、第5条及び第6条の規定により勤務時間が割り振られた日(第12条において「勤務日等」という。)に通常の勤務場所を離れる勤務について、勤務時間を算定し難いときは、通常の勤務時間を勤務したものとみなす。

第3章 時間外勤務

(時間外勤務)

第10条 勤務管理者は、第3条、第4条第2項、第5条及び第6条の規定による勤務時間（以下「正規の勤務時間」という。）以外の時間において、労働基準法（昭和22年法律第49号。以下「労基法」という。）第36条の規定に基づき、職員に勤務を命ずることができる。

2 勤務管理者は、災害その他避けることのできない事由のため緊急の必要がある場合には、正規の勤務時間以外の時間において、職員に前項に規定する勤務以外の勤務を命ずることができる。

第4章 休日

（休日）

第11条 職員の休日は、次に掲げる日とし、当該休日においては、特に勤務することを命ぜられる者を除き、正規の勤務時間においても勤務することを要しない。

（1）国民の祝日に関する法律（昭和23年法律第178号）に規定する休日（以下「祝日法による休日」という。）

（2）12月29日から翌年の1月3日までの日（祝日法による休日を除く。以下「年末年始の休日」という。）

（3）その他理事長が別に定める日

（代休日の指定）

第12条 勤務管理者は、職員に休日である勤務日等に割り振られた勤務時間の全部（第3項において「休日の全勤務時間」という。）について特に勤務することを命じた場合には、当該休日前に、当該休日に代わる日（以下この条において「代休日」という。）として、当該休日後の別に定める期間内にある当該休日に割り振られた勤務時間と同一の時間数の勤務時間が割り振られた勤務日等（休日を除く。）を指定することができる。

2 勤務管理者は、前項の代休日に業務上やむを得ず勤務することを命じた場合には、当該代休日前に、当該代休日に代わる日（以下この条において「再代休日」という。）として、前項の休日後の別に定める期間内にある当該代休日に割り振られた勤務時間と同一の時間数の勤務時間が割り振られた勤務日等（休日を除く。）を指定することができる。

3 第1項の規定により代休日（前項の規定により再代休日指定された場合）にあっては、再代休日を含む。以下この項において同じ。）を指定された職員は、勤務を命ぜられた休日の全勤務時間を勤務した場合において、当該代休日には、特に勤務することを命ぜられるときを除き、正規の勤務時間においても勤務することを要しない。

4 代休日又は再代休日の指定の手續きに関し必要な事項は、理事長が別に定める。

第5章 任期付研究員の特例

（職員の裁量による勤務）

第13条 理事長は、一般職の任期付研究員の採用、給与及び勤務時間の特例に関する法律（平成9年法律第65号）第3条第1項第1号の規定により任期を定めて採用された職員（以下「第1号任期付研究員」という。）の職務につき、その職務の性質上時間配分の決定その他の職務遂行の方法を大幅に当該第1号任期付研究員の裁量に委ねることが当該第1号任期付研究員に係る研究業務の能率的な遂行のため必要であると認める場

合には、当該第1号任期付研究員を、理事長が別に定めるところによりこの規程の規定による勤務時間の割振りを行わないで、その職務に従事させることができる。

第6章 休暇

(休暇の種類)

第14条 職員の休暇は、年次休暇、病気休暇、特別休暇及び介護休暇とする。

(年次休暇)

第15条 職員(再任用短時間勤務職員を除く。以下この項において同じ。)の年次休暇は1の年ごとにおける休暇とし、その日数は、1の年において、20日とする。ただし、当該年の中途において新たに職員となった者(第3項に定める者を除く。)又は任期が満了することにより退職する者については、別表第1の左欄の在職期間に応じ、それぞれ同表の右欄に掲げる日数とする。

2 再任用短時間勤務職員の年次休暇は1の年ごとにおける休暇とし、その日数は、1の年において、次の各号に掲げる再任用短時間勤務職員の区分に応じ、当該各号に定める日数とする。

(1) 同一勤務型職員(再任用短時間勤務職員のうち、1週間ごとの勤務日の日数及び勤務日ごとの勤務時間の時間数が同一である職員をいう。以下同じ。) 20日に1週間の勤務日数を5日で除して得た数を乗じた日数。ただし、当該年の途中において新たに同一勤務型職員となった者(次項に定める者を除く。)又は任期が満了することにより退職する者にあつては、その者の当該年における在職期間に応じ、別表第2の下欄に掲げる1週間の勤務日の日数の区分ごとに定める日数。

(2) 非同一勤務型職員(再任用短時間勤務職員のうち、1週間ごとの勤務日の日数又は勤務日ごとの勤務時間の時間数が同一でない職員をいう。以下同じ。) 160時間に第3条の規定に基づき定められた当該職員の1週間当たりの勤務時間を40時間で除して得た数を乗じて得た時間数を、8時間を1日として日に換算して得た日数(1日未満の端数があるときは、これを四捨五入して得た日数)。ただし、当該年の途中において新たに非同一勤務型職員となった者(次項に定める者を除く。)又は任期が満了することにより退職する者にあつては、その者の当該年における在職期間に応じ、別表第3の下欄に掲げる1週間当たりの勤務時間の区分ごとに定める日数。

3 国公法第2条第2項に規定する一般職及び同条第3項に規定する特別職に属する国家公務員、地方公務員法(昭和26年法律第261号)第3条第2項に規定する一般職及び同条第3項に規定する特別職に属する地方公務員又は公庫の予算及び決算に関する法律(昭和26年法律第99号)第1条に規定する公庫その他その業務がセンターの事務又は事業と密接な関連を有する法人のうち理事長が別に定めるものの職員(常時勤務に服することを要しない職員を除く。以下「他の国家公務員等」という。)であつた者であつて引き続き職員となった者その他理事長が別に定める者の年次休暇の日数は、次の各号に掲げる職員の区分に応じ、当該各号に定める日数から職員となった日の前日までの間に使用した年次休暇に相当する休暇又は年次休暇の日数を減じて得た日数とする。

(1) 次号に掲げる職員以外の職員 20日に当該年の前年における年次休暇に相当する休暇又は年次休暇の残日数(当該日数が20日を超える場合にあっては、20日)を加えた日数(再任用短時間勤務職員にあっては、その者の勤務時間等を考慮して、理事長が別に定める日数)

(2) 当該年の中途において新たに他の国家公務員等となり引き続き職員となった者 他

の国家公務員等となった日において職員となったものとみなして第1項ただし書の規定を適用した場合に得られる日数（再任用短時間勤務職員にあっては、その者の勤務時間等を考慮して、理事長が別に定める日数）

- 4 年次休暇は、1の年における年次休暇の20日を超えない範囲内の残日数（1日未満の端数があるときはこれを切り捨てた日数）を限度として、当該年の翌年に繰り越すことができる。
- 5 年次休暇については、その時季につき、あらかじめ休暇簿に記入して勤務管理者に請求しなければならない。この場合において、勤務管理者は、業務の正常な運営に支障がある場合は、他の時季にこれを変更することができる。
- 6 病気、災害その他やむを得ない事由によりあらかじめ前項の請求ができなかった場合には、その事由を休暇簿に付して事後において提出することができる。

（病気休暇）

- 第16条 病気休暇は、職員が負傷又は疾病のため療養する必要がある、その勤務しないことがやむを得ないと認められる場合における休暇とする。
- 2 病気休暇の期間は、療養のため勤務しないことがやむを得ないと認められる必要最小限の期間とする。
 - 3 勤務管理者は、生理日の就業が著しく困難な女性職員が第1項の休暇を請求した場合には、その者を生理日に勤務させてはならない。
 - 4 病気休暇の承認を受けようとする職員は、あらかじめ休暇簿に記入して勤務管理者に請求しなければならない。ただし、病気、災害その他やむを得ない事由によりあらかじめ請求できなかった場合には、その事由を付して事後において承認を求めることができる。
 - 5 勤務管理者は病気休暇の請求について、第1項に掲げる場合に該当すると認めるときは、これを承認するものとする。ただし、業務の運営に支障があり、他の時期においても当該休暇の目的を達することができるものと認められる場合においては、この限りでない。
 - 6 勤務管理者は、病気休暇について、その事由を確認する必要があると認めるときは、証明書類の提出を求めることができる。

（特別休暇）

- 第17条 特別休暇は、次の各号に掲げる場合における休暇とし、その期間は、次の各号に掲げる場合の区分に応じて、当該各号に掲げる期間とする。
- （1）職員が選挙権その他公民としての権利を行使する場合で、その勤務しないことがやむを得ないと認められるとき 必要と認められる期間
 - （2）職員が証人、鑑定人、参考人等として国会、裁判所、地方公共団体の議会その他官公署へ出頭する場合でその勤務しないことがやむを得ないと認められるとき 必要と認められる期間
 - （3）職員が骨髄移植のための骨髄液の提供希望者としてその登録を実施する者に対して登録の申出を行い、又は骨髄移植のため配偶者、父母、子及び兄弟姉妹以外の者に骨髄液を提供する場合で、当該申出又は提供に伴い必要な検査、入院等のため勤務しないことがやむを得ないと認められるとき 必要と認められる期間
 - （4）職員が自発的に、かつ、報酬を得ないで次に掲げる社会に貢献する活動（専ら親族に対する支援となる活動を除く。）を行う場合でその勤務しないことが相当であると認められるとき 1暦年において5暦日の範囲内の期間

- ア 地震、暴風雨、噴火等により相当規模の災害が発生した被災地又はその周辺の地域における生活関連物資の配布その他の被災者を支援する活動
 - イ 身体障害者療護施設、特別養護老人ホームその他の主として身体上若しくは精神上的の障害がある者又は負傷し、若しくは疾病にかかった者に対して必要な措置を講ずることを目的とする施設であって理事長が別に定めるものにおける活動
 - ウ ア及びイに掲げる活動のほか、身体上若しくは精神上的の障害、負傷又は疾病により常態として日常生活を営むのに支障がある者の介護その他の日常生活を支援する活動
- (5) 職員が結婚する場合で結婚式、旅行その他の結婚に伴い必要と認められる行事等のため勤務しないことが相当であると認められるとき 結婚の日の5日前から当該結婚の日後1月を経過する日までの間に連続する5暦日の範囲内の期間
 - (6) 6週間(多胎妊娠の場合にあっては、14週間)以内に出産する予定である女性職員が申し出た場合 出産の日までの申し出た期間
 - (7) 女性職員が出産した場合 出産の日の翌日から8週間を経過する日までの期間(産後6週間を経過した女性職員が就業を申し出た場合において、医師が支障がないと認めた業務に就く期間を除く。)
 - (8) 生後1年に達しない子を育てる職員が、その子の保育のために必要と認められる授乳等を行う場合 1日2回それぞれ30分以内の期間(男性職員にあっては、その子の当該職員以外の親が当該職員がこの号の休暇を使用しようとする日におけるこの号の休暇(これに相当する休暇を含む。)を承認され、又は労基法第67条の規定により同日における育児時間を請求した場合は1日2回それぞれ30分から当該承認又は請求に係る各回ごとの期間を差し引いた期間を超えない期間)
 - (9) 職員の妻(届出をしないが事実上婚姻関係と同様の事情にある者を含む。)が出産する場合で職員が妻の出産に伴い必要と認められる入院の付添い等のため勤務しないことが相当であると認められるとき 妻が出産するため病院に入院する等の日から当該出産後の2週間を経過する日までの間に2日の範囲内の期間
 - (10) 小学校就学の始期に達するまでの子(配偶者の子を含む。)を養育する職員が、その子の看護(負傷し、又は疾病にかかったその子の世話をを行うことをいう。)のため勤務しないことが相当であると認められる場合 1暦年において5暦日の範囲内の期間
 - (11) 次に掲げる職員の親族が死亡した場合で職員が葬儀、服喪その他の親族の死亡に伴い必要と認められる行事等のため勤務しないことが相当であると認められるとき 次の各号に掲げる区分に応じて、当該各号に掲げる連続する日数(葬儀のため遠隔の地に赴く場合にあっては、往復に要する日数を加えた日数)の範囲内の期間とし、暦日によるものとする。
 - ア 配偶者又は父母 7日
 - イ 子 5日
 - ウ 祖父母 3日(職員が代襲相続し、かつ、祭具等の承継を受ける場合、又は、理事長が類似の慣習と認める場合にあっては、7日)
 - エ 孫 1日
 - オ 兄弟姉妹 3日
 - カ おじ又はおば 1日(職員が代襲相続し、かつ、祭具等の承継を受ける場合、又は、理事長が類似の慣習と認める場合にあっては、7日)
 - キ 父母の配偶者又は配偶者の父母 3日(職員と生計を一にしていた場合にあっては、7日)

- ク 子の配偶者又は配偶者の子 1日（職員と生計を一にしていた場合にあっては、5日）
- ケ 祖父母の配偶者又は配偶者の祖父母、兄弟姉妹の配偶者又は配偶者の兄弟姉妹 1日（職員と生計を一にしていた場合にあっては、3日）
- コ おじ又はおばの配偶者 1日
- (12) 職員が父母追悼のため特別な行事（父母の死亡後15年以内に行われるものに限る。）のため勤務しないことが相当であると認められる場合 1日の範囲内の期間
- (13) 職員が夏季における諸行事、心身の健康の維持及び増進又は家庭生活の充実のため勤務しないことが相当であると認められる場合 1の年の7月から9月までの期間内における、週休日、休日及び代休日を除いて、原則として連続する3日の範囲内の期間
- (14) 地震、水害、火災その他の災害により職員の現住居が滅失し、又は、損壊した場合で職員が当該住居の復旧作業等のため勤務しないことが相当であると認められるとき原則として連続する7暦日の範囲内の期間
- (15) 地震、水害、火災その他の災害又は交通機関の事故等により出勤することが著しく困難であると認められる場合 必要と認められる期間
- (16) 地震、水害、火災その他の災害時において、職員が退勤途上における身体の危険を回避するため、勤務しないことがやむを得ないと認められる場合 必要と認められる期間
- 2 特別休暇の承認を受けようとする職員は、あらかじめ休暇簿に記入して勤務管理者に請求しなければならない。ただし、病気、災害その他やむを得ない事由によりあらかじめ請求できなかった場合には、その事由を付して事後において承認を求めることができる。
- 3 第1項第7号に掲げる場合に該当することとなった女性職員は、その旨を速やかに勤務管理者に届け出るものとする。
- 4 勤務管理者は、特別休暇の請求について、第1項各号に掲げる場合に該当すると認めるときは、これを承認するものとする。ただし、業務の運営に支障があり、他の時季においても当該休暇の目的を達することができるのと認められる場合には、この限りでない。
- 5 勤務管理者は、特別休暇について、その事由を確認する必要があると認めるときは、証明書類の提出を求めることができる。

（介護休暇）

- 第18条 介護休暇は、職員が次に掲げる者（第2号及び第3号に掲げる者にあっては、職員と同居しているものとする。）で負傷、疾病、老齢又は身体上若しくは精神上の障害により2週間以上の期間にわたり日常生活を営むのに支障がある者（以下「要介護者」という。）の介護をするため、勤務しないことが相当であると認められる場合における休暇とする。
- (1) 配偶者（届出をしないが事実上婚姻関係と同様の事情にある者を含む。以下この条において同じ。）、父母、子、配偶者の父母
 - (2) 祖父母、孫及び兄弟姉妹
 - (3) 職員又は配偶者との間において事実上父母と同様の関係にあると認められる者及び職員との間において事実上子と同様の関係にあると認められる次の者
 - ア 父母の配偶者
 - イ 配偶者の父母の配偶者

ウ 子の配偶者
エ 配偶者の子

- 2 介護休暇の期間は、前項に規定する者の各々が同項に規定する介護を必要とする1の継続する状態ごとに、連続する6月の期間内において必要と認められる期間とする。
- 3 介護休暇の承認を受けようとする職員は、当該休暇の承認を受けようとする期間の始まる日の前日から起算して1週間前の日までに休暇簿に記入して勤務管理者に請求しなければならない。
- 4 前項の場合において、第2項に規定する介護を必要とする1の継続する状態について初めて介護休暇の承認を受けようとするときは、2週間以上の期間について一括して請求しなければならない。
- 5 勤務管理者は介護休暇の請求について、第1項に掲げる場合に該当すると認めるときは、これを承認するものとする。ただし、当該請求に係る期間のうち業務の運営に支障がある日又は時間については、この限りでない。
- 6 第3項の請求があった場合において、勤務管理者は速やかに承認するかどうかを決定し、当該請求を行った職員に対して当該決定を通知するものとする。
- 7 勤務管理者は、介護休暇について、その事由を確認する必要があると認めるときは、証明書類の提出を求めることができる。
- 8 勤務管理者は、介護休暇の承認をした後に当該職員からその事由を添えて撤回の申請があった場合には、この申請を承認するものとする。
- 9 前8項に定めるほか、介護休暇について必要な事項は理事長が別に定める。

(休暇簿)

第19条 休暇簿に関し必要な事項は、理事長が別に定める

第7章 育児部分休業

(育児部分休業)

- 第20条 育児部分休業は、職員がその3歳に満たない子を養育するため1日の勤務時間の一部について勤務しないことが相当であると認められる場合における休業とする。
- 2 次に掲げる職員は育児部分休業の申請を行うことができない
 - (1) 常時勤務を要しない職員(再任用短時間勤務職員を除く。)
 - (2) 育児部分休業により養育しようとする子について、配偶者が育児休業、介護休業等育児又は家族介護を行う労働者の福祉に関する法律(平成3年法律第76号)その他の法律により育児休業をしている職員
 - (3) 前号に掲げる職員のほか、育児部分休業を取得しようとする時間において、育児部分休業により養育しようとする子を職員以外の当該子の親が養育することができる場合における当該職員
 - 3 育児部分休業の承認は、正規の勤務時間の始め又は終わりにおいて、1日を通じて2時間(保育時間を承認されている職員については、2時間から当該保育時間を減じた時間)を超えない範囲内で、職員の託児の態様、通勤の状況等から必要とされる時間について30分を単位として行うものとする。
 - 4 育児部分休業の承認を受けようとする職員は、あらかじめその期間等を育児部分休業承認請求書に記入して勤務管理者に請求しなければならない。
 - 5 前項の請求があった場合において、勤務管理者は、業務の運営に支障がないと認めるときは承認するものとし、当該請求を行った職員に対して速やかに承認又は非承認の決

定を通知するものとする。

- 6 勤務管理者は、育児部分休業の承認の請求について、その事由を確認する必要があると認めるときは、証明書類の提出を求めることができる。
- 7 勤務管理者は、育児部分休業の承認をした後当該職員からその事由を添えて撤回の申請があった場合には、この申請を承認するものとする。
- 8 育児部分休業の承認は、次の各号に掲げる場合には、その効力を失うものとする。
 - (1) 職員が産前の休業を始め、又は出産（妊娠満12週以後の分べん（死産を含む。）をいう。）した場合
 - (2) 職員が休職又は停職の処分を受けた場合
 - (3) 当該育児部分休業に係る子が死亡した場合
 - (4) 当該育児部分休業に係る子が次に掲げる事由により当該職員の子でなくなった場合
 - ア 職員と育児部分休業に係る子とが離縁した場合
 - イ 職員と育児部分休業に係る子との養子縁組が取り消された場合
 - ウ 職員と育児部分休業に係る子との親族関係が民法（明治29年法律第89号）第817条の2に規定する特別養子縁組により終了した場合
- 9 勤務管理者は、育児部分休業をしている職員が次の各号に掲げる事由により当該部分休業に係る子を養育しなくなった場合、又は育児部分休業に係る子を職員以外の当該子の親が常態として養育することができることとなった場合には、当該育児部分休業の承認を取り消すものとする。
 - (1) 職員と育児部分休業に係る子とが同居しないこととなった場合
 - (2) 職員が、負傷、疾病又は精神若しくは身体の障害により、育児部分休業の期間中、当該育児部分休業に係る子の日常生活上の世話をすることができない状態になった場合
 - (3) 職員が常態的に当該子の日常生活上の世話に専念しないこととなった場合
- 10 前2項の場合において、職員は遅滞なく、第8項各号又は前項各号に掲げる事由が生じた旨を勤務管理者に届け出なければならない。
- 11 前10項に定めるほか、育児部分休業に必要な事項は理事長が別に定める。

第8章 育児又は介護を行う職員の深夜勤務及び時間外勤務の制限

（育児を行う職員の深夜勤務の制限）

第21条 勤務管理者は、小学校就学の始期に達するまでの子のある職員（職員の配偶者で当該子の親であるものが、深夜（午後10時から翌日の午前5時までの間をいう。以下同じ。）において常態として当該子を養育することができるものとして別に定める者に該当する場合における当該職員を除く。）が当該子を養育するために請求した場合には、業務の運営に支障がある場合を除き、深夜における勤務（以下「深夜勤務」という。）をさせないものとする。

（育児を行う職員の深夜勤務の制限の請求手続等）

第22条 職員は、深夜勤務制限請求書により、深夜勤務の制限を請求する1の期間（6月以内の期間に限る。以下「深夜勤務制限期間」という。）について、その初日（以下「深夜勤務制限開始日」という。）及び末日（以下「深夜勤務制限終了日」という。）とする日を明らかにして、深夜勤務制限開始日の1月前までに前条の規定による請求を行うものとする。

2 前条の規定による請求があった場合においては、勤務管理者は、業務の運営の支障の

有無について、速やかに当該請求をした職員に対し通知しなければならない。当該通知後において、業務の運営に支障が生じる日があることが明らかとなった場合にあっては、勤務管理者は、当該日の前日までに、当該請求をした職員に対しその旨を通知するものとする。

- 3 勤務管理者は、前条の請求に係る事由について確認する必要があると認めるときは、証明書類の提出を求めることができる。

第23条 第21条の規定による請求がされた後深夜勤務制限開始日とされた日の前日までに、次の各号に掲げるいずれかの事由が生じた場合には、当該請求はされなかったものとみなす。

- (1) 当該請求に係る子が死亡した場合
 - (2) 当該請求に係る子が離縁又は養子縁組の取消により当該請求をした職員の子でなくなった場合
 - (3) 当該請求をした職員が当該請求に係る子と同居しないこととなった場合
 - (4) 当該請求をした職員の配偶者で当該請求に係る子の親であるものが、深夜において常態として当該子を養育することができるものとして別に定める者に該当することとなった場合
- 2 深夜勤務制限開始日以後深夜勤務制限終了日とされた日の前日までに、前項各号に掲げるいずれかの事由が生じた場合には、第21条の規定による請求は、当該事由が生じた日を深夜勤務制限期間の末日とする請求であったものとみなす。
 - 3 前2項の場合において、職員は遅滞なく、第1項各号に掲げる事由が生じた旨を勤務管理者に届け出なければならない。
 - 4 前条第3項の規定は、前項の届出について準用する。

(介護を行う職員の深夜勤務の制限)

第24条 第21条から前条まで(同条第1項第4号を除く。)の規定は、第18条第1項に規定する要介護者を介護する職員について準用する。この場合において、第21条中「小学校就学の始期に達するまでの子のある職員(職員の配偶者で当該子の親であるものが、深夜(午後10時から翌日の午前5時までの間をいう。以下同じ。))において常態として当該子を養育することができるものとして別に定める者に該当する場合における当該職員を除く。)が当該子を養育」とあるのは「要介護者のある職員が当該要介護者を介護」と、前条第1項第1号中「子」とあるのは「要介護者」と、同項第2号中「子が離縁又は養子縁組の取消により当該請求をした職員の子でなくなった」とあるのは「要介護者と当該請求をした職員との親族関係が消滅した」と、同項第3号中「子」とあるのは「要介護者」と読み替えるものとする。

(育児を行う職員の時間外勤務の制限)

第25条 勤務管理者は、小学校就学の始期に達するまでの子のある職員(職員の配偶者で当該子の親であるものが、常態として当該子を養育することができるものとして別に定める者に該当する場合における当該職員を除く。)が当該子を養育するために請求した場合には、当該請求をした職員の業務を処理するための措置を講ずることが著しく困難である場合を除き、1月について24時間、1年について150時間を超えて、正規の勤務時間以外の時間における勤務(第10条第2項に規定する勤務を除く。以下「時間外勤務」という。)をさせないものとする。

(育児を行う職員の時間外勤務の制限の請求手続等)

第 26 条 職員は、時間外勤務制限請求書により、時間外勤務の制限を請求する 1 の期間について、その初日 (以下「時間外勤務制限開始日」という。) 及び期間 (1 年又は 1 年に満たない月を単位とする期間に限る。) を明らかにして、時間外勤務制限開始日の前日までに前条の規定による請求を行わなければならない。

- 2 前条の規定による請求があった場合においては、勤務管理者は、前条に規定する措置を講ずることが著しく困難であるかどうかについて、速やかに当該請求をした職員に対し通知するものとする。
- 3 勤務管理者は、前条の規定による請求が、当該請求があった日の翌日から起算して 1 週間を経過する日 (以下「1 週間経過日」という。) 前の日を時間外勤務制限開始日とする請求であった場合で、前条に規定する措置を講ずるために必要があると認めるときは、当該時間外勤務制限開始日から 1 週間経過日までの間のいずれかの日に時間外勤務制限開始日を変更することができる。
- 4 勤務管理者は、前項の規定により時間外勤務制限開始日を変更した場合においては、当該時間外勤務制限開始日を当該変更前の時間外勤務制限開始日の前日までに当該請求をした職員に対し通知するものとする。
- 5 勤務管理者は、前条の請求に係る事由について確認する必要があると認めるときは、証明書類の提出を求めることができる。

第 27 条 第 25 条の規定による請求がされた後、時間外勤務制限開始日の前日までに、次の各号に掲げるいずれかの事由が生じた場合には、当該請求はされなかったものとみなす。

- (1) 当該請求に係る子が死亡した場合
- (2) 当該請求に係る子が離縁又は養子縁組の取消により当該請求をした職員の子でなくなった場合
- (3) 当該請求をした職員が当該請求に係る子と同居しないこととなった場合
- (4) 当該請求をした職員の配偶者で当該請求に係る子の親であるものが、を常態として当該子を養育することができるものとして別に定める者に該当することとなった場合

2 時間外勤務制限開始日から起算して第 25 条の規定による請求に係る期間を経過する日の前日までの間に、次の各号に掲げるいずれかの事由が生じた場合には、同条の規定による請求は、時間外勤務制限開始日から当該事由が生じた日までの期間についての請求であったものとみなす。

- (1) 前項各号に掲げるいずれかの事由が生じた場合
- (2) 当該請求に係る子が小学校就学の始期に達した場合

3 前 2 項の場合において、職員は遅滞なく、第 1 項各号に掲げる事由が生じた旨を勤務管理者に届け出なければならない。

4 前条第 5 項の規定は、前項の届出について準用する。

(介護を行う職員の時間外勤務の制限)

第 28 条 第 25 条から前条まで (同条第 1 項第 4 号並びに第 2 項第 1 号及び第 2 号を除く。) の規定は、要介護者を介護する職員について準用する。この場合において、第 25 条中「小学校就学の始期に達するまでの子のある職員 (職員の配偶者で当該子の親であるものが、常態として当該子を養育することができるものとして別に定める者に該当する場合における当該職員を除く。) が当該子を養育」とあるのは「要介護者のある職

員が当該要介護者を介護」と、前条第1項第1号中「子」とあるのは「要介護者」と、同項第2号中「子が離縁又は養子縁組の取消により当該請求をした職員の子でなくなった」とあるのは「要介護者と当該請求をした職員との親族関係が消滅した」と、同項第3号中「子」とあるのは「要介護者」と、同条第2項中「次の各号」とあるのは「前項第1号から第3号まで」と読み替えるものとする。

第9章 妊産婦である女性職員に対する措置

(妊産婦である女性職員の深夜勤務等の制限)

第29条 勤務管理者は、妊娠中の女性職員及び産後1年を経過しない女性職員（以下「妊産婦である女性職員」という。）が請求した場合には、深夜勤務又は時間外勤務をさせないものとする。

(妊産婦である女性職員の健康診査及び保健指導)

第30条 勤務管理者は、妊産婦である女性職員が請求した場合には、その者が母子保健法（昭和40年法律第141号）第10条に規定する保健指導又は同法第13条に規定する健康診査を受けるため勤務しないことを承認するものとする。

2 前項の健康診査及び保健指導のため勤務しないことを承認しなければならない時間は、妊娠満23週までは4週間に1回、妊娠満24週から満35週までは2週間に1回、妊娠満36週から出産までは1週間に1回、産後1年まではその間に1回（医師等の特別の指示があった場合には、いずれの期間についてもその指示された回数）について、それぞれ1日の正規の勤務時間の範囲内で必要と認められる時間とする。

(妊産婦である女性職員の業務軽減等)

第31条 勤務管理者は、妊産婦である女性職員が請求した場合には、その者の業務を軽減し、又は他の軽易な業務に就かせるものとする。

2 勤務管理者は、妊産婦である女性職員が請求した場合において、その者の業務が母体又は胎児の健康保持に影響があると認めるときは、当該職員が適宜休息し、又は補食するために必要な時間、勤務しないことを承認することができる。

(妊産婦である女性職員の通勤緩和)

第32条 勤務管理者は、妊産婦である女性職員が請求した場合において、その者が通勤に利用する交通機関の混雑の程度が母体又は胎児の健康保持に影響があると認めるときは、正規の勤務時間の始め又は終わりにおいて、別に定める時間、勤務しないことを承認するものとする。

第10章 就業禁止等

(就業禁止)

第33条 理事長は、法令又は他の規程等の定めに基づき、やむを得ないと認める場合には、職員に業務に就くことを禁止することができる。

(職務専念義務の免除)

第34条 理事長は、法令又は他の規程等の定めに基づき、この規程に定めるもののほか、職務に専念する義務を免除することができる。

第 1 1 章 雑則

(勤務時間の割振り等の規定についての別段の定め)

第 3 5 条 理事長は、業務若しくは勤務条件の特殊性又は地域的若しくは季節的事情により、この規程の規定によると、能率を甚だしく阻害し、又は職員の健康若しくは安全に有害な影響を及ぼす場合には、週休日、勤務時間の割振り、週休日の振替等、休憩時間、休息时间又は代休日の指定について別段の定めをすることができる。

(非常勤職員の勤務時間及び休暇)

第 3 6 条 常時勤務を要しない職員(再任用短時間勤務職員を除く。)の勤務時間及び休暇に関する事項については、その職務の性質等を考慮して別に定める。

附 則

- 1 この規程は、平成 1 3 年 4 月 1 日から施行する。
- 2 勤務管理者は、平成 1 4 年 3 月 3 1 日までの間、小学校就学の始期に達するまでの子を養育し、又は要介護状態にある家族を介護する労基法第 1 3 3 条に規定する特定労働者に該当する女性職員が申し出た場合、当該職員の時間外勤務は、4 週間について 3 6 時間、1 年間にについて 1 5 0 時間を超えない範囲とする。ただし、部課等の業務の遂行を指揮命令する職制上の地位にある女性職員については適用しない。
- 3 センター設立の前日において、農林水産省の国際農林水産業研究センターの職員であった者が引き続きセンターの職員(以下「引継職員」という。)となった場合において、一般職の職員の勤務時間、休暇等に関する法律(平成 6 年法律第 3 3 号)第 6 条第 3 項又は第 7 条の規定に基づき、勤務時間の割振りがなされていた職員については、センターの成立の前日まで過不足なく同法第 6 条第 1 項に掲げる勤務時間を勤務したものとみなす。
- 4 引継職員となった場合におけるセンター設立の年における年次休暇の算定については、第 1 5 条第 1 項第 3 号を準用する。
- 5 引継職員となった場合において、センターの設立の日の前日までに受けていた設立の日以後に係る病気休暇、特別休暇、介護休暇及び育児部分休業に相当する休暇又は休業は、この規程に基づく理事長の承認があったものとみなす。
- 6 この附則に定めのない事項については、理事長が定めるものとする。

附 則(平成 1 3 . 1 2 . 2 8 1 3 国研セ第 1 2 - 7 6 号)

(施行期日)

- 1 この規程は、平成 1 4 年 1 月 1 日から施行する。ただし、第 1 8 条第 2 項及び第 2 0 条第 1 項の改正規定並びに附則第 2 項及び附則第 3 項の規定は、同年 4 月 1 日から施行する。

(経過措置)

- 2 この規程による改正後の独立行政法人国際農林水産業研究センター職員の勤務時間、休憩、休日、休暇等に関する規程(以下「新勤務時間規程」という。)第 1 8 条の規定は、この規程による改正前の独立行政法人国際農林水産業研究センター職員の勤務時間、休憩、休日、休暇等に関する規程(以下「旧勤務時間規程」という。)第 1 8 条第 5 項の規定により介護休暇の承認を受けた職員でこの規程の施行の日(以下「施行日」という。)において当該承認に係る介護を必要とする 1 の継続する状態についての介護休暇の初日から起算して 3 月を経過しているもの(当該介護休暇の初日から起算して 6

月を経過する日までの間にある職員に限る。)についても適用する。この場合において、新勤務時間規程第18条第2項中「連続する6月の期間内」とあるのは、「平成14年4月1日から、当該状態についての介護休暇の初日から起算して6月を経過するまでの間」とする。

- 3 旧勤務時間規程第18条第5項の規定により介護休暇の承認を受け、施行日において当該承認に係る介護を必要とする一の継続する状態についての介護休暇の初日から起算して3月を経過していない職員の介護休暇の期間については、新勤務時間法第18条第2項中「連続する6月の期間内」とあるのは、「当該状態についての介護休暇の初日から起算して6月を経過するまでの間」とする。
- 4 新勤務時間規程第25条(第28条の規定により読み替えて準用する場合を含む。)の規定は、この規程の施行の日以後にする請求から適用し、同日前にした請求による時間外勤務の制限については、なお従前の例による。

附 則(平成14.4.1 14国研セ第4-22号)
(施行期日)

この規程は、平成14年4月1日から施行する。

別表第1 職員の在職期間別年次休暇付与日数（第15条第1項関係）

在 職 期 間	日 数
1月に達するまでの期間	2日
1月を超え2月に達するまでの期間	3日
2月を超え3月に達するまでの期間	5日
3月を超え4月に達するまでの期間	7日
4月を超え5月に達するまでの期間	8日
5月を超え6月に達するまでの期間	10日
6月を超え7月に達するまでの期間	12日
7月を超え8月に達するまでの期間	13日
8月を超え9月に達するまでの期間	15日
9月を超え10月に達するまでの期間	17日
10月を超え11月に達するまでの期間	18日
11月を超え1年未満の期間	20日

別表第2 再任用短時間勤務職員（同一勤務型職員）の在職期間別年次休暇付与日数（第15条第2項第1号関係）

在職期間		1月に達するまでの期間	1月を超え2月に達するまでの期間	2月を超え3月に達するまでの期間	3月を超え4月に達するまでの期間	4月を超え5月に達するまでの期間	5月を超え6月に達するまでの期間	6月を超え7月に達するまでの期間	7月を超え8月に達するまでの期間	8月を超え9月に達するまでの期間	9月を超え10月に達するまでの期間	10月を超え11月に達するまでの期間	11月を超え1年未満の期間
1週間の勤務日の日数	5日	2日	3日	5日	7日	8日	10日	12日	13日	15日	17日	18日	20日
	4日	1日	3日	4日	5日	7日	8日	9日	11日	12日	13日	15日	16日
	3日	1日	2日	3日	4日	5日	6日	7日	8日	9日	10日	11日	12日
	2日	1日	1日	2日	3日	3日	4日	5日	5日	6日	7日	7日	8日

別表第3 再任用短時間勤務職員（非同勤型職員）の在職期間別年次休暇付与日数（第15条第2項第2号関係）

在職期間		1月に達するまでの期間	1月を超え2月に達するまでの期間	2月を超え3月に達するまでの期間	3月を超え4月に達するまでの期間	4月を超え5月に達するまでの期間	5月を超え6月に達するまでの期間	6月を超え7月に達するまでの期間	7月を超え8月に達するまでの期間	8月を超え9月に達するまでの期間	9月を超え10月に達するまでの期間	10月を超え11月に達するまでの期間	11月を超え1年未満の期間
1 週 当 た り の 勤 務 時 間	31時間を超え32時間以下	1日	3日	4日	5日	7日	8日	9日	11日	12日	13日	15日	16日
	30時間を超え31時間以下	1日	3日	4日	5日	6日	8日	9日	10日	12日	13日	14日	16日

16時間	1日	1日	2日	3日	3日	4日	5日	5日	6日	7日	7日	8日	

国家公務員倫理法（平成 11 年法律第 129 号）第 2 条第 7 項の規定に基づ
く本省課長補佐級以上の職員及び指定職以上の職員の範囲の公表

1．本省課長補佐級以上の職員

- （1）独立行政法人国際農林水産業研究センター職員給与規程別表第 1 一般職員俸給表の職務の級 7 級以上の職員
- （2）独立行政法人国際農林水産業研究センター職員給与規程別表第 3 研究職員俸給表の職務の級 4 級以上の職員
- （3）一般職の任期付研究員の採用、給与及び勤務時間の特例に関する法律（平成 9 年法律第 65 号）第 3 条第 1 項第 1 号の規定により任期を定めて採用された職員

2．指定職以上の職員

独立行政法人国際農林水産業研究センター任期付研究員及び特定任期付職員給与規程で定める任期付研究員俸給表の 4 号俸以上の俸給を受ける職員

農林水産業分野の国際共同研究人材データベース構築のためのアンケートのお願い

アンケート実施の背景

技術開発は競争と協調の時代に入っており、バイオテクノロジー等先端的な技術に端的に見られるように、世界各国が研究開発にしのぎを削る一方、最新の知見・情報を持ち寄っての国際共同研究は、効率的な研究に必須となっています。

一方、今日の世界は、人口の増加とこれに伴う食料問題・環境問題等、地球規模で取り組むべき諸問題に直面しており、その解決に向けて技術開発の一層の加速と効率化を図っていくため、対開発途上国も含めて我が国の一層の貢献が求められており、この観点から、国際研究機関に対して、また国際共同研究に対して一層の人的貢献が求められています。

このため、国際共同研究に従事する意志と必要な資質を有する人材を把握し、その方々に対し、適切な国際研究参加の機会を提供させていただくことを企画しました。

独立行政法人国際農林水産業研究センター（JIRCAS）では、以上のような背景に基づき、全国の農林水産業分野の試験研究機関を中心として、国際共同研究に意欲的に取り組んでいただける方々の人材データベースの構築を、農林水産省の委託事業として実施することになりました。

本データベースに登録された方には、次の1～5のような国際共同研究参加機会等に関する情報提供を行う予定です。

1. JIRCAS が実施している国際共同研究プロジェクトへの研究者としての派遣
2. 上記プロジェクトに関する開発途上地域からの招へい研究者の受入れ
3. 国際協力事業団(JICA)が行っている研究協力事業への専門家としての派遣
4. 国際研究機関における研究実施状況
5. 先進国の国際研究協力機関の紹介

本アンケートは、国際共同研究人材の基礎データを得るためのものであり、ご本人の意に反して義務を課されることは一切ありません。また、当センターが、本データベースに登録された方に就職のあっせんを目的とするものではありません。この点をご考慮のうえ、ご回答いただきますよう、よろしくお願い申し上げます。

本アンケートの返送先・問い合わせ先

< 調査票 >

回答方法：空欄に必要事項を記入するか、該当する番号に 印をつけてください。記入欄が不足した場合は、別紙を添付していただいても結構です。

1. 記入年月日 西暦 年 月 日
2. 氏名 (姓) (名)
3. 氏名のローマ字表記 (surname) (given name)
4. 性別 男・女
5. 生年月日 西暦 年 月 日
6. 所属先 機関名
研究部等 研究科等
研究室等
7. 職名 1. 部長 2. 科長・課長 3. 室長 4. 主任研究官 5. 研究員
6. その他 ()
8. 勤務先住所 〒 - :
9. 勤務先電話番号 () -
10. 勤務先 Fax 番号 () -
11. 現住所 〒 - :
電話番号 () - Fax 番号 () -
12. 電子メールアドレス @
13. 取得学位 1. 博士 2. 修士 3. 学士 4. その他 ()

< あなたの研究経験について >

14. あなたの専門に近い専門分野のキーワード番号を専門・分科コード表より 3 つ以内で選んで下さい。

番号 (, ,)

15. あなたの最近の研究テーマをお答え下さい。(記述式)

16. 開発途上地域に関する研究(開発途上地域を対象とした研究のほか、開発途上地域で利活用できそうな研究も含む)の経験がありますか? 1. ある 2. なし

具体的にはどのような研究ですか?(記述式)

17. 外国語の会話能力についてお答えください。また、取得している資格（英検、TOEIC等）があれば、記入してください。）

- 1) 英語 (1.堪能 2.普通 3.日常会話程度 4.不可) 資格()
- 2) フランス語 (1.堪能 2.普通 3.日常会話程度 4.不可) 資格()
- 3) スペイン語 (1.堪能 2.普通 3.日常会話程度 4.不可) 資格()
- 4) 中国語 (1.堪能 2.普通 3.日常会話程度 4.不可) 資格()
- 5) ロシア語 (1.堪能 2.普通 3.日常会話程度 4.不可) 資格()
- 6) ドイツ語 (1.堪能 2.普通 3.日常会話程度 4.不可) 資格()
- 7) アラビア語 (1.堪能 2.普通 3.日常会話程度 4.不可) 資格()
- 8) その他() (1.堪能 2.普通 3.日常会話程度) 資格()

18. 開発途上地域における研究以外の目的で、海外で3ヶ月以上の滞在経験があれば、国名、期間、目的をお答えください。

- 1) 国名： 滞在期間：西暦 年 月 ~ 年 月
目的： _____
- 2) 国名： 滞在期間：西暦 年 月 ~ 年 月
目的： _____

19. CGIAR等海外の国際研究機関(IRRI、FAO等)における勤務経験がありますか？

1. ある 2. ない

[ある]と答えた方は、具体的な機関名及び滞在期間(例:1999年4月-2000年3月)をご記入ください。

<開発途上地域における研究活動について>

20. 開発途上地域へ研究を目的として派遣された経験がありますか？1. はい 2. いいえ
([はい]と答えた方は21以降に進んでください。[いいえ]と答えた方は22以降に進んで下さい。)

21. 研究を目的として何回派遣されたか、お答えください。 ()回

そのうちで主要なものに関して、派遣された開発途上地域の国名、滞在期間、派遣元機関、目的をお答え下さい。

- 1) 国名： 滞在期間：西暦 年 月 ~ 年 月
派遣元機関：1. 農林水産省(国際農林水産業研究センターを含む) 2. JICA
3. 文部科学省 4. その他()

目的： _____

2) 国名：_____ 滞在期間：西暦 _____ 年 _____ 月 ~ _____ 年 _____ 月

派遣元機関：1. 農林水産省（国際農林水産業研究センターを含む） 2. JICA

3. 文部科学省 4. その他（_____）

目的：_____

3) 国名：_____ 滞在期間：西暦 _____ 年 _____ 月 ~ _____ 年 _____ 月

派遣元機関：1. 農林水産省（国際農林水産業研究センターを含む） 2. JICA

3. 文部科学省 4. その他（_____）

目的：_____

(21 の続き)

さらに、開発途上地域へ研究者として派遣された時に主に研究した事柄に近いキーワード番号を専門・分科コード表より選択してください。(複数回答可)

番号(_____, _____, _____)

22. 開発途上地域へ農林水産分野の研究者として派遣依頼があった場合、お受けいただけますか？下の1~4より選択してください？

1.可能 2. 状況による 3. 将来的には可能 4.不可能

1) [可能]、[状況による]、[将来的には可能]と答えた方は、どういう分野であれば協力可能であるのか、キーワード番号を専門・分科コード表より選択してください。

当てはまるものがなければ、記述式でお答えください。(複数回答可)

番号(_____, _____, _____)

その他(_____)

2) [可能]、[状況による]、[将来的には可能]と答えた方は、派遣先、派遣期間についてご希望がありましたらお書き下さい。(複数回答可)

地域：1.アジア 2. 中近東 3. アフリカ 4. 中南米 5. 大洋州 6. 東欧

7.その他(_____) 8. どこでもよい

国名：1.(_____) 2. どこでもよい

期間：(_____)日間 (_____)週間 (_____)ヶ月間 (_____)年間

3) [将来的には可能]と答えた方は、いつ頃から可能であるか、具体的にお書き下さい。

いつ頃から：(_____)年後に (_____)ヶ月後に

<外国人招へい研究員・外国人研修員受け入れについて>

23. 外国人招へい研究員・研修員との共同研究・研修を行った経験がありますか？

1. ある

内容はどのようなものでしたか？以下より選択してください。(複数回答可)

1. 講義 2. 室内実験指導 3. 野外実習指導 4. 施設見学案内 5. 研究指導

6.その他(_____)

2. ない

24. 現在、外国人招へい研究員・研修員受入れ事業への協力が可能ですか?

1. 可能 2. 状況による 3. 将来的には可能 4. 不可能

([可能][状況による]と答えた方は、25 以降に進んでください。[将来的には可能]と答えた方は 27 以降、[不可能]と答えた方は<同意書><ご意見・ご要望>の欄に進んでください。)

25. どのような内容の受け入れが可能か、以下より選択してください。(複数回答可)

1. 講義 2. 室内実験指導 3. 野外実習指導 4. 施設見学案内 5. 研究指導

6. その他()

26. 相手側開発途上地域、受け入れ可能な分野、期間について希望がありましたらお書き下さい。分野については専門・分科コード表より選択してください。

当てはまるものがない場合はその他の欄に記述してください。

地域：1. アジア 2. 中近東 3. アフリカ 4. 中南米 5. 大洋州 6. 東欧

7. その他() 8. どこでもよい

国名：1. () 2. どこでもよい

分野：番号(, ,)

その他()

受入れ可能期間：()日間 ()週間 ()ヶ月間 ()年間

27. [将来的には可能]と答えた方は、いつからどのくらいの期間、可能であるか、具体的にお書き下さい。

いつから：()年後に ()ヶ月後に

期間：()日間 ()週間 ()ヶ月間 ()年間

1 から 27 までの事項について、国際協力関係機関から情報提供の要請があった場合、ご回答いただいた情報を農林水産省や国際農林水産業研究センターが提供することに同意していただけますか？(情報提供については慎重に検討した上で行います。また、提供された情報が原因で義務を課されるようなことは一切ありません。)

1. はい 2. いいえ ([はい]と答えた方は、下に署名(自署)をお願いします。)

年 月 日

当センター、あるいは農林水産業分野での国際共同研究に関して、ご意見、ご要望がありましたらご記入ください。

ご協力ありがとうございました。

[IITA](#)

INTERNATIONAL CENTRE FOR TROPICAL AGRICULTURE (IITA) is a non-profit organization established in 1983, based in Ibadan, Nigeria. It was created by the merger of the International Institute of Tropical Agriculture (IITA) and the International Institute of Agricultural Sciences (IIAS).

IITA is a member of the United Nations World Food Programme (WFP) and the International Agricultural Research Centre (IARC). It is also a member of the International Union of Biological Sciences (IUBS) and the International Union of Pure and Applied Chemistry (IUPAC).

IITA is a member of the International Union of Biological Sciences (IUBS) and the International Union of Pure and Applied Chemistry (IUPAC). It is also a member of the International Union of Pure and Applied Chemistry (IUPAC) and the International Union of Biological Sciences (IUBS).

IITA's Core Values

IITA's core values are: Integrity, Innovation, Inclusion, Impact, and Inspiration. These values guide the organization's operations and interactions with its stakeholders.

IITA's vision is to lead the world in agricultural research and innovation, ensuring sustainable food security for all. Its mission is to provide high-quality research and advisory services to its member countries.

IITA's strategic plan focuses on three main areas: research, capacity development, and policy advice. The organization aims to address the needs of smallholder farmers and improve their livelihoods.

IITA's research programs cover a wide range of crops and livestock species, including maize, rice, wheat, and various types of livestock. The organization also focuses on research related to plant health and animal health.

IITA's capacity development programs aim to build the skills and knowledge of agricultural scientists and extension workers in developing countries. This includes providing training, workshops, and technical assistance.

IITA's policy advice programs provide technical support and guidance to governments and other stakeholders. This includes conducting research, analyzing data, and providing recommendations on agricultural policies and practices.

IITA's financial statements show a strong commitment to transparency and accountability. The organization's income is primarily derived from contributions from its member countries and other donors.

IITA's governance structure includes a Board of Directors, a Council of Governors, and a Secretariat. The Board of Directors is responsible for the overall management and strategic direction of the organization.

IITA's commitment to sustainability is reflected in its focus on research and advisory services that promote environmental conservation and the efficient use of natural resources.

IITA's Impact on the World

IITA has made significant contributions to the world of agriculture, particularly in the areas of research, capacity development, and policy advice.

IITA's research has led to the development of improved crop and livestock varieties that are more resilient to pests and diseases, and better adapted to changing environmental conditions.

IITA's capacity development programs have trained thousands of agricultural scientists and extension workers, improving their skills and knowledge.

IITA's policy advice has helped governments and other stakeholders make informed decisions on agricultural policies and practices.

IITA's commitment to sustainability has inspired other organizations and individuals to focus on environmental conservation and the efficient use of natural resources.

IITA's impact on the world is a testament to its dedication to agricultural research and advisory services for the benefit of all.

IITA's Future Outlook

IITA's future outlook is bright, with a strong commitment to research, capacity development, and policy advice. The organization is well-positioned to address the challenges of a changing world.

IITA's research programs will continue to focus on improving crop and livestock production, while also addressing the needs of smallholder farmers and improving their livelihoods.

IITA's capacity development programs will continue to provide training and technical assistance to agricultural scientists and extension workers in developing countries.

IITA's policy advice programs will continue to provide technical support and guidance to governments and other stakeholders on agricultural policies and practices.

IITA's commitment to sustainability will continue to be a key focus, ensuring that agricultural production is environmentally sound and socially equitable.

IITA's future outlook is bright, with a strong commitment to research, capacity development, and policy advice. The organization is well-positioned to address the challenges of a changing world.

IITA's policy advice programs will continue to provide technical support and guidance to governments and other stakeholders on agricultural policies and practices.

IITA's commitment to sustainability will continue to be a key focus, ensuring that agricultural production is environmentally sound and socially equitable.

IITA's future outlook is bright, with a strong commitment to research, capacity development, and policy advice. The organization is well-positioned to address the challenges of a changing world.

IITA's research programs will continue to focus on improving crop and livestock production, while also addressing the needs of smallholder farmers and improving their livelihoods.

IITA's capacity development programs will continue to provide training and technical assistance to agricultural scientists and extension workers in developing countries.

IITA's policy advice programs will continue to provide technical support and guidance to governments and other stakeholders on agricultural policies and practices.

IITA's commitment to sustainability will continue to be a key focus, ensuring that agricultural production is environmentally sound and socially equitable.

IITA's future outlook is bright, with a strong commitment to research, capacity development, and policy advice. The organization is well-positioned to address the challenges of a changing world.

ILRI・国際食料安全保障センター

ILRIのロゴ

ILRIの設立に関する情報と、国際食料安全保障センターの使命と活動に関する説明。

Who, What, Why, Where, Howに関するILRIの概要と、国際食料安全保障センターの役割と活動に関する説明。

ILRIの歴史、設立、および国際食料安全保障センターの活動に関する詳細な説明。

ILRIの主要な活動、研究プロジェクト、および国際食料安全保障センターの貢献に関する説明。

ILRIの歴史

ILRIの歴史に関する詳細な説明、包括的食料安全保障センターの設立と発展に関する説明。

ILRIの使命

ILRIの使命に関する詳細な説明、包括的食料安全保障センターの目標と活動に関する説明。

ILRIの組織とスタッフ

ILRIの役員

1	代表理事	2003-present	board member
1	副代表理事	1995-2000	board member
1	常務理事	1989-94	board member
1	獣医学部長	2000-present	veterinary parasitologist
1	細胞生物学部長	1998-2000	cell biologist
1	ウイルス学部長	1994-present	virologist
1	病理学部長	1993-97	pathologist
1	免疫学部長	1993-96	molecular geneticist
1	遺伝学部長	1993-95	geneticist
1	分子生物学部長	1992-95, 1999-2000	molecular biologist
1	生化学部長	1993-94	biochemist
1	ウイルス学部長	1990-91	virologist
1	生化学部長	1989-92	biochemist
1	微生物学部長	1988-90	veterinary microbiologist
1	分子生物学部長	1987-90	molecular parasitologist
1	免疫学部長	1986-89	immuno-parasitologist
1	化学微生物学部長	1983-88	chemical microbiologist
1	免疫学部長	1983-86	immuno-parasitologist
1	免疫学部長	1983-85	immuno-parasitologist
1	生化学部長	1983-85	biochemist
1	獣医学部長	1982-83	veterinary parasitologist
1	獣医学部長	1980-82	veterinary parasitologist
1	細胞生物学部長	1976-83	cell culturist
1	細胞生物学部長	1976-83	cell biologist

入札公告

次のとおり一般競争入札に付します。

平成14年3月8日

独立行政法人国際農林水産業研究センター
理事長 井上 隆 弘

1. 競争に付す事項

- (1) 業務名 島嶼環境技術開発棟新築工事設計業務
- (2) 業務内容 詳細は入札説明書による。
- (3) 履行期限 平成14年6月28日
- (4) 入札方法

入札金額は、業務の総価とする。

なお、落札決定に当たっては、入札書に記載された金額に当該金額の100分の5に相当する金額を加算した金額（当該金額に1円未満の端数があるときは、その端数金額を切り捨てた金額とする。）をもって落札価格とするので、入札者は、消費税及び地方消費税に係る課税事業者であるか免税事業者であるかを問わず、見積もった契約金額の105分の100に相当する金額を記載した入札書を提出しなければならない。

2. 競争参加資格

- (1) 独立行政法人国際農林水産業研究センター契約事務取扱規程（以下の項において「契約規程」という。）第8条及び第9条の規定に該当しない者であること。なお、未青年者、被保佐人又は被補助人であって、契約締結のために必要な同意を得ている者は、同条中、特別の事由がある場合に該当する。
- (2) 平成13・14年度農林水産本省又は農林水産技術会議事務局筑波事務所の競争契約の参加資格における「測量・建設コンサルタント等契約」の業種区分のうち「建築士事務所」において、「A」の等級に格付けされている者であること。
- (3) 平成4年度以降に研究施設等の設計業務において実績を有する者であること。

3. 入札手続等

- (1) 担当部局

〒305 - 8686 茨城県つくば市大わし1 - 1

独立行政法人国際農林水産業研究センター
総務部会計課用度係

電話 0298-38-6236、FAX0298-38-6328

- (2) 入札説明書の交付期間、場所及び交付方法

本公告の日から、平成14年3月20日（水）までの土曜日及び日曜日を除く毎日午前9時から午後5時まで、上記(1)の交付場所にて交付する。

なお、次に掲げる場所においても交付する。

〒907 - 0002 沖縄県石垣市字真栄里川良原1091-1

独立行政法人国際農林水産業研究センター沖縄支所
庶務課会計係

電話 09808-2-2306、FAX09808-2-0614

(3) 入札説明会の日時及び場所

平成14年3月22日(金) 11:00

茨城県つくば市大わし1-1

独立行政法人国際農林水産業研究センター
国際研究本館 1階 総務作業室

(4) 入札・開札の日時及び場所

平成14年3月29日(金) 11:00

茨城県つくば市大わし1-1

独立行政法人国際農林水産業研究センター
国際研究本館 1階 総務作業室

4. その他

(1) 契約手続において使用する言語及び通貨 日本語及び日本国通貨

(2) 入札保証金及び契約保証金 免除

(3) 入札者に要求される事項

この一般競争に参加を希望する者は、本入札説明書2.(2)の競争参加資格を有することを証明する「資格確認通知書」又は「資格審査決定通知書」の写し、2.(3)の実績が確認できる書類(例えば契約書及び仕様書の写し等)を添付し、入札説明会までに3.(1)の場所まで提出しなければならない。

開札日の前日までの間において、担当者から上記の書類等に関し説明を求められた場合には、それに応じなければならない。

(4) 入札の無効

本公告に示した競争参加資格のない者、入札条件に違反した者又は入札者に求められる義務を履行しなかった者の提出した入札書は無効とする。

(5) 契約書の作成の要否 要

(6) 落札者の決定方法

本公告に示した競争参加資格等の要件を全て満たし、当該入札者の入札価格が契約規程第29条の規定に基づいて作成された予定価格の制限の範囲内であり、かつ、最低価格をもって有効な入札を行った者を落札者とする。

(7) その他 詳細は入札説明書による。

落札者等の公示

次のとおり落札者について公示します。

平成14年4月1日

独立行政法人
国際農林水産業研究センター
理事長 井上隆弘
(茨城県つくば市大わし1-1)

入札公告（建設工事）

次のとおり一般競争入札に付します。

平成14年 7月17日

独立行政法人国際農林水産業研究センター
理事長 井上 隆弘

1. 工事概要等

- (1) 工事名 島嶼環境技術開発棟建築工事
- (2) 工事場所 沖縄県石垣市字真栄里川良原 1091-1
国際農林水産業研究センター沖縄支所構内
- (3) 工事内容 島嶼環境技術開発棟建築工事
鉄筋コンクリート造 2階建 延べ面積 778.56㎡
屋内ライシメーター 1式
屋外ライシメーター 1式
当該工事は、「建設工事に係る資材の再資源化等に関する法律」に基づく分別解体等及び特定建設資材廃棄物の再資源化等の実施が義務づけられた工事である。
- (4) 工期 平成15年3月10日まで 約8か月

2. 競争参加資格

次に掲げる条件を全て満たしている者であること。

- (1) 独立行政法人国際農林水産業研究センター契約事務取扱規程（以下「契約規程」という）第8条の規定に該当しない者であること。なお、未成年者、被保佐人又は被補助人であって、契約締結のために必要な同意を得ている者は、同条中、特別の理由がある場合に該当する。
- (2) 契約規程第9条の規定に該当しない者であること。
- (3) 平成13・14年度農林水産本省又は農林水産技術会議事務局筑波事務所の競争契約の参加資格における「建設工事契約」の業種区分のうち、「建築一式工事」において、「A」の等級に格付けされている者であること（会社更生法（昭和27年法律第172号）に基づき更生手続開始の申立てがされている者及び民事再生法（平成11年法律第225号）に基づき再生手続開始の申立てがされている者について手続開始の決定後、農林水産本省又は農林水産技術会議事務局筑波事務所が別に定める手続開始に基づく一般競争参加資格の再確認を受けていること。）
- (4) 会社更生法に基づき更生手続開始の申立てをしている者及び民事再生法に基づき再生手続開始の申立てをされている者（上記（3）の再確認を受けた者を除く。）でないこと。
- (5) 平成4年度以降に、元請けとして完成・引渡し完了した鉄筋コンクリート造2階建以上で延べ面積1,000㎡以上の試験研究施設を施工した実績を有すること（共同企業体の構成員としての実績は、出資率が20%以上の場合のものに限る。）
- (6) 次に掲げる基準を満たす主任技術者又は監理技術者を当該工事に専任できること。
 - 1) 1級建築施工管理技士又はこれと同等以上の資格を有する者であること。
 - 2) 平成4年度以降に、上記（5）に掲げる工事を施工した経験を有する者であること。
 - 3) 監理技術者にあつては、監理技術者資格者証を有する者であること。
- (7) 「農林水産本省営繕工事請負契約指名停止等措置要領」に基づく指名停止を受けている期間中でないこと。

- (8) 上記 1 に示した工事に係る設計業務等の受託者又は当該受託者と資本若しくは人事面において一定の関連がある建設業者でないこと。

3.入札手続等

(1)担当部局

〒 305 - 8686 茨城県つくば市大わし1 - 1
独立行政法人国際農林水産業研究センター総務部会計課用度係
TEL 0298-38-6326

(2) 入札説明書の交付期間、場所及び方法

本公告日から平成 14 年 7 月 31 日 (水) までの土曜日、日曜日及び休日を除く毎日午前 9 時から午後 4 時まで上記 (1) において交付する。

(3) 競争参加資格確認申請書 (以下「申請書」という。) 及び競争参加資格確認資料 (以下「資料」という。) の提出方法、場所及び方法

平成 14 年 7 月 18 日 (木) から平成 14 年 7 月 29 日 (月) までの土曜日、日曜日及び休日を除く毎日午前 9 時から午後 4 時まで上記 (1) に持参するか、又は郵送により提出すること。

(4) 入札及び開札の日時、場所並びに方法

平成 14 年 8 月 20 日 (火) 午前 11 時 00 分 国際農林水産業研究センター国際研究本館 1 階総務作業室に持参すること。

4.その他

(1) 契約の手続において使用する言語及び通貨

日本語及び日本国通貨に限る。

(2) 入札保証金及び契約保証金

1) 入札保証金 免除

2) 契約保証金 履行保証保険契約の締結又は公共工事履行保証証券による保証を付することにより、契約保証金を免除する。

(3) 入札の無効

本公告に示した競争参加資格のない者のした入札、申請書又は資料に虚偽の記載を行った者のした入札及び入札に関する条件に違反した入札は無効とする。

(4) 落札者の決定方法

契約規程第 29 条の規定に基づいて作成された予定価格の範囲内で、最低の価格をもって有効な入札を行った入札者を落札者とする。ただし、落札者となるべき者の入札価格によっては、その者により当該契約の内容に適合した履行がなされない恐れがあると認められるとき、又はその者と契約を締結することが公正な取引の秩序を乱すこととなる恐れが著しく不適当であると認められるときは、予定価格の制限の範囲内の価格をもって入札した他の者のうち最低の価格をもって入札した者を落札者とすることがある。

(5) 契約書作成の要否

要

(6) 一般競争参加資格を有していない者の参加

上記 2 (3) に掲げる一般競争参加資格を有していない者も上記 3 (3) により申請書及び資料を提出することができるが、競争に参加するためには、開札の時に、当該資格の認定を受け、かつ、競争参加資格の確認を受けていなければならない。

(7) その他

詳細は入札説明書による。

落札者等の公示

次のとおり落札者について公示します。

平成14年8月28日

独立行政法人
国際農林水産業研究センター
理事長 井上隆弘
(茨城県つくば市大わし1-1)

1. 件名 島嶼環境技術開発棟建築工事
2. 契約方式 一般競争
3. 落札決定日 平成14年8月20日
4. 落札者の氏名 佐藤工業株式会社
及び住所 管財人 梶谷 剛
東京都中央区日本橋本町四丁目12番20号
(登記上の本店 富山市桜木町1番11号)
5. 落札価格 343,350,000円
6. 入札公告日 平成14年7月17日
7. 落札方式 最低価格

入札公告（建設工事）

次のとおり一般競争入札に付します。

平成14年 7月24日

独立行政法人国際農林水産業研究センター
理事長 井上 隆弘

1. 工事概要等

- (1) 工事名 島嶼環境技術開発棟電気設備工事
- (2) 工事場所 沖縄県石垣市字真栄里川良原 1091-1
国際農林水産業研究センター沖縄支所構内
- (3) 工事内容 以下建物等の電気設備工事一式
島嶼環境技術開発棟 鉄筋コンクリート造 2階建 延べ面積 778.56㎡
屋内ライシメーター 1式
屋外ライシメーター 1式
当該工事は、「建設工事に係る資材の再資源化等に関する法律」に基づく分別解体等及び特定建設資材廃棄物の再資源化等の実施が義務づけられた工事である。
- (4) 工期 平成15年3月10日まで 約7か月

2. 競争参加資格

次に掲げる条件を全て満たしている者であること。

- (1) 独立行政法人国際農林水産業研究センター契約事務取扱規程（以下「契約規程」という）第8条の規定に該当しない者であること。なお、未成年者、被保佐人又は被補助人であつて、契約締結のために必要な同意を得ている者は、同条中、特別の理由がある場合に該当する。
- (2) 契約規程第9条の規定に該当しない者であること。
- (3) 平成13・14年度農林水産本省又は農林水産技術会議事務局筑波事務所の競争契約の参加資格における「建設工事契約」の業種区分のうち、「電気工事」において、「A」の等級に格付けされている者であること（会社更生法（昭和27年法律第172号）に基づき更生手続開始の申立てがされている者及び民事再生法（平成11年法律第225号）に基づき再生手続開始の申立てがされている者について手続開始の決定後、農林水産本省又は農林水産技術会議事務局筑波事務所が別に定める手続開始に基づく一般競争参加資格の再確認を受けていること。）
- (4) 会社更生法に基づき更生手続開始の申立てをしている者及び民事再生法に基づき再生手続開始の申立てをされている者（上記（3）の再確認を受けた者を除く。）でないこと。
- (5) 平成4年度以降に、元請けとして完成・引渡し完了した鉄筋コンクリート造2階建以上で延べ面積1,000㎡以上の試験研究施設における電気設備工事を施工した実績を有すること（共同企業体の構成員としての実績は、出資率が20%以上の場合のものに限る。）
- (6) 次に掲げる基準を満たす主任技術者又は監理技術者を当該工事に専任できること。
 - 1) 1級電気工事施工管理技士又はこれと同等以上の資格を有する者であること。
 - 2) 平成4年度以降に、上記（5）に掲げる工事を施工した経験を有する者であること。
 - 3) 監理技術者にあつては、監理技術者資格者証を有する者であること。
- (7) 「農林水産本省営繕工事請負契約指名停止等措置要領」に基づく指名停止を受けている期間中でないこと。

- (8) 上記 1 に示した工事に係る設計業務等の受託者又は当該受託者と資本若しくは人事面において一定の関連がある建設業者でないこと。

3. 入札手続等

(1) 担当部局

〒 305 - 8686 茨城県つくば市大わし1 - 1
独立行政法人国際農林水産業研究センター 総務部会計課用度係
TEL 0298-38-6326

(2) 入札説明書の交付期間、場所及び方法

本公告日から平成 14 年 8 月 7 日 (水) までの土曜日、日曜日及び休日を除く毎日午前 9 時から午後 4 時まで上記 (1) において交付する。

(3) 競争参加資格確認申請書 (以下「申請書」という。) 及び競争参加資格確認資料 (以下「資料」という。) の提出方法、場所及び方法

平成 14 年 7 月 25 日 (木) から平成 14 年 8 月 5 日 (月) までの土曜日、日曜日及び休日を除く毎日午前 9 時から午後 4 時まで上記 (1) に持参するか、又は郵送により提出すること。

(4) 入札及び開札の日時、場所並びに方法

平成 14 年 8 月 27 日 (火) 午前 11 時 00 分 国際農林水産業研究センター国際研究本館 1 階 総務作業室に持参すること。

4. その他

(1) 契約の手続において使用する言語及び通貨

日本語及び日本国通貨に限る。

(2) 入札保証金及び契約保証金

1) 入札保証金 免除

2) 契約保証金 履行保証保険契約の締結又は公共工事履行保証証券による保証を付することにより、契約保証金を免除する。

(3) 入札の無効

本公告に示した競争参加資格のない者のした入札、申請書又は資料に虚偽の記載を行った者のした入札及び入札に関する条件に違反した入札は無効とする。

(4) 落札者の決定方法

契約規程第 29 条の規定に基づいて作成された予定価格の範囲内で、最低の価格をもって有効な入札を行った入札者を落札者とする。ただし、落札者となるべき者の入札価格によっては、その者により当該契約の内容に適合した履行がなされない恐れがあると認められるとき、又はその者と契約を締結することが公正な取引の秩序を乱すこととなる恐れが著しく不適当であると認められるときは、予定価格の制限の範囲内の価格をもって入札した他の者のうち最低の価格をもって入札した者を落札者とする可能性がある。

(5) 契約書作成の要否

要

(6) 一般競争参加資格を有していない者の参加

上記 2 (3) に掲げる一般競争参加資格を有していない者も上記 3 (3) により申請書及び資料を提出することができるが、競争に参加するためには、開札の時に、当該資格の認定を受け、かつ、競争参加資格の確認を受けていなければならない。

(7) その他

詳細は入札説明書による。

落札者等の公示

次のとおり落札者について公示します。

平成14年9月3日

独立行政法人
国際農林水産業研究センター
理事長 井上隆弘
(茨城県つくば市大わし1-1)

1. 件名 島嶼環境技術開発棟電気設備工事
2. 契約方式 随意契約
3. 落札決定日 平成14年8月27日
4. 落札者の氏名 株式会社東電通
及び住所 取締役社長 島津佳夫
東京都港区東新橋二丁目12番7号
5. 落札価格 117,600,000円
6. 入札公告日 平成14年7月24日
7. 落札方式 一般競争入札不調に伴う最低価格入札者との
随意契約

入札公告（建設工事）

次のとおり一般競争入札に付します。

平成14年 8月 7日

独立行政法人国際農林水産業研究センター
理事長 井上 隆弘

1. 工事概要等

- (1) 工事名 島嶼環境技術開発棟機械設備工事
- (2) 工事場所 沖縄県石垣市字真栄里川良原 1091-1
国際農林水産業研究センター沖縄支所構内
- (3) 工事内容 以下建物等の空気調和設備及び給排水 衛生設備工事一式
島嶼環境技術開発棟 鉄筋コンクリート造 2階建 延べ面積 778.56㎡
屋内ライシメーター 1式
屋外ライシメーター 1式
当該工事は、「建設工事に係る資材の再資源化等に関する法律」に基づく分別解体等及び特定建設資材廃棄物の再資源化等の実施が義務づけられた工事である。
- (4) 工期 平成15年3月10日まで 約7か月

2. 競争参加資格

次に掲げる条件を全て満たしている者であること。

- (1) 独立行政法人国際農林水産業研究センター契約事務取扱規程（以下「契約規程」という）第8条の規定に該当しない者であること。なお、未成年者、被保佐人又は被補助人であって、契約締結のために必要な同意を得ている者は、同条中、特別の理由がある場合に該当する。
- (2) 契約規程第9条の規定に該当しない者であること。
- (3) 平成13・14年度農林水産本省又は農林水産技術会議事務局筑波事務所の競争契約の参加資格における「建設工事契約」の業種区分のうち、「管工事」において、「A」の等級に格付けされている者であること（会社更生法（昭和27年法律第172号）に基づき更生手続開始の申立てがされている者及び民事再生法（平成11年法律第225号）に基づき再生手続開始の申立てがされている者について手続開始の決定後、農林水産本省又は農林水産技術会議事務局筑波事務所が別に定める手続開始に基づく一般競争参加資格の再確認を受けていること。）
- (4) 会社更生法に基づき更生手続開始の申立てをしている者及び民事再生法に基づき再生手続開始の申立てをされている者（上記（3）の再確認を受けた者を除く。）でないこと。
- (5) 平成4年度以降に、元請けとして完成・引渡しが完了した鉄筋コンクリート造2階建以上で延べ面積1,000㎡以上の試験研究施設における空気調和設備及び給排水 衛生設備工事を施工した実績を有すること（共同企業体の構成員としての実績は、出資率が20%以上の場合のものに限る。）
- (6) 次に掲げる基準を満たす主任技術者又は監理技術者を当該工事に専任できること。
 - 1) 1級管工事施工管理技士又はこれと同等以上の資格を有する者であること。
 - 2) 平成4年度以降に、上記（5）に掲げる工事を施工した経験を有する者であること。
 - 3) 監理技術者にあつては、監理技術者資格者証を有する者であること。
- (7) 「農林水産本省営繕工事請負契約指名停止等措置要領」に基づく指名停止を受けている期間中でないこと。

- (8) 上記 1 に示した工事に係る設計業務等の受託者又は当該受託者と資本若しくは人事面において一定の関連がある建設業者でないこと。

(2) 入札説明書の交付期間、場所及び方法

本公告日から平成 14 年 8 月 21 日 (水) までの土曜日、日曜日及び休日を除く毎日午前 9 時から午後 4 時まで上記 (1) において交付する。

(3) 競争参加資格確認申請書 (以下「申請書」という。) 及び競争参加資格確認資料 (以下「資料」という。) の提出方法、場所及び方法

平成 14 年 8 月 8 日 (木) から平成 14 年 8 月 19 日 (月) までの土曜日、日曜日及び休日を除く毎日午前 9 時から午後 4 時まで上記 (1) に持参するか、又は郵送により提出すること。

(4) 入札及び開札の日時、場所並びに方法

平成 14 年 9 月 10 日 (火) 午前 11 時 00 分 国際農林水産業研究センター国際研究本館 1 階総務作業室に持参すること。

4.その他

(1) 契約の手続において使用する言語及び通貨

日本語及び日本国通貨に限る。

(2) 入札保証金及び契約保証金

1) 入札保証金 免除

2) 契約保証金 履行保証保険契約の締結又は公共工事履行保証証券による保証を付することにより、契約保証金を免除する。

(3) 入札の無効

本公告に示した競争参加資格のない者のした入札、申請書又は資料に虚偽の記載を行った者のした入札及び入札に関する条件に違反した入札は無効とする。

(4) 落札者の決定方法

契約規程第 29 条の規定に基づいて作成された予定価格の範囲内で、最低の価格をもって有効な入札を行った入札者を落札者とする。ただし、落札者となるべき者の入札価格によっては、その者により当該契約の内容に適合した履行がなされない恐れがあると認められるとき、又はその者と契約を締結することが公正な取引の秩序を乱すこととなる恐れが著しく不適当であると認められるときは、予定価格の制限の範囲内の価格をもって入札した他の者のうち最低の価格をもって入札した者を落札者とする可能性がある。

(5) 契約書作成の要否

要

(6) 一般競争参加資格を有していない者の参加

上記 2 (3) に掲げる一般競争参加資格を有していない者も上記 3 (3) により申請書及び資料を提出することができるが、競争に参加するためには、開札の時に、当該資格の認定を受け、かつ、競争参加資格の確認を受けていなければならない。

(7) その他

詳細は入札説明書による。

落札者等の公示

次のとおり落札者について公示します。

平成14年9月18日

独立行政法人
国際農林水産業研究センター
理事長 井上 隆 弘
(茨城県つくば市大わし1-1)

1. 件 名 島嶼環境技術開発棟機械設備工事
2. 契約方式 随意契約
3. 落札決定日 平成14年9月10日
4. 落札者の氏名 株式会社朝日工業社
及び住所 代表取締役 高 須 康 有
東京都港区浜松町1丁目25番7号
5. 落札価格 304,500,000円
6. 入札公告日 平成14年8月7日
7. 落札方式 一般競争入札不調に伴う最低価格入札者との
随意契約

入 札 公 告

次のとおり一般競争入札に付します。

平成14年 9 月 6 日

独立行政法人国際農林水産業研究センター
理 事 長 井 上 隆 弘

1 調達内容

- (1) 燃 料 灯油 J I S 1号
- (2) 予定数量 下半期 160KL
- (3) 納入期間 平成14年10月 1 日～平成15年 3 月31日
- (4) 納入場所
 - 〒305-8686 茨城県つくば市大わし1 - 1
 - 独立行政法人国際農林水産業研究センター 隔離温室
 - ” ” 育苗温室
 - ” ” 熱帯作物棟
 - ” ” 海外生物工学実験棟
- (5) 納入方法 独立行政法人国際農林水産業研究センターが指定した日時に、指定した数量を石油元売業者が給油口に封印したタンクローリー車等で納品すること。
その他詳細は別紙仕様書による
- (6) 入札方法 上記1(1)の物品1L当たりの単価を記入すること。また、落札決定に当たっては、入札書に記載された金額に当該金額の5パーセントに相当する額を加算した金額(当該金額に1円未満の端数があるときは、その端数金額を切り捨てるものとする。)をもって落札価格とするので、入札者は、消費税に係る課税事業者であるか免税事業者であるかを問わず、見積った契約金額の105分の100に相当する金額を入札書に記載すること。

2 競争参加資格

- (1) 平成13・14・15年度の一般競争(指名競争)参加資格(全省庁統一資格)の「燃料類」において「B」、「C」又は「D」の等級に格付けされている者であること。

(2) 1 (1) の物品を独立行政法人国際農林水産業研究センターが指定する日時、場所に確実に納品できる者であること。

3 入札書の提出場所等

(1) 入札説明書の交付場所及び問い合わせ先
〒305-8686 茨城県つくば市大わし 1 - 1
独立行政法人 国際農林水産業研究センター
総務部会計課用度係
TEL.0298-38-6326 FAX.0298-38-6328

(2) 入札説明書の交付方法
本公告の日より 3 (1) の交付場所にて随時無料交付する。

(3) 入札日時及び場所
平成 1 4 年 9 月 3 0 日 (月) 1 1 : 0 0 ~
国際研究本館 1 F 総務作業室

4 その他

(1) 契約手続きにおいて使用する言語及び通貨
日本語及び日本国通貨に限る。

(2) 入札者に求められている義務
この一般競争に参加を希望するものは、封印した入札書を入札日時に入札場所まで持参しなければならない。

(3) 入札保証金及び契約保証金
免除

(4) 入札の無効
本公告に示した競争参加資格のない者がした入札及び入札に関する条件に違反した入札。

(5) 契約書作成の要否
要

(6) 落札者の決定方法
独立行政法人国際農林水産業研究センター契約事務取扱規程第 2 9 条の規定に基づいて作成された予定価格の制限の範囲内で、かつ、最低価格をもって有効な入札を行った者を落札者とする。

(7) 支払条件
灯油の代金は、毎月 1 回支払う。供給者は灯油納入の翌月に前月納入した数量に契約単価を乗じて得た額を請求するものとする。

(8) 入札説明会
本入札に係る入札説明会は行わない。

落札者等の公示

次のとおり落札者について公示します。

平成14年10月1日

独立行政法人
国際農林水産業研究センター
理事長 井上隆弘
(茨城県つくば市大わし1-1)

1. 件名 灯油(下半期)単価契約
2. 契約方式 一般競争
3. 落札決定日 平成14年9月30日
4. 落札者の氏名 株式会社稲葉燃料
及び住所 代表取締役 稲葉 茂
茨城県結城郡石下町大字若宮戸字井戸田664番地
5. 落札価格 33.3375円/L
6. 入札公告日 平成14年9月6日
7. 落札方式 最低価格

入札公告

次のとおり一般競争入札に付します。

平成14年9月26日

独立行政法人国際農林水産業研究センター
理事長 井上隆弘

1 調達内容

- (1) 購入件名及び数量 化学発光検出装置 1台
- (2) 購入件名の規格等 米国アルファイノテック社製
イメージアナライザー FluorChem IS-8800-5SU
詳細は仕様書による
- (3) 納入期限 平成14年11月29日
- (4) 納入場所 独立行政法人国際農林水産業研究センター
海外生物学実験棟
- (5) 入札方法 落札決定に当たっては、入札書に記載された金額に当該金額の5%に相当する額を加算した金額(当該金額に1円未満の端数があるときは、その端数金額を切り捨てるものとする。)をもって落札価格とするので、入札者は、消費税及び地方消費税に係る課税事業者であるか免税事業者であるかを問わず、見積った契約金額の105分の100に相当する金額を入札書に記載すること。

2 競争参加資格

- (1) 平成13・14・15年度の一般競争(指名競争)参加資格(全省庁統一資格)における「物品販売」の業種区分「精密機器類」において「A」、「B」又は「C」の等級に格付けされている者であること。
- (2) 当該装置を確実に納品できる代理店等であり、販売物品に係る迅速なアフターサービス・メンテナンスの体制が整備されていることを証明した者であること。

3 入札書の提出場所等

- (1) 入札説明書の交付場所及び問い合わせ先
〒305-8686 茨城県つくば市大わし1 - 1
独立行政法人 国際農林水産業研究センター
総務部会計課用度係
TEL.0298-38-6326 FAX.0298-38-6328
- (2) 入札説明書の交付方法
本公告の日より3 (1) の交付場所にて随時無料交付する。
- (3) 入札及び開札の日時及び場所
平成14年10月18日(金) 11:00 ~
国際研究本館 1F 総務作業室

4 その他

- (1) 契約手続きにおいて使用する言語及び通貨
日本語及び日本国通貨に限る。
- (2) 入札者に求められている義務
この一般競争に参加を希望するものは、封印した入札書を入札日時に入札場所まで持参しなければならない。
- (3) 入札保証金及び契約保証金
免除
- (4) 入札の無効
本公告に示した競争参加資格のない者がした入札及び入札に関する条件に違反した入札。
- (5) 契約書作成の要否
要
- (6) 落札者の決定方法
独立行政法人国際農林水産業研究センター契約事務取扱規程第29条の規定に基づいて作成された予定価格の制限の範囲内で、かつ、最低価格をもって有効な入札を行った者を落札者とする。
- (7) その他
詳細は入札説明書による。

希望する人材（畜産草地部）

1. 予定される活動

近い将来では、現在進行中のJIRCASの天水農業プロジェクトでの「耐乾性飼料資源を利用した乳用牛飼養技術の開発」の中で、家畜の生産性、飼料の栄養評価、家畜の栄養代謝、飼養管理、酪農生産などの長期在外研究を推進。

将来的には家畜生産グループの中核的役割を果たし、中国、アフリカ等の小雨量地域での家畜飼養、家畜の排出するメタン等の低減化による温暖化防止等の研究を担う。

2. 必須な、あるいは好ましい経験、資質

必須

- 牛栄養学関連の分野での博士課程レベルの教育を受けていること。
- 牛の代謝機能、飼料評価、ガス測定、飼養標準についての研究活動。
- 日本語に堪能であること。
- 英語の読み書き及び会話ができる。
- 現在所属している組織から JIRCAS への異動に同意を得られること。

好ましい

- 乳牛のみならず、肉牛や在来反芻家畜の生理的特異性を解明しうる素養。
- 技術普及研究の経験。
- 飼料作物学関連の研究活動。
- スペイン語、フランス語、ドイツ語等の主要言語の経験。
- 海外での勉学、研究の経験。
- 外国人パートナーとの連携研究に積極的であること。
- チームワークでの活動に熱心である。
- 開発途上国の農業・環境問題への関心。

代表委員による総合評価所見(平成13年度)

代表委員： 稲垣 春郎

年度計画の達成状況に関する総合所見

(1) 業務運営の効率化に関する目標を達成するためにとるべき措置について

法人化の初年目にあつて、所内のおよび対外的な各種規定・協約等必要な体制が整備され、機関運営が順調に進められたことは高く評価される。さらに研究者のインセンティブを高め、JIRCASの国際性が発揮されるような効率的な機関運営に努められたい。

(2) 試験及び研究並びに調査について

国内外における広範・多岐にわたる試験研究が活発に実施され、大部分の課題で計画が達成されたことは高く評価される。一方、海外における一部の共同研究で見られた予期せぬ事態や人事配置の困難性等による研究の遅れについては、その問題点を明らかにし、計画変更も含めた臨機な対応が望まれる。また、発展途上国との共同研究の課題選定に当たっては、これら諸国への研究支援がJIRCASの役割であり、共同研究の基本理念であるとの認識に立って、課題の重点化に努める必要がある。

(3) 専門研究分野を活かした社会貢献について

JIRCASは持てる能力を最大限に活用して、国際シンポジウム、研修、講習等、多様な形での社会的・国際的貢献を果たしている。地域共同研究の理念や手法を明らかにしつつ、さらに国際貢献を進めていくためには、移転すべき研究成果・技術のニーズ把握を的確かつタイムリーに行うことの出来る研究マネジメントが重要である。

(4) 成果の公表、普及の促進について

研究成果等の公表は十分に行われている。公表形態については、JIRCASとしての性格付け・位置付けを明らかにし、機関誌およびメディアの多様化と共に権威付けを図ることが望まれる。研究成果等情報の伝達に当たっては、海外志向を強化し、JIRCASのみならず国内他機関の成果も積極的に取り上げてゆくことが重要である。

(5) その他農林水産省令で定める業務運営に関する事項について

諸規定・規則等がよく整備され、適正に業務運営されている。

(6) 全体を通して

限られた人的・経済的資源の中で、JIRCAS としての目標達成のために多大な努力がはらわれたことを高く評価する。技術開発研究と基礎科学研究が共存する JIRCAS の機関運営上の問題については、他機関との関連を含めて、今後十分検討していくべきであろう。同時に、JIRCAS に期待される役割を果たしていくための人材確保については、JIRCAS 独自の人材育成と他機関との協力関係のあり方について、長期的な検討と対応が必要である。JIRCAS としては特に、発展途上国における研究ニーズの的確な把握とプロジェクトの効果的な実施を可能にする研究マネジメントの重要性が強調されるべきである。

その他ご意見（次年度に向けての意見も含む。）

JIRCAS がさらに国際貢献を進めていくためには、国内各機関との安定的な支持・協力関係ならびに海外関連機関との日常的な意思疎通が極めて重要である。同時に、海外研究と国内研究のマッチング、発展途上国に役立つ研究成果・技術等の情報発信機能の強化が肝要である。

次年度の運営評価会議においては、資料や会議準備に費やす研究職員の労力と時間を最小限にする工夫をしつつ、資料等の更なる合理化と会議の効率的運営に努められたい。また、JIRCAS が実施する総合プロジェクトについては、個別プロジェクトとはちがった評価方法を案出するべきではないか。さらに、「中期目標」と「中期計画」の記述には工夫が必要で、「中期目標」は研究戦略を中心に記述するべきであろう。評価表 1 - 1（業務運営の効率化に関する目標を達成するためにとるべき措置、専門研究分野を活かした社会貢献、成果の公表、普及の促進及びその他農林水産省令で定める業務運営に関する事項）については、研究推進上の問題点にもう少しスペースをさき、評価表 1 - 2（試験及び研究並びに調査）では、研究の進捗度を評価する観点から、研究期間、年次計画、人員、予算等を加えたほうがよい。

Call for Posters

The 9th JIRCAS International Symposium will be hosted under the title of “Value–Addition to Agricultural Products—towards increase of farmers’ income and vitalization of rural economy”. Posters that contribute to information exchange related to the symposium subject will be welcomed for Poster Session.

1. Panel: One panel is available per subject. The size of each panel is 100 cm wide and 210 cm high. The official language is English.
2. Period for display: Poster panels will be displayed during the duration of the Symposium from October 16 to 17. Posters should be mounted by noon on October 16 in the designated location, and removed after the poster session by the presenters. Presenters are expected to be by their posters during the poster session (12:30-14:30, October 17).
3. Presentation site: Epochal Tsukuba (3F Foyer)
4. Abstracts: All participants who will present a poster are required to submit an abstract. These will be the basis for the abstract book which will be distributed at the beginning of the symposium. An example of the required format is shown below.

(Abstract Format)

- Abstracts must be in English
- Type on A4 (210 x 297 mm) paper within an area of 160 mm (width) and 240 mm (length), centered on the page, using Time New Roman Letters (12 point font except for title and names) with 1 line-spacing.
- Give the title first (14 pt. bold) followed by the names (14 pt.) and affiliations of the authors (12 pt.). Underline the presenter.
- Give full postal addresses of all authors with numeric superscripts if needed.
- Leave one line blank, indent 4 spaces, and begin first paragraph.
- Abstracts should be approximately 200 words.
- Give the name and e-mail address of the presenter for contacts at the bottom of paper.
- Save abstracts in MS-Word or DOS text format.

Please submit abstracts through e-mail as attached files, or on 3.5 inch diskettes to:

Yutaka Mori
Secretariat of the Organizing Committee
for the 9th JIRCAS International Symposium
Japan International Research Center
for Agricultural Sciences
Tsukuba, Ibaraki 305-8686, Japan
E-mail: sympo9@ml.affrc.go.jp

5. Deadline: The deadline for receipt of abstracts is August 15, 2002. In case you do not receive a confirmation e-mail, please contact the office by telephone or ordinary mail

9th JIRCAS International Symposium
“Value-Addition to Agricultural Products”
-Towards increase of farmers’ income and vitalization of rural economy-

REGISTRATION FORM

Please type or print

Name :

(Prof./ Dr. / Mr. / Ms.) First name Middle initial Family name

Affiliation :

Address :

Phone:

Fax:

E-mail:

Please check off the sessions you will participate in:

Keynote address	(free of charge)	October 16	morning
Sessions 1-2	(free of charge)	October 16	afternoon
Sessions 3-4	(free of charge)	October 17	full day
Reception	(5,000yen)	October 16	evening

Note: The Symposium Reception will be held from 6:00 to 8:00 p.m. Wednesday, October 16 , in the restaurant Espoir in Epochal Tsukuba. The fee for participation in the reception is ¥5,000, and may be paid at the door

Deadline for receipt of registration : September 30, 2002.

Please submit this form by fax or E-mail to:

Yutaka Mori

Secretariat of the Organizing Committee for the 9th JIRCAS International Symposium

9th JIRCAS International Symposium

Value-Addition to Agricultural Products

-Towards increase of farmers' income and vitalization of rural economy-

Background and Objectives

The current world population is about 6 billion and it is anticipated that the population will reach 7.5 billion and 8.0 billion by years 2020 and 2030, respectively, according to United Nations' World Population Prospects. Global food production should be increased so as to meet the demands of the rapidly increasing population, with the limited water resources and arable land. Therefore, the roles of rural areas where agriculture and food industry greatly contribute to the production of agricultural produce and products will be more important, from the point of food security. Agriculture is still the largest sector of rural economies, and a majority of the rural population is engaged in agriculture, in developing countries. The incomes of rural people are much lower than the urban ones, and the population has been shifting from the rural to the urban areas seeking better incomes and convenient daily-life. These trends will lead to the reduction of rural potential as a base for food supply and the increase of the poorest in slums in big cities. On the other hand, it is difficult for small-scale rural food companies to compete with big companies of the urban and developed countries. In considering these facts, we have to make efforts to give rural people and enterprises tools to increase their income through value-adding to the commodities, in order that they may stay in the rural areas and continue to be engaged in agriculture and food production.

Changes in urban lifestyle as a result of the increased income and the increasing number of working women have resulted in increased consumers' demand for a more diversified diet, for processed and convenience foods and for animal products. When people overcome hunger, they become concerned about the quality and safety of what they eat. For example, they want to avoid foods with contaminants such as pathogens, mycotoxins and pesticides, and prefer foods with physiological functions such as anti-carcinogenicity and anti-hypertension. It is important for rural farmers and enterprises to market products that meet the demands of urban consumers.

We dealt with postharvest losses of grains in the 5th JIRCAS Symposium in 1998, and then started a research project to reduce postharvest losses of grains in Southeast Asia. It is worthwhile to review the demands of urban consumers, the role of rural food industry and the related research activities in developing countries. For this purpose, we will invite distinguished experts from Japan and overseas, to discuss problems associated with ensuring high quality/safety of, and adding value to agricultural produce and products, and explore directions for research on these topics in developing countries.

9th JIRCAS International Symposium

Value-Addition to Agricultural Products

-Towards increase of farmers•f income and vitalization of rural economy-

Program

Day 1 (Wednesday, October 16)	
Opening Session (9:30-10:00)	Opening address and welcome remarks
Keynote addresses (10:00-11:00)	1. Status of postharvest development and the potential future contribution of value addition to rural economy (Geoffrey Mrema, FAO)
	2. Linking farmers to markets - PhAction Initiative (Guy Poulter, Chair of PhAction, NRI, UK)
Session 1 (11:15-15:20)	Current status of rural economy and measures for increasing farmers•f income and vitalization of rural economy
	1. China (Li Suoping, CAAS, China) 2. The Philippines (Nerlita M.Manalili, SEARCA, The Philippines) 3. Vietnam (Le Van To, Post Harvest Technology Center, Vietnam) 4. Indonesia (Made S. Mahendra, UNUD, Indonesia) 5. South Asia (Andrew Hall, CPHP, India) 6. Latin America (Bernard Ospina, GLAYUCA, Colombia) 7. Africa (Shaun Ferris, IITA, Uganda)
Session 2 (15:35-17:55)	System for ensuring high quality and safety
	1. Codex standards and food safety (Yukiko Yamada, NFRI, Japan) 2. Systems for ensuring production quality and safety for small rural agro-enterprises-the way forward (Linda Nicolaidis, NRI, UK) 3. Grain Quality-storage to market (Joseph Rickman, IRRI, The Philippines) 4. Safety of feed and animal products (Andrew Speedy, FAO, Italy) 5. Extension of fish pre-rigor state by enhancing mitochondrial ATP synthesis (Shugo Watabe, Univ.Tokyo, Japan)
Day 2 (Thursday, October 17)	
	Research on value-addition and novel utilization

<p>Session 3 (9:00-12:30)</p>	<ol style="list-style-type: none"> 1. Application of value adding technologies in Thailand (Warunee Varanyanond, IFRPD-KU, Thailand) 2. Adding value of milk and milk products (Jean-Paul Ramet, Ensaia, France) 3. Present status and problems of traditional fish products in Southeast Asia (Tan Sen Min, SEAFDEC, Singapore) 4. Development of intermediate foodstuff from freshwater fish in China (Wang Xi Chang, SFU, China) 5. Inventory of indigenous plants and minor crops in Thailand based on bioactivities (Kazuhiko Nakahara, JIRCAS, Japan) 6. Functionalities of traditional foods in China (Li Lite, CAU, China) 7. Functionalities of foods and their utilization in Japan (Makoto Shimidzu, Univ.Tokyo, Japan)
<p>Poster Session (12:30-14:30)</p>	
<p>Session 4 (15:00-16:30)</p>	<p>General Discussion</p> <ol style="list-style-type: none"> 1. What needs to be done to make postharvest research and development serve the needs of the poor farmers in their efforts to find markets for their products? (Chair: Geoffrey Mrema, FAO) 2. Changing focus of postharvest research - from postharvest losses towards value- addition - --re-evaluation of indigenous products and traditional foods(Chair: Toru Hayashi, JIRCAS)
<p>Closing Address (16:30-16:45)</p>

環境物品等の調達を推進等を図るための方針

独立行政法人

国際農林水産業研究センター

国等による環境物品等の調達の推進等に関する法律（平成12年法律第100号。以下「法」という。）第7条第1項の規定に基づき、平成14年度における環境物品等の調達の推進を図るための方針（以下「調達方針」という。）を定めたので、同条3項の規定に基づき、公表する。

特定調達品等の平成14年度における調達の目標

平成14年度における個別の特定調達物品等の調達目標は、以下のとおりとする。

なお、環境物品等の調達の推進に関する基本方針（平成13年2月2日閣議決定）に規定された判断の基準は、あくまでも調達の推進に当たっての一つの目安を示すものであるため、環境物品等の調達に当たっては、できる限り環境への負荷の少ない物品等の調達に努めることとする。

1 紙 類

情報用紙 （コピー用紙，フォーム用紙）	調達を実施する場合は、インクジェット方式のプリンター用紙、カラー複写機用紙及びフォーム用紙を除き、調達目標は70%とする。
印刷用紙	調達を実施する場合は、ポスターやパンフレット用の写真印刷を主とする用紙及び色上質紙を除き、調達目標は70%とする。
衛生用紙（トイレトペーパー）	調達を実施する場合は、調達目標は100%とする。

2 納入印刷物

ポスター及びパンフレット類の主として写真印刷となるものを除く納入印刷物であって、その納入印刷物の一部に写真印刷が入っても、そのほとんどが判断の基準を満足するものを調達するものとし、その納入印刷物の調達を実施する場合は、調達目標は70%とする。

3 文具類

シャープペンシル シャープペンシル替芯 ボールペン マーキングペン	調達を実施する場合は、調達目標は90%とする。 なお、鉛筆、ブックスタンド、カードケース、ゴミ箱及び名札（机上用）については、間伐材などの木材を使用した製品を優先的に選択する。
--	---

鉛筆
スタンプ台
朱肉
印章セット
定規
トレー
消しゴム
ステープラー
連射式クリップ
事務用修正具（テープ）
事務用修正具（液状）
クラフトテープ
ブックスタンド
はさみ
マグネット（玉）
マグネット（バー）
テープカッター
パンチ
モルトケース
鉛筆削
OAクリーナー（ウェットタイプ）
OAクリーナー（液タイプ）
レターケース
マウスパッド
カッターナイフ
OHPフィルム
絵の具
墨汁
のり（液状）
のり（澱粉のり）
のり（固形）
のり（テープ）
ファイル
バインダー
カードケース
チャック付ケース
事務用封筒（紙製）
けい紙・起案用紙
ノート
インデックス

付箋紙 ゴミ箱 リサイクルボックス 名札（机上用）	
------------------------------------	--

4 機器類

いす 机 棚 収納用什器（棚以外ローパーティション） 掲示板 黒板 ホワイトボード	調達を実施する場合は、調達目標は30%とする。 なお、間伐材などの木材を使用した製品を優先的に選択する。
---	---

5 OA機器

コピー機 電子計算機 プリンタ及びプリンタ・ファクシミリ兼用機 ファクシミリ スキャナ 磁気ディスク装置	調達を実施する場合（前年度以前からリースやレンタルの契約を締結し、平成14年度においても継続して使用する機種を除く。）は、調達目標は50%とする。
---	---

6 家電製品

電気冷蔵庫（冷蔵庫、冷凍庫、冷凍冷蔵庫） エアコンディショナー テレビジョン受信機 ビデオテープレコーダー	調達を実施する場合（前年度以前からリースやレンタルの契約を締結し、平成14年度においても継続して使用する機種を除く。）は、調達目標は100%とする。
--	--

7 照 明

蛍光灯照明器具 蛍光管	調達を実施する場合（器具の形状により、不可能な場合を除く。）は、調達目標は100%とする。
----------------	---

8 自動車（普通自動車、小型自動車及び軽自動車とし、二輪車及び重量車を除く。）

低公害車	調達の予定はない。
低公害車以外の自動車	調達の予定はない。

9 制服・作業服

調達を実施する場合は、調達目標は50%とする。

10 インテリア・寝装

カーテン	調達を実施する場合は、調達目標は90%とする。
カーペット（織じゅうたん、ニードルパンチカーペット） 毛布	調達の予定はない。

11 作業用手袋

調達を実施する場合（防蜂手袋及び防振手袋を除く。）は、調達目標は40%とする。

12 設 備

太陽光発電システム 太陽熱利用システム 燃料電池	調達の予定はない。
--------------------------------	-----------

13 公共工事

公共工事の中で、基本方針に位置付けられた資材、建設機械を使用する場合は、原則として、判断の基準を満足するものを使用するものとする。

1.4 役 務 （省エネ診断役務）

調達の手定はない。

特定調達物品等以外の平成14年度に調達を推進する環境物品等及びその調達の目標

- 1 環境物品等の選択に当たっては、エコマークの認定を受けている製品またはこれと同等のものを調達するように努める。
- 2 O A機器、家電製品の調達に際しては、より消費電力が小さく、かつ再生材を多く使用しているものを選択する。

その他環境物品等の調達推進に関する事項

- 1 この調達方針は独立行政法人国際農林水産業研究センター沖縄支所も対象とする。
- 2 調達の実績は、各品目毎に取りまとめ、国際農林水産業研究センターのホームページで公表する。
- 3 調達する品目に応じて、エコマーク等の既存の情報を活用することにより、判断基準を満たすことにとどまらず、できる限り環境負荷の少ない物品の調達に努める。
- 4 本調達方針に基づく調達担当窓口は、総務部会計課用度係とする。

独立行政法人国際農林水産業研究センター役員退職手当規程

13国研セ第4 - 24号

平成13年4月2日

(趣旨)

第1条 独立行政法人国際農林水産業研究センター（以下「センター」という。）の常勤の役員（以下「役員」という。）の退職手当の支給に関する事項は、この規程に定めるところによる。

(退職手当の支給)

第2条 退職手当は、役員が退職した場合に、その者（死亡による退職の場合には、その遺族）に支給する。ただし、役員が独立行政法人通則法（平成11年法律第103号）第23条の規定により解任された場合（同条第1項及び第2項第1号に該当し解任された場合を除く。）は、当該役員には退職手当は支給しない。

(支給額)

第3条 退職手当の額は、その者の退職した日における俸給月額に、在職期間1月につき100分の28の割合（以下「支給割合」という。）を乗じて得た額とする。ただし、役員が任期満了の日以前又はその翌日に役職を異にする役員に任命され、引き続き在職した後退職した場合の退職手当の額は、それぞれ退職した日における当該異なる役職ごとの俸給月額に、当該異なる役職ごとの在職期間（以下「役職別期間」という。）1月につき支給割合を乗じて得たそれぞれの額の合計額とする。

2 前項の規定による退職手当の額は、その者の職務実績に応じ、これを増額し、又は減額することができる。

(在職期間の計算)

第4条 在職期間及び役職別期間の月数の計算については、任命された日から起算して、暦に従って計算するものとする。この場合において、1月に満たない端数（以下「端数」という。）を生じたときは、これを1月とするものとする。

2 前条第1項ただし書に規定する場合において、各役職別期間の月数の合計が、同一の役職に在職したものとみなした場合に前項の規定により得られる在職期間の月数を超えるときは、同項の規定により1月とした端数の少ない役職別期間の月数から当該超える月数に達するまで順次1月を減ずるものとし、この場合において端数が等しいときは、後の役職別期間の月数から同様に1月を減ずるものとする。

(退職手当の支給制限)

第5条 役員が任期満了となり退職する場合において、その者がその日の翌日に再び同一の役職の役員に任命されたときは、その退職については、退職手当を支給しない。役員が任期満了の日以前又はその翌日に役職を異にする役員に任命されたときも、同様とする。

(遺族の範囲及び順位)

第6条 第2条に規定する遺族の範囲及びこれらの者が退職手当を受ける順位については、国家公務員退職手当法(昭和28年法律第182号)第11条の規定を準用する。この場合において、同条第1項中「職員」とあるのは「役員」と読み替えるものとする。

(遺族からの排除)

第7条 遺族からの排除については、国家公務員退職手当法第11条の2の規定を準用する。この場合において、同条中「職員」とあるのは「役員」と読み替えるものとする。

(起訴中に退職した場合等の退職手当の取扱い)

第8条 役員が刑事事件に関し起訴(当該起訴に係る犯罪について禁錮以上の刑が定められているものに限り、刑事訴訟法(昭和23年法律第131号)第6編に規定する略式手続きによるものを除く。次項及び次条第2項において同じ。)をされた場合において、その判決の確定前に退職したときは、退職手当は支給しない。ただし、禁錮以上の刑に処せられなかったときは、この限りでない。

2 前項の規定は、退職した者に対しまだ退職手当が支払われていない場合において、その者が在職期間(その退職手当の支給の基礎となる期間をいう。次条及び第10条において同じ。)中の行為に係る刑事事件に関し起訴をされたときについて準用する。

(退職手当の支給の一時差止め)

第9条 理事長は、退職した役員に対しまだ退職手当が支払われていない場合において、その者の在職期間中の行為に係る刑事事件に関して、その者が逮捕されたとき又はその者から聴取した事項若しくは調査により判明した事実に基づきその者に犯罪があると思料するに至ったときであって、その者に対し退職手当を支給することが、公共上の見地から行うセンターの事務及び事業に対する国民の信頼を確保し、退職手当の支給に関し、その適正かつ円滑な実施を維持する上で重大な支障を生ずると認めるときは、退職手当の支給を一時差し止めることができる。

2 理事長は、前項の規定による退職手当の支給を一時差し止める処分(以下「一時差止め処分」という。)について、次の各号のいずれかに該当するに至った場合には、速

やかに当該一時差止処分を取り消さなければならない。ただし、第2号に該当する場合において、一時差止処分を受けた者がその者の在職期間中の行為に係る刑事事件に関し現に逮捕されているときその他これを取り消すことが、一時差止処分の目的に明らかに反すると認められるときは、この限りでない。

- (1) 一時差止処分を受けた者について、当該一時差止処分の理由となった行為に係る刑事事件につき公訴を提起しない処分があった場合
 - (2) 一時差止処分を受けた者がその者の在職期間中の行為に係る刑事事件に関し起訴されることなくその者の退職の日から起算して1年を経過した場合
- 3 前項の規定は、理事長が一時差止処分後に判明した事実又は生じた事情に基づき、退職手当の支給を差し止める必要がなくなったとして当該一時差止処分を取り消すことを妨げるものではない。
- 4 理事長は、一時差止処分を行う場合は、当該一時差止処分を受けるべき者に対し、当該一時差止処分の際、一時差止処分の事由を記載した説明書を交付しなければならない。
- 5 前各項に規定するもののほか、一時差止処分に関し必要な事項は、理事長が別に定める。

(退職手当の返納)

第10条 理事長は、退職した役員に対し退職手当を支給した後において、その者が在職期間中に係る刑事事件に関し禁錮以上の刑に処せられたときは、その支給した退職手当の全部又は一部を返納させることができる。

(実施細則)

第11条 退職手当の支給手続きその他この規程の実施に関し必要な事項については、理事長が別に定める。

附 則

- 1 この規程は、平成13年4月1日から施行する。

附 則(平成14.3.29 13国研セ第3-145号)

- 1 この規程は、平成14年4月1日から施行する。
- 2 平成14年4月1日(以下「基準日」という。)の前日に現に在職する役員が引き続き在職した後基準日以降に退職した場合における退職手当の額は、第3条の規定にかかわらず、基準日の前日における俸給月額に任命された日から基準日の前日までの在職期間1月につき100分の36を乗じて得た額と当該退職の日における俸給月額

に基準日から退職した日までの在職期間 1 月につき 1 0 0 分の 2 8 を乗じて得た額の合計額とする。

- 3 前項の場合において、各在職期間の月数の計算については、暦に従って計算するものとし、端数を生じたときは、これを 1 月とするものとする。ただし、各在職期間の月数の合計が、第 4 条第 1 項の規定により得られる在職期間の月数を超えるときは、1 月とした端数の少ない在職期間の月数から 1 月を減ずるものとし、この場合において端数が等しいときには後の在職期間の月数から 1 月を減ずるものとする。
- 4 基準日の前日に現に在職する役員が任期満了の日以前又はその翌日に役職を異にする役員に任命された場合における前 2 項の規定の適用については、附則第 2 項中「基準日の前日における」とあるのは「それぞれ退職した日（基準日以降も同一の役職に引き続いて在職している場合にあっては、基準日の前日）における」と、「任命された日から基準日の前日までの在職期間」とあるのは「各役職別期間（基準日以降も同一の役職に引き続いて在職している場合にあっては、基準日の前日までの役職別期間）」と、「当該退職の日」とあるのは「それぞれ退職した日」と、「基準日から退職した日までの在職期間」とあるのは「各役職別期間（基準日の前日から引き続き同一の役職に在職している場合にあっては、基準日からの役職別期間）」と、附則第 3 項中「在職期間」とあるのは「役職別期間」と、「第 4 条第 1 項の規定により得られる在職期間」とあるのは「同一の役職に在職したものとみなした場合に第 4 条第 1 項の規定により得られる在職期間」と読み替えるものとする。

Impact of Depreciated Currency on Agriculture in Thailand

Minoru TADA*

Research Information Division, Japan International Research Center for Agricultural Sciences (JIRCAS) (Tsukuba, Ibaraki, 305-8686 Japan)

These studies were carried out within the framework of the Thailand-Japan joint project entitled "Econometric Model Building of Agriculture in Thailand" sponsored and coordinated by JICA and JIRCAS, and conducted at the Office of Agricultural Economics, Ministry of Agriculture and Cooperatives in Thailand.

Present address:

*Fisheries Management and Economy Division, National Research Institute of Fisheries Science (Fukuura 2-12-4, Yokohama, 236-8648 Japan)

---Abstract-----

In this paper, the impact of currency depreciation that took place on July 2, 1997 in Thailand, on agriculture especially on prices and production was analyzed by estimating and constructing demand-supply models for the main agricultural commodities. As a result, it was found that the most favored commodities were upland crops which compete in the world market and for which dollar prices are given, and the broiler meat export sector which has a significant market share in Japan, although the contraction in the domestic market exceeded the expansion in export. The next favored commodity was rice in the rainy season for which few imported input materials are used and the output price depends on export. Domestic commodities such as pork and eggs were worst off because of the contraction of the domestic market. If we consider the recent economic recession in Thailand, the impact of the factors indicated above is amplified, although the increase in the number of migrants from urban to rural areas may lead to the decrease in farmers' income per capita.

Discipline: Agricultural economics

Additional key words: demand, supply, price, economic growth

(Received for publication, December 4, 1998)

---Introduction-----

The purpose of this report is to analyze the impact of the currency depreciation that took place on July 2, 1997 in Thailand on agriculture, especially on prices and production by estimating and constructing demand-supply models for the main agricultural commodities.

In the latter half of 1997, the "Baht", the currency of Thailand, depreciated nearly 100% against the US dollar and other major currencies. This is because the Baht had been strongly pegged to the dollar and overvalued in spite of continuous inflation and wage hikes in Thailand, and the current account balance recorded almost 338 billion Baht which accounted for 8% in the GDP ([Fig. 1\(34KB\)](#)).

There are direct and indirect effects of currency depreciation on agriculture. The direct one is that some agricultural commodities gain competitiveness in the world market in spite of the rise in input prices such as fertilizer price. The indirect one is through changes in the domestic demand for agricultural products caused by the economic recession, especially in the commercial sectors such as real estate development, banking and retail companies which do not face international competition. The economic crisis of these sectors is caused by the loss of the purchasing power of urban people and increased debt payment of the sector accelerated by the currency depreciation.

Thailand experienced an economic boom after 1987 caused by direct and indirect foreign capital inflow with the appreciation of the Japanese "yen". During this period, the Baht was overvalued against the US dollar, and the impact was opposite to the recent case. Martin and Warr demonstrated the importance of the impact of capital accumulation in the manufacturing sector that reduced the agricultural share in the GDP of Thailand³).

In light of the macroeconomic linkages with agriculture, Schuh was the first to show the importance of exchange rates in determining agricultural competitiveness⁵). Subsequently, McCalla emphasized the role of monetary policy that affects agricultural trade through changes in the exchange rates⁴). Chambers and Just developed these concepts into an empirical model, and the importance of real exchange rates was verified²). In the case of Japan, Tada pointed out the key role of monetary policy in determining the agricultural income of upland crop commodities⁶). Thraen, Hwang and Larson could not find a clear relation between US monetary expansion and soybean exports, where the role of the exchange rate was still significant⁷). For the macroeconomic impact on agriculture in developing countries, Bautista pointed out that realistic and competitive real exchange rates in the 1980s promoted the growth of the agricultural sector¹).

---Method-----

In the context of introductory economics that assumes a "small country" case, industries of tradable goods become better off through the depreciation of currency. In the case of Thailand, however, exported rice has a significant market share in the world and the assumption of "small country" can not be applied. Additionally Thai broiler meat competes with US, Chinese and Brazilian products in the Japanese market, and each share is substantial. This means that the balance between the positive influence of the improvement in price competitiveness and the negative effect of the rise in input prices is important to evaluate the impact of the depreciated Baht. Therefore, we constructed an econometric model of Thai agriculture comprising rice, wheat, maize, sugarcane, cassava, broiler, pork and egg commodities, where the sub-models of US rice and Japanese broiler meat were also included.

After constructing the model, we compared the results of simulations as of 1995/96 under the actual exchange rate which was 26 BT/\$ in 1996 and the alternative 40 BT/\$, which was stable as of April 1998 and corresponds to the Purchasing Power Parity exchange rate. The period of simulation ranged from 1989/90 to 95/96, because it takes several years for planted areas and prices to be adjusted to new economic conditions. Therefore, the differences in the simulated results under the alternative conditions of exchange rates demonstrate the long-term impact when the exchange rate changes from 26 to 40 BT/\$ under conditions where other exogenous variables such as GDP and dollar prices of fertilizer and feed remain constant.

---Framework of the model-----

The model is composed of 8 sub-models for rice, wheat, maize, cassava, sugarcane, broiler meat, pork meat and eggs, and these commodities account for nearly 60% of the value of the agricultural production. The model also includes the agricultural labor supply reflecting the subsistence characteristic of rice farming. Exchange rate, national income, population, CIF prices of fertilizer and feed given in dollar are the important exogenous variables influencing agriculture ([Fig. 2\(65KB\)](#)).

The rice model shows the following characteristics: price, production, consumption and trade depend on each other, where Thailand and USA are main players. FOB price for Thai rice is determined by the export of Thailand, by the aggregated export of USA and Australia, by the aggregated export of Vietnam, India, Myanmar and Pakistan, by the import of Japan, by the aggregated import of China, Indonesia and Iran, by the inflation ratio, implying that the demand for assets shifts from monetary to real assets during the period of inflation. The FOB price is transmitted into the wholesale price, thereby into retail and farm gate prices. Since it takes several years for the FOB price to be transmitted, we adopted partial adjustment lags for equations of wholesale, retail and farm gate price determinations. Production is defined as the planted area multiplied by yield, and the export is defined as production minus domestic consumption minus change in ending stock, where ending stock is an exogenous variable.

Supply of small livestock such as broilers, pigs and hen layers can respond to price changes quickly, because Thailand imports parent stock from the USA and European countries. Therefore, we assume horizontal supply curves for them, implying that they are produced under a constant return to scale. The prices depend on the price of feed which is the main component of the cost of production. In the broiler meat sector, the demand is represented by the aggregation of domestic and foreign market, where the Japanese market is the most important. The import of Japan from Thailand depends on the Japanese demand and the relative price of Thai to US and Chinese products.

Demand for maize is derived from livestock production, and the difference between production and domestic consumption is exported or imported. The price is transmitted into the domestic market through the exchange rate from USA Chicago market. Broken rice is also a major component of feed, and the price is determined based on wholesale prices of maize and rice.

For the cassava and sugarcane commodities, the raw outputs are processed into various kinds of final goods, and it is difficult to estimate the domestic consumption. Therefore, we built models for forecasting price and production. Yields are exogenous, because the yield functions estimated did not fit well. Domestic markets for these products are not linked to the world market perfectly, and the domestic prices are influenced by domestic production as well as world prices.

In estimating supply functions composed of planted area and yield functions and demand functions, we adopted single equation regressions such as OLS and ridge regressions rather than system estimations. In addition, the planted area and price in the previous year were selected in the explanatory variables of the planted area functions, where these two variables are components of the partial adjustment lag and adaptive price expectation. In all the equations, prices are deflated by the CPI of the country.

The reasons for this approach are as follows: (a) the presence of significant differences in profitability and labor productivity among industries and the fact that optimum conditions such as profit

maximization and zero profit are not satisfied in the Thai economy, (b) the problem of data accuracy in using sophisticated estimating methods such as the seemingly unrelated regression (SUR), and (c) existing equations estimated by single equation regressions that can be readily replaced by new equations when data are updated.

[Estimated impact of depreciation](#)

[Contents](#)

---Estimated impact of depreciation-----

The explanation below shows the difference in endogenous variables when the exchange rate changes from 26 to 40 BT/\$. [Table 1\(80KB\)](#) presents a summary of the impact. Since the simulation was conducted during the 6-year period after 1989/90, the estimated impact of the devaluation is considered to be a long-term one. In the short-term, the rise in prices of imported materials such as fertilizer and feed may not be fully transmitted to the domestic prices, or farmers change their planted area gradually, and as a result the impact will be less appreciable than the impact in the long-term.

1)Rice

Planted area and yield decrease by 4.4 and 2.6%, respectively, because the impact of the rise in fertilizer price exceeds that of the rise in rice price. In total, production decreases by 7.0%. Domestic consumption increases by 1.8% in spite of the 8.8% rise in retail price, because substitutive foods such as meats and wheat products become expensive relative to rice.

Farm gate price rises by 9.8%. One reason is the leftward shift of the supply curve (=cost push), and the other is the increase in the domestic and foreign demand for Thai rice due to the decrease in US production that responds to the fall in the dollar rice price.

Consequently, the gross revenue of farmers from rice production increases slightly, and farmers' income increases especially from the main crop (rainy season). This is because the cost of imported inputs in the total cost accounts for 10-12% for the main crop and 16-23% for the second crop, respectively. Therefore, production cost per unit increases by 5.0-7.0%, and is slightly lower than the price rise for the main crop.

2)Maize

Wholesale price and farm gate price rise by 49.0 and 40.0%, respectively due to the depreciation. For the supply side, planted area remains almost constant because of the substitution between maize, cassava and sugarcane. Yield and production increase by 15.5% due to the rise in output price, which means that more intensive production is promoted. Consequently, farmers' gross revenue increases by 65.5%. The cost of imported inputs accounts for about 10% (max. 25%) of the total cost, and the production cost per unit of maize is estimated to increased by 5.4% (max. 13.5%). Therefore, farmers' income from maize production increases significantly.

For the demand side, the use of maize is discouraged because of the contraction of livestock production. Thus, domestic consumption decreases by 18.0% and the export increases by 1,470,000 ton. Therefore, Thailand becomes a net exporter of maize again, and exports nearly 510,000 ton. For this estimation, it must be noted that the climatic conditions of the northeastern area of Thailand have become unsuitable for maize production, and that the expansion of production seems impossible. If this interpretation is correct, the production of other upland crops and perennial crops such as sugarcane, cassava, and kenaf is likely to increase.

3)Broiler

Feed price and retail price rise by 22.1 and 16.1%, respectively, and domestic consumption decreases by 16.0%. However, Thai broiler meat recovers its price competitiveness in the Japanese market, although it becomes expensive in the domestic market. Thus, the export to Japan increases by 20.0%. Under the

assumption that exports to countries other than Japan remain constant, the total export increases by 16.1% and the total demand for broiler and the production decline by 8.9%.

4)Pork and eggs

Feed prices for producing pork and eggs rise by 21.9 and 13.1%, respectively. Consequently, farm gate price and retail price increase as well. As a result, domestic consumption and production of pork and eggs decrease by 2.7 and 5.3%, respectively.

5) Cassava and sugarcane

Farm gate prices for these commodities rise by 40.0 and 48.1%, respectively. However, planted areas remain constant because of the substitution between these commodities, maize and other upland crops. Since the yield functions could not be estimated for these commodities, the yields are assumed to be constant in the simulation, although they are considered to respond to the prices of products and fertilizer. Thus, gross revenue exceeds price increase.

---Economic growth and prospects for agriculture-----

The drastic depreciation of the exchange rate which occurred in 1997 had 2 effects: (a) agricultural products recovered their price competitiveness, and (b) the cost of production increased, especially for the commodities for which imported materials are intensively used. These effects offset each other, and the effect of the former was dominant for the commodity which competes internationally.

According to the results of simulation, the most favored commodities are upland crops such as maize, cassava and sugarcane for which world dollar prices are given, and broiler meat for export. The next favored commodity is rice in the rainy season. On the other hand, pork and egg commodities which are domestically consumed, are worst off because of the contraction of the domestic market.

The current balance account of Thailand has improved remarkably and been in the black since the end of 1997, implying that the international competitiveness of exporting industries has recovered substantially. Therefore, the predictions of our econometric model seem to be qualitatively satisfactory, although they should be revised by updating the data.

The analysis above is limited to the impact of the currency depreciation, and does not include the impact of economic growth. The recent economic recession in Thailand is very severe, and the economic growth rate is forecasted to be -3.0 to -8.0% for the year 1998. If this situation continues for some years, the impact may become very significant both on the demand and supply of agriculture, though it is not significant in only one year.

The persistent economic recession affects agriculture as follows. Demand for livestock products and maize decreases, while the demand for rice increases under the negative economic growth. The production of livestock shrinks and exports of upland crops expand due to the changes in the demand side. If the economic growth rate recovers to a 3.0% value or higher, our model shows that the situation after the depreciation will return to that before the depreciation in some years. However, under the assumption that the growth rate remains at less than 1% even after 1999, similar situation of agriculture is forecasted to continue.

These effects of the economic recession amplify the impact of devaluation. However, if the economic recession continues for many years, many laborers in the urban sector will migrate to rural areas. Under

this scenario, labor migration may reduce the agricultural income per capita.

Finally, there are 2 alternative strategies for the recovery of the Thai economy: (1) to promote the introduction of advanced technology and enhance the industrial structure through the improvement of human capital, thereby discontinuing the export-oriented growth depending on assembly plants such as current automobile industries, and (2) to enhance the domestic industrial linkages, thereby expanding the labor-intensive industries that are less dependent on foreign capital and technology.

For the development of agriculture in Thailand, the latter alternative is preferable whereby the currency weakens and the export of agricultural and processed products is promoted. Consequently, the opportunities for employment in the rural areas are also expanded.

This report was written within the framework of the integrated project entitled "Productivity and Sustainable Utilization of Brackish Water Mangrove Ecosystems" in collaboration with Fisheries Research Institute, University of Malaya, Forestry Research Institute of Malaysia and JIRCAS, during the period of 1995 to 2000.

Present address:

*¹ East China Sea Fisheries Oceanography Division, Seikai National Fisheries Research Institute (Kokubu, Nagasaki, 850-0951 Japan)

---Abstract-----

The stable carbon and nitrogen isotope ratios of mangrove leaves, particulate organic matter (POM), shrimps and crabs, squids and fishes were studied for tracing the actual food web structure in the Matang mangrove brackish water ecosystems. Carbon isotope ratio of POM showed a positive correlation with the level of salinity, suggesting that POM around the mouth to mudflat areas of the river may consist of phytoplankton-derived detritus from the sea, whereas POM from mid- to upstream areas of the river may consist of mangrove-derived detritus. ¹³C-¹⁵N map showed a C-N isotope ratio gradient with the lowest value with mean (±SD) of ¹³C (-28.74±0.031‰) and ¹⁵N (4.36±0.15‰) for a mangrove leaf (*Rhizophora apiculata*), the highest value of ¹³C (-20.45±0.026‰) for a squid (*Loligo duvaucelii*) and of ¹⁵N (13.63±0.021‰) for a fish (*Stolephorus commersonii*). Penaeid shrimps (*Penaeus merguensis*, *Metapenaeus brevicornis* and *M. ensis*) and mangrove crabs (*Scylla serrata*) showed intermediate C-N values between those of mangrove leaves and fish/squid.

Discipline: Fisheries resources

Additional key words: mangrove litter, food-chain, energy flow

---Introduction-----

Brackish waters form where sea water and freshwater mix, usually within regions characterized by flat topography stretching between rivers and seas. In tropical and subtropical areas, brackish water coastlines often play host to mangrove forests, which serve as nursery grounds for fish and prawns while playing critical roles in protecting coasts from the threat of hurricanes and erosion. Humans also utilize mangrove trees for fuel, charcoal, chips, timber and medicinal products.

Matang Mangrove Forest Reserve in Perak State, reputed to be the world's best managed forest. This reserve consisting of some 40,711 hectares of mainly *Rhizophora apiculata* mangroves situated on the north-western coast of Peninsular Malaysia. It is the largest tract of mangrove forest in Peninsular Malaysia and has been under sustainable yield management since the early century, consisting of many islands and adjacent numerous waterways (rivers, channels, inlets and streams). Among of those waterways, Selinsing river (Sungai Selinsing in Malay language) is the most undisturbed river, and Sangga river (Sungai Sangga) is a main ships course of otter-trawlers and particularly in around the mouth area of the river, a Chinese fishing village and many rafts for cage culture of finfish (mainly giant sea-bass and mangrove snapper) have been engaged. We collected samples from above 2 rivers in Matang, and tried to analyze the trophic relations in mangrove brackish water ecosystems.

Measurements of natural ¹³C/¹²C and ¹⁵N/¹⁴N isotope ratios are useful for determining sources of nutrition for consumers and trophic relationships among organisms and have often been used in studies of lake, river and marine food webs^{2,4,6,11,14,16-18}). It is generally recognized that ¹³C measurements primarily indicate the main sources of carbon for consumers, and ¹⁵N values indicate the trophic distance of consumers from the food base⁵). The simultaneous use of ¹³C and ¹⁵N values therefore enables to analyze the trophic relationships in food webs³).

Measurements of ¹³C and ¹⁵N values in mangrove brackish water ecosystems have been carried out by many researchers^{1,3,7-10,12,13,15}) who reported the presence of a ¹³C gradient at the higher trophic levels.

---Materials and methods-----

1) Sampling and processing

Samples for isotope analysis were collected from Sungai Selinsing and Sangga Matang, November 1996 and February 1997 ([Fig. 1\(105KB\)](#)). Five species of shrimps, 4 mangrove crabs and 8 squids with different body sizes, and 7 species of fishes were collected from Sungai Selinsing. Leaves from 2 species of mangrove and 7 bottles of surface water for the isotope analysis of particulate organic matter at different stations from mouth/mudflat to upstream areas of the river were also sampled from Sungai Sangga ([Table 1\(114KB\)](#)). The length and weight were measured for each sample, then fat/gut were removed and gut contents were investigated in fish samples. Thereafter, each sample was dried at 60 for about half to one day. At least 4 whole individuals of fish and shrimp were pooled and muscle tissues were carefully excised from each specimen with a clean scalpel, and only muscle tissue was used for isotope analysis. Particulate organic carbon (POC) samples were collected with precombusted (450) Whatman GF/F glass-fiber filters and dried at 60. In each analysis, dried samples were pretreated with concentrated hydrochloric acid (HCl) for removing carbonates since carbonates are known to interfere with C signatures. Dry animal tissues, particulate organic matter and leaf tissues were ground to a fine powder using a mortar and pestle, then subjected to combustion.

2) Isotope analysis

The organic matters were converted into CO₂ and N₂ gases with the sealed quartz tube combustion method⁵. CO₂ and N₂ gases were separated and purified cryogenically with liquid nitrogen and dry ice ethanol slush. Purified gases were introduced into isotope ratio mass spectrometer (Finnigan Mat, MAT 252). A graphite reference material was used as a standard for carbon isotope ratio measurements. ¹³C values are expressed relative to the VPDB (Vienna Peedee Belemnite) standard. High purity tank nitrogen gas was used as a working standard for the nitrogen isotope ratio measurements. This working standard was calibrated against N₁ and N₂ ammonium sulfate. ¹⁵N values are reported relative to nitrogen in air. Stable carbon and nitrogen isotope ratios are represented by the following δ values:

$$\delta^{13}\text{C}, \delta^{15}\text{N} (\text{‰}) = \left[\frac{R_{\text{sample}}}{R_{\text{standard}}} - 1 \right] \times 1,000, \text{ where } R = {}^{13}\text{C}/{}^{12}\text{C} \text{ or } {}^{15}\text{N}/{}^{14}\text{N}.$$

---Results and discussion-----

Carbon isotope ratio of POM showed a positive correlation with the level of salinity (n=7, p<0.05) ([Fig. 2\(49KB\)](#)). Carbon isotope ratio of POM without 2 stations (Sts. 7 and 8 in Fig. 1) also showed a positive correlation with the total carbon content (n=5, p<0.05) ([Fig. 3\(49KB\)](#)), suggesting that an area with higher salinity contains a higher total carbon content with a higher POM ¹³C. The content of phytoplankton carbon calculated from chlorophyll-a was almost stable (about 15-25% of total carbon), regardless of the POM ¹³C level ([Fig. 4\(49KB\)](#)). These findings indicate that the phytoplankton-derived carbon contains about 15-25% of total carbon, and major parts of remaining carbon may consist of detritus carbon throughout the river to the estuary of Sungai Sangga. In other words, the results shown in Figs. 2-4 suggesting that the POM around the mouth to mudflat areas of the river (higher POM ¹³C) may consist of phytoplankton-derived detritus from the sea, whereas POM from mid- to upstream areas of the river (lower POM ¹³C areas) may consist of mangrove-derived detritus. ¹³C and ¹⁵N of mangrove leaves showed the lowest values without a range of POM ¹³C in Sungai Sangga.

While in Sungai Selinsing, squid showed the highest value of ¹³C and tropical anchovy (*Stolephorus commersonii*) showed the highest value of ¹⁵N ([Table 1](#)). ¹³C-¹⁵N map showed that there was a C-N isotope ratio gradient from the Matang mangrove brackish water ecosystem with the lowest value with mean (SD) of ¹³C (-28.74 x 0.031_‰) and ¹⁵N (4.36 x 0.15_‰) for a mangrove leaf (*Rhizophora apiculata*), the highest value of ¹³C (-20.45 x 0.026_‰) for a squid (*Loligo duvaucelii*) and of ¹⁵N (13.63 x 0.021_‰) for a fish (*S. commersonii*). Except for one fish, *Anodontostoma chacunda*, all fishes showed higher ¹⁵N values suggesting with a higher trophic level. Penaeid shrimps (*Penaeus merguensis*, *Metapenaeus brevicornis* and *M. ensis*) and mangrove crab (*Scylla serrata*) showed on intermediate C-N value between those of mangrove leaves and fish/squid. The range of the ¹³C values for POM in Sungai Sangga overlapped the ¹³C signal range for fishes, squids, shrimps and crabs in Sungai Selinsing ([Fig. 5\(47KB\)](#)). Thus a clear C-N isotope ratio gradient in the Matang mangrove brackish water ecosystem could be detected.

Natural Environment Research Center⁷), which conducted the isotope studies of mangrove leaves, land and aquatic animals, mangrove and marine mud sediments collected in the northern portion (around Kuala Gula area) of the Matang mangrove ecosystem during the period 1992-1994, concluded the following: (1) there is a mangrove leaf-based organic matter flux in the water, running into the sea through the river, (2) some of the organic materials accumulated in the mud sediment and were utilized by mangrove/aquatic mollusks, and (3) fishes showed the highest values of ¹³C and ¹⁵N, and also a clear C-N isotope ratio gradient from mangrove leaves up to fishes in the Matang mangrove brackish water ecosystem ([Fig. 6\(28KB\)](#)).

The present results also suggest that there is a food pathway from the mangrove leaf-based detritus to carnivorous fishes and squids through herbivorous shrimps and crabs.
